Executive Summary

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the City of Corona, California (Site) (Figures 1 & 2). This ESA was prepared to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your efforts to acquire and redevelop the Site with a new industrial building. The Site is located to the northeast of the intersection of Magnolia Avenue and El Camino Avenue, at 1375 Magnolia Avenue in Corona, California. The Site is identified as Riverside County Assessor Parcel Number 107-030-022-3 and covers approximately 16 acres. HMC prepared an ESA for the Site in 2020 and this report updates that previous assessment.

The Site is occupied by two divisions of McWane for manufacturing and distribution of fire hydrants, gaskets, clamps and related metal valves. Approximately 40% of the property was recently used for machining, product finishing and testing, and product storage. The remaining 60% includes asphalt-paved parking areas and unpaved areas. Since the date of the previous ESA, one division that stored fire hydrants and other materials for distribution has vacated the property and the remaining two divisions have continued to operate as previously noted and are in the process of vacating. There were no reports or signs of new spills or releases of hazardous materials since the prior ESA though as part of remedial work, an area of additional impact was discovered.

The Site is roughly triangularly shaped and located in a developing area that includes a mix of historic industrial, commercial and retail uses. The Site is relatively flat with an elevation of approximately 648 feet above mean sea level (msl) with a regional slope to the north northwest.

The Site is bound:

- to the north by a drainage feature referred to as Temescal Wash;
- on the east by Temescal Wash and Magnolia Avenue across which are industrial developments;
- to the south by Magnolia Avenue across which is a relatively new business park; and,
- to the west by El Camino Avenue beyond which is a shopping center.

Key findings of this Phase I ESA are as follows:

- The Site and Site vicinity were observed to have historically been part of a drainage feature from the earliest photographs available until the 1950s when the plant was first constructed.

- The Site has been used for metal forging and casting and more recently the manufacture of fire hydrants, gaskets, clamps and related products.

- The historic operations at the Site led to previous remedial efforts overseen by the RCDEH including removal of the former foundry waste, removal of sand blast residue, general site cleanup (1994-1995) as well as the removal and closure of four USTs (1993). No releases were found as part of the UST closure. The work was done to the satisfaction of the RCDEH and the current inspections by the County do not document continued concern. These items would be considered Historical RECs in our opinion with no further action necessary.

- As part of the operations, chemicals were used and released at the Site. The Site has been subject to a thorough fence line to fence line review and investigation by the DTSC through the Corrective Action Process (2000-present). This has included an evaluation of all of the suspect uses and features at the Site and involved soil, soil gas and groundwater.

- The investigation conducted by DTSC (2000-present) at the Site to date has found evidence of metals, PCBs and hydrocarbons in shallow soil at the Site at elevated concentrations. VOCs were not found to a concern in the subsurface and there was no evidence of groundwater impact from the Site. Due to the findings of PCBs t the Site, EPA ws notified as they have exclusive jurisdiction over PCB cleanups.

- The previous owners implemented a remedial plan for the Site as presented in the CMS Implementation report (CMSIR). The CMS identified excavation (AOC-7) and capping in place (AOC-1, AOC-5, and AOC-7) as the selected remedy. In addition,

a “Risk Based Application” (RBA) was prepared to present a remedial plan for the PCB cleanup which was approved.

- As part of the transaction, Clow implemented the work for the CMSIWP including capping AOC-1 and AOC-5 and recording of all the required documents so that the case will be considered closed. The field work was conducted between July and October 2021 and the asphalt cap put in place as documented in the CMSIR. DTSC approved the CMSIR dated October 25, 2021 with their letter dated April 14, 2022.

- During the field work described above, additional areas were found to contain PCBs in shallow soil. After notification was made to EPA, an investigation was conducted across the Site to assess the lateral extent of PCBs at the Site as presented in the report entitled PCB Soil Investigation Report dated October 29, 2021. The soil results related to PCB including supplemental sampling were summarized in a document titled Risk-Based Approval Application (April 25, 2022). It appears that foundry sand containing PCBs may have been used as fill in certain areas of the Site. Clow proposed to EPA that the previous approval described above be amended and that the “hot spots” be removed from the Site and all of the remaining soil containing PCBs be retained on Site under a TSCA Cap. The hot spot removal is currently planned for February 2023. The TSCA Cap would actually be the future building slabs and pavement sections. EPA approved the revised Risk Based Application on June 26, 2022.

- An LUC was recorded on Title which restricts certain sensitive uses such as residential, hospitals, day care and others, and requires any changes or disturbances to the Site be conducted pursuant to an approved Soil Management Plan (SMP) after notice is given to DTSC. Annual inspections are required with a report submitted to DTSC confirming the terms of the LUC are being complied with. The LUC will be revised and re-recorded upon completion of the pending field work.

- It is our understanding that your plans for the Site call for redevelopment of the Site with industrial buildings. This would entail demolition of all improvements at the Site and then grading of the Site including over excavation and recompaction of soil as necessary for geotechnical and civil specifications. Specifically, the existing cap at the Site would be removed and then replaced following the grading

as part of the development. Such work would in essence remove the cap from the Site and require notification to DTSC and EPA and must be conducted pursuant to the SMP and most recent Risk Based Application. This will specifically include that all PCB waste be managed under a TSCA cap which would include at least 6" of concrete. It is our understanding that your development will include 6" of concrete for foundations and truck courts and would in essence serve as the TSCA Cap.

- The SMP presents the procedures to be used to move and handle soil at the Site including procedures for stockpiling, monitoring for general health and safety concerns, requirements for either reuse on site or off-site disposal of impacted material and chemical testing requirements for potential import soil that may be necessary. The SMP presents the procedures to manage the known impacts at the Site on Site and also presents the procedures to be used to respond to potential unknown conditions. In addition to the general requirements of the SMP, grading at the Site will also be subject to AQMD Rule 1466.
- The buildings were reported to have been built in the 1950's through the 1960's during a time when asbestos was commonly found in construction materials. Suspect asbestos containing materials were observed at the Site including drywall, joint compound, ceiling tiles, vinyl floor tile, acoustic ceilings, and mastic.

Conclusions

We have performed a Phase I Environmental Site Assessment in accordance with ASTM E1527-13 Guidelines for the property located at 1375 Magnolia Avenue in Corona, California. The following REC was identified during this investigation:

- The Site has had releases of hazardous substances which are the subject of a current remedial action under the regulatory direction of DTSC and EPA. This includes metals and hydrocarbons in soil which were remediated as approved by DTSC. Future grading activities are subject to a SMP as well as the requirements in a Risk Based Application to address the PCBs present at the Site.

- There were also previous remedial actions taken including the removal of sand blast residue and the closure of four USTs by the County of Riverside. These

would be considered Historic RECs in our judgment. There were no Controlled RECs found.

While not an REC by ASTM standards, the buildings were reported to have been built in the 1950's through the 1960's during a time when asbestos was commonly found in construction materials. Suspect asbestos containing materials were observed at the Site including drywall, joint compound, ceiling tiles, vinyl floor tile, acoustic ceilings, and mastic.

Recommendations

Based on the findings of this ESA, we recommend the following:

- The Risk Based Application that was approved by EPA should be implemented to obtain a closure certification. Grading at the Site is subject to the SMP.
- The buildings to be demolished may contain asbestos and an asbestos survey will be necessary prior to any disturbance to ACMs so that such ACMs can be abated prior to demolition.
- The future development will be subject to the LUC, SMP and OM Plans which should be reviewed and followed during development. The LUC will need to be revised and re-recorded upon completion of Site development to reflect the updated Site conditions once the SMP And CAP is installed.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Clow Inc. Manufacturing Facility

1375 Magnolia Ave Corona, California

1. INTRODUCTION

Hazard Management Consulting, Inc. (HMC) is pleased to submit this Environmental Site Assessment (ESA) for the property referenced above in the City of Corona, California (Site) (Figures 1 & 2). This ESA was prepared to evaluate the Site for potential Recognized Environmental Conditions (RECs) that may be present and was conducted as part of your efforts to acquire and redevelop the Site with a new industrial building. The Site is located to the northeast of the intersection of Magnolia Avenue and El Camino Avenue, at 1375 Magnolia Avenue in Corona, California. The Site is identified as Riverside County Assessor Parcel Number 107-030-022-3 and covers approximately 16 acres. HMC prepared an ESA for the Site in 2020 and this report updates that previous assessment.

The Site is occupied by two divisions of McWane for manufacturing and distribution of fire hydrants, gaskets, clamps and related metal valves. Approximately 40% of the property was recently used for machining, product finishing and testing, and product storage. The remaining 60% includes asphalt-paved parking areas and unpaved areas. Since the date of the previous ESA, one division that stored fire hydrants and other materials for distribution has vacated the property and the remaining two divisions have continued to operate as previously noted and are in the process of vacating. There were no reports or signs of new spills or releases of hazardous materials since the prior ESA though as part of remedial work, an area of additional impact was discovered.

1.1. Objective

In accordance with the ASTM E 1527-13 Standard Practice for Environmental Site Assessments, the objective of the ESA is to assess, to the extent feasible under the standard, the likelihood that Recognized Environmental Conditions (RECs), as defined by ASTM, are present at the Site.

A Recognized Environmental Condition “means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate

an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies" (ASTM Standard Practice E1527-13). Performance of a Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for Recognized Environmental Conditions in connection with a property, within reasonable limits of time and cost.

All Appropriate Inquires (AAI) as defined in the Final Rule (40 CFR, Part 312), must be conducted by persons seeking the landowner liability protections under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) prior to acquiring a property or seeking or receiving federal brownfields grants under the authorities of CERCLA. The purpose of AAI, as defined in the AAI Final Rule, is to identify releases and threatened releases of hazardous substances, which cause or threaten to cause the incurrence of response costs. The U.S. Environmental Protection Agency (EPA) has stated that ASTM Standard E-1527-13 is consistent with the Standards and Practices for AAI and is compliant with the statutory criteria for AAI.

1.2. Scope of Services, Methodology and Limitations

The findings of this ESA must be viewed in recognition of certain limiting conditions. The scope of work commissioned for this project does not represent an exhaustive study, but rather a reasonable inquiry, consistent with good commercial practice, in general accordance with ASTM Practice E-1527-13.

The scope of work for this ESA included the following activities:

- A site walk to document the current condition of the Site and neighboring facilities.
- Review of a regulatory database report.
- Review of previously prepared reports for the Site.
- Interviews with the current Owner of the Site and User of the report.

- Review of historical references including aerial photographs, city directories, Sanborn Maps and topographic maps.
- On-line research and file review requests concerning the Site and suspect off site sources at the State of California Regional Water Quality Control Board (RWQCB) and Department of Toxic Substances Control (DTSC) websites.
- Discussions with the regulators for the Site regarding the investigations conducted to date and remaining remedial issues.
- Review of records maintained by the Riverside County Environmental Health Department.
- Preparation of this report of findings.

In the course of this assessment, HMC has relied on information provided by outside parties, such as regulatory agencies, previous reports and interview sources. For the purpose of this assessment, such third-party information is assumed to be accurate unless contradictory evidence is noted, and HMC does not express or imply any warranty regarding information provided by third-party sources.

2. SITE DESCRIPTION

2.1. Site Setting

The Site is roughly triangularly shaped and located in a developing area that includes a mix of historic industrial, commercial and retail uses. The Site is relatively flat with an elevation of approximately 648 feet above mean sea level (msl) with a regional slope to the north northwest.

The Site is bound:

- to the north by a drainage feature referred to as Temescal Wash;
- on the east by Temescal Wash and Magnolia Avenue across which are industrial developments;
- to the south by Magnolia Avenue across which is a relatively new business park; and,
- to the west by El Camino Avenue beyond which is a shopping center.

Utilities at the Site are provided by:

- Electricity: Southern California Edison
- Natural Gas: Southern California Gas Company
- Water/Sewer: City of Corona

2.2. Regional Geology and Hydrogeology

The geology and hydrogeology were identified in the report titled Addendum to Preliminary Endangerment Assessment and Facility Investigation (Environmental Support Technologies, July 24, 2003) and excerpts are provided below:

Regional Geology

The Site is located in Riverside County within the Corona-Elsinore Trough, a graben-like-valley that extends from Corona to Elsinore. The Corona-Elsinore Trough is located within the Peninsular Ranges geomorphic province. The Santa Ana Mountains and the Elsinore Fault Zone bound the Corona-Elsinore Trough on the southwest. The Gavilan Hills, part of the Perris Block, bounds the Corona-Elsinore Trough on the northeast. The Site is situated on the northeast edge of the alluvial fan surface that slopes gently from the Santa Ana Mountains, extending northeasterly through Corona toward Temescal Wash. Temescal Wash is approximately ½ mile southeasterly of the Site.

Local and Site Geology

Surficial materials at the Site are comprised of Holocene Older and Younger alluvium and bedrock. The younger alluvium consists of unconsolidated sand, gravel, and silt associated with the intermittent Temescal Wash. The active channel for the Temescal wash bounds the northeast portion of the Site and flows to the west as a cemented flood channel. The older alluvium consists of semi-consolidated buff to dark brown, sand, gravel, and silt associated with the alluvial deposits upgradient (south) of the Site. The bedrock consists of siltstone units possibly associated with the Miocene-Puente formation and weathered metamorphosed volcanic rock (Santiago Peak Volcanic). The siltstone is exposed in the hills located immediately south of the Site at 750 feet above mean sea level (msl). Crystalline bedrock thought to be Corona Hornblende Granodiorite Porphyry crops out in the foothills approximately 3 miles south of the Site.

Previous consultants investigating surrounding properties identified layers of gravelly sand (1-5 feet below ground surface [ft bgs]), sand and silty clay (20-30 ft bgs), gravelly sand (25-40 ft bgs) and clay 55-60 ft bgs). Drilling refusal has occurred several times at approximately 20 ft bgs indicating the presence of dense consolidated silty clay and gravelly material at that depth. Multiple dense, laterally discontinuous clay lenses have been reported to occur between 40-50 ft bgs, 62-81 ft bgs, and 90-103 ft bgs (AESI, 2002). Investigations conducted on-Site encountered sand and gravel mixtures with refusal on cobbles occurring commonly.

Local Hydrogeology

Groundwater depths in the vicinity of the Site have been reported to range from 23-28 ft bgs and from 42-47 ft bgs (AESI, 2002), presumably as perched layers related to the clay layers described above. The regional aquifer is reported to start at 124 ft bgs. Recovery depths of groundwater in Corona municipal wells in the early 2000's were approximately 190-193 ft bgs. In addition, a westerly gradient was observed following the overall direction of discharge from the Temescal River to the Santa Ana River. Groundwater was also estimated to be approximately 45 ft bgs traveling into the gravely Temescal Wash downgradient of the Site (AESI, 2002). Groundwater beneath the Site was encountered at approximately 47 ft bgs in coarse granular material composed of sand and gravel (Fero, 2006b).

In addition, the groundwater beneath the Site is identified as Temescal Hydrologic Sub Area within the Middle Santa Ana River Basin with beneficial use designations including municipal and domestic supply (MUN), agricultural supply (AGR), industrial service supply (IND), and industrial process supply.

3. INTERVIEWS AND USER PROVIDED INFORMATION

The User of this report is Western Realco who is looking to acquire the Site and would be considered a "User" of the report per ASTM definitions. We requested all available information from the User and were provided a Preliminary Title Report and access to select investigation documents. We were able to interview Mr. Jeremy Mape of Western Realco who indicated his firm has no unique knowledge or background on the Site and is aware there is ongoing environmental remedial action as it was disclosed by the seller.

They are paying full market value for the Site with an understanding of the known environmental conditions.

3.1. Title Records

A Title Report (Report) prepared by Ticor Title Company dated November 5, 2019 was provided to HMC for review. The Report stated that Title was vested in McWane Inc. The report included information regarding tax obligations, mortgage liens, easements for various utilities and related matters but did not contain any information of an environmental nature.

3.2. Owner/User Knowledge

We interviewed Ms. Tiffany Smith who provided an overview of the Site operations and led Mr. Cousineau of a tour of the facility and also answered all of our questions. We were also able to discuss the Site with Mr. Larry Bowers of McWane (Corporate Parent of Clow) who also provided with copies of the various investigatory documents prepared for the Site as listed in the references herein as well as certain permits and records included in Appendix C.

3.3. Environmental Liens or Activity and Use Limitations

A Land Use Covenant (LUC) recorded on Title for the Site. There is a draft LUC that is currently being finalized and will be recorded against Title upon completion of the outstanding remedial actions. A copy of the LUC is included in Appendix C.

4. SITE USE AND HISTORY

Past usage of the subject Site was assessed through a review of historical aerial photographs, topographic maps and an EDR search of city directories and prior reports. Sanborn maps were generated for the Site.

4.1. Aerial Photograph Review

Aerial photographs covering the Site were obtained from Environmental Data Resources, Inc. (EDR). Photographs were available from the period 1931 through 2016. Copies of the aerial photographs are included in Appendix B. A summary of the observations noted from the aerial photographs are as follows:

1931-53 In the photograph from 1931, the Site and immediate Site vicinity were noted to be open undeveloped land. The Site appeared to be in a drainage wash with a road in the current location of Magnolia present to the south. South southwest of the Site across Magnolia was a lowland that appeared to have been filled over time and was used as a landfill. Agricultural uses were noted to the northeast, northwest and west of the Site.

1959 The photograph from 1959 shows the first development of the Site with a single industrial building located in the center of the Site. Limited development was noted west and northeast of the Site.

1961 A small addition to the building was noted along the east and what appears as a small guard shack was noted along the southwest side of the Site. Industrial developments were noted to the west and northeast of the Site.

1967 Significant changes had occurred on Site since the previous photograph including/ the addition of numerous buildings to the north and east of the initial building. The office building along the southeast was in place and outdoor storage was taking place along Magnolia. No significant changes were noted in the Site vicinity.

1975-94 Significant changes to the Site were not seen in this photograph. The adjacent wash was channelized between the time of the 1975 and 1985 photographs.

2006 No significant changes were noted at the Site though several changes were noted in the Site vicinity including the construction of a business park to the south of/ the Site and the conversion of the industrial facility to the west into a shopping center.

2009- 2016 No significant changes were noted at the Site or the Site vicinity other than continued development of commercial/industrial facilities in the vicinity of the Site.

4.2. Topographic Maps

Historical topographic maps were also reviewed as part of this effort and aided in interpreting the overall Site history. Although, no specific observations were made from

the review of these maps with the exception that the property south of the Site that was noted to have been filled over time was labelled on the 1954 topo map as “city dump”, confirming that it was a landfill.

