1.0 Introduction

1.1 Purpose of Report & Study Objectives

The purpose of this traffic impact analysis is to evaluate the proposed Fitness Mania Project (hereinafter referred to as project) from a traffic and circulation standpoint and determine whether the project will have a significant traffic impact. This traffic study has been conducted pursuant to the *City of Corona Public Works Department Traffic Impact Study Guidelines*, dated July 2006 (TIA Guidelines), and the California Environmental Quality Act (CEQA) requirements.

This study has been prepared in accordance with the scope of work previously approved by City of Corona staff. A copy of the approved scope of work is contained in Appendix A.

1.2 Site Location & Project Description

The project site is located at 2895 South Main Street, generally on the northeast corner of South Main Street at Chase Drive, in the City of Corona.

The proposed project consists of constructing and operating a 52,317 square-foot health club/gym facility with ancillary uses that include laundry services, office space, cafeteria/kitchen, retail, and a kids club.

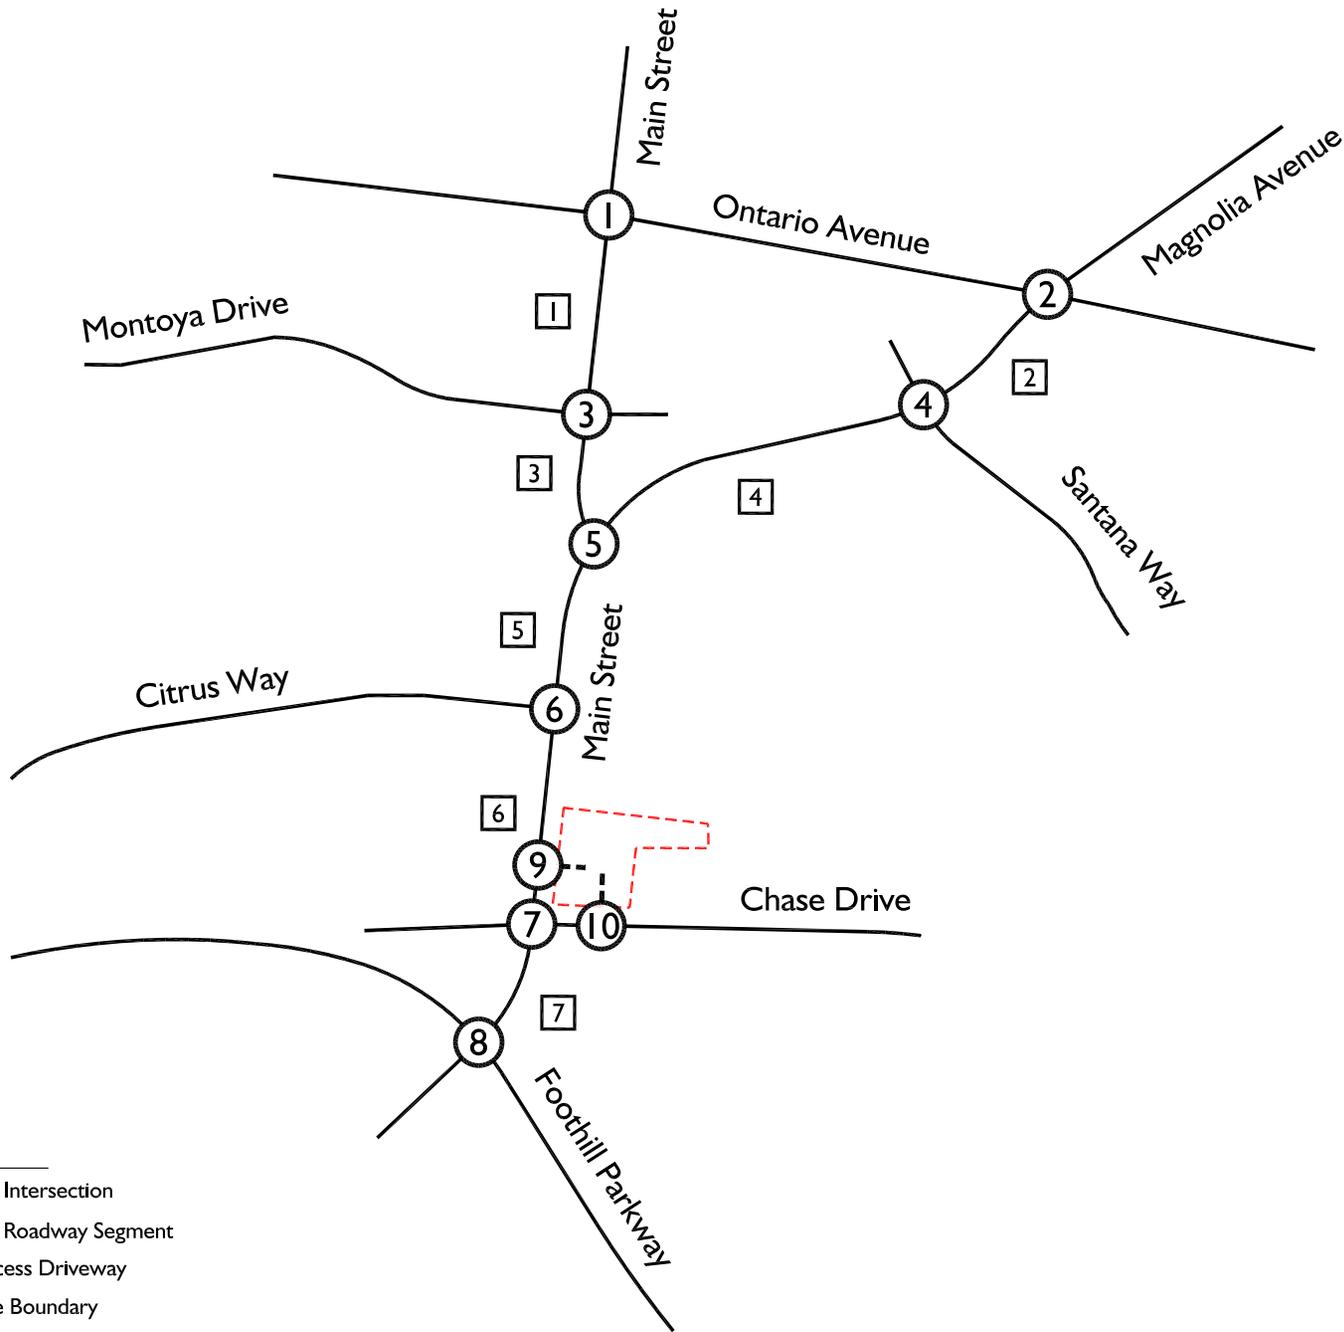

Access to the project site will be provided via the following:

- One (1) full-ingress/right-out only unsignalized access driveway along Main Street; and
- One (1) full-access unsignalized access driveway along Chase Drive.

The project site location map is shown on Exhibit 1-1. The project site plan is shown on Exhibit 1-2.

The construction of the proposed project will include the installation of a raised median along Main Street in front of the project site, as well as the construction of a 100-foot southbound left-turn pocket for the Main Street project access (i.e. Project Access 1). This