4.3. Sanborn Maps

Sanborn maps are maps that were created for the insurance industry to document site activities in metropolitan areas of the country and were used in underwriting. They often times contain detailed information about a site. While they were prepared for insurance underwriting and were not environmental maps per se, they often times contain information that is useful in evaluating the historical use of a site. Sanborn maps were not available or prepared for the Site.

4.4. EDR City Directory Review

EDR performed a search of the City Directory records for the Site addresses provided at the initiation of this Phase I ESA and nearby properties at approximately five-year intervals. Review of this report yielded the following findings:

1970:	Rich Valve Company
1977:	Clow Corp and Rich Valve Co and Rich Mfg Co of Cal
1981:	Rich Mfg Co of Calif & Rich Valve Co.
1990:	Clow Valve Co
1993:	Clow Valve Co, Clowus
1996	Clow Valve Co, Mercury Rubber Products, Pacific States Cast Iron Pipe Co, Powerdrill
2001	Clow Valve Co, Iron Pipe Co
2002	Clow Valve Co, Pacific States Cast Iron, Pipe Co.
2005	McWane Inc.
2010	M H Valve Ca

4.5. Preliminary Endangerment Assessment

As part of the corrective action investigation conducted at the Site as described in Section 5 below, a Preliminary Endangerment Assessment (PEA) was prepared for the Site by EST in 2004. The PEA is the first step in the CA process and is similar to a Phase One ESA in that it reviews the historical, current and neighboring uses to assess whether there are areas of/ concern at the Site that would require further evaluation. The following historical summary was obtained from the PEA.

American Foundry used the property during the 1950s to manufacture iron pipes and fittings. An aerial photo from this time period shows only what appears to be the former brass foundry building onsite. Rich Manufacturing (Rich) occupied the property in 1960 and continued iron pipe construction. Rich erected two new buildings (the machine shop and the former iron foundry (Current ANACO Building), and operated the foundries and machine shop until approximately 1970.

Clow purchased the property in 1972 and began to manufacture fire hydrants and associated equipment. The fueling operations in the rail-spur area were discontinued in the late 1970's. Clow shut down the iron and brass foundries in 1982 and most equipment was removed from the iron foundry; however, brass foundry operation was restarted in 1983. McWane, Inc. (McWane) purchased Clow in 1985 and assumed ownership of the property and facility.

The brass foundry was shut down in 1991 and only assembly and warehousing operations were performed from 1992 through 1995. The four USTs were removed in December 1993 . Foundry sand, shallow excavated soil, bag-house dust, and the test pond were removed during July to October 1994. Berms were placed around areas of concern identified by county inspectors in 1994. Six (6) large transformers were removed in 1997 and replaced with four (4) new dry-type transformers. The asphalt dip tank was removed in approximately 1997. Stormwater pollution control devices were installed in2001.

Clow currently machines, assembles, pressure-tests, and paints fire hydrants, valves, and associated equipment only on the western portion of the property. The unused foundry buildings, small offices, and open areas at the eastern and northern portions of the site have since been leased to a succession of tenants. The former iron found1y building was occupied by DH Enterprises, an automobile tire recycler. Used tires would

be delivered to the site in large steel bins, shredded into bins, and then shipped out via truck. The former iron foundry currently houses ANACO, a pipe fitting manufacturer.

The former brass foundry building was partitioned in half, with the eastern po1tion used by Clow as a product storage area, and the western portion housing Tyler Pipe Shipping. The Tyler Pipe Shipping operation consists of an office and outside storage of large-diameter cast piping. Uncovered and plastic-wrapped pipe fittings are stored on wooden pallets and are periodically loaded onto trucks using a propane-powered forklift.

The southern comer portion of the property with the small office building was occupied by Mercury Rubber during the 1980 's. Used automobile tires were stored and shredded on this portion of the site, then shipped out. After the Mercury Rubber facility was abandoned by its operator, Clow removed the tires and equipment.

4.6. Summary

The Site was historically undeveloped land until construction of the first building on site in the 1950s. The Site expanded through the 1970s to the current configuration of the Site. The Site vicinity was similar with some industrial developments noted in the 1950s with expansion over time. A landfill was noted to the south of the Site.

The Site was originally developed for the production of iron pipes and connections by American Foundry in approximately 1950 (AESI, 2002). In 1960, Rich Manufacturing of Los Angeles acquired the property and moved their iron pipe manufacturing business to the Site, adding additional structures in 1967 for a machine shop and brass foundry. Clow Valve, acquired Rich Manufacturing Company of Corona in 1972. In 1985, McWane, Inc. purchased all of Clow Corporation's stock and Clow became a wholly owned subsidiary and eventually operating division of McWane.

5. REVIEW OF ENVIRONMENTAL INVESTIGATIONS AND REMEDIAL PLAN

The Site operated as a manufacturing facility for many years generating and disposing of hazardous waste. The Site has been regulated since the 1980s initially by the County of Riverside Department of Environmental Health (RCDEH) and also the California Department of Toxic Substances Control (DTSC).

The County is the Certified Unified Program Agency (CUPA) for Riverside County and oversees facilities that generate hazardous waste including UST permitting and Site investigations. The County required site cleanup activity beginning in 1989 and oversaw removal and cleanup activities at the Site in the early 1990s and also oversaw the closure of USTs in 1993. They later responded to a fire at the facility that led to removal of waste and soil sampling and continue to conduct compliance inspections at the facility.

DTSC oversees facilities where hazardous waste treatment, among other activities, occurs and the facility did maintain a permit to treat certain waste streams at the Site thus bringing the facility under the regulatory oversight and closure of DTSC. DTSC conducted a compliance inspection in 2000 and determined that releases of hazardous waste had occurred at the Site and required a Site Investigation to be conducted under their "Corrective Action" process. At this point, the oversight of subsurface investigations transferred to DTSC. DTSC entered into a Corrective Action Consent Agreement (CACA) with Clow and oversaw a series of investigations at the Site that concluded with a Corrective Measures Study (CMS) laying out the proposed remedial plan for the Site. That plan was about to be implemented at the time of this ESA.

Copies of select figures and tables from these investigations are presented in the Figures Section of this report with copies of information from the County Files and most recent reports to DTSC presented in Appendix C and D respectively.

5.1. County of Riverside

The initial investigations conducted at the Site were overseen by the RCDEH beginning with inspections of the facility in 1982. Many issues noted related to the historic foundry activities which were closed but wastes remained in place as well as the then current operations of Clow. Several violations were noted including stockpiles of foundry waste which were suspect as being hazardous, metal containing dust on the concrete floors, storage practices for chemicals in use on Site, a settling pond that was noted to contain hydrocarbons and what was thought to be metal containing waste, USTs that were not in compliance with UST regulations among other requirements. In 1993, the RCDEH directed the facility to remove the stockpiles and other waste materials, close the pond, permit or remove the USTs, sample and remove any area of impacted soil, modify

housekeeping practices and oversaw the implementation of this directive through 1994. Copies of the relevant files from the RCDEH files are included in Appendix C.

Underground Storage Tanks

The Site formerly maintained four Underground Storage Tanks (USTs) which were used for the storage of automotive fuel and oil. The USTs were removed in 1993 under oversight and direction of the County Fire and Health Departments. There was no evidence of a release noted and soil samples collected upon removal of the USTs were not reported to contain contaminants of concern. The Health Department approved closure of the USTs and no further action was required. A copy of this approval is included in Appendix E.

Foundry Waste & Sandblast Material Cleanup

As part of their inspection, the County noted numerous areas where site cleanup was required as noted above. The stockpiles of foundry sand was profiled and disposed of off-site. The surface dust and metal containing materials were swept up and consolidated before being disposed of off- site as was the impacted soil noted in these areas. All of the material in the pond was also removed along with the other requirements of the County. This work was completed in 1994 and 1995 to the satisfaction of the County as noted in a subsequent inspection in 1996. The County conducted subsequent inspections and accumulation of sand blast debris was also noted as an issue to correct through 2010. More recent inspections noted no compliance matters and the facility was run with no housekeeping areas noted.

However, in 2001 during repair work for a sewer line, evidence of diesel containing soil and foundry waste were observed. This was concurrent with activities of the DTSC related to a permit maintained by the facility and a compliance inspection being conducted by DTSC. The oversight role for subsurface investigations transferred to DTSC as described below in section 5.2.

Hazardous Waste Storage Area Fire

A fire broke out at the Site in 2010 which was responded to by the County Fire Department and Environmental Health Department. After the fire was put out, the materials were removed and samples of the underlying soil was collected with no evidence of impacts to the shallow soil or storm drain noted.

5.2. Department of Toxic Substances Control Investigations

In addition to the County, the Department of Toxic Substances Control (DTSC) also required, and is currently overseeing, a site characterization and remediation of the Site. In October of 2000, the DTSC conducted a Compliance Evaluation Inspection at the Site as part of hazardous waste treatment permit issued to the Site and determined that there may have been potential releases of hazardous waste into the environment from the abandoned rail spur area (SWMU 1), the chip storage area (SMWU 2), and the area adjacent to the pressure test area (SWMU 3). DTSC determined that further investigation was required to determine the nature, constituents, and extent of the release. A Corrective Action Consent Agreement (CACA) was prepared for the Site on October of 2001 and was subsequently revised on March 6, 2002.

As required by the CACA, a Preliminary Endangerment Assessment (PEA) and Facility Workplan were prepared for the Site. A PEA is generally similar to a Phase One ESA and is designed to evaluate the Site for potential releases of hazardous substances and evaluate the context and significance of those releases. The PEA identified the following nine (9) areas of concern (AOC) at the Site (see Figure 3):

- AOC-1 – Rail Spur Area (including area of diesel impact)
- AOC-2 – Chip-Bin Storage Area
- AOC-3 – Water Pressure Test Area
- AOC-4 – Former Iron Foundry Sand Cleanup Area
- AOC-5 – Oil-Stained Pad (eastern portion of AOC1)
- AOC-6 – Former Asphalt Dip Tank
- AOC-7 – Transformer Area 1
- AOC-8 – Transformer Area 2
- AOC-9 – Former Test-Pond (filled)

An investigation was conducted at the Site to evaluate whether releases had occurred from these AOCs.

Based upon review of the results, DTSC determined that interim measures were necessary due to the presence of a stockpile of dry, unconsolidated foundry sand waste located in the Rail Spur Area (AOC-1). The removal of the stockpile in AOC-1 was identified in the revised PEA because characterization results indicated elevated levels of copper, lead and zinc, but also to provide access to the area for sampling and further evaluation of potential soil impact to the native soil below. A document titled Interim Measures Work Plan (IWMP) dated January 13, 2005 to address the removal of the foundry sand stockpile was prepared as required by the DTSC. The IMWP evaluated the various interim measures that could potentially be used to mitigate the impact of potential contaminant dispersion arising from the stockpile foundry sand on-Site. Excavation and subsequent off-site transport was selected as the most feasible interim remedial measure.

The stockpiled material was removed from the Site in June of 2005 and approximately 393 cubic yards was transported to Chemical Waste Management's Kettleman City, facility for disposal.

A soil and soil gas sampling investigation was subsequently conducted in June and July of 2005 and the results were provided in a document titled Preliminary Summary of Site Assessment Results and Proposed Further Assessment (November 29, 2005). DTSC provided comments on the report and, as a result, EST prepared an Addendum Report – Summary of Site Assessment Results Clow Valve dated July 28, 2006. Clow replaced EST with Fero Environmental Engineering, Inc. (Fero) as the consultant for the Site.

Fero subsequently prepared the Further Investigation Workplan in order to further define the vertical and lateral extent of subsurface impacts as needed based on the previous EST reports as well as incorporation of DTSC comments. Therefore, in September 2006, Fero conducted soil sampling activities at AOC-1, AOC-2, AOC-3, AOC-5, and AOC-7. To address further DTSC comments, Site wide near surface soil sampling was also conducted, including an unpaved storage area not previously sampled, to address the concern related to the potential occurrence of metal impacted fill material that may have been used on-Site. In addition, one groundwater well was installed at AOC-1 to facilitate groundwater sampling. Results from this investigation were provided in a document titled Report of Findings (Fero, December 18, 2006).

Clow attended a meeting with the DTSC in February of 2007 to discuss future Site remediation activities. In a follow up letter, Fero discussed how remediation efforts were not anticipated prior to February of 2008 (Fero, February 8, 2007). In addition, the letter also discussed groundwater sampling results from their 2006 investigation, which showed a low level of TCE (1.43 ug/L, which is below the Maximum Contaminant Level of 5 ug/L) in groundwater beneath the Site. Given the absence of any chlorinated solvent use at the Site, the letter postulated that the TCE detection may be the result of an off-site source. Subsequently, groundwater monitoring was conducted on a quarterly basis from the fourth quarter of 2006 (reported in October 2006) to the second quarter of 2008 (reported August 2008). TCE has not been detected since April of 2007.

In 2010, Clow submitted a letter in response to the DTSC's inquiry regarding the discovery of an area of foundry sand fill in AOC-4. This area was identified during a sewer line replacement project in a paved area just north of the Anaco building. The stockpiled material was sampled and was characterized as hazardous for lead and approximately 60.5 tons was transported to Beatty, Nevada for disposal. This letter also addressed the status of the Site remediation and redevelopment. McWane explained that the project was "on indefinite hold pending recovery of the local Corona economy" as stated in the CMW.

In October 2015, Clow restarted the stalled process due to the economic uncertainty associated with Site redevelopment. Clow subsequently contracted with EarthCon to assist with restarting the process and preparing a Site Corrective Measures Study in the absence of site redevelopment. EarthCon and Clow met with the DTSC on March 15, 2016 to provide an overall project update and identify a path to move forward as requested. EarthCon evaluated the previous environmental activities, site assessment investigations, and the associated analytical results.

In February 2017, two additional groundwater monitoring wells were installed on-Site. Installation of these wells allowed for calculation of the Site-specific groundwater flow direction and gradient to confirm that the existing well (MW-1) is appropriately positioned to evaluate potential groundwater impacts related to the former TPH-d release at AOC-1. Groundwater monitoring events were conducted in March 2017 and subsequently in May 2017. Groundwater samples reported concentrations of various compounds below their associated MCLs with the exception of arsenic (March 2017 event only). However, the arsenic concentrations reported in MW-1 through MW-3 are within

the local background arsenic concentrations. Therefore, it was determined that groundwater would not be incorporated into the overall scope of this CMS.

The DTSC requested further vertical delineation of soil impacts at locations where previous investigations had encountered difficult drilling conditions and refusal of the drill string and associated sampling equipment. Therefore, soil borings were advanced at the former sample locations SW6 and CV-BG2 and analyzed for metals and two borings were also advance in AOC-1 and soil samples were analyzed for lead. The metal concentrations in the soil samples were not reported above their associated criteria.

McWane then directed the preparation of the remediation related documents. As part of preparation of the remedial plan for the Site, supplemental investigations were conducted through 2019 and all datagaps were addressed. DTSC has not required any further characterization efforts and considered the Site characterization complete.

5.3. Proposed Remedial Plan for the Site

The historical data, Human Health Risk Assessment, and current Site operations were used to prepare a CMS for the Site (EarthCon, 2018). The CMS identified that excavation (AOC-7) and capping in place (AOC-1, AOC-5, and AOC-7) as the selected remedy. However, due to the presence of PCBs at AOC-7, additional Site assessment activities were conducted in July 2018, October 2018, and January 2019 under the oversight of the USEPA. The USEPA also required that further assessment of potential PCB impacted soil would be evaluated at AOC-3 and AOC-6 as well. The results were summarized in a document titled Risk-Based Approval Application 40 CFR 761.61 (c)(1) (EarthCon, 2019).

Based on the results from the PCB related Site assessment activities, EarthCon recommended that rather than excavating PCB-impacted soil at AOC-7 that the Site remained capped, with the existing concrete cap having the ability to protect industrial workers from exposure to PCB concentration in the underlying soil. In a letter dated April 23, 2019, the USEPA approved the application with the conditions including preparation of the following: Deed Restriction, Operations and Maintenance Plan, and Soil Management Plan and a PCB Cleanup Report. EPA also required that if the cap were ever removed, soil containing PCBs greater then 15 ppm must be removed from the Site.

Upon receipt of the approval letter from the USEPA, the DTSC approved the CMS in a letter dated May 16, 2019. As noted previously, excavation of AOC-7 is no longer

required. Therefore, an engineering control (capping system) along with institutional controls (See Section 4.3) were the selected remedy for the Site. Copies of the CMS and PCB Plan approval letters are included in Appendix E.

DTSC approved the remedial plan. As part of the real estate transaction, Clow agreed to complete all pending work for the CMSIWP including capping AOC-1 and AOC-5 and recording of all the required documents so that the case will be considered closed. The field work has been completed and the asphalt cap put in place as documented in a report entitled Corrective Measures Implementation Report.

During the field work described above, additional areas were found to contain PCBs in shallow soil. After notification was made to EPA, an investigation was conducted across the Site to assess the lateral extent of PCBs at the Site as presented in the report entitled PCB Soil Investigation Report dated October 29, 2021. It appears that foundry sand containing PCBs may have been used as fill in certain areas of the Site. Clow has proposed to EPA that the previous approval described above be amended, the hot spots removed and all of the remaining soil containing PCBs be retained on Site under a TSCA Cap in their revised Risk Based Application dated April 2022. The TSCA Cap would actually be the future building slabs and pavement sections. EPA approved the Risk Based Application on June 29, 2022. The LUC will be updated and recorded upon completion of the field work.

5.4. Future Obligations

The remedy for the Site is to cap the hazardous materials in place below an asphalt cap (completed) and the PCB wastes under a TSCA Cap. The TSCA Cap will be the future building slabs and pavement areas. The Site will have a LUC recorded on title that restricts certain sensitive uses such as residential, hospitals, day care and others, and requires any changes or disturbances to the Site to be conducted pursuant to an approved SMP after notice is given to DTSC and EPA. Annual inspections are required with a report submitted to DTSC confirming the terms of the LUC are being complied with.

The SMP presents the procedures to be used to move and handle soil at the Site including procedures for stockpiling, monitoring for general health and safety concerns, requirements for either reuse on site or off-site disposal of impacted material and chemical testing requirements for potential import soil that may be necessary. The SMP presents the procedures to manage the known impacts at the Site on Site and also

presents the procedures to be used to respond to potential unknown conditions. The future development will be subject to the SMP.

In addition to the general requirements of the SMP, grading at the Site will also be subject to AQMD Rule 1466. We recommend that you plan on encountering some surprises during grading which will require off-site disposal of soil.