Exhibit I-1
Location Map

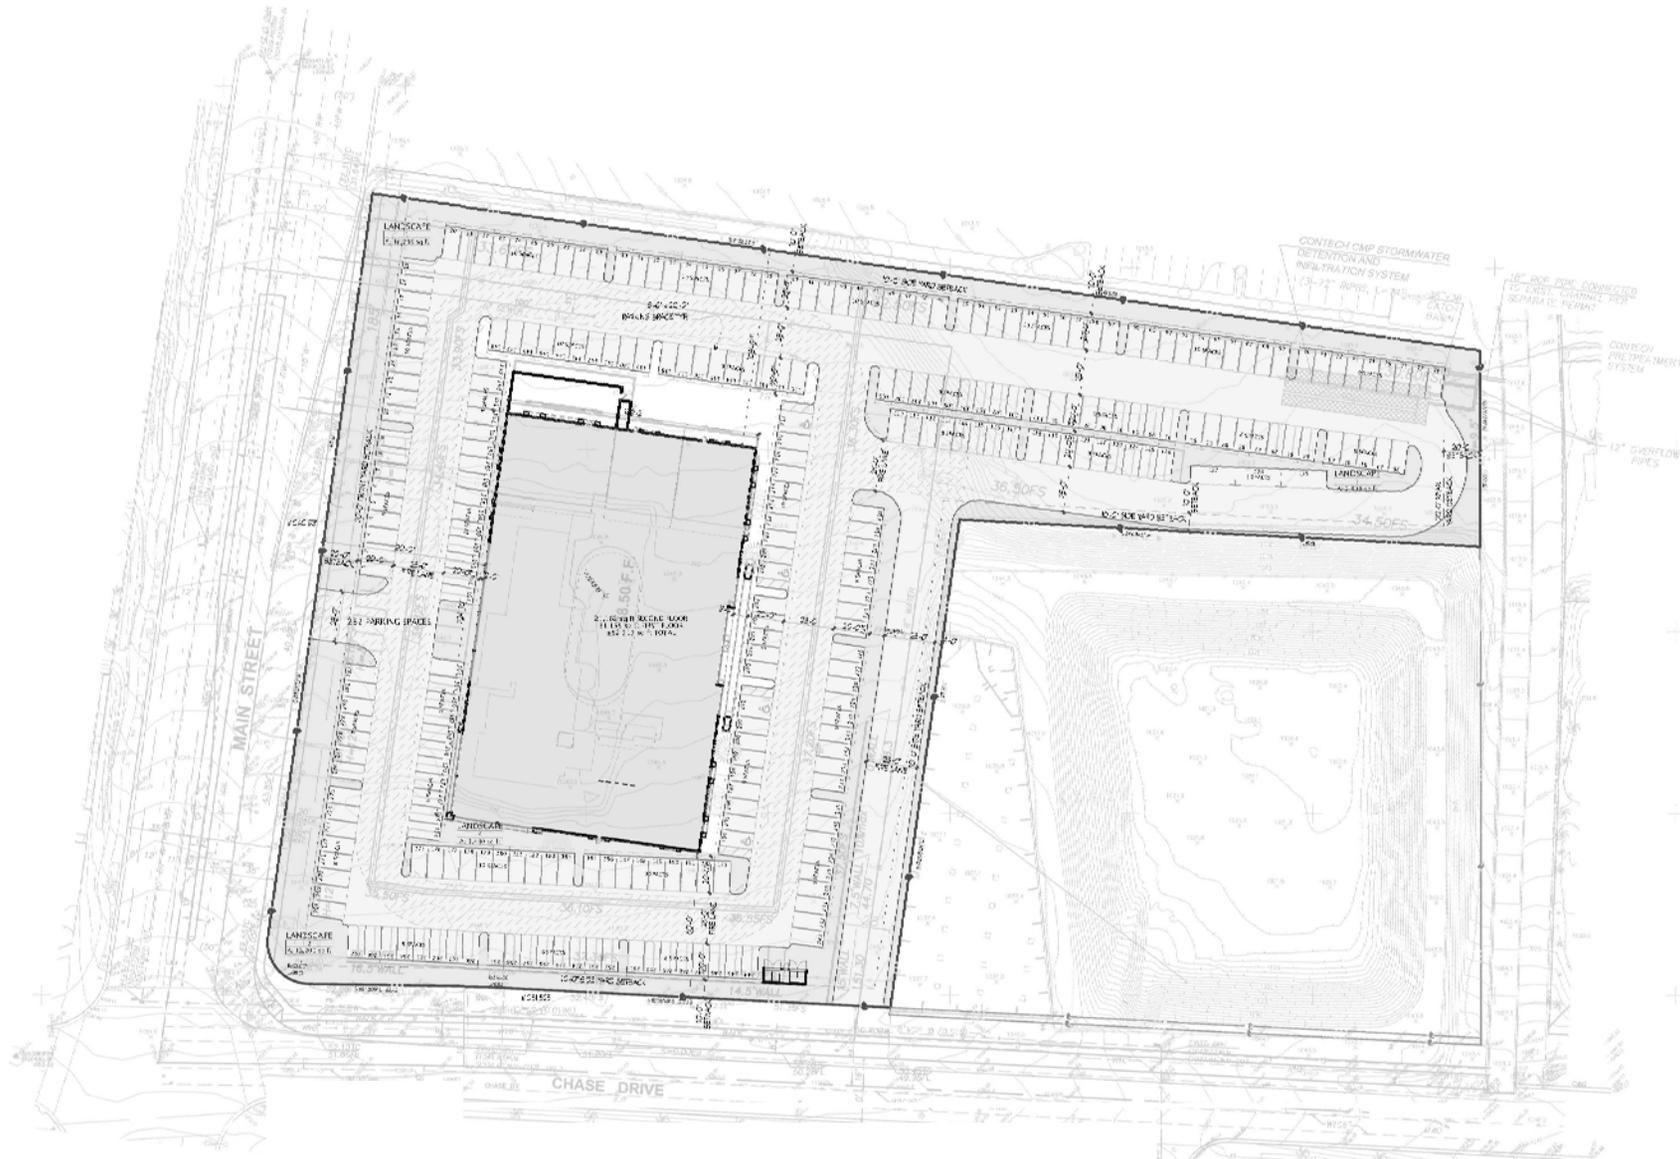

Legend:

- ① = Study Area Intersection
- ▭ = Study Area Roadway Segment
- = Project Access Driveway
- = Project Site Boundary

Exhibit I-2 Site Plan

project-specific improvement will also include the widening of Main Street in front of the project site to be a 4-lane roadway.

Additionally, the proposed project will extend the existing westbound left-turn pocket at the intersection of Main Street at Chase Drive approximately fifty-five (55) feet to provide a 100-foot pocket. The project will also modify the northbound approach of Main Street at Chase Drive to consist of one (1) left-turn lane, one (1) through lane, and one (1) shared through/right-turn lane.

Exhibit 1-3 shows a conceptual layout of the proposed raised median along Main Street in front of the project site, as well as the other project-specific improvements described above.

The project is planned to be completed in 2023 and has been evaluated in one (1) single phase.

1.3 Traffic Study Area & Analysis Scenarios

The study area included in this analysis has been determined based upon existing and future transportation facilities within the vicinity of the site where the project may contribute a significant amount of traffic. The traffic analysis evaluates the following ten (10) study intersections and seven (7) study roadway segments. All ten (10) study intersections and seven (7) study roadway segments are located within the City of Corona.

Study Intersections:

1. Main Street at Ontario Avenue (signalized);
2. Magnolia Avenue at Ontario Avenue (signalized);
3. Main Street at Montoya Drive (signalized);
4. Magnolia Avenue at Santana Way (signalized);
5. Magnolia Avenue/Main Street at Main Street (signalized);
6. Main Street at Citrus Way (signalized);

7. Main Street at Chase Drive (signalized);
8. Main Street at Foothill Parkway (signalized);
9. Main Street at Project Access 1 (unsignalized); and
10. Project Access 2 at Chase Drive (unsignalized).

Study Roadway Segments:

1. Main Street between Ontario Avenue and Montoya Drive (4-lane Major Arterial);
2. Magnolia Avenue between Ontario Avenue and Santana Way (6-lane Major Arterial);
3. Main Street between Montoya Drive and Magnolia Avenue (4-lane Major Arterial);
4. Magnolia Avenue between Santana Way and Main Street (6-lane Major Arterial);
5. Main Street between Magnolia Avenue and Citrus Way (5-lane Major Arterial);
6. Main Street between Citrus Way and Project Access 1 (4-lane Major Arterial); and
7. Main Street between Chase Drive and Foothill Parkway (4-lane Major Arterial).

The analysis evaluates traffic conditions for the following study scenarios during the weekday AM (6:30 AM to 9:00 AM) and weekday PM (4:00 PM to 6:00 PM) peak periods:

- Existing Conditions;
- Project Opening Year (2023) With Background Traffic Without Project Conditions; and
- Project Opening Year (2023) With Background Traffic With Project Conditions.

2.0 Analysis Methodologies, Performance Criteria & Thresholds of Improvement Requirement

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report in accordance with the City of Corona. This section also discusses the agency-established applicable performance criteria and thresholds of improvement requirement for the study facilities.

2.1 Intersection Peak Hour LOS Analysis Methodology

In accordance with the City of Corona TIA Guidelines, the Highway Capacity Manual 6th Edition (HCM 6) is utilized as the technical guide in the evaluation of traffic operations.

The Highway Capacity Manual (HCM) defines level of service (LOS) as a qualitative measure which describes operational conditions within a traffic stream, generally in terms of such factors as speed and travel time, freedom to maneuver, traffic interruptions, comfort and convenience, and safety. The criteria used to evaluate LOS conditions vary based on the type of roadway and whether the traffic flow is considered interrupted or uninterrupted.

The definitions of LOS for uninterrupted flow (flow unrestrained by the existence of traffic control devices) are:

- **LOS A** represents free flow. Individual users are virtually unaffected by the presence of others in the traffic stream.
- **LOS B** is in the range of stable flow, but the presence of other users in the traffic stream begins to be noticeable. Freedom to select desired speeds is relatively unaffected, but there is a slight decline in the freedom to maneuver.
- **LOS C** is in the range of stable flow, but marks the beginning of the range of flow in which the operation of individual users becomes significantly affected by interactions with others in the traffic stream.
- **LOS D** represents high-density but stable flow. Speed and freedom to maneuver are severely restricted, and the driver experiences a generally poor level of comfort and convenience.

- **LOS E** represents operating conditions at or near the capacity level. All speeds are reduced to a low, but relatively uniform value. Small increases in flow will cause breakdowns in traffic movement.
- **LOS F** is used to define forced or breakdown flow. This condition exists wherever the amount of traffic approaching a point exceeds the amount which can traverse the point. Queues form behind such locations.

For signalized intersections, average control delay per vehicle is used to determine the LOS. For all-way stop controlled intersections, the LOS is also determined based on the average control delay per vehicle. For intersections with stop control on the minor approach only, the calculation of LOS is dependent on the occurrence of gaps in the free-flow traffic movement of the main street, and the LOS is determined based on the worst individual movement or movements sharing a single lane.

The HCM 6 methodology describes the operation of an intersection using a range of LOS from LOS A (free-flow conditions) to LOS F (severely congested conditions), based on the corresponding ranges of stopped delay experienced per vehicle for signalized and unsignalized intersections.

Table 2-1 below shows the LOS criteria based on the HCM 6 methodology.

**Table 2-1
HCM LOS - Vehicle Delay**

LOS	Average Control Delay Per Vehicle (Seconds)	
	Signalized	Unsignalized
A	0.00 – 10.00	0.00 – 10.00
B	10.01 – 20.00	10.01 – 15.00
C	20.01 – 35.00	15.01 – 25.00
D	35.01 – 55.00	25.01 – 35.00
E	55.01 – 80.00	35.01 – 50.00
F	> 80.00	> 50.00

For this study, the HCM LOS grades will be determined utilizing the HCM 6 methodology and the PTV Vistro analysis software.

All analysis parameters utilized in this analysis are in accordance with the City of Corona TIA Guidelines.

Optimized signal timing is utilized for signalized intersections.

Existing peak hour factors have been calculated based upon the manual turning movement counts collected at the study area intersections. For a conservative analysis, the existing peak hour factors have been used for all study scenarios.

2.2 Roadway Segment LOS Analysis Methodology

Level of service (LOS) is commonly used as a qualitative description of roadway segment operation and is based on the daily capacity of the roadway segment and the daily volume of traffic experienced by the roadway segment.

Roadway segment LOS and operation is evaluated utilizing the volume-to-capacity (V/C) ratio methodology. The LOS is determined based on the numerical ratio obtained by dividing the daily traffic volume of the roadway segment by its daily capacity identified by the City's General Plan Circulation Element for the corresponding roadway classification.