6. SITE RECONNAISSANCE

Mr. Mark Cousineau of HMC conducted a Site and Site vicinity reconnaissance on December 10, 2019 and then again on March 19, 2021 and most recently on November 9, 2021. The reconnaissance was conducted in order to identify visible evidence of REC's at the Site and to assess possible conditions off Site that may impact the Site. We met with Ms. Tiffany Smith, Environmental Health & Safety Manager for the facility on the first two occasions who led us on a property tour and with Mr. Rene Carillo for the final . Since the date of the first ESA, the only significant change was that one of the tenants on Site, Tyler Union had vacated and removed all of their product. There was no evidence of new chemical spills, releases or change in operations noted from the prior reconnaisance.

The Site is an active manufacturing warehousing and distribution facility for two separate McWane divisions who operate at the Site. They include:

Clow Valve Company: primarily manufacture fire hydrants and water valve assemblies;

Anaco: Manufactures rubber gaskets and connections;

Tyler Union: Formerly operated on Site and distributed metal pipe, valves and related product. They have vacated the Site since the date of the prior ESA.

A layout of the facility is presented in Figure 3.

The facility is triangular shaped bordered on the northern and eastern side by the Temescal Wash and the southern side by Magnolia Avenue. El Camino Avenue borders the Site on the west. The Site is fenced with access off of Magnolia and a secondary access

off of El Camino Avenue. Along the front entrance is a parking area and corporate offices. East and west of the entrance is being used for product storage.

Clow Valve Company

Separating the front corporate offices from the manufacturing areas is a large asphalt paved area. Clow Valve primarily operates north of the corporate building along the eastern side of the Site in two large metal sided buildings. Their operations include taking castings and shot blasting the rough casting to a smoother surface, painting of the product and then assembly and testing of the finished product. Product was noted being stored along the eastern side of the Site between the building and property boundary. Inside the buildings were hydrants in various stages of the process along with shot blast booths, paint booths, drying ovens and assembly areas. Chemicals noted included paints and thinners, oil and lubricants. Chemicals were stored on secondary containment and/or flammable cabinets. Minor staining was noted on the ground surface. In addition, several compressors were present with no significant staining or blowdown present.

To the west of the Clow operations was an outdoor area that contained a fenced transformer area. This area is the subject of the PCB Investigation and is currently capped with concrete. North and west of the transformer area is a metal sided building used for warehousing of product. Product was also noted as being stored outdoors in the front of this building.

Tyler Union

Tyler Union is a distributor of metal pipe, hydrants, valves and related products. They were formerly located along the southwestern portion of the Site. Their operations were limited to product storage in outdoor areas and loading and unloading of material. No chemical use or operations were noted during the first reconnaissance. As of the date of the second inspection, they had vacated and were no longer on Site. All of their product and equipment had been removed and there was no evidence noted of new stains or chemical releases since the date of the prior inspection.

Anaco

Anaco is a manufacturer of rubber gaskets, clamps and screws and operates along the western and northern portions of the Site. Anaco's operations includes a warehouse located west of the Clow warehousing area. Along the eastern side of the warehouse is

a hazardous waste storage area as well as a wastewater treatment plant. The waste storage area was bermed and no significant stains were noted.

To the north of the Anaco warehouse is a recently paved area that is the location of the AOCs that were part of the remedial action. Along the western side of the site is an open area used for product loading and storage.

The main manufacturing operations for Anaco are along the northern portion of the Site in the Anaco Production Plant also known as Building 2A. As noted, operations include manufacture of screws, gaskets and clamps. The screw making department involves steel in thin bar stock which is fed through screw manufacturing machines to create the finished product. The gaskets are manufactured by taking rolls of rubber and cutting the rubber into specialized forms. The clamps are manufactured from aluminum coil which is cut and slit into desired sizes and then coiled and a screw added to tighten.

The operations were orderly and housekeeping was well maintained. Chemicals used included oils and cleaning products which were stored on secondary containment or in flammable cabinets.

Selected photographs illustrating the property and nearby off-site conditions are included in Appendix A. Summaries of the Site and observations are detailed below.

Description and Use of Site:	The Site manufacturing facility used for the production, warehousing and distribution of fire hydrants, gaskets, clamps and related products.
Underground and Aboveground Storage Tanks:	There were no USTs present at the Site. Several ASTs were noted in the production areas.
Hazardous Materials, Hazardous Wastes or Petroleum Products:	Chemical use was included oils, thinners and paint. Lubricants and cleaning products were noted. Chemical waste was noted at satellite storage areas as well as a central hazardous waste storage area.

Drains, Drain lines and Sumps:	There were several filled in concrete sumps noted from the historic uses. There were no subsurface drains noted and the wastewater treatment system was noted to be self-contained. Stormwater drainage was into drop structures and swales into the regional storm drain system.
Pits, Ponds, Lagoons	No ponds, pits, or lagoons were seen at or near the Site.
Industrial Wastewater:	Wastewater generated at the Site as part of the manufacturing process is treated by a self0contained waste water treatment system with no reported discharge.
Stains:	Only minor staining was noted reflective of historic operations with no significant staining suggesting new releases noted.
Wells:	There were no monitoring wells noted at the Site.
Transformers:	Several transformers were noted at the Site. No staining was observed in the vicinity of these features.
Other Features:	As noted above, there were several areas of patched concrete from historic manufacturing operations.

6.1. Site Vicinity

The Site is located in an area zoned by the City of Corona for industrial use and is bound:

- to the north by a drainage feature referred to as Temescal Wash;
- on the east by Temscal Wash and Magnolia Avenue across which are industrial developments;
- to the south by Magnolia Avenue across which is a relatively new business park; and,
  to the west by El Camino Avenue beyond which is a shopping center.

7. REGULATORY AGENCY DATABASE RESEARCH

Regulatory agency database information was obtained from a standard radius Site Assessment (ASTM) report by Environmental Data Resources, Inc. The center of the search was in the approximate center of the Site. Search distances for specific databases were one-quarter to one mile as specified in the ASTM 1527-13 standard. The database search includes over 70 federal, state, local, and proprietary records. A complete copy of this report is included in Appendix B.

7.1. Database Records Concerning the Target Property

The Site was listed on the following databases in the EDR report:

Name	Lists	Comments
Clow Valve	AST, CERS Hwaste, Tanks, EMI, WDS, CIWQS	General listings of chemical use, storage and disposal from the Site. No information regarding spills or releases.
DF Equipment	Haznet	Evidence of off site disposal of hazardous waste but not a release.
SoCal Edison	Haznet	Evidence of off site disposal of hazardous waste but not a release.
Clow Valve & Anaco	FINDS	Listings were for Air discharges.
Rich Mfg	SEMS Archive	No specific info listed
Magnolia Ave Waste Tire Site	RGA-LF	Facility was off site
Mercury Rubber Products	RGA-LF	Facility was off site
Anaco	RCRA-SQG, AST	General listing of chemical storage but no reference to a spill or release.

These listings reflect that hazardous waste was generated but do not reflect releases of hazardous substances and would not be considered RECs.

7.2. Database Records Concerning the Site Vicinity

We reviewed the database report for off-Site potential sources within the relevant search distance. In review of the many entries on the database, we reviewed the following factors that affect the ability of a facility to affect the Site:

- Distance from the Site,
- Location from the Site with regard to the direction of groundwater flow,
- Nature of the release and whether the release has affected soil, groundwater or both,
- Status of the investigation (e.g. open or closed)

Groundwater was noted to flow in a west northwesterly direction below the Site, therefore facilities located adjacent to or to the east were further considered. Only those facilities judged using these factors are discussed below.

The following presents a summary of our findings:

Name	Address	Dist	Dir	Lists	REC	Rationale
Advanced Fuel Filtration	1461 Magnolia	462'	NE	SEMS, PRP, ICIS	NO	Removal action, no investigation required.
Indiana Auto Wrecking	14800 E 6th Street	291'	NE	CERS HWaste	NO	Not listed as a site with spills or releases.
Optimum Wellness & Longevity	1315 Corona Pointe	356'	WNW	RCRA Nongen	NO	No indications of a spill or release
Petes Road Service	866 El Camino Ave	493'	NNW	RCRA Nongen	NO	No indications of a spill or release
Office Depot	1160 El Camino	449'	WSW	RCRA Nongen	NO	No indications of a spill or release
Jacks Chevron	1315 Magnolia	306'	SW	Cers HWaste, Tanks, CHMIRS	NO	The facility is a service station downgradient of the Site with no record of a spill or release.
Corona Disposal Site, Sherborn	Magnolia & Compton	Adj	S	SWF/LF, CERS	NO	The facility is a former landfill located

Magnolia Drum Site						downgradient of the Site.
FRS Environmental	1414 E Sixth	890'	N	HWT	NO	No indications of a spill or release
6th & Corona	1436 E 6th Street	931'	N	SEMS	NO	No indications of a spill or release
National Certified fabricators	1525 E 6th	1319'	NNE	CERS Hwaste, Haznet	NO	No indications of a spill or release
Trim Manufacturing	1433 E 6th Street	1074'	N	Rcra Nongen	NO	No indications of a spill or release
Extrumed Inc	547 TRM Circle	1246'	N	CERS HWaste, CIWQS	NO	Listings were for chemical use and stormwater permit but no records of a spill or release

Orphan Sites

Orphan Sites are those properties that are included on various agency lists, but for which the records do not have sufficient address information for the database program to map the site. No orphan sites identified appear to be in the Site vicinity.

7.3. Summary of Off-Site Issues

Based on the review of the available regulatory information, the Site is located in an area with history of industrial uses and landfill operations. Several facilities were identified to store and use hazardous chemicals and have had releases but none were close enough or in the correct orientation to be considered an REC to the Site.

8. LOCAL AGENCY AND OTHER RECORDS REVIEW

8.1. Tribal Records

The Site is not located in a tribal area therefore there were no tribal records to review.

8.2. Oil and Gas Wells

The State of California Department of Conservation, Division of Oil, Gas, and Geothermal Resources online mapping website was reviewed for the location of active, plugged, or

abandoned oil and gas wells in the vicinity of the Site. No oil or gas wells were listed as having been drilled on Site.

8.3. State of California

The State of California Geotracker and EnviroStor websites were also reviewed for information on potential on or off-Site facilities that are being remediated under either RWQCB or DTSC oversight. No active cases were listed on these databases that were not listed in the EDR review. As previously noted and described, DTSC is providing regulatory oversight for the ongoing cleanup of hydrocarbons and metals at the Site.

8.4. Riverside County Department of Environmental Health

HMC requested a review of records of the Riverside County Department of Environmental Health. Files were found responsive for both address at the Site and copies are included in Appendix C. The Health Department is the Certified Unified Program Agency (CUPA) who oversees facilities that generate hazardous waste and periodically inspect such facilities. The County had two separate files including files related to the inspections the conducted and cleanups they oversaw as previously mentioned and also a file on the ongoing cleanup being overseen by DTSC previously discussed.

As noted above in Section 4, the County oversaw three cleanup efforts before DTSC involvement. These included:

- Overseeing the closure of USTs in 1993 with no evidence of a release found and closure granted; and,
- Overseeing the removal of sand blast material that had built up at the Site in 1994 in 1995.
- Responding to a fire at the hazardous waste area of/ the Site. No impacted soil was encountered;

The County also conducted inspections of the operations. Early inspections noted evidence of remnants of the old foundry operations and build-up of hazardous materials such as sand blast residue which led to remedial action. More recent inspections did not find significant violations other than periodic paperwork issues that were subsequently corrected. A copy of an inspection report from 1996 provides a very concise description

of the processes on Site that generated hazardous wastes and how that waste was handled and is included in the Tables Section of this report.

As noted, the County did not find any areas of concern remaining in their recent inspections which was consistent with the observations of HMC during our site visit.

8.5. City of Corona

We reviewed the online permit center for the City of Corona to review permits that would suggest environmental uses and/or features previously unknown or that would require closure such as Underground Storage Tanks (USTs). The records included benign features such as flagpoles and interior petitions but also included records of spray booths and hot use areas. There were no unknown features listed in the permits nor were there any permits for features that would require a separate closure process.

9. VAPOR INTRUSION, ASBESTOS AND OTHER CONCERNS

9.1. Vapor Intrusion

Given the findings of the previous investigations conducted at the Site, VOC releases have not been an issue of concern for the continued commercial use of the Site. No vapor intrusion conditions were found as part of this assessment and DTSC has not requested or required any vapor mitigation.

9.2. Asbestos

The buildings were reported to have been built from the 1950s through the 1970s during a time when asbestos was commonly found in construction materials. Suspect asbestos containing materials were observed at the Site including drywall, joint compound, ceiling tiles, vinyl floor tile, acoustic ceilings, ducting/pipe wrap, and mastic. A thorough asbestos sampling event should take place at the Site if these building materials are to be disturbed.

9.3. Radon

The Site is listed as being located in Zone 2 with regards to radon indicating that radon maybe present at concentrations less than 4 pico curies / liter.

9.4. Mold

No evidence of mold or water damage was observed at the Site.

10. SUMMARY OF FINDINGS

Key findings of this Phase I ESA are as follows:

- The Site and Site vicinity were observed to have historically been part of a drainage feature from the earliest photographs available until the 1950s when the plant was first constructed.

- The Site has been used for metal forging and casting and more recently the manufacture of fire hydrants, gaskets, clamps and related products.

- The historic operations at the Site led to previous remedial efforts overseen by the RCDEH including removal of the former foundry waste, removal of sand blast residue, general site cleanup (1994-1995) as well as the removal and closure of four USTs (1993). No releases were found as part of the UST closure. The work was done to the satisfaction of the RCDEH and the current inspections by the County do not document continued concern. These items would be considered Historical RECs in our opinion with no further action necessary.

- As part of the operations, chemicals were used and released at the Site. The Site has been subject to a thorough fence line to fence line review and investigation by the DTSC through the Corrective Action Process (2000-present). This has included an evaluation of all of the suspect uses and features at the Site and involved soil, soil gas and groundwater.

- The investigation conducted by DTSC (2000-present) at the Site to date has found evidence of metals, PCBs and hydrocarbons in shallow soil at the Site at elevated concentrations. VOCs were not found to a concern in the subsurface for commercial use and there was no evidence of groundwater impact from the Site. DTSC did require a LUC to prevent sensitive uses such as residential, schools or

day care uses. Due to the findings of PCBs at the Site, EPA was notified as they have exclusive jurisdiction over PCB cleanups.

- The previous owners implemented a remedial plan for the Site as presented in the CMS Implementation report (CMSIR). The CMS identified excavation (AOC-7) and capping in place (AOC-1, AOC-5, and AOC-7) as the selected remedy. In addition, a "Risk Based Application" (RBA) was prepared to present a remedial plan for the PCB cleanup which was approved.

- As part of the transaction, Clow implemented the work for the CMSIWP including capping AOC-1 and AOC-5 and recording of all the required documents so that the case will be considered closed. The field work was conducted between July and October 2021 and the asphalt cap put in place as documented in the CMSIR. DTSC approved the CMSIR dated October 25, 2021 with their letter dated April 14, 2022.

- During the field work described above, additional areas were found to contain PCBs in shallow soil. After notification was made to EPA, an investigation was conducted across the Site to assess the lateral extent of PCBs at the Site as presented in the report entitled PCB Soil Investigation Report dated October 29, 2021. The soil results related to PCB including supplemental sampling were summarized in a document titled Risk-Based Approval Application (April 25, 2022). It appears that foundry sand containing PCBs may have been used as fill in certain areas of the Site. Clow proposed to EPA that the previous approval described above be amended and that the "hot spots" be removed from the Site and all of the remaining soil containing PCBs be retained on Site under a TSCA Cap. The hot spot removal is currently planned for February 2023. The TSCA Cap would actually be the future building slabs and pavement sections. EPA approved the revised Risk Based Application on June 26, 2022.

- An LUC was recorded on Title which restricts certain sensitive uses such as residential, hospitals, day care and others, and requires any changes or disturbances to the Site be conducted pursuant to an approved Soil Management Plan (SMP) after notice is given to DTSC. Annual inspections are required with a report submitted to DTSC confirming the terms of the LUC are being complied with. The LUC will be revised and re-recorded upon completion of the pending field work.

- It is our understanding that your plans for the Site call for redevelopment of the Site with industrial buildings. This would entail demolition of all improvements at the Site and then grading of the Site including over excavation and recompaction of soil as necessary for geotechnical and civil specifications. Specifically, the existing cap at the Site would be removed and then replaced following the grading as part of the development. Such work would in essence remove the cap from the Site and require notification to DTSC and EPA and must be conducted pursuant to the SMP and most recent Risk Based Application. This will specifically include that all PCB waste be managed under a TSCA cap which would include at least 6" of concrete. It is our understanding that your development will include 6" of concrete for foundations and truck courts and would in essence serve as the TSCA Cap.

- The SMP presents the procedures to be used to move and handle soil at the Site including procedures for stockpiling, monitoring for general health and safety concerns, requirements for either reuse on site or off-site disposal of impacted material and chemical testing requirements for potential import soil that may be necessary. The SMP presents the procedures to manage the known impacts at the Site on Site and also presents the procedures to be used to respond to potential unknown conditions. In addition to the general requirements of the SMP, grading at the Site will also be subject to AQMD Rule 1466.
- The buildings were reported to have been built in the 1950's through the 1960's during a time when asbestos was commonly found in construction materials. Suspect asbestos containing materials were observed at the Site including drywall, joint compound, ceiling tiles, vinyl floor tile, acoustic ceilings, and mastic.

11. DATA GAPS

There were no datagaps that affected this assessment.

12. CONCLUSIONS

E1527-13 Guidelines for the property located at 1375 Magnolia Avenue in Corona, California. The following REC was identified during this investigation:

- The Site has had releases of hazardous substances which are the subject of a current remedial action under the regulatory direction of DTSC and EPA. This includes metals and hydrocarbons in soil which were remediated as approved by DTSC. Future grading activities are subject to a SMP as well as the requirements in a Risk Based Application to address the PCBs present at the Site.

- There were also previous remedial actions taken including the removal of sand blast residue and the closure of four USTs by the County of Riverside. These would be considered Historic RECs in our judgment. There were no Controlled RECs found.

While not an REC by ASTM standards, the buildings were reported to have been built in the 1950's through the 1960's during a time when asbestos was commonly found in construction materials. Suspect asbestos containing materials were observed at the Site including drywall, joint compound, ceiling tiles, vinyl floor tile, acoustic ceilings, and mastic.