The V/C ratio methodology describes the operation of a roadway segment using a range of LOS from LOS A to LOS F, based on the corresponding ranges as shown in Table 2-2 below.

Table 2-2
LOS – Volume to Capacity Ratio

LOS	V/C Ratio
A	0.00 – 0.60
B	0.61 – 0.70
C	0.71 – 0.80
D	0.81 – 0.90
E	0.91 – 1.00
F	> 1.00

The following roadway capacity values are utilized in accordance with the City of Corona TIA Guidelines.

**Table 2-3
Roadway Segment Capacity Thresholds**

Roadway Classification	No. of Lanes	Maximum Two-Way ADT Volume		
		LOS C	LOS D	LOS E
Major Arterial	4	27,300	30,700	34,100
Major Arterial	6	43,100	48,500	53,900

2.3 LOS Performance Criteria & Thresholds of Improvement Requirement

Performance Criteria:

Study Intersections:

The acceptable LOS for intersections within the City of Corona is LOS C or better for local intersections in residential/industrial areas, and LOS D or better for collector and arterial intersections. LOS E will be permitted for the following intersections: Lincoln Avenue at SR-91, Main Street at SR-91, McKinley Avenue at SR-91, Hidden Valley Parkway at I-15, Cajalco Road at I-15, Weirick Road at I-15, and other locations as approved by the City Engineer.

All of the ten (10) study intersections included in this analysis are required to operate at LOS D or better.

Study Roadway Segments:

The acceptable LOS for roadway segments located within the City of Corona is LOS C or better.

Thresholds of Improvement Requirement:

Per the City of Corona TIA Guidelines and in accordance with the City's General Plan, feasible measures shall be identified to mitigate any impacts to the levels identified below for Project Opening Year (2023) With Background Traffic With Project Conditions:

1. If a project causes a facility that is projected to operate at an acceptable LOS with opening year background traffic, to operate at an unacceptable LOS, then mitigation measures shall be identified for which the project shall be responsible to bring the facility back to an acceptable LOS.
2. In addition, developments that require a change in zoning from that shown in the current General Plan shall be responsible for mitigating impacts caused to City facilities by the zoning change back to an acceptable LOS.
3. If a project causes an impact to a facility operating at an unacceptable LOS with opening year background traffic, then mitigation measures shall be identified for which the project should pay a fair share.

3.0 Existing Traffic Volumes & Circulation System

This section of the report provides a discussion of existing study area conditions and traffic volumes.

3.1 Existing Traffic Controls & Intersection Geometrics

Exhibit 3-1 identifies the existing roadway conditions within the study area. The number of through traffic lanes for existing roadways and the existing intersection controls are identified. The type of traffic control and number of lanes at an intersection are key inputs for the calculation of level of service.

3.2 Existing Traffic Volumes

Existing traffic volumes at the study intersections are based upon manual AM and PM peak hour turning movement counts compiled for RK in August 2022 while local schools were in session.

The AM peak period of traffic was counted from 6:30 AM to 9:00 AM and the PM peak period of traffic was counted from 4:00 PM to 6:00 PM during typical weekday conditions.

Existing traffic volumes are shown on Exhibit 3-2 for the ten (10) study intersections and seven (7) study roadway segments.

Traffic count worksheets are contained in Appendix B.

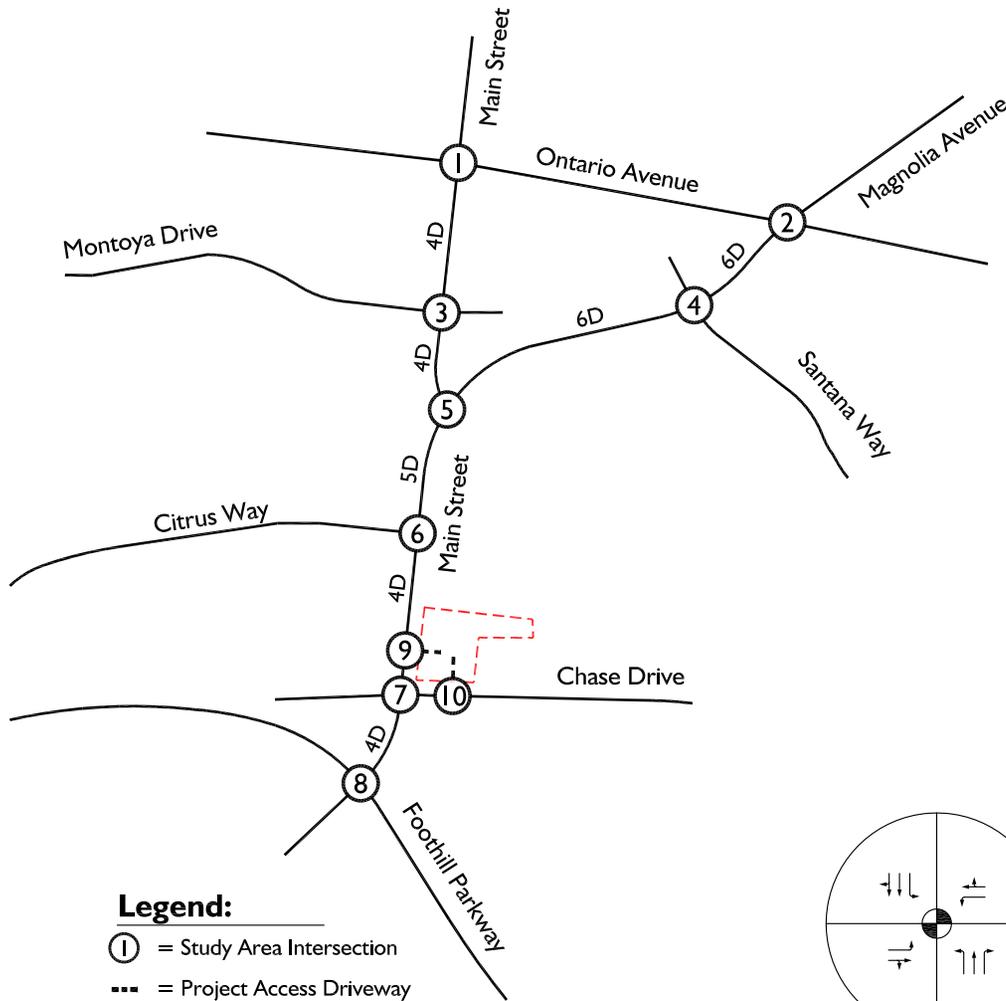

3.3 City of Corona Circulation Element

The City of Corona General Plan Roadway Plan is shown on Exhibit 3-3.

The City of Corona General Plan Bikeway Plan is shown on Exhibit 3-4.

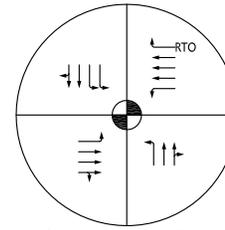

The City of Corona General Plan Transit Routes are shown on Exhibit 3-5.

4.0 Projected & Future Traffic Volumes

This section of the report provides a discussion on methodologies utilized to derive future traffic volumes for the study area.

4.1 Project Traffic Conditions

4.1.1 Trip Generation

Trip generation represents the amount of traffic that is attracted and produced by a development. The trip generation for the project is based upon the specific land uses that have been planned for this development.

Trip generation is typically estimated based on the trip generation rates from the latest *Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition, 2021)*. This publication provides a comprehensive evaluation of trip generation rates for a variety of land uses.

Table 4-1 shows the ITE trip generation rates utilized for the trip generation analysis of the project land uses. Utilizing the trip generation rates from Table 4-1, Table 4-2 summarizes the daily and peak hour trip generation for the proposed project.

As shown in Table 4-2, based on the ITE trip generation rates, the project is forecast to generate approximately 1,805 daily trips which include approximately 69 AM peak hour trips and approximately 181 PM peak hour trips.

4.1.2 Trip Distribution

Trip distribution represents the directional orientation of traffic to and from the project site. Trip distribution is heavily influenced by the geographical location of the site, the location of retail, employment and recreational opportunities, and the proximity to the regional freeway system. The directional orientation of traffic was determined by evaluating existing and proposed land uses and highways within the study area.

The outbound project trip distribution is shown on Exhibit 4-1. The inbound project trip distribution is shown on Exhibit 4-2.

**Table 4-1
ITE Trip Generation Rates¹**

Land Use	ITE Code	Units ²	AM Peak Hour			PM Peak Hour			Daily
			In	Out	Total	In	Out	Total	
Health/Fitness Club	492	TSF	0.67	0.64	1.31	1.97	1.48	3.45	34.50 ³

¹ Source: *ITE Trip Generation Manual* (11th Edition, 2021).

² TSF = Thousand Square Feet.

³ The *ITE Trip Generation Manual* (11th Edition, 2021) does not provide a daily trip rate for Land Use 492. As such, the daily trip rate is assumed to be ten (10) times the PM peak hour trip rate.