13. RECOMMENDATIONS

Based on the findings of this ESA, we recommend the following:

- The Risk Based Application that was approved by EPA should be implemented to obtain a closure certification. Grading at the Site is subject to the SMP.
- The buildings to be demolished may contain asbestos and an asbestos survey will be necessary prior to any disturbance to ACMs so that such ACMs can be abated prior to demolition.
- The future development will be subject to the LUC, SMP and OM Plans which should be reviewed and followed during development. The LUC will need to be revised and re-recorded upon completion of Site development.

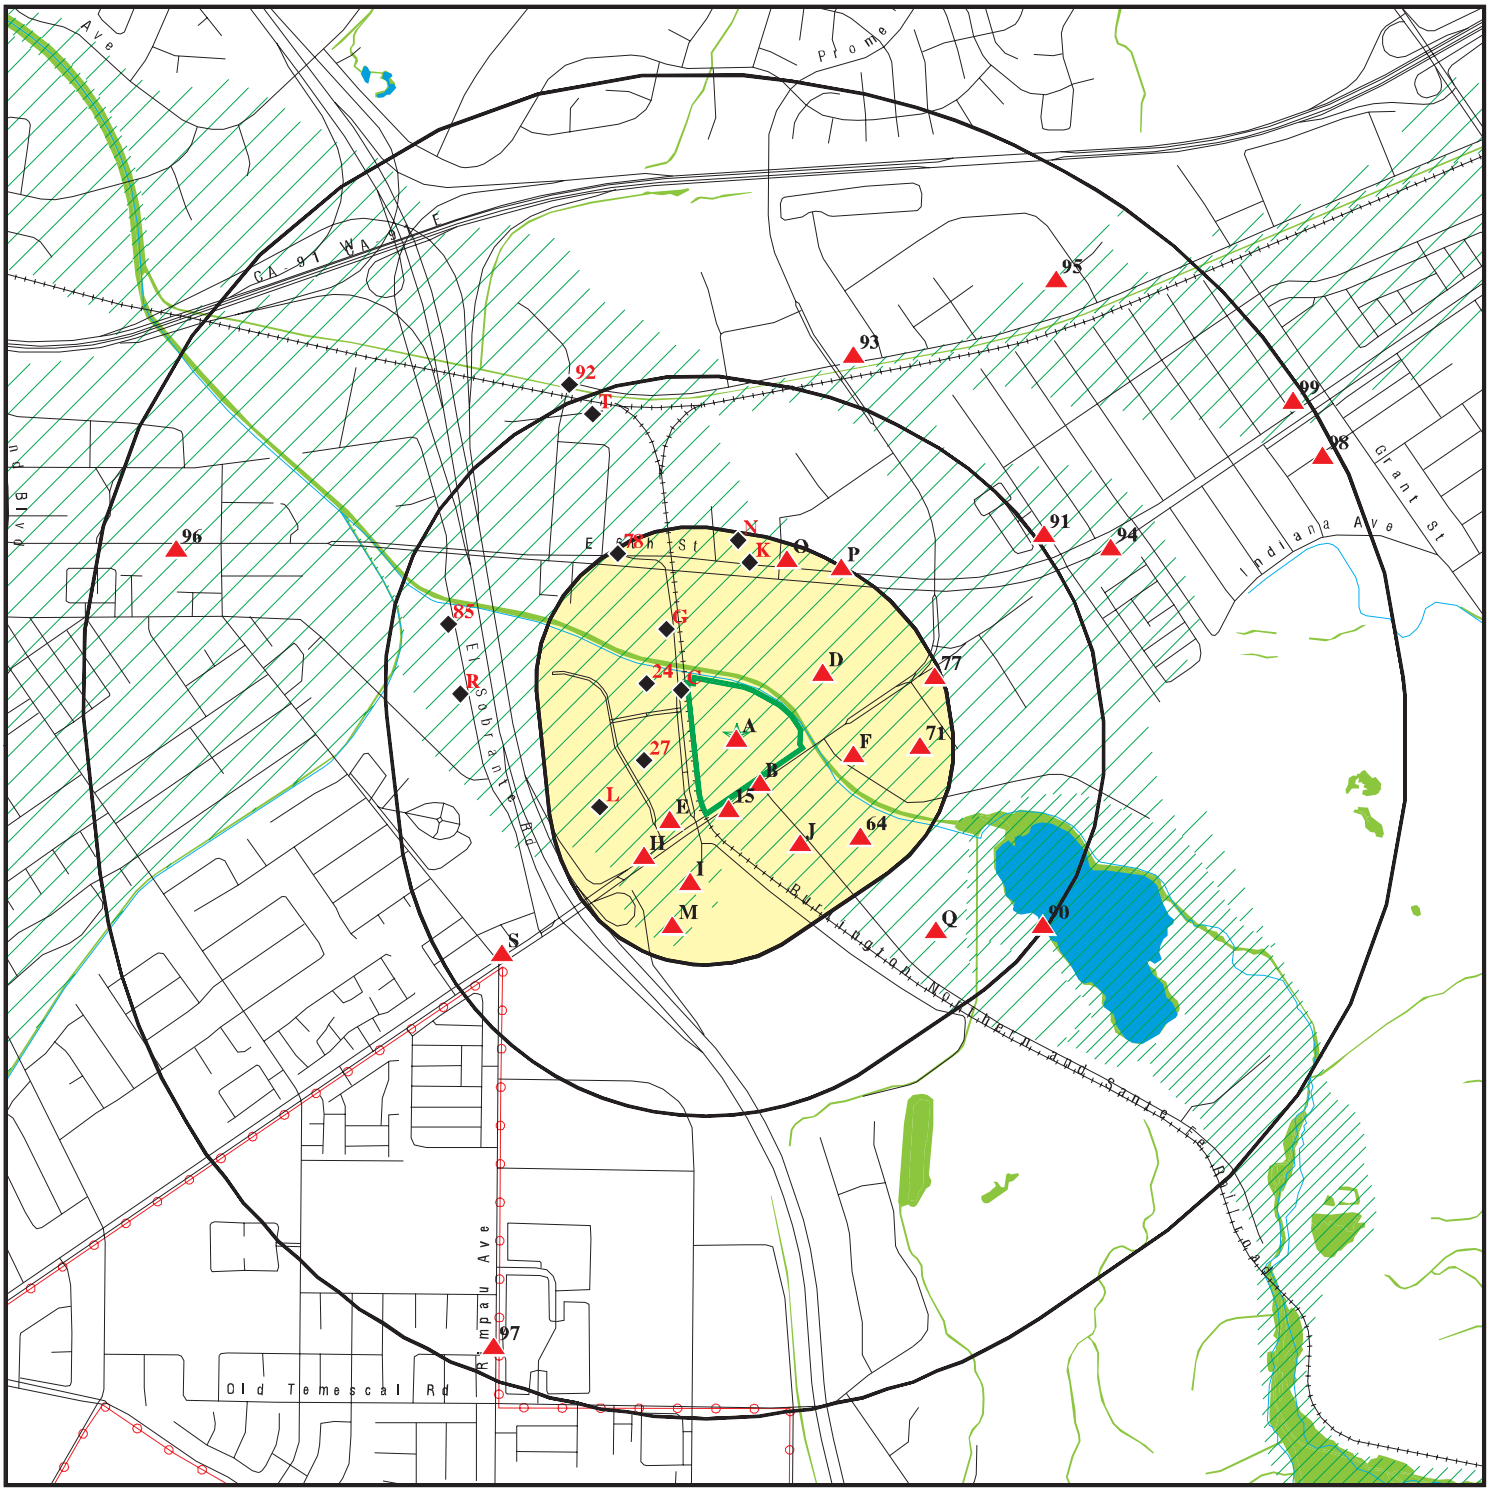
15. QUALIFICATIONS

Mark S. Cousineau, NREP

Mr. Mark S. Cousineau, principal with HMC, has a diverse professional background in environmental management, which includes working as a generator, regulator, consultant, and corporate advisor in hazardous waste and other environmental issues.

Mr. Cousineau's technical background is focused in the area of overseeing large-scale environmental investigations and regulatory compliance management related to site assessments, subsurface investigations, facility surveys, and site remediation. To projects such as these, Mr. Cousineau brings expertise in evaluating complex sites and developing solutions to solve the technical, operational, regulatory, financial and timing issues. In addition, Mr. Cousineau routinely assists clients in developing environmental business plans for single assets and multi-site real estate portfolios and has designed and implemented several tenant audit programs involving the proactive management of environmental risk caused by on-site commercial and industrial tenant activities.

Mr. Cousineau has provided litigation support and has served, as a court-appointed expert on environmental issues, is a Member of the National Registry of Environmental Professionals, holds a M.S. in Environmental Sciences from California State University Fullerton and a B.S. in Chemistry from University California San Diego.



As signatory to this report, I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of this part. I have the specific qualifications based on education, training, and experience to assess the property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Mark Cousineau, NREP
Principal

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there are 3 SEMS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 10 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

A review of the VCP list, as provided by EDR, and dated 10/26/2020 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 23 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS Description: Industrial Facility Storm Water

Violations:

Site ID: 529440
Site Name: Clow Valve Co
Violation Date: 07-02-1999
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Deficient Report
Violation Notes: Non-submittal of Annual Report. Due 7//1/1999
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Site ID: 529440
Site Name: Clow Valve Co
Violation Date: 10-17-2000
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: SW - Deficient BMP Implementation
Violation Notes: SWPPP needs updating, need training, elevated analytical results, oil on ground, no BMPS implemented.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-03-2019
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: An inpection was conducted by regional board staff, Keith Elliott, Maria Marquez and Reyna Mendoza. Tiffanny Smith, the facility Environmental Manager led the inspection. The SWPP was available and recently updated in August 2019. The last BMP monthly inspection was dated 11/25/2019. The 3 discharge points had multiple types of BMPs (waddles) to filter TSS and some metals. One of the waddles contained zeollite catalyst. The north A discharge point line had canaster filters. Housekeeping appeared to be in good condition.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 12-22-2009
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: B Type compliance (no sampling) inspection:Site appears well maintained. Zinc is .06 vs 0.1. Iron is 1.2 vs 1.0. Aluminum is .7 vs. .75. TSS is only 23 and conductivity is only 36. They have made some effort to filter runoff with homemade filter inserts.
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

CLOW VALVE COMPANY (Continued) **1016076821**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Year:	2019
Gepaid:	CAD063115133
TSD EPA ID:	AZD983469594
CA Waste Code:	261 - Polychlorinated biphenyls and material containing PCBs
Disposal Method:	H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons:	0.01433
Year:	2019
Gepaid:	CAD063115133
TSD EPA ID:	NVT330010000
CA Waste Code:	352 - Other organic solids
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	19.76650
Year:	2019

CLOW VALVE CO (Continued) **S113001297**

Gepaid: CAD063115133
TSD EPA ID: CAT080013352
CA Waste Code: 132 - Aqueous solution with metals (< restricted levels and (Alkaline solution (pH >= 12.5) with metals))
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons: 2.91900

Year: 2019
Gepaid: CAD063115133
TSD EPA ID: NVT330010000
CA Waste Code: 352 - Other organic solids
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons: 4.00000

Year: 2019
Gepaid: CAD063115133
TSD EPA ID: CAD008252405
CA Waste Code: 214 - Unspecified solvent mixture
Disposal Method: H061 - Fuel Blending Prior To Energy Recovery At Another Site
Tons: 1.50000

Year: 2019
Gepaid: CAD063115133
TSD EPA ID: CAD008252405
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.47400

Year: 2019
Gepaid: CAD063115133
TSD EPA ID: CAT080013352
CA Waste Code: 221 - Waste oil and mixed oil
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons: 0.00000

Year: 2019
Gepaid: CAD063115133
TSD EPA ID: NVT330010000
CA Waste Code: 724 - Liquids with lead >= 500 Mg./L
Disposal Method: H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons: 0.02085

Year: 2019
Gepaid: CAD063115133
TSD EPA ID: CAT000613976
CA Waste Code: 134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.81060

Year: 2019

CLOW VALVE CO (Continued) **S113001297**

Gepaid:	CAD063115133
TSD EPA ID:	NMD002208627
CA Waste Code:	352 - Other organic solids
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.06600

Site History:	Downs Energy is a high-volume commercial fueling facility. Release was discovered in April 2016 during facility UST systems upgrades/removals. Site Background The site is located southeast of the intersection of Magnolia Ave and Interstate I-15 in Corona, California. It is operated as a commercial fueling card lock facility. Two gasoline and diesel fueling areas were present at the Site. The diesel fueling area consists of 12 card lock diesel dispenser areas located in the north central portions of the site fueled by three diesel underground storage tanks (USTs) and one nearby gasoline fuel UST. The gasoline fueling area consisted of four USTs and 12 dispenser islands that were removed from the site in April to May 2016. Previous Investigations/Corrective Action An unauthorized release of diesel fuel was discovered when soil samples collected on April 6, 2016 detected TPH-diesel at a concentration of up to 10,900 mg/l. On April 19, 2016, soil samples were collected at the time of removal of four underground storage tanks (USTs) and associated dispenser islands located at the northern portion of the property. TPH-gasoline and TPH-diesel were detected at a concentration of up to 4,150 ppm and 995 ppm, respectively. Downs Energys consultant, PIC Environmental (PIC), asserted that the diesel impacted soil detected during the removal of the USTs from the gasoline fueling area were likely residual diesel contamination that was previously assessed as part of the past releases from the USTs at the Site. Riverside County Department of Environmental Health had granted closure in 1999. From July to August 2016, 11 soil borings and three exploratory trenches were advanced to a maximum depth of 84 feet bgs. TPH-diesel was detected at a maximum concentration of 6,160 ppm at a depth of 11 feet bgs in the diesel area and was not detected in soil samples collected below 40 feet bgs. An estimated 2,000-cubic yards of soil was believed to be affected by diesel exceeding 1,000 mg/kg. TPH-gasoline was detected at a concentration of 8,200 PPM at a depth of 20 feet in the gasoline fuel area and not detected below 45 feet bgs. No benzene was detected. Grab groundwater samples were collected from borings D1 and S2 at a depth of 60 to 80 feet bgs. No petroleum fuel constituents were detected in the groundwater. PIC concluded that the extent of the diesel-affected soil in the diesel fueling area had been defined and appeared to meet the SWRCB Low -Risk Closure Criteria, and therefore recommended no further

DOWNS ENERGY (Continued) **S108205261**

assessment. PIC further concluded that the lateral extent of the gasoline and diesel affected soil in the gasoline fueling area was not defined with the two soil borings, and recommended that further assessment be conducted. In April 2017, four additional soil borings were advanced in the diesel dispenser area and two additional soil borings were advanced to depths up to 60 feet bgs in the gasoline fueling area. TPH-diesel was detected at a concentration of 1,524 ppm at a depth of 20 feet. No gasoline fuel constituents were detected. Groundwater was collected from three soil borings and no fuel associated constituents were detected. Trichloroethene was detected in the groundwater samples at a concentration of up to 1.5 a%g/l. On July 1, 2017, RCDEH transferred regulatory oversight to Santa Ana Regional Water Quality Control Board staff. Request for Closure Based on these findings, PIC Environmental is proposing site closure based on the following assertions: Diesel Fueling Area Lateral and vertical extent of the diesel fuel hydrocarbons have been defined. Diesel release has not impacted the underlying groundwater. The residual concentrations of diesel in the soil meets the SWRCB Low Threat Criteria for site closure. Gasoline Fueling Area Lateral and vertical extent of the gasoline and diesel fuel hydrocarbons detected beneath the southwestern dispenser island have adequately been defined. The vertical extent of the affected soil does not extend to groundwater and does not impact the underlying groundwater. There are no anticipated significant health risks associated with contact or inhalation as a result of exposure with the residual impacted soil at the Site. The residual concentrations of gasoline and diesel fuel hydrocarbons in the soil meets the SWRCB Low Threat Criteria for site closure.

Click Here:

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site Name:	ACROMIL LLC
Violation Date:	01-04-2019
Citation:	2014-0057-DWQ - Industrial General Permit
Violation Description:	SW - Deficient Report
Violation Notes:	Ramtox staff, acting as a consultant, used LRP’s account to certify an electronic report.Allowing another person access to the LRP account to sign and certify an application or report under penalty of perjury for the LRP is not only unacceptable, it is against the law. As the person certifying the accuracy of the information being submitted and allowing the signature to be used to sign reports under penalty of perjury, the LRP is held accountable for the accuracy of the information submitted and could be subject to criminal liability if the information submitted is false (California Water Code - 13387, subdivision (e), Penal Code - - 115 and 118). In addition, the party submitting information under the LRPs signature could be subject to criminal penalties under Water Code section 13387, subdivision (e), for knowingly making a false statement, representation, and certification. Title 40 of the Federal Code of Regulations (40 CFR) Part 122.22, cited in NPDES permits under Standard Provisions, requires that specific parties or their duly authorized representativesG sign permit applications and reports (refer to attachment for complete citation). Failure to comply with this

ACROMIL LLC (Continued) **S123170018**

provision is a violation of the terms of the General Permit.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes: - Facility is an asphalt construction company and potentially generates the following waste streams: used oil, used antifreeze, fuel filters (metal and paper), contaminated solids, waste latex paint, and parts water solution. - Manager stated that facility conducts training every 2 months - Facility exchanges batteries for core receipts with Napa Batteries. Manager stated that no more than 1 battery is kept on site at a time. - Soiled textiles are laundered by Cintas. - Waste haulers are Enviroguide Inc, Alexis Environmental, and Toxguard. - Observed a small amount of contaminated absorbent in a 55 gallon drum (appeared to be used as a refuse container). Manager moved contaminated absorbent to appropriate hazardous waste container. - Aerosol cans which are not empty shall not be thrown in the the trash but handled as universal waste. If facility decides to puncture aerosol cans, please contact this Department.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-09-2020
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	- Unable to obtain signature due to COVID-19 restrictions. - Inspection report will be sent to the e-mail address provided by J. Voss. - Facility is a hazardous waste hauler and potentially generates the following waste streams: vehicle maintenance (used oil and absorbent), parts washer solution/sludge, solvent - Facility just had a hazardous waste pick up so no hazardous waste was on site during the inspection. - Per J. Voss, employees receive 40 hour HAZWOPER training/refresher annually.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

CERS Description: Industrial Facility Storm Water

Violations:

Site ID: 542603
Site Name: Six Pac Recycling
Violation Date: 02-25-2015
Citation: R8-2012-0012 - Scrap Metal Recyclers Permit
Violation Description: SW - Failure to Notify
Violation Notes: Discharger exceeded the copper Numeric Action Level by at least twice, failed to notify Regional Board of the exceedance, and failed to submit a Corrective Action Plan as required.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Site ID: 542603
Site Name: Six Pac Recycling
Violation Date: 08-02-2013
Citation: R8-2012-0012 - Scrap Metal Recyclers Permit
Violation Description: SW - Late Report
Violation Notes: Failure to submit 2012-2013 Annual Report by 8/1/13 due date.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-19-2016
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: I spoke to owner Ben Benson, of the requirements of the permit and his sampling results. We also spoke of the annual employee training requirement. Ben stated in the past he talks to his employees about stormwater and actions that need to be taken in the event a storm is projected to occur in the near future. I stated to Ben to begin documenting date and attendance of when to who the training was given to. Present was; a) SWPPP b) Monthly visual inspection reports (last one 06/10/2016) c) Rain Event Action plan/checklist is part of their Monthly inspection form. d) COCs (last one 9/16/2015) e) Wet weather inspection (5/5/2016) f) Daily sweeping Log (to be filled out) Missing was; a) Employee training sheet
Eval Division: Water Boards
Eval Program: INDSTW
Eval Source: SMARTS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-16-2015
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Mr. Benson has constructed an integrated stormwater capture system. All stormwater is captured onsite. Mr. Benson is the Legally Responsible Person (LRP) and is SM-QSD certified. Several large tanks are used to store stormwater until it can be treated. The Advanced Treatment System (ATS) is used to treat storm water. Mr. Benson also designed and constructed several large covers and utilized them to prevent stormwater contamination (see photograhs on attached inspection report). In regards to his Storm Water Pollution Prevention

SIX-PAC RECYCLING CORPORATION (Continued) **1004675517**

Plan (SWPPP), They have REAP, QAPP, Spill response plan, and hazardous material handling procedures, in SWPPP binder. They have COC and lab results in SWPPP binder (last sample was 5/14/15). They have visual inspection report records and are to incoporate a more formal storm water trainng for employees.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/30/2009
Comments: Cost Estimate letter sent to proponent via U.S. Mail and email

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 06/13/2006
Comments: Site Screening Assessment Report was submitted to EPA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 10/01/2007
Comments: Conditional Approval Letter was issued 10/1/07.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 12/12/2008
Comments: Final RAW approved. Fieldwork to implement remedy will take place once sale of property is complete. New property owner will implement remedy.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 05/16/2008
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Supplemental Site Investigation Report
Completed Date: 10/03/2008
Comments: During the 4/15/2008 meeting with DTSC and West Environmental, it was determined that characterization was adequate for the site, given the end use. Project will move to the Removal Action Workplan (RAW) phase of the project and all necessary site activities will be addressed in the RAW. A note to file will be added since no official comment letter was submitted regarding this matter.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fact Sheets
Completed Date: 10/24/2008
Comments: Fact sheet finalized and sent for mailing to mailing list.

Completed Area Name: PROJECT WIDE

IMCO WASTE DISPOSAL AREA (FORMER) (Continued) **S123133177**

Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 12/12/2008
Comments: Site Management Plan approved. Approval letter sent 12/12/2008.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Design/Implementation Workplan
Completed Date: 03/15/2012
Comments: Document accepted. Once grading permit has been obtained by the City of Corona - or any other necessary permits - grading activities can begin.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 09/25/2013
Comments: Document received and reviewed by DTSC. No comments were made and therefore the RACR was approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 02/21/2018
Comments: Not reported

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART)

PALOS VERDES BUILDING CORP (Continued) **1000596037**

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

STATE MASTER
HAZARDOUS WASTE BIENNIAL REPORTER
AIR MINOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Violation Description: Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in

PALOS VERDES BUILDING CORP (Continued) **1000596037**

service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Soil moisture content; 2. Soil pH; 3. Soil sulfides level; 4. Soil resistivity; 5. Structure to soil potential; 6. Influence of nearby underground metal structures (e.g., piping); 7. Stray electric current; and, 8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and (B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following: 1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic; 2. Corrosion-resistant coating (such as epoxy or f

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Local Lists of Registered Storage Tanks

SWEEPS UST: SWEEPS UST Listing

Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

Date of Government Version: 06/01/1994
Date Data Arrived at EDR: 07/07/2005

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills
This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

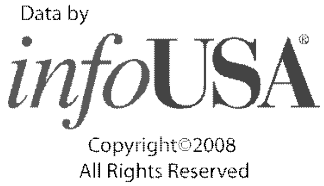
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1921 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Hazard Management Consulting were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Project NA

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: B47D-45E5-9E1D

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✔ Library of Congress
- ✔ University Publications of America
- ✔ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Hazard Management Consulting (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Good Afternoon Michelle,

As our new inspector I am sending you this notification of a spill that we had at our facility. The Anaco facility operates electric forklifts with large batteries that require charging and replenishing the electrolyte by filing it with water. Yesterday 5/9/2019 while refilling a battery with water, it overflowed resulting in spilled battery acid. The spill happened at 5:30 AM and spilled inside the facility on the concrete floor and is estimated to have been about 4 ounces. Later that day the forklift was hooked up to the charging station; the charging process elevates the temperature of the battery acid. This increased temperature along with higher battery acid levels from overfilling earlier in the day resulted in the battery acid boiling over and again spilling inside the facility to the concrete floor and happened at about 1:00 PM and was estimated to be about 12 ounces. In both instances the battery acid was contained by putting a neutralizing absorbent on the material and cleaning it up and disposed of as hazardous waste.

Aside from cleanup actions, the facility has also taken other corrective actions. The same day yesterday the battery suppliers were brought onsite to replace the float valves which are supposed to prevent overfilling. The facility is also working with them on a different filling mechanism and will be implementing a form of lock-out procedure while the unit is charging to prevent prematurely taking it off of the charger before fully charged as this could potentially be a factor in overfilling.

Although this is a small amount of material that was spilled inside the facility, this is being reported due to past discussions with those from your office that have requested that any amount that is spilled of this material be reported due to the nature of the material.

Please let me know if you have any questions or need any additional information.

Thank you,

Tiffany Smith
Environmental Manager

SUPPLEMENTAL REPORT

Reference Date: 11/2/2017	Facility ID #: FA0014980	Program ID #: PR0019196	Page 1 of 1
NAME	**ADDRESS**		**CITY**
Clow Valve Company	1375 Magnolia Ave		Corona

RE: Non-RCRA Large Quantity Generator Inspection

Facility inspection was conducted at the abovementioned facility on 11/2/2017 by EHS III, REHS Kathleen Estrada. Consent was granted by Environmental Manager, Tiffany Smith. Anaco and Clow Valve co-occupy the property, both owned by McWane Inc. Only one EPA ID number is currently used onsite. The facilities generate couplings, gaskets, and assembles fire hydrants. The hazardous wastes that are generated include waste paint, waste powdered paint, flammable solvent debris, paint filters, oily water, oily sludge, oil contaminated debris, used oil, parts washer solution, spent mold cleaner, blast booth dust, and waste soil impacted with lead (dirt sweepings & lead acid battery neutralizer). The facility's current registered hazardous waste hauler is Amberwick Corp. The facility's SB-14 Source Reduction Evaluation Review plan, weekly inspection reports, and training documentation were available to review at the time of inspection.

NOTES:

1. Owner/operator shall ensure that all flammable wastes are stored in closed steel containers at all times.

Supplemental

Reference Date	August 28, 2013	Page 2 Of 2
NAME	**ADDRESS**	**CITY**
Clow Valve	1375 Magnolia Avenue	Corona

TOPIC: Hazardous Waste Generator Inspection

REMARKS:

This facility assembles and finishes fire hydrants. Hazardous wastes that are generated include: waste paint related material, waste paint filters, waste rags/absorbent, waste flammable liquid, oily water, and lead contaminated soil from sweeping the parking lot. Lead contaminated soil is generated from passing traffic on Magnolia Avenue. Universal wastes that are generated include aerosol cans and florescent lights.

The facility is a LQG of non-RCRA hazardous wastes. The manifests and the SB-14 was onsite and available for review.

Please correct the following within 30 days:

#201, 210- The funnel near the paint booths would not properly close. Repair or replace the funnel to ensure that it closes completely. Additionally, the small container on the drum contained a flammable liquid. Keep all containers closed.

#203- The satellite accumulation areas were not posted. Please post all of the satellite accumulation areas.

Re-inspection will be performed in approximately 30 days of receipt of this report.

Please contact me at (951) 273-9143 should you have any questions.

NARRATIVE REPORT:

I arrived onsite to investigate the fire located in the hazardous waste storage area. The fire occurred on 4/9/10 at approximately 1240 AM. Corona FD responded to the fire. Jeff Potts of Corona Public Works also responded. The fire is believed to have started in the tri-wall that contained paint booth filters. A new (different) formulation may have contributed to the ignitability. Cal-EMA # 10-2313.

Affected inventory included:

- 1 cubic yard of paint booth filters
- 1 partial drum of paint waste
- 4 cubic yards of absorbent waste
- 1 drum of aerosol cans
- 1 drum of (new) kerosene
- ½ drum of (new) diesel
- 2- 30-gallon drums of soap
- 1- 30-gallon container of vinegar

HCl was contracted on 4/9/10 for clean-up. Six samples were taken from the dirt lot, located in front of the hazardous waste storage area. It did not appear that the storm drain was affected.

CASE REFERRED TO THE HAZARDOUS WASTE GENERATOR PROGRAM.

Re: Fire in the haz waste/haz mat Storage Facility # 19196

Remarks:

I arrived onsite to investigate the fire in the hazardous materials / hazardous waste storage area. The fire occurred on 4/9/10 at approximately 1240 am. Corona FD responded to the fire. Jeff Potts of Corona Public Works also responded.

It is believed that the fire started in a tri-wall filled with paint booth filters. A new (different) paint formulation may have contributed to the ignitability.

Inventory affected include (approximate):

Clow Valve:
- 1 cubic yard of paint booth filters
- 1 partial drum of paint waste

Anaco:
- 4 ~~drums~~ cubic yards of absorbent waste
- 1 drum of aerosol cans
- 1 drum of (new) kerosene
- 1 1/2 drum of (new) diesel
- 2 - 30 gallon drums of soap
- 1 - 20 gallon container of vinegar

HCI was contacted on 4/9/10 for clean-up. Six samples were taken from the dirt lot, located in front of the hazardous waste storage area. It does not appear that the storm drain was affected. CFD built a dirt berm to prevent a release to the storm drain.

II. ACTIVITIES DECLARATION

NOTE: If you check YES to any part of this list, please submit the Business Owner/Operator Identification page (OES Form 2730).

Does your facility...		If YES, please complete these pages of the UPCF....
A. HAZARDOUS MATERIALS Have on site (for any purpose) hazardous materials at or above 55 gallons for liquids, 500 pounds for solids, or 200 cubic feet for compressed gases (include liquids in ASTs and USTs); or the applicable Federal threshold quantity for an extremely hazardous substance specified in 40 CFR Part 355, Appendix A or B; or handle radiological materials in quantities for which an emergency plan is required pursuant to 10 CFR Parts 30, 40 or 70?	☒ YES ☐ NO 4	BUSINESS OWNER/OPERATOR IDENTIFICATION HAZARDOUS MATERIALS INVENTORY – CHEMICAL DESCRIPTION
B. REGULATED SUBSTANCES Have Regulated Substances stored onsite in quantities greater than the threshold quantities established by the California Accidental Release Prevention Program (CalARP)?	☐ YES ☒ NO 4a	Coordinate with your local Agency responsible for CalARP.
C. UNDERGROUND STORAGE TANKS (USTs) Own or operate underground storage tanks?	☐ YES ☒ NO 5	UST FACILITY UST TANK (one per tank)
D. ABOVE GROUND PETROLEUM STORAGE Store greater than 1,320 gallons of petroleum products (new or used) in aboveground tanks or containers.	☒ YES ☐ NO 8	NO FORM REQUIRED TO CUPAs May require SPCC plan.
E. HAZARDOUS WASTE Generate hazardous waste?	☒ YES ☐ NO 9	EPA ID NUMBER – provide at the top of this page
Recycle more than 100 kg/month of excluded or exempted recyclable materials (per HSC 25143.2)?	☐ YES ☒ NO 10	RECYCLABLE MATERIALS REPORT (one per recycler)
Treat hazardous waste on site?	☐ YES ☒ NO 11	ONSITE HAZARDOUS WASTE TREATMENT – FACILITY ONSITE HAZARDOUS WASTE TREATMENT – UNIT (one page per unit)
Treatment subject to financial assurance requirements (for Permit by Rule and Conditional Authorization)?	☐ YES ☒ NO 12	CERTIFICATION OF FINANCIAL ASSURANCE
Consolidate hazardous waste generated at a remote site?	☐ YES ☒ NO 13	REMOTE WASTE / CONSOLIDATION SITE ANNUAL NOTIFICATION
Need to report the closure/removal of a tank that was classified as hazardous waste and cleaned onsite?	☐ YES ☒ NO 14	HAZARDOUS WASTE TANK CLOSURE CERTIFICATION
Generate in any single calendar month 1,000 kilograms (kg) (2,200 pounds) or more of federal RCRA hazardous waste, or generate in any single calendar month, or accumulate at any time, 1 kg (2.2 pounds) of RCRA acute hazardous waste; or generate or accumulate at any time more than 100 kg (220 pounds) of spill cleanup materials contaminated with RCRA acute hazardous waste?	☐ YES ☒ NO 14a	Obtain federal EPA ID Number, file Biennial Report (EPA Form 8700-13A/B), and satisfy requirements for RCRA Large Quantity Generator.
Household Hazardous Waste (HHW) Collection site?	☐ YES ☒ NO 14b	See CUPA for required forms.
F. LOCAL REQUIREMENTS: Note: If you have answered "NO" to question "A" listed above, complete and submit the Statement		15

Re: Notice of Violation - McWane, Inc.

Dear Ms. Adams:

The purpose of this letter is to notify state environmental departments that the U.S. Environmental Protection Agency (EPA) is proposing to resolve violations of the Clean Air Act (CAA), the Clean Water Act (CWA), the Resource Conservation and Recovery Act (RCRA), and their implementing regulations at certain facilities in your state.

This notice is given pursuant to Section 113(a)(1) of the CAA, 42 U.S.C. § 7413(a)(1), which requires EPA to notify the person found to be in violation of any requirement of a state implementation plan (SIP), and the state in which the plan applies, of such finding no less than 30 days prior to taking action; Section 309(b) of the CWA, 33 U.S.C. § 1319(b), which requires EPA to notify the appropriate state when commencing a civil action; and Section 3008(a)(2) of RCRA, 42 U.S.C. § 6928(a)(2), which requires EPA to notify a state authorized to carry out a hazardous waste program under RCRA § 3006, 42 U.S.C. § 6926, prior to issuing an order or commencing a civil action. The facilities and violations are listed in Attachment A.

EPA plans to resolve the violations in Attachment A, as well as violations identified at McWane facilities in other states, in a Consent Decree. The Consent Decree will be lodged shortly in the United States District Court for the Northern District of Alabama.

Should you have any questions on this matter, please contact me at (202) 564-4387, or your staff may contact Peter Moore at (202) 564-6014, Caroline Hermann at (202) 564-2876, or Beth Cavalier at (202) 564-3271.

Sincerely,

for Bernadette M. Rappold, Director

CLOSED UST

Attachment A

Location	Violations
Anaco, Corona, California	Under the CWA, on or about December 2004, failed to have a national pollutant discharge elimination system (NPDES) permit for storm water discharges, in violation of 40 C.F.R. § 22.26(a)(1)(v).
Anaco, Corona, California	Under RCRA, on or about April 2001, failed to have adequate secondary containment for its hazardous waste storage area, in violation of 40 C.F.R. § 265 Subpart DD, and 40 C.F.R. §§ 262.34(a), 265.1101.
Clow Valve Company, Corona, California	Under the CAA, on or about March 2001, failed to record daily volatile organic compound emissions from the dry paint booth and the wet paint booth on the respective coating usage charts, in violation of SCAQMD Rule 109 Recordkeeping for Volatile Organic Compound Emissions.
Clow Valve Company, Corona, California	Under CWA, on or about March 2001, failed to fully comply with storm water general permit requirements when it discharged cooling water to the storm sewer system, in violation of 40 C.F.R § 112.26.
Clow Valve Company, Corona, California	Under CWA, failed to meet the benchmark concentration levels authorized by the facility's storm water general permit during sampling on January 11, 2001 for the following parameters: total organic carbon, zinc, nitrate nitrogen, nitrite nitrogen, iron, and aluminum, in violation of 40 C.F.R § 122.26.
Clow Valve Company, Corona, California	Under CWA, on or about December 2004, failed to fully comply with storm water general permit requirements when cooling tower water was being sent to the storm sewer drain but this discharge was not authorized under the general storm water permit, in violation of General NPDES Permit Section A(6)(a)(v).
Clow Valve Company, Corona, California	Under CWA, on or about December 2004, failed to fully comply with the spills section of the facility's storm water pollution prevention plan. The need to address surface staining around the chip storage area had been removed from the plan and staining was observed during the audit suggesting that the deletion of that section from the plan was premature, in violation of 40 C.F.R. § 122.41, and 22 California Code of Regulations (C.C.R.) § 66279.10(c).

Clow Valve Company, Corona, California	Under RCRA, on or about March 2001, failed to comply with hazardous waste container storage area requirements when ground areas within the hazardous waste container storage area, within the machine shop around metal cutting machines, and outside near the pressure test area were contaminated with releases of oil and cutting fluid releases, in violation of 40 C.F.R. §§ 265.31, 265.171, and 8 C.C.R. § 5192.
Clow Valve Company, Corona, California	Under RCRA, on or about March 2001, failed to comply with universal waste requirements when the storage of used oil in a rolloff box was not properly covered, in violation of 40 C.F.R. Part 273, 40 C.F.R. §§ 264.173, 279.22, and 22 C.C.R. § 66279.20.
Clow Valve Company, Corona, California	Under RCRA, on or about March 2001, failed to properly analyze and characterize metal dust, in violation of 40 C.F.R. § 262.11 and 8 C.C.R. § 5192.
Clow Valve Company, Corona, California	Under RCRA, on or about December 2004, failed to have a written source reduction program which is required by a large quantity generator of hazardous waste, in violation of 40 C.F.R. § 262, and 22 C.C.R. § 67100.5.
Clow Valve Company, Corona, California	Under RCRA, on or about December 2004, failed to properly maintain drums of unused paint in the hazardous material storage area on which the labels were not readable, and the containers had visible surface corrosion, in violation of 40 C.F.R. § 262.11, and 22 C.C.R. § 66262.34(f).
Clow Valve Company, Corona, California	Under RCRA, on or about December 2004, failed to characterize hazardous waste when one drum of decontamination water located near the remediation site had not been characterized, in violation of 40 C.F.R. § 262.11.
Clow Valve Company, Corona, California	Under RCRA, on or about December 2004, failed to have a comprehensive universal waste program that covered aerosol cans and cathode ray tubes, in violation of 40 C.F.R. Part 273.
Clow Valve Company, Corona, California	Under RCRA, on or about March 2001 and December 2004, failed to fully comply with the solid and hazardous waste container storage regulations when staining and chip oil were observed on the concrete surface around the metal chip roll-off containers, in violation of 22 CCR § 66279.1 (Standards for Generators of Used Oil).