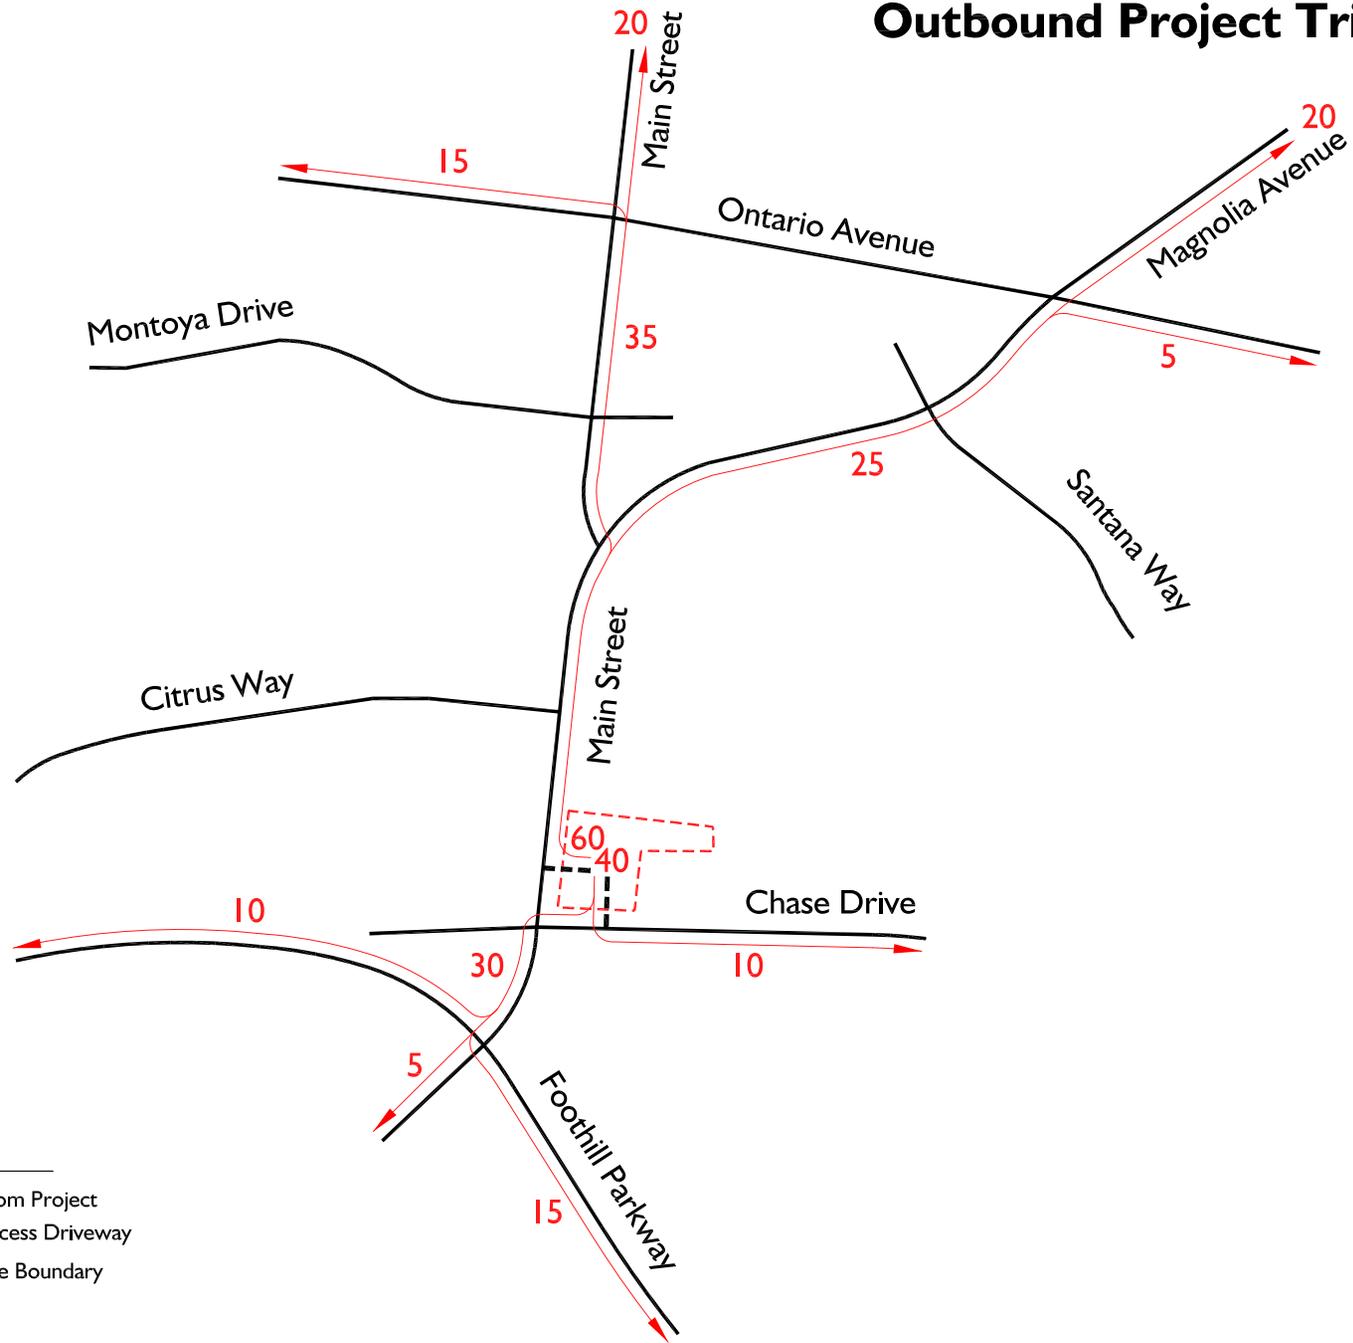

**Table 4-2
Project Trip Generation¹**

Land Use (ITE Code)	Quantity	Units ²	AM Peak Hour			PM Peak Hour			Daily
			In	Out	Total	In	Out	Total	
Health/Fitness Club (492)	52.317	TSF	35	34	69	103	78	181	1,805

¹ Source: *ITE Trip Generation Manual* (11th Edition, 2021).

² TSF = Thousand Square Feet.

Outbound Project Trip Distribution

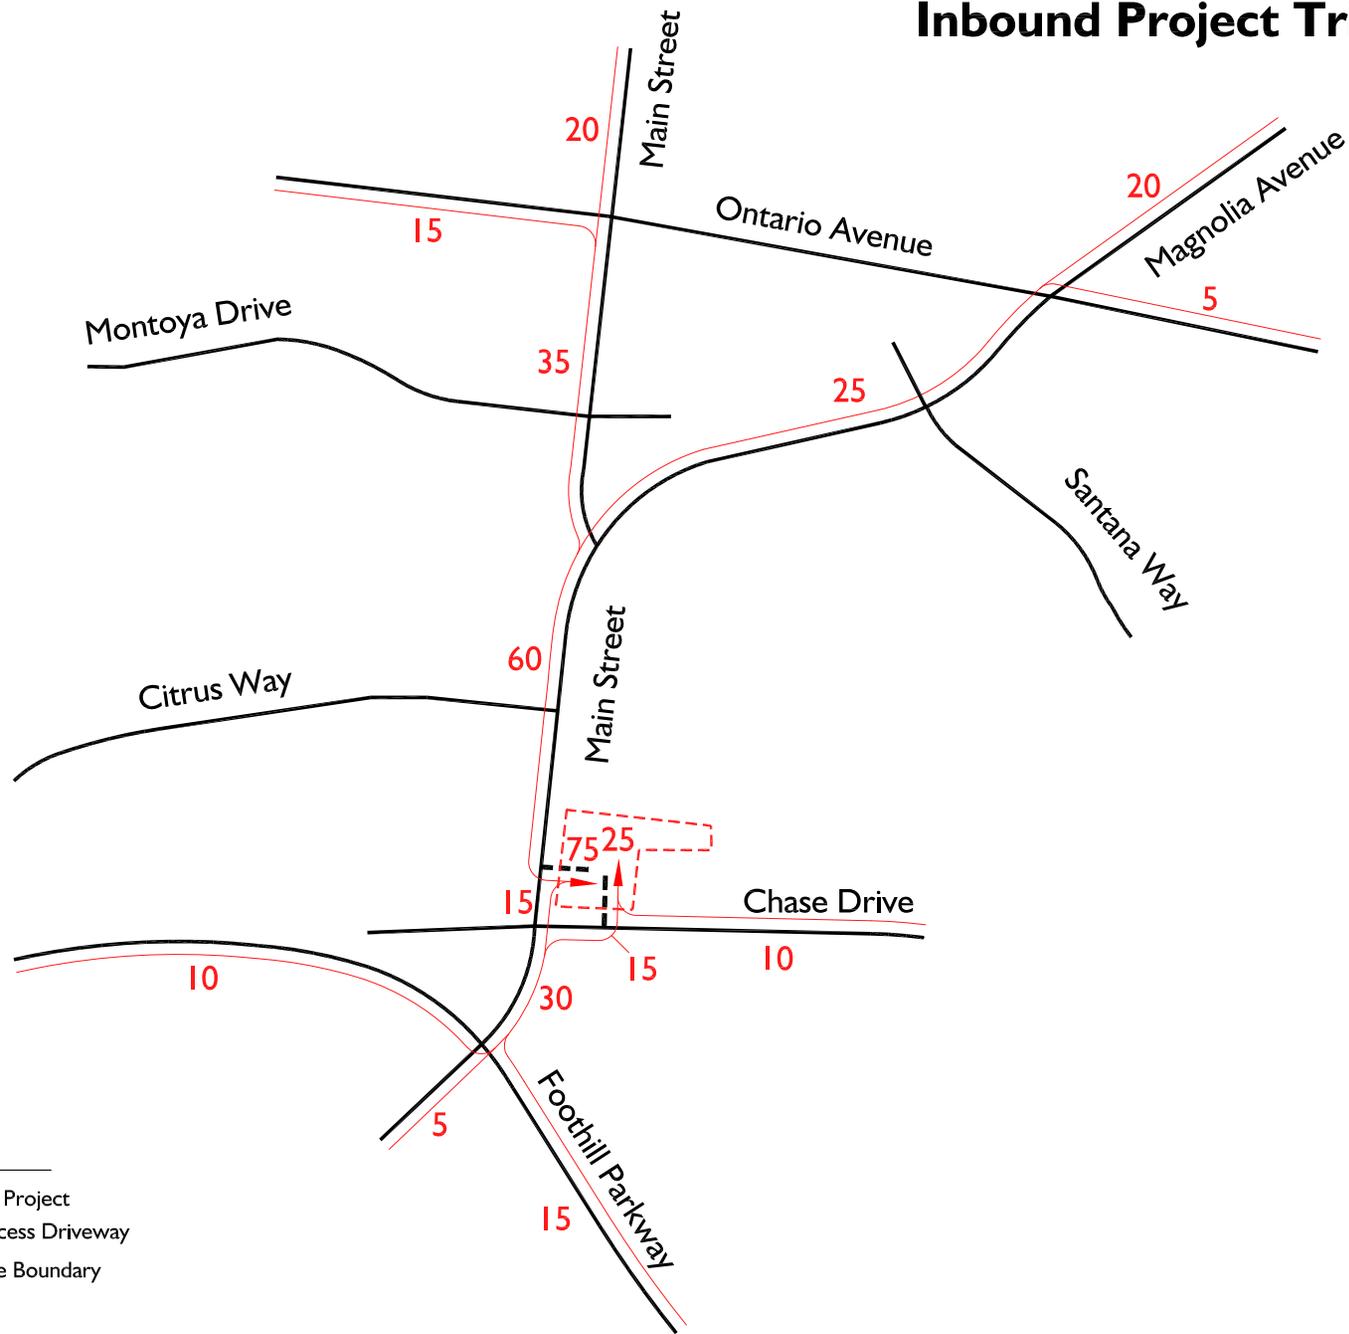

Legend:

- 10 = Percent from Project
- = Project Access Driveway
- = Project Site Boundary

Inbound Project Trip Distribution

Legend:

- 10 = Percent to Project
- = Project Access Driveway
- = Project Site Boundary

4.1.3 Modal Split

Modal split denotes the proportion of traffic generated by a project that would use any of the transportation modes, namely buses, cars, bicycles, motorcycles, trains, carpools, etc. The traffic-reducing potential of public transit and other modes is significant. However, the traffic projections in this study are conservative in that public transit and alternative transportation may be able to reduce the traffic volumes, but no modal split reduction is applied to the projections. With the implementation of transit service and provision of alternative transportation ideas and incentives, the automobile traffic demand can be reduced significantly.

4.1.4 Project Traffic Volumes/Assignment

The assignment of project traffic to the adjoining roadway system is based upon the project's trip generation, trip distribution, and arterial highway and local street systems that would be in place by the time of initial occupancy of the site.

Project traffic volumes are shown on Exhibit 4-3 for the ten (10) study intersections and seven (7) study roadway segments.

4.2 Background Traffic

4.2.1 Method of Projection

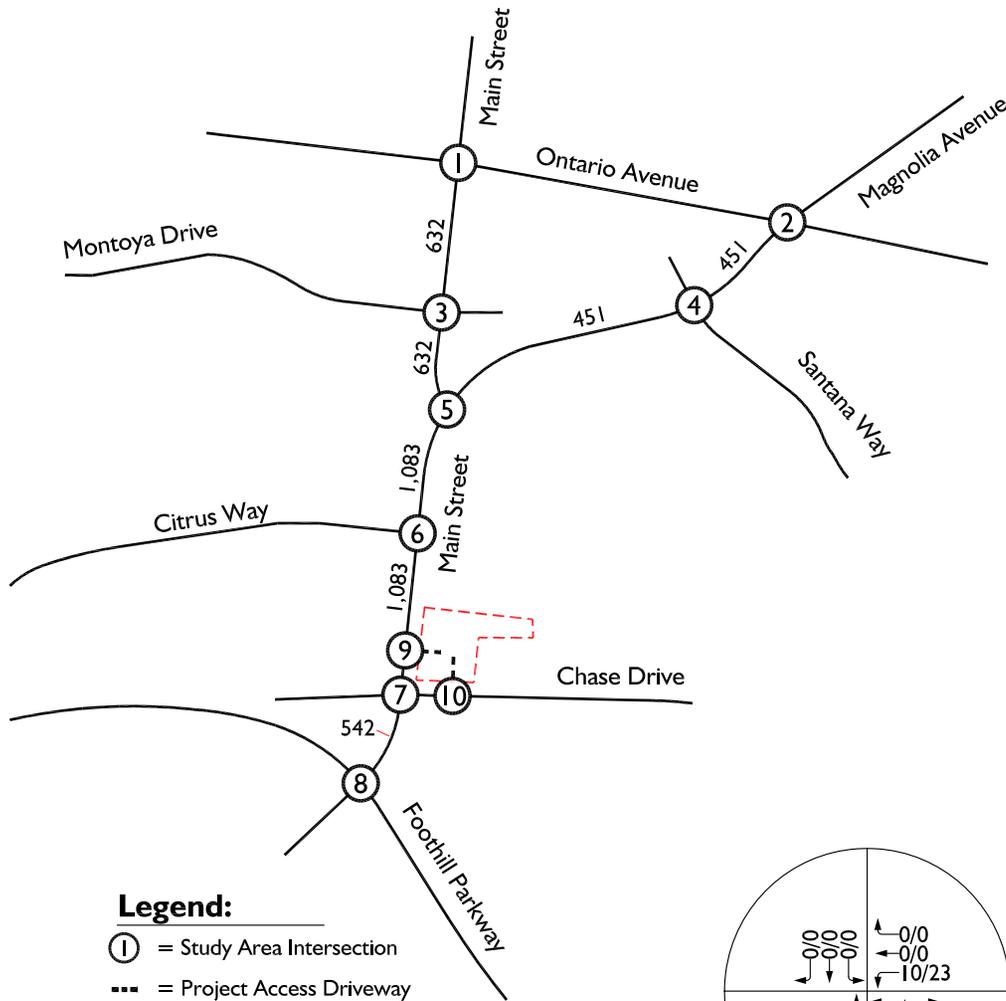

To assess future conditions, project traffic is combined with existing traffic and area-wide growth. As directed by City staff, to account for area-wide/ambient growth in the study area, an annual growth rate of two percent (2%) per year has been applied to the existing (2022) traffic volumes over a 1-year period from 2022 for opening year (2023).

4.2.2 Cumulative Projects Traffic

Information on future projects in the vicinity of the study area has been provided by City of Corona staff for inclusion in this analysis and is shown in Table 4-3.

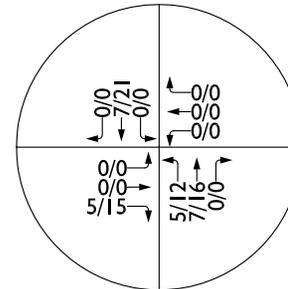

Table 4-3 shows the land uses, and daily and peak hour trip generation for the nearby cumulative projects provided by the public agencies.

Exhibit 4-3 Project Traffic Volumes

¹ Cumulative Projects information provided by the City of Corona.

² DU = Dwelling Units.

TSF = Thousand Square Feet.

³ Source: Skyline Village Commercial Center Traffic Impact Study, City of Corona, prepared by RK Engineering Group, Inc., dated June 9, 2021.

A location map of the cumulative projects is shown on Exhibit 4-4. Cumulative projects traffic volumes are shown on Exhibit 4-5 for the ten (10) study intersections and seven (7) study roadway segments.

In reality, some of the cumulative projects may be downsized or may not be developed by project opening year (2023). In addition, many of the related projects have been or will be subject to a variety of mitigation measures that will reduce the potential environmental impacts associated with those projects. However, those mitigation measures have not been taken into account in projecting the environmental impact of the related projects.

Therefore, the cumulative analyses set forth below are conservative and could result in greater impacts than actually anticipated. Additionally, the analysis utilizes a growth rate of two percent (2%) per year for project opening year (2023) conditions, which would already capture and account for most projects in the area. The growth rate methodology is considered conservative since it is applied to all movements in all the study intersections.

4.3 Project Opening Year (2023) With Background Traffic Without Project Conditions Traffic Volumes

Project Opening Year (2023) With Background Traffic Without Project Conditions traffic volumes consist of one (1) year of annual growth on top of existing (2022) traffic volumes at two percent (2%) per year, plus the traffic generated by the cumulative projects.