Re: Aboveground Storage Tank Facility Statement

Dear Ms. Parsons;

Enclosed are two Aboveground Storage Tank Facility Statements Anaco and Clow Valve, Inc. here in Corona.

For clarification, Anaco and Clow are from different divisions of McWane, Inc that operate on the same property but have different addresses. McWane is the owner of the property.

The site has one SPCC plan that is managed by the EHS department which has environmental responsibility for the entire site.

Should you have any questions, please contact me at:

Subject: **Clow Valve, Foundry Clean-Up**
1375 Magnolia Avenue
Corona, California

Dear Ms. Wages,

The following are the proposed taaks for removal, loading and subsequent recycle of foundry sand and baghouse dust at the above referenced site. This correspondence is pursuant to our telephone conversation late last month. The quantity of dust and sand to be recycled at Cyprus Miami Mining in Claypool, Arizona has been estimated at approximately 701 tons.

Work Plan

1. Remove baghouse dust from the baghouse adjacent to south end of brass foundry, stockpile.
2. Empty sand from 88 drums, stockpile for loading to bulk disposal.
3. Remove foundry sand from three silos in brass foundry, stockpile.
4. Remove sand from conveyor area and vault. Remove conveyor belt to access vault, remove sand, stockpile.
5. Broom sweep areas of involvement.
6. Load material from quantity list into end-dump trucks for disposal at Laidlaw's Imperial facility.
7. Include in loading of sand approximately 12" of soil from below the stockpile outside the iron foundry.
8. Crush 83 empty drums. Send to recycle at AMR, Ontario,CA on a Bill of Lading.

Please contact me if all is accepable to you. McWane (Clow Valve's parent company) is intent on completing this work as soon as possible. So are we. If any revisions are required, if you have any questions or require further explanation please contact me.

Sincerely,
Disposal Control Service, Inc./Laidlaw Environmental Services, Inc.

Re: Clow Valve Company Underground Storage Tank Removal

Dear Mr. Robison:

This letter is to inform you that the requirements for the closure of the four underground storage tanks located at 1375 Magnolia Avenue in Corona have been completed. This department has received the results for the laboratory analyses of soil samples collected from beneath the tank. It has been determined that no further site mitigation will be required (reference Del Mar Analytical analyses dated 11/18/93 and 12/10/93).

With the provision that the results obtained from the soil sampling were accurate and properly handled, it is the position of this department that no further action will be required at this location.

It should be pointed out that this letter does not relieve you of any responsibilities mandated under the California Health and Safety Code if additional or previously unidentified contamination is discovered at this same location.

The details of the tank removal are on file at the County of Riverside, Department of Environmental Health, Hazardous Materials Management Division located at 4065 County Circle Drive, Room 123. If you have any questions, please do not hesitate to contact me at (909) 358-5055.

Sincerely,

Sandra J. Wages

UNDERGROUND STORAGE TANK PERMIT FOR CLOSURE

TYPE OF PERMIT

- [X] Removal
- [ ] Abandonment in Place
- [ ] Temporary Closure (12 Months Only)

This permit shall not be construed as to allow the violation of any law, nor does it prevent further corrections of errors found on the application, plans, or at the site. Plans must be resubmitted for approval if any additional changes are made by the applicant.

In addition to this permit, all applicable permits required by the local fire department, building department, and the air quality management district must be obtained and should be available for review at the closure site.

All tank closures must, at a minimum, comply with the California Underground Storage Tank Regulations and the appropriate section of the California Health & Safety Code.

81052

CLOW VALVE/PETRO BUILDER (Owner/Contractor/Applicant) has applied for and is granted a permit to

REMOVE (Remove/Abandon/Temp. Close) FOUR (No.) underground storage tank(s) at

CLOW VALVE (Facility Name) located at

1375 MAGNOLIA (Street Address) in CORONA (City/Town), California.

Underground tank closure inspections **must be scheduled five (5) business days in advance.** Telephone (714) 358-5055.

Daniel T Workman — Permit Approved By

11-8-93 — Date

93-326 — Plan Check #

*This Permit for Closure is VALID FOR 90 DAYS from the date of approval. If no reasonable action is taken within that period, the applicant will be required to reapply for a closure permit with all pertinent fees associated.

RE: Underground Storage Tanks at
1375 Magnolia Avenue
Corona, CA 91719

Attn: Joe Scheliga

Dear Mr. Scheliga:

It has come to the attention of the Hazardous Materials Management Division that the above-mentioned property has two, or possibly three, Underground Storage Tanks (USTs) for which current Underground Storage Tank Permits have not been obtained. Under Riverside County Ordinance 617 and Section 25284(a) of the California Health and Safety Code, "no person shall own or operate an underground storage tank unless a permit for its operation has been issued by the local agency." Therefore, as the property owner of the above location, you are in violation of County and State regulations thereby subject to regulatory action.

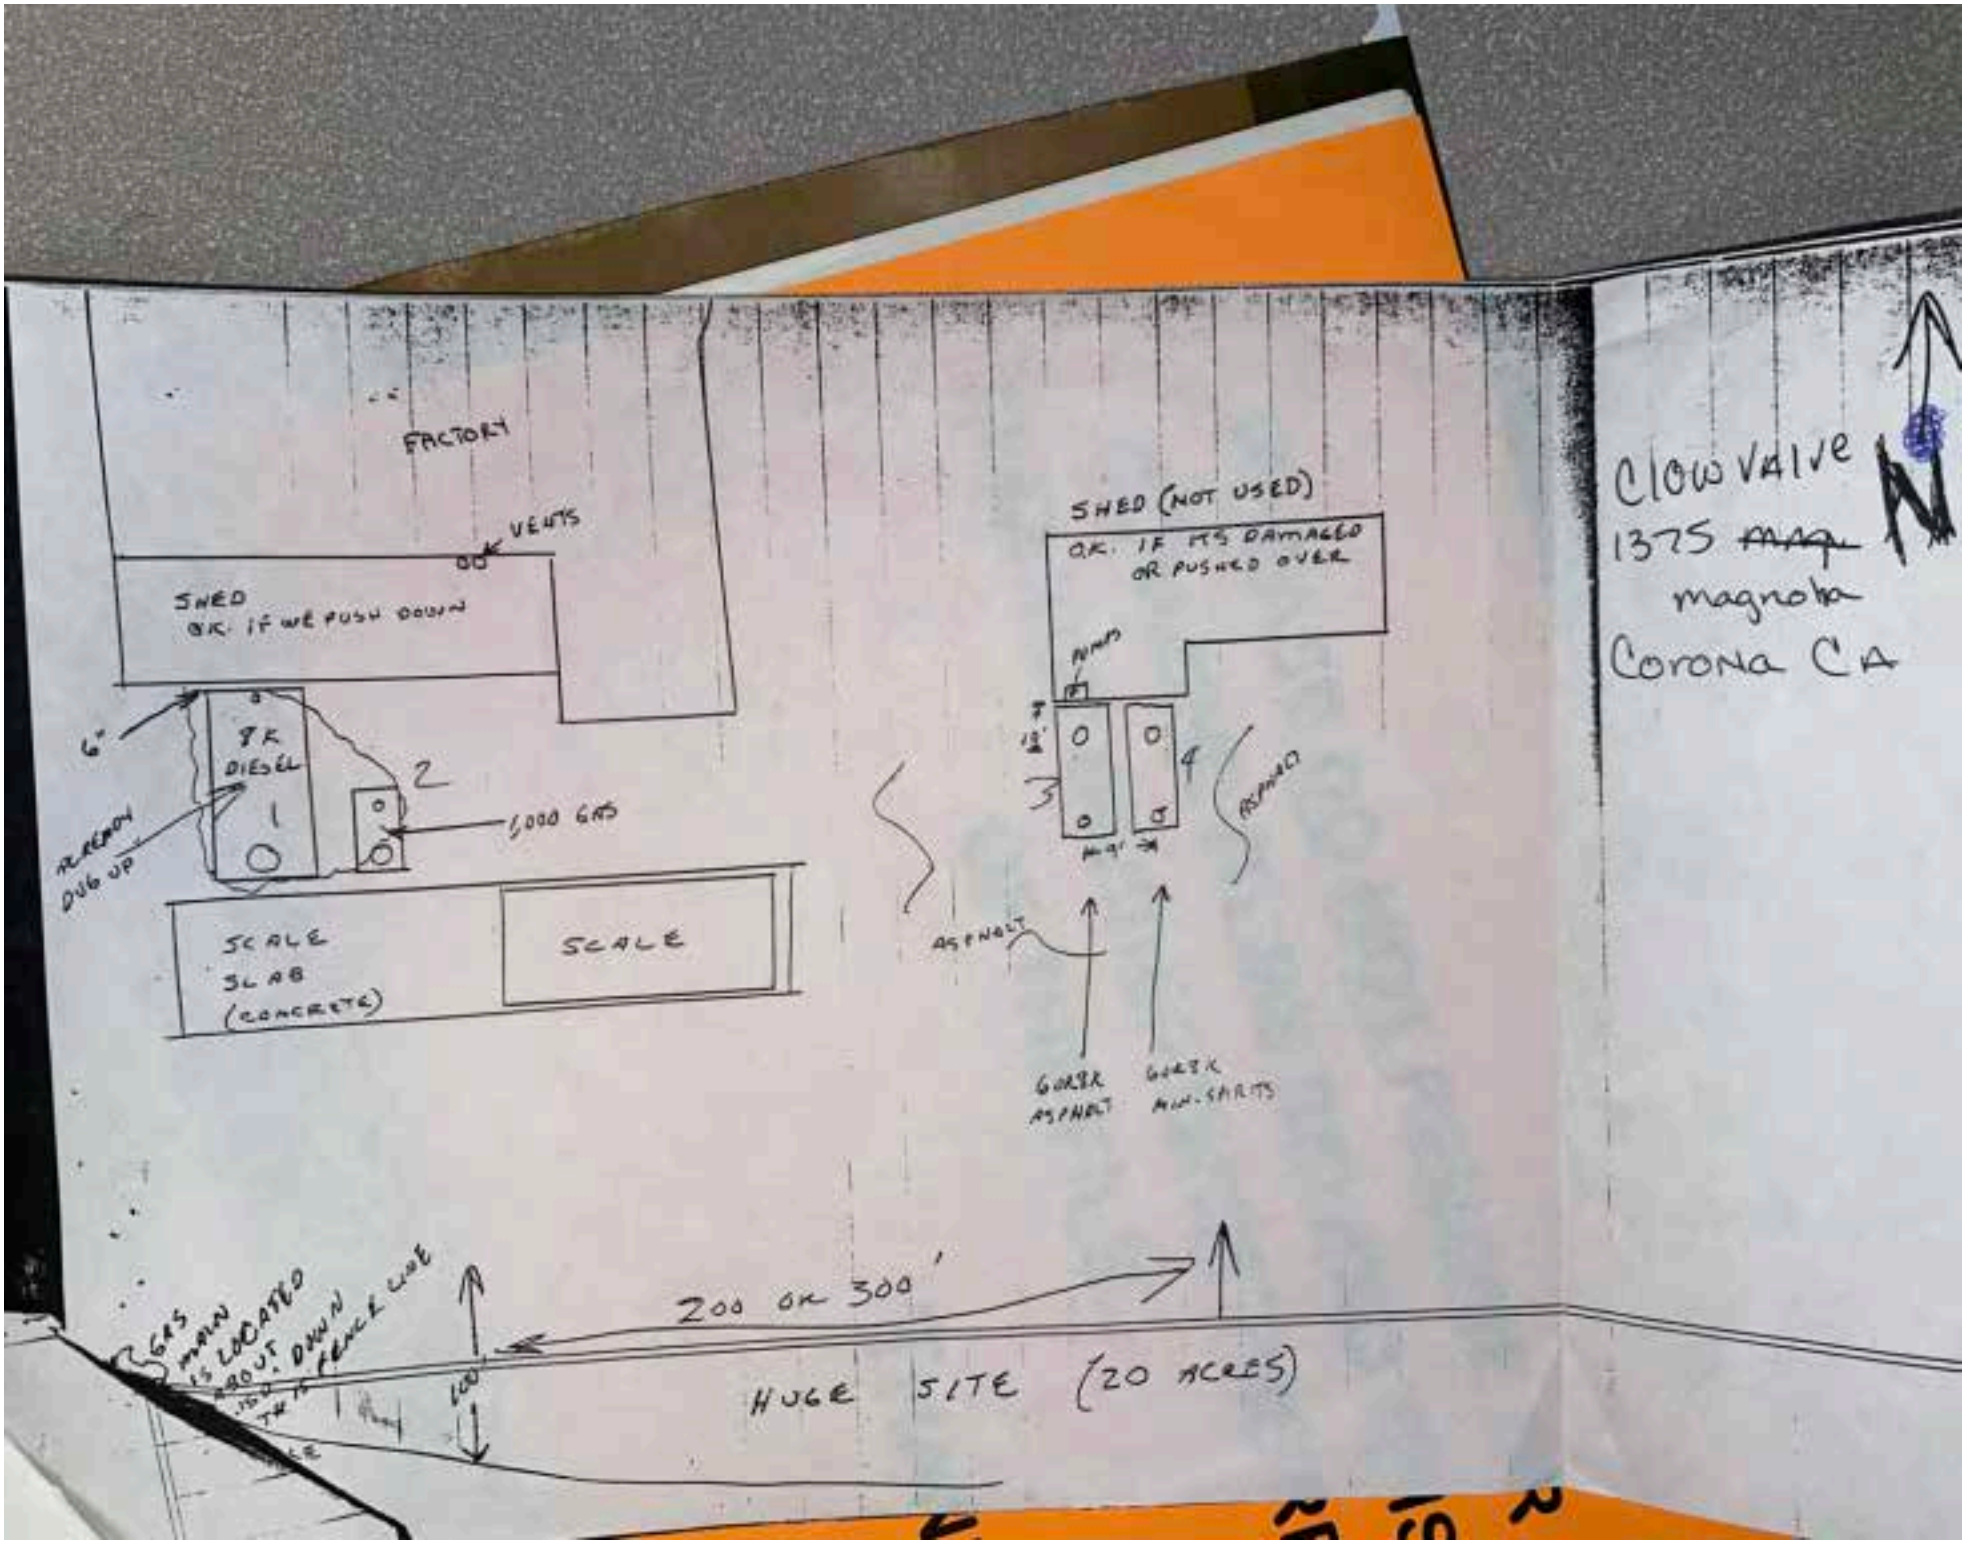
In order to remedy these violations, this office provides three options listed as follows:

I. Obtain current UST permits by providing this office with the following information for all tank systems:

-Tank integrity test results
-Pipeline integrity test results
-An approved monitoring alternative application
-Forms A and B (contact this office for applications)
-A statement of financial responsibility
-Daily monitoring records
-Monthly inventory reconciliation records
-Calibration of the meters
-Annual inventory reconciliation records
-Payment of all past and current fees including penalties

II. Place the USTs in Temporary Closure requiring a Closure Permit from this office. A Temporary Closure Permit is valid for one year.

III. Obtain a Permit for Removal from this office and remove the tanks within 90 days.



In addition to the current Underground Storage Tank regulations, as stated in Title 23 of the California Code of Regulations, existing UST systems must either be upgraded to include secondary containment or removed by 1998.

One of the above options must be carried out by 10/28/93 to avoid regulatory action. For further details, please call Sande Wages at (909)358-5055.

Thank You,

Sandra J. Wages

pic Hazardous Waste Generators follow-up inspection

EMARKS:

1. Characterize the ~~Sand~~ blast once it becomes a waste. ~~Sand~~ blast just used on cast iron. Need copy of the Material Safety Data Sheet for the sand (Fax to Bruce Bailey at 909-358-5017)
2. Metal dust from floor should be collected and properly stored. The metal dust will require lab characterization for California Metals. Contact Bruce Bailey for assistance at 909-358-5055.
3. What chemicals are added to the cooling tower water? What chemicals do they use to clean the cooling tower system?
   How is the waste water disposed of?
   Please answer these questions and Fax to Bruce Bailey.
4. Discontinue spraying gun cleaning solvent into the spray booth filters. The solvent shall be collected for proper disposal or reused.
5. Contain mop water for proper disposal.
6. Presently, used rags are disposed into the municipal trash. If the rags are contaminated with solvent or coolant, a solvent rag service will be required.
7. Need documentation for the 1997 PCB cleanup.

Name Clow Valve Co., Inc.

Address 1375 Magnolia Ave. City Corona

Topic HAZARDOUS WASTE GENERATOR INSPECTION - FLOW CHART

REMARKS:

The following is a general list of Clow Valve Co.'s processes, the hazardous materials used, and wastes produced:

① RECEIVING IRON AND BRASS CASTINGS

Propane → Forklifts for unloading ← Lube Oil

Forklifts for unloading → WASTES

WASTES → Waste oil from servicing forklifts - handled by outside company

② MACHINING (CAST IRON ONLY - NO BRASS)

Cutting Oil, Iron Castings, Hydraulic Oil, Grease → Machinery

Naptha Solvent → Servicing Machinery

Servicing Machinery → WASTES

WASTES → Waste Solvent disposed as hazardous by Safety-Kleen

WASTES → Metal Chips → Metal Recycler (Non-hazardous)

WASTES → Cutting Oil (Soluble Oil) → Some adheres to metal chips, the rest disposed with waste oil as hazardous waste.

WASTES → Oil contaminated sawdust for leaks/spills disposed under manifest as hazardous waste

WASTES → Used Rags - disposed as hazardous waste

WASTES → Waste hydraulic oil from occasional changing of oil in machinery - disposed as hazardous

ess 1375 Magnolia Ave. City Corona

HAZARDOUS WASTE GENERATOR INSPECTION - FLOW CHART (cont.)

ARKS:

(3) ASSEMBLY AND TESTING OF FIRE HYDRANTS

Water → "Closed Loop" pressurized water testing system ← Filter Element

WASTES

Waste filter containing dirt and a small amount of oil - handled as hazardous waste

(5) PAINTING (3 METHODS - ENAMELS, EPOXY, POWDER COAT)

Enamel Paint → Thinned with Kerosene → Black "Asphalt Enamel" Applied in Dip Tank and Spray booth

1515 Solvent → Enamels/Primers Applied by Spray Gun in spray boothes

2-Part Epoxy → Thinned → Epoxy Applied by Spray Gun in Spray Booth

MEK for clean-up

Powder Coat → Powder-Fuse Coat - Iron Castings are heated in oven and Powder coat is applied → "Closed Loop" System - bag house collected surplus put back into system

WASTES:

- Waste Spray booth filters - handled as hazardous waste
- Waste paint scrapings, sweepings, miscellaneous - handled as hazardous waste
- Small amount of waste thinner disposed as hazardous with waste paint
- used Rags - disposed as hazardous waste

(6) STORAGE/SHIPPING

(7) Note: Air Compressors used in all processes (occasional waste oil - disposed as hazardous. Also, Cooling Tower with closed loop water system)

Hazardous Materials Specialist, S. Wages conducted a Hazardous Waste Generator Inspection of the above facility on 3/25/96. Hazardous wastes produced include: paint-related waste (booth filters, rags, scrapings, occasional waste paint, and a small amount of thinner/paint), waste oil, waste solvent (parts-washer).

There were no violations at the time of inspection. PERMIT ISSUED.

HMMS, S. Wages, conducted a Hazardous Waste Generator follow-up inspection of the above facility on 11-15-94.

The following items remain to be corrected:

I. HAZARDOUS WASTE STORAGE

A.) Some used oil has been stored on site for longer than the allowable time period (contaminated with water). Waste foundry sand and lead-contaminated soil has been stored on site for longer than the allowable time period. Owner/operator shall have the above hazardous wastes hauled off-site, as hazardous waste, by a registered hazardous waste hauler maintaining receipts for review.

*All other violations have been corrected.

Note: Facility is changing to water-based paint and has determined that their paint filters may not be hazardous. In order to make a hazardous waste determination, owner/operator shall have filters analyzed for Total Metals under HMMD Supervision.

*Permit issued at the time of inspection.

Topic CONFIRMATION SAMPLING & FOLLOW-UP HAZARDOUS WASTE GENERATOR

REMARKS:

HMMS, SANDE WAGES, CONDUCTED A SITE VISIT OF THE ABOVE FACILITY ON 8-11-94. WAGES ASSESSED CLEAN-UP OF FOUNDRY SAND AND FOUND IT TO BE PROGRESSING WELL. FOUNDRY SAND PILE DIRECTLY ON SOIL IN REAR OF PLANT HAD BEEN REMOVED AND PROPERLY DISPOSED OF. CONFIRMATION SAMPLES WERE COLLECTED BY CLOW REPRESENTATIVE BARRY ROBISON IN THREE LOCATIONS UNDER WHERE PILE WAS LOCATED. SAMPLES TO BE TRANSPORTED TO LAB BY LAIDLAW PERSONNEL. WAGES THEN CONDUCTED A FOLLOW-UP GENERATOR INSPECTION, WALK-THROUGH AND REVIEW OF RECORDS, WHERE SEVERAL ITEMS WERE NOTED TO BE IN THE PROCESS OF CORRECTION. WAGES REVEIWED, VERBALLY, ITEMS OF CONCERN WITH BARRY ROBISON AND DETERMINED THAT A FORMAL FOLLOW-UP INSPECTION WOULD BE CONDUCTED WITHIN TWO WEEKS WHEN ALL ITEMS WERE SUPPOSED TO BE COMPLETE.

REMAINING ITEMS OF CONCERN: CLEAN-UP OF FOUNDRY SAND, REVIEW OF CONFIRMATION SAMPLE ANALYSIS, CLEAN-UP & DISPOSAL OF CONTAMINATED SOIL, REVIEW OF ALL RECEIPTS/TASKS INVOLVED IN CLEAN-UP, LABELING OF WASTE, CLOSING OF WASTE, INSPECTION OF WASTE STORAGE AREA, REVIEW OF WASTE OIL RECEIPTS.

Mallay met with Mr. Barry Robinson and Mr. JR Fredericks and conducted a walk-thru of the facility. The drums of foundry sand had been placed next to the fence in the front of the property on Magnolia. The drums of waste oil had been consolidated. Much debris had been removed from the foundry and the stockpiling of wastes had begun. JR indicated that they were planning on stockpiling the sand from the foundry on Magnolia pending disposal. The sampling was tentatively scheduled for 7/28/94.

Hazardous Materials Specialists S. Wages and M. Bahia (with assistance from J. Uhlman and V. Sternjacob) conducted a routine Hazardous Waste Generator Inspection of the above facility on 9-2-93. This facility has several waste streams from past and current manufacturing activities. A large portion of the waste generated from past activities consists of foundry waste (baghouse dust, molding sand, etc.) and an oil/water mixture found in old testing pond. Current Hazardous wastes produced include waste oil, oil-contaminated rags/absorbant, waste paint-related materials, and waste solvent. The following violations were noted at the time of inspection:

I. HAZARDOUS WASTE STORAGE

A.) Old foundry waste (see note) located in several areas of the facility and waste oil/water mixture in test pond has been stored for longer than the allowable time period. Hazardous waste is required to be hauled off site by a registered hazardous waste hauler within 90 days of initial accumulation. Note: Foundry waste will be considered a hazardous waste until

proper analysis is provided to the Hazardous Materials Management Dirision (HMMD) to prove otherwise.

C2.) Several containers in various locations (i.e. waste paint-related materials, waste oil, drums of foundry waste) were not labeled. All hazardous wastes shall be properly labeled as to contents to include the following: ① The words "Hazardous Waste" ② Physical and Chemical Characteristics ③ Hazards of Waste ④ Accumulation Start Date ⑤ Name and address of generator.

C3.) General appearance of facility, particularly unused portions, indicates a lack of regular inspections for hazardous waste storage violations. Owner/operator shall inspect hazardous waste storage areas weekly for open, unlabeled containers, spills, potentials for release, etc..

C5.) Oil-contaminated absorbant, waste oil, and old foundry waste drums were not stored closed. All hazardous wastes shall be stored closed so as to minimize the possibility of release.

II. PREPAREDNESS & PREVENTION

A.) Soil contamination was visible in many areas throughout the facility (i.e. large and small piles of foundry waste inside and outside foundry bldgs; what appears to be waste oil

contamination in various locations including main machine shop, compressor room, brass foundry storage room, valve assembly area, and drilling area; and a large amount of waste paint related material in and around spray boothes). In addition, compressor room has a drain into which waste oil was leaking at the time of inspection. All hazardous wastes shall be maintained so as to minimize the possibility of release. Soil contamination in these areas shall be remediated under HMMD supervision.

III. RECORDS

A) Permit fees have been paid; however, the Hazardous Waste Generator Permit will not be issued until all violations have been corrected.

C) All manifests and/or receipts for hazardous waste disposal were not available at the time of inspection. Manifests and/or receipts shall be maintained on site for 3 years to be available at the time of inspection.

D) Documented employee training was not available at the time of inspection. All hazardous waste generators shall have documented employee training to demonstrate that employees have been trained to deal with hazardous waste.

Topic Preliminary Hazardous Waste Generator Inspection

REMARKS:

Hazardous Materials Specialist, Sande Wages, conducted a preliminary Hazardous Waste Generator Inspection of the above facility on 7-20-93. Several areas of concern were noted at the time of inspection listed as follows:

- Large stockpile of possible foundary waste in piles and covering ground in some areas behind facility
- Drums and stockpiles of baghouse dust
- "Settling Pond" containing oil, water? and sludge. Manager stated that Entire containment is concrete. He also stated their intentions to skim off oil, pump out water, and scrape up sludge in bottom.
- Open asphalt dip tank also containing solvents below grade in concrete.
- Abandoned sections of plant which need to be inspected for contamination and/or wastes
- 2 MVF Underground Storage Tanks and 1 possible liquid asphalt UST never under permit on property.
- Spray booths, waste oil rags, absorbant, paint filters & paint related waste all being placed in same drum for disposal
- Old generator application which refers to waste oil as alternative fuel
- In general - soil contamination and accumulation time violations.
- Labeling, cont. plan, training - Manager could not produce at inspection.

SUPPLEMENTAL REPORT

Reference Date 7/10/89

Name CLOW CORPORATION

Address 1375 OLD MAGNOLIA Rd City CORONA 91719

Topic INSPECTION.

REMARKS:

This facility has ACETONE, METHYL CHLORIDE, MEK, 1,1,1 TRICHLOROETHANE & ISOPROPYL ALCOHOL. WASTE IS generated from water soluble cutting oil, motor oil and lube oil. Resin, waste paint, paint thinner (15 cr), spray booth filters, contaminated rags and bag house wastes. There are some separate areas where spray paint is used.

1,A. - 22, CCR, Section 66508; This facility has on its property hazardous waste for a period of greater than 90 days and does not meet the criteria for a storage facility. The hazardous waste must be disposed of by a registered waste transporter to an appropriate site.

The hazardous waste noted is as follows:

(A) Waste paint (yellow) - Quantity undetermined.
(B) Resins, catalyzied in 5 gallon buckets.
(C) Rag contaminated with Acetone, MEK & thinners.
(D) Hydraulic, Motor & Gear Oil - 16, 55 gallon drums at the "old Paint Shop."

Address 1375 Old Magnolia Rd City Corona 91719

Topic Inspection

REMARKS:

(E.) 70-80, 55 gallon drums, 70-80, 5 gallon buckets, some with liquid ashes and solid/soil material. 1, 55 gallon drum leaking. These are located on the East side of the machine shop.

(F) One drum containing a thick black substance behind the maintenance shop.

(G) Inside shop - 5 gallon buckets and bags on the floor.

(H) The bag house was releasing minute particles into the air that likely were either metals or sand. This material will require laboratory analysis.

(I) Noted in many area of the grounds were mounds of sand that possibly contained heavy metals from the process. These mounds will also have to be sampled to determine their status re: Hazardous - non Hazardous.

I, B. In almost every instance the possibility

REMARKS:

of a release was likely due to poor maintenance. This is violation of 22, CCR, Section 67120.

1-C-1 Containers were not properly managed. They were located in several different areas of the plant making it difficult to manage at all. - 22 CCR Section 67243

1-C-3. With the exception of one or two drums, there were no containers labeled as "Hazardous Waste" and none identified the contents. 22, CCR - Section 66508

1-C-4. Inspection of containers is required on a weekly basis by responsible person. Section 67244, 22, CCR

1-C-4-B. 22 CCR Section 67241 requires the containers holding hazardous waste to be in good condition. Many of the containers were in poor condition and in one case, one was leaking its contents.

: Insp.

ARKS:

C,4,c. 22 CCR, Section 67243 requires that all hazardous waste containers be closed. Many drums were unsecured, those secured had open bungs. Most all 5 gallon buckets were open as were all of the contaminated soil containers.

II, F. One container holding the black tar like substance had been filled to overflow and had excessive soil contamination. 22 CCR Health & Safety Code 25189 will require the soil to be removed and transported as a hazardous waste to an appropriate disposal site.

A period of 30 days will be granted to the facility to accomplish the required corrections. Expiration date is set at August 10, 1989

FOLLOWING IS A PARTIAL LIST OF HAZARDOUS WASTE WHICH WILL ASSIST YOU IN COMPLETING QUESTION
NAMES OF SPECIFIC CHEMICALS AND CRITERIA OF HAZARDOUS WASTE ARE FOUND IN THE
IFORNIA ADMINISTRATIVE CODE, TITLE 22, SECTION 66680 THROUGH 66723 AND THE HEALTH
) SAFETY CODE, 25117 AND 25117.5.

DOES YOUR BUSINESS OR SERVICE PRODUCE, STORE OR HANDLE MATERIALS WHICH CONTAIN ANY OF THE FOLLOWING BY-PRODUCTS OR WASTES?

31

EXAMPLES OF BY-PRODUCTS/WASTES:	YES	NO	APPROX. AMT./MONTH
1. Infectious Wastes (i.e. laboratory cultures, pathological and surgical specimens, human or animal parts, other materials contaminated with etiologic agents).		✓	
2. Solvents (i.e. acetone, methyl chloride, methyl ethyl ketone, benzene, Stoddard, perchloroethylene, dry cleaning fluids, trichloroethylene, styrene, xylene, unspecified solvent mixtures).	✓		
3. Sludges (i.e. paint, degreasing, caustic, paper, metal picking sludge, acetylene, lime, metal machine coolant, tanning).	✓		
4. Waste Oil/Mixed Oil (i.e. motor oil, cutting oil, lube oil, bunker oil, sulfonation oil, oil and water, hydraulic fluid).	✓		
5. Pesticides (i.e. unusable portion of active pesticide, unrinsed empty containers, rinse water).			
6. Polychlorinated Biphenyls (i.e. PCB contaminated electric capacitors, ballasts, transformer fluids).		✓	
7. Monomer Waste / Polymeric Resin (i.e. incompletely reacted resin, resin rinse water).	✓		
8. Organic Liquids/Solids (i.e. fuel, paint thinner, paint remover, paint, dry cleaning fluids and filters).	✓		
9. Solids and Solutions (i.e. cyanide, azide, hypochlorite, sulfide, fluoride, anti-corrosion fluids, coolant, metal and equipment cleaning solutions, heavy metals powdered or in solution, eg.: antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium and zinc).	✓		
10. Acid Solutions with a pH less than or equal to 2 (i.e. battery acid, metal plating waste, etching residue, pickling liquor).	✓		
11. Alkaline Solutions with a pH greater than or equal to 12.5 (i.e. metal plating and cleaning waste, soda ash, sodium or calcium hydroxide).		✓	
12. Asbestos (i.e. insulation products, old pipe lagging, asbestos pipe waste).		✓	
13. Ashes (i.e. all ashes including oil ash, kiln and oven residue).		✓	
14. Photo Processing Waste (i.e. developer, fixer, hypo solutions).		✓	
15. Miscellaneous (i.e. drilling mud, explosives, chemical toilet waste, printing ink, bag house wastes, mine tailings, fly ash, waste chemicals, dyes, obsolete stock).	✓		

SECTION B
(CON'T)

		YES	
B2.	Do you dispose of any items in #B1 by discharging them into the sewer system, including down sinks, storm drains, floor drains, toilets, etc.? If yes, which category(ies) of by-products or wastes? _____	☐	☑
B3.	Do you dispose of any items in #B1 in a way other than disposal into the sewer system (for example: trash cans, dumpster, on the ground, evaporation ponds, land fills, etc.)? If yes, which category(ies) of by-products or wastes? Misc.	☑	☐
B4.	Do you recycle any of the items listed in #B1 through another company/contractor or by yourself? If yes, which category(ies) of by-products or wastes? waste oil, Solids & Solutions	☑	☐
B5.	Do you manifest (prepare the required transportation document for hazardous wastes) any items listed in #B1?	☐	☑
B6.	Do you store any of the wastes or by-products listed in #B1?	☑	☐
a.	If yes, do you store any of the wastes or by-products in a surface impoundment?	☐	☑
	Check the type of protection your surface impoundment has:		
	Liner ☐		
	Double Liner ☐		
	Monitoring Well ☐		
b.	Do you store any wastes or by-products in an underground storage tank?	☐	☑
c.	Do you store raw materials in an underground storage tank?	☐	☑

B7. If you answered 'yes' to any of the above questions (except #B6,c), your business or service DOES generate hazardous waste and a Riverside County Hazardous Materials Management Permit IS REQUIRED.

ENTER THE **Amount Due** FROM THE FOLLOWING FEE SCHEDULE: $ 200.00
ATTACH CHECK OR MONEY ORDER FOR FULL AMOUNT, PAYABLE TO 'COUNTY OF RIVERSIDE, DEPARTMENT OF HEALTH'.

ANNUAL FEE SCHEDULE

NUMBER OF EMPLOYEES	FEE
1 - 19	$100.00
20 - 49	$150.00
50 - 99	$200.00
100 - 249	$250.00
250 PLUS	$300.00

IF YOU HAVE CORRECTLY ANSWERED 'NO' TO ALL OF THE ABOVE QUESTIONS, YOUR BUSINESS OR SERVICE DOES **not** APPEAR TO GENERATE HAZARDOUS WASTE. YOU MAY BE CONTACTED BY THE DEPARTMENT OF HEALTH TO DISCUSS THE INFORMATION SUBMITTED IN THIS APPLICATION. PROCEED TO **Section C.**

Samples taken: Yes ___ (receipt attached) No X | Avg. Gen. Rate (monthly): ___

Plan of Correction necessary: Yes ___ (Due date: ___) No X

Discussion with Management: The foundry portion of the facility has been closed since April 82. They are plans to reopen the foundry Jul 83. A few drums of contained raw material were found which could not be identified. Mr. Morbete was advised to identify & label them if they were to be used. Also were drums which contained acetone & 99% isopropyl alcohol. Mr. Morbete was advised to properly dispose of them if the materials were not to be used. Otherwise, no hazardous waste was observed.

On this date an inspection of your facility was conducted under authority of Section 25185, California Health & Safety Code and Section 66328, California Administrative Code. The collection of samples or other evidence, including the taking of photographs, was done under authority of Section 66328, California Administrative Code. The following conditions or practices observed this date are alleged to be violations of one or more sections of the California Health & Safety Code, Division 20, or California Administrative Code, Title 22, relating to the storage, handling, transportation, and disposal of hazardous and extremely hazardous waste or asbestos containing products.

Joe Wilson, Environmental Recovery Services

John Talbot, Environmental Recovery Services

Thomas Owen, Environmental Recovery Services

Douglas Parker, Environmental Recovery Services

CONSENT GIVEN BY: Mark A. Willett, Environmental Engineer
Clow Valve Company

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption. For a list of simple ways you can reduce demand and cut your energy costs, see our Web-site at www.dtsc.ca.gov.

PURPOSE: This was a follow-up inspection at the site, to further assess Solid Waste Management Units identified in the Corrective Action Consent Agreement

FACILITY INFORMATION:

Current Owner: Clow Valve Company, Oskaloosa, Iowa.

Current Operator: Clow Valve Company

CURRENT STATUS OF FACILITY:

Small Quantity Generator of RCRA Hazardous Waste

WASTE STREAMS:

Waste oils, paint solvents, coolants, waste rags, metal chips

TYPE OF BUSINESS:

Fabrication of large cast iron valves and fire hydrants.