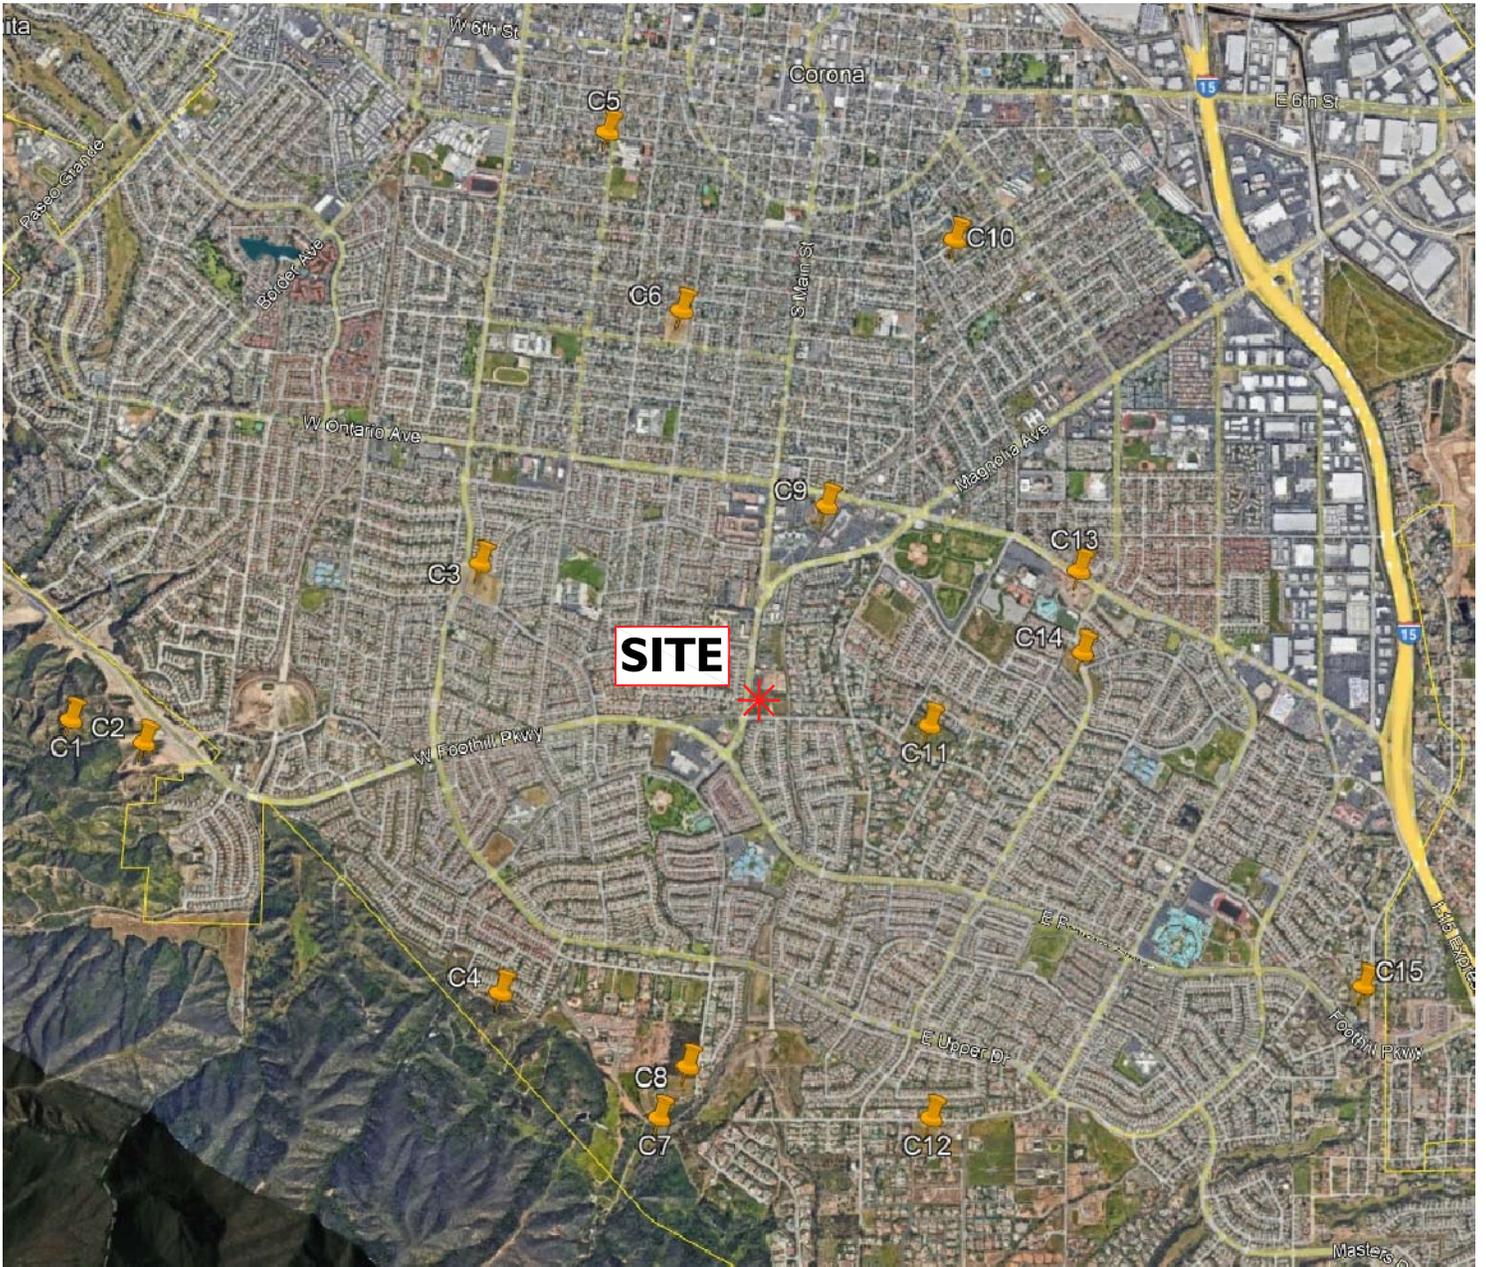

Project Opening Year (2023) With Background Traffic Without Project Conditions traffic volumes are shown on Exhibit 4-6 for the ten (10) study intersections and seven (7) study roadway segments.

4.4 Project Opening Year (2023) With Background Traffic With Project Conditions Traffic Volumes

Project Opening Year (2023) With Background Traffic With Project Conditions traffic volumes consist of one (1) year of annual growth on top of existing (2022) traffic volumes at two percent (2%) per year, plus the traffic generated by the cumulative projects and the traffic generated by the proposed project.

Project Opening Year (2023) With Background Traffic With Project Conditions traffic volumes are shown on Exhibit 4-7 for the ten (10) study intersections and seven (7) study roadway segments.

5.0 Study Intersection Peak Hour LOS Analysis

This section of the report provides a discussion on the study intersection peak hour LOS analysis and findings.

5.1 Existing Conditions LOS

Existing Conditions LOS calculations for the study intersections are shown in Table 5-1 and are based upon the existing (2022) traffic volumes shown on Exhibit 3-2, and the existing geometry shown on Exhibit 3-1.

As shown in Table 5-1, all study intersections are currently operating at an acceptable LOS (LOS D or better) during the peak hours for Existing Conditions.

Detailed LOS analysis worksheets for Existing Conditions are contained in Appendix C.

5.2 Project Opening Year (2023) With Background Traffic Without Project Conditions LOS

Project Opening Year (2023) With Background Traffic Without Project Conditions LOS calculations for the study intersections are shown in Table 5-2 and are based upon the Project Opening Year (2023) With Background Traffic Without Project Conditions traffic volumes shown on Exhibit 4-6, and the existing geometry shown on Exhibit 3-1.

As shown in Table 5-2, all study intersections are forecast to continue to operate at an acceptable LOS (LOS D or better) during the peak hours for Project Opening Year (2023) With Background Traffic Without Project Conditions.

Detailed LOS analysis worksheets for Project Opening Year (2023) With Background Traffic Without Project Conditions are contained in Appendix D.

5.3 Project Opening Year (2023) With Background Traffic With Project Conditions LOS

Project Opening Year (2023) With Background Traffic With Project Conditions LOS calculations for the study intersections are shown in Table 5-2 and are based upon the Project Opening Year (2023) With Background Traffic With Project Conditions traffic

volumes shown on Exhibit 4-7, the existing geometry shown on Exhibit 3-1, and the proposed project-specific improvements illustrated on Exhibit 1-3.

As shown in Table 5-2, all study intersections are forecast to continue to operate at an acceptable LOS (LOS D or better) during the peak hours for Project Opening Year (2023) With Background Traffic With Project Conditions. Based on the agency-established LOS performance thresholds, the project is forecast to not required to contribute to LOS improvements at the study intersections.

Detailed LOS analysis worksheets for Project Opening Year (2023) With Background Traffic With Project Conditions are contained in Appendix E.

6.0 Study Roadway Segment LOS Analysis

This section of the report provides a discussion on the study roadway segment LOS analysis and findings.

6.1 Existing Conditions LOS

Table 6-1 summarizes the study roadway segment LOS analysis results for Existing Conditions.

As shown in Table 6-1, all study roadway segments are currently operating at an acceptable LOS (LOS C or better) for Existing Conditions.

6.2 Project Opening Year (2023) With Background Traffic Without & With Project Conditions LOS

Table 6-2 summarizes the study roadway segment LOS analysis results for Project Opening Year (2023) With Background Traffic Without & With Project Conditions.

As shown in Table 6-2, all study roadway segments are forecast to continue to operate at an acceptable LOS (LOS C or better) for Project Opening Year (2023) With Background Traffic Without Project Conditions.

As also shown in Table 6-2, all study roadway segments are forecast to continue to operate at an acceptable LOS (LOS C or better) for Project Opening Year (2023) With Background Traffic With Project Conditions.

**Table 6-1

7.0 HCM 95th Percentile Queue Analysis

An analysis of the lane storage capacity has been performed to determine if adequate queue storage is currently provided to accommodate the vehicular queues for the following seven (7) movements during the peak hours for all analysis scenarios evaluated as part of this study:

- Int 7: Main Street at Chase Drive
 - Northbound Left-Turn
 - Southbound Left-Turn
 - Eastbound Left-Turn
 - Westbound Left-Turn
- Int 9: Main Street at Project Access 1
 - Southbound Left-Turn
 - Westbound Right-Turn
- Int 10: Project Access 2 at Chase Drive
 - Southbound Left-Turn/Right-Turn

The analysis utilizes the Highway Capacity Manual 6th Edition (HCM 6) 95th percentile vehicular queue methodology and the PTV Vistro analysis software.

Table 7-1 shows the results of the 95th percentile vehicular queue analysis. As previously mentioned in Section 1.2 of this report, the project will construct a 100-foot southbound left-turn pocket at the Main Street project access within the future raised median. Additionally, the project will extend the existing 45-foot westbound left-turn pocket approximately fifty-five (55) feet to provide a 100-foot pocket at the intersection of Main Street at Chase Drive.

As shown in Table 7-1, with the construction of the southbound left-turn pocket at the Main Street project access and the extension of the westbound left-turn pocket at the intersection of Main Street at Chase Drive, adequate queue storage is provided for all seven (7) movements under Project Opening Year (2023) With Background Traffic With Project Conditions.

**Table 7-1
HCM 95th Percentile Queue Analysis Summary**

Intersection	Movement ¹	No. of Lanes	Existing Storage Capacity per Lane (ft) ²	With Project Storage Capacity per Lane (ft) ²	Existing Conditions				Project Opening Year (2023) With Background Traffic Without Project Conditions				Project Opening Year (2023) With Background Traffic With Project Conditions				
					Vehicular Queue (ft) ^{5,6}		Adequate Queue Storage Available?		Vehicular Queue (ft) ^{5,6}		Adequate Queue Storage Available?		Vehicular Queue (ft) ^{5,6}		Adequate Queue Storage Available?		
					AM	PM	AM	PM	AM	PM	AM	PM	AM	PM	AM	PM	
7.	Main Street (N/S) at Chase Drive (E/W)	NB Left-Turn	1	140	140	25 ⁷	25 ⁷	YES	YES	25 ⁷	25 ⁷	YES	YES	25 ⁷	25 ⁷	YES	YES
		SB Left-Turn	1	115	115	56	65	YES	YES	66	72	YES	YES	55	68	YES	YES
		EB Left-Turn	1	100	100	25 ⁷	25 ⁷	YES	YES	25 ⁷	25 ⁷	YES	YES	25 ⁷	25 ⁷	YES	YES
		WB Left-Turn	1	45	100 ³	85	54	NO	NO	96	59	NO	NO	92	80	YES	YES
9.	Main Street (N/S) at Project Access 1 (E/W)	SB Left-Turn	1	--	100 ⁴	--	--	--	--	--	--	--	--	25 ⁷	25 ⁷	YES	YES
		WB Right-Turn	1	--	50	--	--	--	--	--	--	--	--	25 ⁷	25 ⁷	YES	YES
10.	Project Access 2 (N/S) at Chase Drive (E/W)	SB Left-Turn/Right-Turn	1	--	50	--	--	--	--	--	--	--	--	25 ⁷	25 ⁷	YES	YES

¹ NB = Northbound; SB = Southbound; EB = Eastbound; WB = Westbound.

² Through lane storage capacity is measured as the distance to the next intersection. Storage capacity for project access driveway exit lanes is assumed to be fifty (50) feet.

³ Per Exhibit 1-3, the project will extend the existing westbound left-turn pocket approximately fifty-five (55) feet to provide a 100-foot pocket.

⁴ Per Exhibit 1-3, the project will construct a 100-foot southbound left-turn pocket at the Main Street project access within the future raised median.

⁵ Queue reported is the 95th percentile queue per lane.

⁶ HCM Analysis Software: PTV Vistro, Version 2022.

⁷ Although the calculated queue length is less, a minimum of twenty-five (25) feet is assumed for the purposes of this analysis.

8.0 CEQA Vehicle Miles Traveled (VMT) Analysis

In response to Senate Bill (SB) 743, the California Natural Resource Agency certified and adopted new CEQA Guidelines in December 2018 which now identify Vehicle Miles Traveled (VMT) as the most appropriate metric to evaluate a project’s transportation impact under CEQA (§ 15064.3).

Effective July 1, 2020, the previous CEQA metric of LOS, typically measured in terms of automobile delay, roadway capacity and congestion, generally will no longer constitute a significant environmental impact. However, SB 743 does not prevent a city or county from continuing to analyze delay or LOS as part of other plans (i.e. general plans), studies, or ongoing network monitoring. The VMT analysis methodology and thresholds of significance used in this analysis are based on the *Draft City of Corona CEQA Assessment - VMT Analysis Guidelines*, dated January 11, 2019 (VMT Guidelines).

8.1 VMT Screening Criteria

The City of Corona VMT Guidelines utilize screening criteria to determine whether a project may be presumed to have a less than significant impact to VMT. For land use projects, there are three (3) screening criteria that are used to determine impact.

Table 8-1 shows that the project is expected to satisfy the Low VMT Area Screening.

**Table 8-1
VMT Screening Criteria**

Screening Criteria	Description	Satisfied (Yes/No)
Transit Priority Area (TPA)	Project is located within ½ mile radius around an existing or planned major transit stop or an existing stop along a high quality transit corridor.	No
Low VMT Area	Project is located in a TAZ that generates total daily VMT/SP that is less than the baseline level for the City.	Yes ¹
Project Type	Project serves the local community such as retail projects less than 50,000 square feet or neighborhood K-12 school	No

¹ Source: Online WRCOG VMT Screening Tool and the Riverside County Model (RIVCOM).

8.2 VMT Screening Analysis

To identify that the project is located within a low VMT-generating area, the Riverside County Model (RIVCOM) was utilized through the Western Riverside Council of Governments (WRCOG) VMT Screening Tool to determine if the proposed project fulfills the Low VMT Area Screening criteria.

Table 8-2 shows the results of the VMT screening analysis for the proposed project.

Table 8-2
VMT Screening Analysis

Project APN & TAZ	Baseline Year	OD VMT per Service Population
APN: 113340018; TAZ 428	2023	35.1
City of Corona Threshold of Significance (0% Below City Baseline)		40.6
Percent Difference (Project TAZ vs. Jurisdictional Threshold)		-13.45%
Significant Impact?		No

The WRCOG VMT Screening Tool printout is contained in Appendix F.

Based on the results of the WRCOG VMT Screening Tool, the proposed project's TAZ VMT is quantified to be 35.1 VMT per service population, which is less than the City of Corona threshold of significance of 40.6 VMT per service population. Hence, the proposed project satisfies the Low VMT Area Screening procedure.

The project may be presumed to have a less than significant impact to VMT under CEQA. No further VMT analysis is required.

9.0 Findings, Conclusions & Recommendations

The purpose of this traffic impact analysis is to evaluate the proposed Fitness Mania Project (herein referred to as project) from a traffic and circulation standpoint and determine whether the project will have a significant traffic impact. This traffic study has been conducted pursuant to the *City of Corona Public Works Department Traffic Impact Study Guidelines*, dated July 2006 (TIA Guidelines), and the California Environmental Quality Act (CEQA) requirements.

This study has been prepared in accordance with the scope of work previously approved by City of Corona staff.

9.1 Proposed Project

The project site is located at 2895 South Main Street, generally on the northeast corner of South Main Street at Chase Drive, in the City of Corona.

The proposed project consists of constructing and operating a 52,317 square-foot health club/gym facility with ancillary uses that include laundry services, office space, cafeteria/kitchen, retail, and a kids club.

Access to the project site will be provided via the following:

- One (1) full-ingress/right-out only unsignalized access driveway along Main Street; and
- One (1) full-access unsignalized access driveway along Chase Drive.

The construction of the proposed project will include the installation of a raised median along Main Street in front of the project site, as well as the construction of a 100-foot southbound left-turn pocket for the Main Street project access (i.e. Project Access 1). This project-specific improvement will also include the widening of Main Street in front of the project site to be a 4-lane roadway.

Additionally, the proposed project will extend the existing westbound left-turn pocket at the intersection of Main Street at Chase Drive approximately fifty-five (55) feet to provide a 100-foot pocket. The project will also modify the northbound approach of Main Street at

Chase Drive to consist of one (1) left-turn lane, one (1) through lane, and one (1) shared through/right-turn lane.

The project is planned to be completed in 2023 and has been evaluated in one (1) single phase.

9.2 Traffic Study Area & Analysis Scenarios

The study area consists of the following ten (10) study intersections:

1. Main Street at Ontario Avenue (signalized);
2. Magnolia Avenue at Ontario Avenue (signalized);
3. Main Street at Montoya Drive (signalized);
4. Magnolia Avenue at Santana Way (signalized);
5. Magnolia Avenue/Main Street at Main Street (signalized);
6. Main Street at Citrus Way (signalized);
7. Main Street at Chase Drive (signalized);
8. Main Street at Foothill Parkway (signalized);
9. Main Street at Project Access 1 (unsignalized); and
10. Project Access 2 at Chase Drive (unsignalized).

The study area also includes the following seven (7) study roadway segments:

1. Main Street between Ontario Avenue and Montoya Drive (4-lane Major Arterial);
2. Magnolia Avenue between Ontario Avenue and Santana Way (6-lane Major Arterial);

3. Main Street between Montoya Drive and Magnolia Avenue (4-lane Major Arterial);
4. Magnolia Avenue between Santana Way and Main Street (6-lane Major Arterial);
5. Main Street between Magnolia Avenue and Citrus Way (5-lane Major Arterial);
6. Main Street between Citrus Way and Project Access 1 (4-lane Major Arterial); and
7. Main Street between Chase Drive and Foothill Parkway (4-lane Major Arterial).

The analysis evaluates traffic conditions for the following study scenarios during the weekday AM (6:30 AM to 9:00 AM) and weekday PM (4:00 PM to 6:00 PM) peak periods:

- Existing Conditions;
- Project Opening Year (2023) With Background Traffic Without Project Conditions; and
- Project Opening Year (2023) With Background Traffic With Project Conditions.

9.3 Project Trip Generation Summary

Based on the ITE trip generation rates, the proposed project is forecast to generate approximately 1,805 daily trips which include approximately 69 AM peak hour trips and approximately 181 PM peak hour trips.

9.4 Study Intersection Peak Hour LOS Analysis Summary

All study intersections are currently operating, and are forecast to continue to operate, at an acceptable LOS (LOS D or better) during the peak hours for all analysis scenarios evaluated as part of this study.

Based on the agency-established LOS performance thresholds, the project is forecast to not be required to contribute to LOS improvements at the study intersections for Project Opening Year (2023) With Background Traffic With Project Conditions.

9.5 Study Roadway Segment LOS Analysis Summary

All study roadway segments are currently operating, and are forecast to continue to operate, at an acceptable LOS (LOS C or better) for all analysis scenarios evaluated as part of this study.

9.6 HCM 95th Percentile Queue Analysis Summary

Adequate queue storage is currently provided for all seven (7) movements evaluated during the peak hours for all analysis scenarios evaluated as part of this study, with the exception of the following movements:

- Int 7: Main Street at Chase Drive
 - Westbound Left-Turn

It should be noted that with the construction of the southbound left-turn pocket at the Main Street project access and the extension of the westbound left-turn pocket at the intersection of Main Street at Chase Drive, adequate queue storage is provided for all seven (7) movements under Project Opening Year (2023) With Background Traffic With Project Conditions.

9.7 CEQA Vehicle Miles Traveled (VMT) Analysis Summary

Based on the results of the WRCOG VMT Screening Tool, the proposed project's TAZ VMT is quantified to be 35.1 VMT per service population, which is less than the City of Corona threshold of significance of 40.6 VMT per service population. Hence, the proposed project satisfies the Low VMT Area Screening procedure.

FITNESS MANIA PROJECT
Traffic Impact Analysis
Revised Scoping Agreement

July 14, 2022

The following provides information on the proposed project, summarizes the analysis scope, parameters, and assumptions for review and approval, and also includes request for information on items related to the study.

A. Project Description: The proposed Fitness Mania Project (hereinafter referred to as project) is proposed to consist of the construction and operation of a 52,317 square-foot health club/gym facility with ancillary uses that include laundry services, office space, cafeteria/kitchen, retail, and a kids club. **It should be noted that the project description has yet to be finalized and based on feedback from the City regarding this scoping agreement, the site plan could be revised slightly to accommodate any comments received by the City.**

The project site is located at 2895 S. Main Street, generally on the northeast corner of South Main Street and Chase Drive, in the City of Corona.

The project will be evaluated in a single phase and is planned to open in 2023.

Access to the project is proposed via one (1) full-ingress/right-out only unsignalized driveway located along Main Street and via one (1) full-access unsignalized driveway located along Chase Drive. It is RK's understanding that Main Street will be widened to its ultimate width with the construction of the project (i.e. two travel lanes in both the northbound and southbound directions). Furthermore, as part of the construction of the project, it is understood that it will be the responsibility of the developer to install a raised median on Main Street along the project frontage.

Exhibit A shows the location of the proposed project. Exhibit B-1 shows the proposed site plan. Exhibit B-2 shows the latest proposed site plan with a conceptual hand-sketch of the raised median opening to allow for southbound left-turn access at the project driveway along Main Street.

B. Project Trip Generation: Trip generation represents the amount of traffic that is attracted and produced by a development.

Trip generation is typically estimated based on the trip generation rates from the latest *Institute of Transportation Engineers (ITE) Trip Generation Manual*. The latest and most recent version of the *ITE Trip Generation Manual* (11th Edition, 2021) has been utilized for this scoping agreement. This publication provides a comprehensive evaluation of trip generation rates for a variety of land uses.

Table 1 shows the ITE trip generation rates utilized for the trip generation analysis of the proposed project land use.

**Table 1
ITE Trip Generation Rates¹**

Land Use	Units ²	ITE Code	AM			PM			Daily
			In	Out	Total	In	Out	Total	
Health/Fitness Club	TSF	492	51%	49%	1.31	57%	43%	3.45	34.50 ³

¹ Source: *ITE Trip Generation Manual* (11th Edition, 2021)

² TSF = Thousand Square Feet

³ *ITE Trip Generation Manual* (11th Edition, 2021) does not provide a daily trip rate for Land Use 492. As such, the daily rate is assumed to be 10 times the PM peak hour trip rate.

Table 2 shows the trip generation for the proposed project utilizing the trip generation rates shown in Table 1.

**Table 2
Project Trip Generation¹**

Land Use (ITE Code)	Quantity	Units ²	AM			PM			Daily
			In	Out	Total	In	Out	Total	
Health/Fitness Club (492)	52.317	TSF	35	34	69	103	78	181	1,805

¹ Source: *ITE Trip Generation Manual* (11th Edition, 2021)

² TSF = Thousand Square Feet

As shown in Table 2, based on the preliminary evaluation of the project trip generation utilizing the Institute of Transportation Engineers (ITE) trip generation rates, the proposed project is forecast to generate approximately 1,805 daily weekday trips, which include approximately 69 AM peak hour trips and 181 PM peak hour trips.

C. Project Trip Distribution: Exhibit C-1 shows the outbound project trip distribution for the proposed project. Exhibit C-2 shows the inbound project trip distribution for the proposed project.

D. Study Intersections: The analysis will evaluate the following eight (8) study intersections:

1. Main Street (N/S) at Ontario Avenue (E/W);
2. Magnolia Avenue (N/S) at Ontario Avenue (E/W);
3. Main Street (N/S) at Montoya Drive (E/W);
4. Magnolia Avenue (N/S) at Santana Way (E/W);
5. Magnolia Avenue/Main Street (N/S) at Main Street (E/W);
6. Main Street (N/S) at Citrus Way (E/W);
7. Main Street (N/S) at Chase Drive (E/W); and
8. Main Street (N/S) at Foothill Parkway (E/W).

The two (2) proposed access points will also be analyzed.

The analysis will also evaluate the following seven (7) study roadway segments for level of service for one typical weekday:

1. Main Street between Ontario Avenue and Montoya Drive;
2. Magnolia Avenue between Ontario Avenue Santana Way;
3. Main Street between Montoya Drive and Magnolia Avenue;
4. Magnolia Avenue between Santana Way and Main Street;
5. Main Street between Magnolia Avenue and Citrus Way;

6. Main Street between Citrus Way and Main Street Project Access; and
7. Main Street between Chase Drive and Foothill Parkway.

E. Analysis Scenarios: The analysis will evaluate traffic conditions for the following scenarios during the weekday AM (6:30 AM to 9:00 AM) and weekday PM (4:00 PM to 6:00 PM) peak hour conditions:

- Existing Conditions;
- Project Opening Year (2023) With Background Traffic Without Project Conditions;
- Project Opening Year (2023) With Background Traffic With Project Conditions.

F. Traffic Analysis Parameters: The analysis will utilize the following parameters:

- Vistro 2022 analysis software and the Highway Capacity Manual 6th Editions (HCM 6) methodology.
- Optimized Signal Timing.

G. Existing Traffic Counts: The analysis will utilize new traffic counts. New traffic counts will be conducted after August 9th once local schools return from summer break and resume normal instruction. The counts will not be collected by vehicle classification.

- AM peak period counts will be collected during one typical weekday from 6:30 AM to 9:00 AM.
- PM peak period counts will be collected during one typical weekday from 4:00 PM to 6:00 PM.

H. Forecast Opening Year (2023) Conditions Traffic Volumes: Opening year (2023) background traffic volumes will be derived by applying an annual growth rate of two percent (2%) per year to existing traffic volumes and addition of traffic associated with specific cumulative projects in the area provided by the City of Corona Staff.

I. Performance Criteria:

City of Corona Study Intersections: In accordance with the City's General Plan, the following intersection level of service (LOS) thresholds from the General Plan shall be implemented using the current Highway Capacity Manual (HCM).

- **LOS C** or better shall be maintained for local intersections in residential/industrial areas
- **LOS D** or better shall be maintained on collector and arterial intersections
- **LOS E** will be permitted for the following intersections:
 - Lincoln Avenue at SR-91
 - Main Street at SR-91
 - McKinley Avenue at SR-91
 - Hidden Valley Parkway at I-15
 - Cajalco Road at I-15
 - Weirick Road at I-15
 - Other locations as approved by the City Engineer

Hence, all of the eight (8) study intersections for this analysis would be required to perform at LOS D or better.

J. Significant Impact Criteria: Per the *City of Corona Traffic Impact Study Guidelines*, dated July 2006, and in accordance with the City's General Plan, feasible measures must be identified to mitigate any impacts to the levels identified below for Project Opening Year with Background Traffic Plus Project:

1. If a project causes a facility that is projected to operate at an acceptable LOS with opening year background traffic, to operate at an unacceptable LOS, then mitigation measures shall be identified for which the project shall be responsible to bring the facility back to an acceptable LOS.
2. In addition, developments that require a change in zoning from that shown in the current General Plan shall be responsible for mitigating impacts caused to City facilities by the zoning change back to an acceptable LOS.

3. If a project causes an impact to a facility operating at an unacceptable LOS with background traffic, then a mitigation measure shall be identified for which the project should pay a “fair share.”

K. Vehicles Miles Traveled (VMT) Analysis:

Effective July 1st, 2020, the longstanding metric of roadway level of service (LOS), which is typically measured in terms of vehicle delay, roadway capacity and congestion, will no longer be considered a significant impact under the California Environmental Quality Act (CEQA). Pursuant to CEQA Guidelines, Section 15064.3, VMT is now the most appropriate measure of transportation impacts.

The City of Corona has provided a memorandum *Draft City of Corona CEQA Assessment – VMT Analysis Guidelines*, dated January 11, 2019, prepared by Fehr & Peers, to provide recommendations in the form of thresholds of significance and methodology for identifying VMT related impacts.

To identify if the project is in a low VMT-generating area, the Riverside County Transportation Analysis Model (RIVCOM) was utilized through the Western Riverside County Council of Governments (WRCOG) VMT screening tool website to determine if the proposed project fulfills the Low VMT Area Screening criteria

The results of the VMT screening analysis are summarized in Table 3. The WRCOG VMT Screening Tool printouts are provided in Attachment A.

Table 3
VMT Screening Analysis¹

Project APN & TAZ	Baseline Year	OD VMT per Service Population
APN: 113340018; TAZ 428	2023	35.1
City of Corona Threshold of Significance (0% Below City Baseline)		40.6
Percent Difference (Project TAZ vs. Jurisdictional Threshold)		-13.45%
Potentially Significant Impact?		No

Based on the results of the WRCOG VMT Screening Tool, the proposed project’s TAZ VMT is quantified to be 35.1 VMT per service population, which is less than the City of Corona Threshold of Significance of 40.6 VMT per service population. Hence, the proposed project satisfies the Low VMT Area Screening procedure.

The project may be presumed to have a less than significant VMT impact under CEQA. Thus, no further VMT analysis is required.

L. Project Access Queuing Analysis: RK will perform a queueing analysis utilizing HCM 95th percentile queue evaluation methodology for the two (2) proposed access points as well as the intersection of Main Street at Chase Drive. The study will evaluate any potential spill over from turn pockets into through lanes or into adjacent intersections.

M. On-Site Circulation: On-site circulation will be reviewed and an exhibit will be included as part of the final traffic study.

N. Request for Information: Please provide information on the following for use in the traffic study:

- Information on cumulative projects that need to be included in the traffic analysis (location, land use type(s), and land use quantities); and
- Information on future roadway and circulation system modifications/improvements that are planned within the study area and would potentially affect the analysis.

If you have any questions, or would like further review, please call us at (949) 474-0809.

Sincerely,
RK ENGINEERING GROUP, INC.

Justin Tucker, P.E.
Principal Engineer