SITE WALKTHROUGH:

On January 22, 2002, DTSC performed a follow-up inspection and technical meeting at Clow Valve Company located at 1375 Magnolia Ave., Corona, CA 91719 (Facility). The purpose of the inspection was to identify a newly identified release at the Facility. DTSC received information of the release in a letter dated September 27, 2001 from Bruce Bailey, of the County of Riverside Health Services Agency. The release was identified as diesel/solvent contaminated soil and foundry sand used as fill dirt located at the Facility. The purpose of the meeting was to discuss revising the previously identified Solid Waste Management Units (SWMU's) or Areas of Concern identified in the Corrective Action Consent Agreement that was signed by the Facility effective October 31, 2001.

At approximately 10:00 a.m. Yvonne Sanchez (DTSC) and I arrived at the Facility. We met with Daniel Dart (Clow), Mark Willett (Clow), and Barry Robison (Clow). We were shortly joined by representatives of the Facility's consulting firm, Advanced Environmental Services, Inc. The representatives included Joe Wilson, John Talbot, Thomas Owen, and Douglas Parker. I received consent to conduct the inspection from Mr. Willet.

We proceeded to inspect the abandoned rail spur area. According to a letter dated September 21, 2001, from Joe Wilson to Bruce Bailey, during a preliminary trenching investigation of the area by Advanced Environmental Services, hydrocarbons and

metals were identified at shallow depths". Mr. Willett informed us that this area formerly housed two Underground Storage Tanks (UST's). One 8,000 gallon diesel tank and one 4000 gallon gasoline tank. Closure of the UST's were done by the County, however no soil sampling data was provided in the County's report. Since the source for the petroleum impacted area is unknown, Mr. Willett stated the Facility's plans for the abandoned rail spur area was to conduct grid sampling and take several borings in order to identify the vertical and horizontal extent of the contamination. Depending on extent of contamination and cleanup at the area the Facility plans to make a grass/park area, or lay a concrete pad over the entire area. It was agreed that this entire area is to be referenced as the "rail spur area." This area will be identified as SWMU 1.

We then proceeded to the chip storage area and the hazardous waste storage area. Due to the proximity in nature of these two area's, it was agreed that the revised Corrective Action Consent Agreement (Agreement) would reference only the "chip storage area" as SWMU 1, for investigation purposes depending on the degree of lateral contamination towards the hazardous waste storage area. For the chip storage area, the Facility plans to do a grid Sampling Analysis plan up to 33 feet laterally from the current storage building. Depending on the extent of contamination, Mr. Willett stated that the Facility may decide to repave and put a concrete pad and roof over the waste roll off bin area. At the time of inspection, Mr. Willett asked if DTSC would consider removing the hazardous waste storage area from the Agreement. I observed on no visual staining or contamination at the inspection of the hazardous waste storage area. Ms. Sanchez and I agreed to remove this as a SWMU from the Agreement. Ms. Sanchez stated that if contamination was found at the roll off bin area adjacent to the hazardous waste storage area, it would have to be investigated in order to determine the lateral and vertical extent of contamination at the area. This area will be identified as SWMU 2.

The next area to be inspected was the area adjacent to pressure test are. Underneath a pump adjacent to the wall, there had been oil leakage that was observed during a DTSC compliance inspection on October 12 and 13, 2000. Mr. Dart informed us that since the inspection, soil around the area was excavated and a pan was placed under the pump. DTSC is recommending that borings be taken and analyzed to make sure that all contaminated soil was removed. This area will be identified as SWMU 3.

The next area to be inspected was the machine shop around the metal cutting machines. At present, there are two Horizontal Machine Centers (T-20 and T-11). Mr. Dart stated that the machines have not been in operation for approximately two years. During the visual inspection, I observed some staining but no problems with concrete integrity. A puddle of oil was observed about 1 foot long/wide around the edge of the machine. Since the condition of the concrete was acceptable, DTSC will remove the machine shop around the metal cutting machine as a SWMU from the Agreement. However, since the area could be a potential area of concern,

DTSC is making a recommendation that an Investigation be conducted once the Facility removes heavy machines from the area. The inspection ended at approximately 11:00 a.m.

EXIT INTERVIEW:

At the conclusion of the inspection, everyone reconvened in Mr. Dart's office. DTSC informed the Facility representatives that the following Solid Waste Management Unit or Area of Concern would be identified in the revised Agreement:

SWMU 1: Abandoned Rail Spur Area - The two area identified by Advanced Environmental Services with hydrocarbons and metals at shallow depths.

SWMU 2: Chip Storage Area - Roll off Bin Area and possibly the Hazardous Waste Storage Area.

SWMU 3: Area Adjacent to the Pressure Test Area.

RECOMMENDATION AND CONCLUSION:

As a potential area of concern, DTSC is making a recommendation that an Investigation should be conducted in the area once the Facility removes heavy machines from the machine shop around the metal cutting machines area.

DTSC requested a Preliminary Endangerment Assessment Workplan (PEA Workplan) for the three Solid Waste Management Unit or Areas of Concern as identified during the inspection. DTSC also agreed on a phased approach to the investigation and remediation, therefore separate plans for each SWMU will be submitted for review, approval, and implementation as proposed by Mr. Wilson. DTSC will revise the Agreement to correlate with the findings of this inspection. Concurrently a PEA Workplan will be submitted to DTSC by the Facility. Mr. Mark Willett identified himself as the Point of Contact for any work regarding cleanup at the Facility.

Mr. Shetler:

Attached is a letter acting as the notification of the discovery of a release at our Clow Valve Company facility located at 1375 Magnolia Avenue, Corona, CA. This notice is stemming from a conversation with Ms. Sandra Wages in your office. Please call me upon the receipt of this document at (641) 673-8612 ext 207. A hard copy will be mailed tomorrow to your attention.

Respectively,

Mark A. Willett

RE: Discovery of diesel impacted soil at Clow Valve Company, Division of McWane, Inc, 1375 Magnolia Avenue, Corona, CA

Mr. Shetler:

On Wednesday, August 22, 2001 Clow Valve Company contracted Advanced Environmental Services, Corona, CA to conduct preliminary sampling at our facility. During the investigation soil appearing to be impacted by diesel was discovered at approximately 2 feet below grade. Mark Willett, Environmental Engineer, Clow Valve Company, Oskaloosa, IA was immediately notified and arrived at the site on Thursday, August 23. The subsoil was observed and all sampling activities were halted.

Today, Monday, August 27, Mr. Barry Robison, VP Environmental Affairs, McWane Inc., contacted Ms. Sandra Wages. At that time Ms. Wages asked us to fax this brief report to your attention addressing the discovery of the release. Clow is in the process of contracting Mr. Joe Wilson, Advanced Environmental Services to conduct further sampling in an effort to define the vertical and horizontal extent of the petroleum impacted soil. Ms. Wages stated that all further sampling activities will have to be scheduled through your office to ensure compliance with local regulations.

Please consider this fax (hard copy to be mailed) as our notification to you concerning the discovery of the release.

If there are any other reporting or notification requirements needed concerning this matter please let us know. I look forward to further discussing this matter with you in the near future.

Respectively,

Mark A. Willett
Environmental Engineer
Clow Valve Company

[Block (1993) old diesel genset 8,000 gal diesel to locomotives.

Thin background - 3" line - (underground line to locomotive)

- Auger -
- tools -
- core sound - talking about removal.

As a starting point for profiling and initially confirm recycling qualities, contamination, metal content, etc., analytical was conducted on bag house dust and foundry sands recycling feasability was confirmed. Samples of baghouse dust and foundry sand were taken in February, 1994 from the brass foundry and iron foundry. Profile samples were repeated in March, 1994. These materials were approved for recycling at Cyprus-Miami Mining Co. in Claypool, Arizona in May. Due to site improvements being completed Cyprus-Miami was not able to accept material until July, 1994.

Laidlaw Environmental Services began on July 20, 1994 to implement the removal of foundry sands and baghouse dust from the Clow Valve Foundry in Corona. Previous to this an informal work plan was submitted to the County of Riverside and was reviewed by Sandra Wages. It was approved. Previous to the onset of actual work the site was toured with Ms. Wages, Mr. Barry Robinson (of McWane Inc. Clow Valve's parent company) and J.R. Fredericks, Project Manager for L.E.S.I. Upland. This sitewalk was to confirm the work plan and to establish the County's concerns. Basic removal of sand was done by hand, with shovels, scrapers and brooms, also by "Super-Sucker" vacuum truck, backhoe and skiploader.

On site loading was accomplished from one stockpile located to the southeast of the brass foundry bag house. Open-top drums stored in the brass foundry and sand removed from them, the silos, conveyors and trenches were accumulated there. Material at the brass foundry was also broomed from the floors and vacuumed from the roof, the alley, under the bag house and the transformer area. At the northern portion of the site sands had been collected inside the iron foundry and on the dirt pad adjacent to the back door (outside). These materials were moved, then screened at the area southeast of the brass foundry and subsequently loaded onto end-dumptrucks.

All dust and foundry sand was recycled at Cyprus-Miami. The weight shipped was 580.79 tons. All screened waste (debris) segregated from the dust and sand were contained on site in two 15 cubic yard certified hazardous waste bins. Other surplus foundry sands and refractory materials were put into two, 2 cubic yard, certified hazardous waste bins.

Approximately 160, empty 55 gallon metal drums were crushed on site and placed into a roll-off bin. They are to be recycled by Central Reclamation Company of Los Angeles. A certificate of destruction will be issued documenting their recycle.

Oil contaminated soil and asphalt with steel turnings were removed at a sump involved with hydrant manufacturing. Oil, rust and steel turnings were removed from the concrete vault which was approximately three foot in depth. Over flow of oil had seeped onto adjacent asphalt and soil. All oil contaminated material was removed based on visual inspection. It was placed into three 2 cubic yard, certified hazardous waste bins.

At the location of the stockpile adjacent to the iron foundry the County of Riverside had called for removal of 12 inches of soil below the area where the stockpile occurred. Subsequent sampling mandated additional excavation. A total of approximately 12 cubic yards of soil was excavated, stockpiled, profiled and transported to landfill. This waste was lead-contaminated, below federal limits (Non-RCRA), but was hazardous according to California Title 22.

All hazardous waste was profiled to, approved, transported and disposed of at Laidlaw's Imperial Valley facility at Westmorland, CA. The total quantity of waste shipped was approximately 52 cubic yards, and has been documented on hazardous waste manifest: #93108696, #93108697, and #93112283.

All work onsite was concluded on October 27, 1994.

Topic Preliminary Hazardous Waste Generator Inspection

REMARKS:

Hazardous Materials Specialist, Sande Wages, conducted a preliminary Hazardous Waste Generator Inspection of the above facility on 7-20-93. Several areas of concern were noted at the time of inspection listed as follows:

- Large stockpile of possible foundary waste in piles and covering ground in some areas behind facility
- Drums and stockpiles of baghouse dust
- "Settling Pond" containing oil, water and sludge. Manager stated that Entire containment is concrete. He also stated their intentions to skim off oil, pump out water, and scrape up sludge in bottom. below grade in concrete.
- Open asphalt dip tank also containing solvents
- Abandoned sections of plant which need to be inspected for contamination and/or wastes
- 2 MVF Underground Storage Tanks and 1 possible liquid asphalt UST never under permit on property.
- Spray booths, waste oil rags, absorbant, paint filters & paint related waste all being placed in same drum for disposal
- Old generator application which refers to waste oil as alternative fuel
- In general - soil contamination and accumulation time violations.
- Labeling, cont. plan, training - Manager could not produce at inspection.

Re: Clow Valve Company, Inc.

Dear Mr. Robison:

Based upon the information provided by Laidlaw Environmental Services, Inc. in their letter dated October 14, 1994, this office will approve the proposed removal and disposal, under a separate and distinct Hazardous Waste Manifest, of the original stockpile of the lead-contaminated soil from directly below the stockpile of foundry sand in the rear of the facility.

As per Section 66268.7(a)(3) of Title 22 of the California Code of Regulations, McWane, Inc. (Clow Valve Company, Inc.) as the generator of said waste, must submit a notice to the facility receiving the waste that the waste is not prohibited from land disposal. This notice shall include all of the required information.

Please contact me at (909)358-5055 if there are any questions.

Sincerely,

Sandra J. Wages
Hazardous Materials Specialist

RE: Clow Valve - Corona, California

Dear Ms. Wages,

In response to your correspondence to Barry Robison of McWane regarding Clow Valve in Corona, California, please be advised of the following information.

We accept your determination that the "lead contaminated soil from directly below the site of foundry sand" warrants management as a discreet waste stream. We also agree that this waste is subject to the treatment standards prescribed in California Code of Regulations, Title 22, Section 55268.106(a)(3). However, pursuant to California Health and Safety Code, Section 25179.7(a)(3), a variance has extended the implementation date of these standards until January 1, 1995.

With this in mind, we propose to load this material on-site into certified hazardous waste end-dump trucks, transport it to Laidlaw's Imperial Valley facility at Westmorland, California, on a California Hazardous Waste Manifest where it will then be landfilled.

If you should have any further questions or concerns, please do not hesitate to contact me at (909) 983-0342.

Sincerely,
Laidlaw Environmental Services, Inc.

J.R. Fredericks
Project Manager

Dear Ms. Wages:

This correspondence is to follow up our telephone conversation of October 14, 1994 concerning the recycling of lead impacted soil at Clow Valve in Corona, CA.

The following is a short synopsis of how the material will be handled:

- Remediation activity is to involve foundry sand from the Brass Foundry area and the stock pile of lead impacted soil at the rear of the facility
- All sheet metal will be cut out of the trench and the Brass Foundry sand will be removed via backhoe and swept broom clean
- Material will be collected in 20 cubic yard roll-off bins
- Brass Foundry sand and lead impacted soil are to be transported under a California Uniform Hazardous Waste Manifest to Gibson Environmental with copies of manifest provided to the Hazardous Materials Management Division, County of Riverside
- There it will be recycled into road base
- Personnel will be wearing level C personal protective equipment
- County of Riverside Hazardous Materials Management Division will be notified as to the work start date

If you have any further questions, please feel free to contact me directly at your earliest convenience.

Sincerely,

Joe Wilson, REA
Environmental Engineering
Advanced Environmental, Inc.

JW:kp

Once excavation is complete (and the confirmatory sampling results are received), the excavated soil will be profiled for appropriate disposal, manifested if needed, transported and disposed of at an approved facility. The profiling, transporting and final disposal will be done by a contractor, most likely DCSI or Advanced Environmental. In the interim, all excavated soils will be stockpiled on pavement or plastic and covered with plastic to prevent dispersion by wind or rain and the excavated area will be bermed to preclude run on.

I will talk to you next week. In the meantime, if you need any more information, please call.

Sincerely,

CBH

VICE PRESIDENT
ENVIRONMENTAL AFFAIRS

August 23, 1994

RE: Clow Valve, Corona

Dear Ms. Wages:

As requested, I am writing to update you on our progress in cleaning up the Corona facility and to outline the additional work we anticipate completing in the next few weeks.

As of this date, Disposal Control Service, Inc.(DCSI), has essentially removed all the foundry sands, oil contaminated soils, and the solid waste products from the site. Enclosed are copies of their progress reports through August 22, 1994, as well as copies of all the analytical results that have been made available to us. As soon as we receive their final report I will forward a copy to you. I have also requested copies of the analytical work done by DCSI to profile the wastes prior to recycling and/or disposal. I will forward these to you as soon as they are received.

Regarding the area under the sand pile at the rear of the old iron foundry. I plan to be in Corona next week to complete the evaluation, conduct follow up sampling and arrange for disposal of any and all contaminated soils. Our plan is to excavate the area (about 10 square feet) under sample point B to a point where the residual lead concentration meets the TTLC or STLC limits, whichever is appropriate. To accomplish this we will continue to excavate the area approximately one foot at a time. At each one foot interval (depth) at least two (2) samples will be collected and analyzed for total lead (Pb). If the total lead concentrations are less than 50 mg/kg no further excavation will be done. If the total lead concentrations, are greater than 50 mg/kg but less than about 100 mg/kg, the sample will be analyzed for soluble lead (STLC). If the STLC concentrations are below 5.0 mg/l no further excavation will be done. At this point, you will be contacted and requested to observe the final confirmatory sampling. This procedure will be repeated as necessary until we are satisfied that no contaminated soils remain in the area.

5796 Corporate Ave.
Cypress, CA

Subject: August 22, 2001 discovery of diesel/solvent contaminated soil and foundry sand used as fill dirt located at Clow Valve Company, 1375 Magnolia Ave., Coroana.

Dear Ms. Matthews:

Mark Willett contacted our office on August 27, 2001 concerning contamination located at Clow Valve, 1375 Magnolia Ave., Corona. This notification was 5 days after locating the contamination (refer to the attached faxed letter).

On September 21, 2001, Joe Wilson with Advanced Fuel Filtration dropped off the attached work plan. Mr. Wilson stated that they were conducting a phase II site assessment and were excavating soil when they hit free product. Mr. Wilson stated that the area mapped out appeared to be core/foundry sand to a depth of 5 feet. I advised Mr. Wilson that I needed to review the plan prior to acceptance.

I reviewed the plan on September 21, 2001 and identified the following limitations:

1. Exhibit 2 should be drawn to scale.
2. Need a separate exhibit which would include the entire facility.
3. Need to sample free product and analyze.
4. EPA test method 8015 modified should include a full fuel screen.
5. EPA test method 8260 should be used instead of EPA test method 8010.
6. CAM Metals analysis should include the stipulation that if the TTLC concentration results exceed 10X the STLC then perform a Waste Extraction Test and analyze the extract for the target substance.
7. Needed to include the past analytical.
8. Need to attach the phase I background information.
9. What is the groundwater level? Is there perched groundwater?

September 27, 2001

On September 26, 2001, I left a message with Joe Wilson advising him that the cleanup should be coordinated with our office and DTSC. Mr. Wilson contacted me on September 27, 2001 and expressed concern over possible delays of the project. I advised Mr. Wilson that I was required to contact your office and that both of our offices would require review and acceptance of the work plans.

My supervisor Mike Shetler is requesting that a Preliminary Endangerment Assessment be required for the Clow Valve property. Please contact me at 909-358-5055 at your earliest convenience.

Sincerely,

Bruce Bailey

RE: Discovery of diesel impacted soil at Clow Valve Company, Division of McWane, Inc, 1375 Magnolia Avenue, Corona, CA

Mr. Shetler:

On Wednesday, August 22, 2001 Clow Valve Company contracted Advanced Environmental Services, Corona, CA to conduct preliminary sampling at our facility. During the investigation soil appearing to be impacted by diesel was discovered at approximately 2 feet below grade. Mark Willett, Environmental Engineer, Clow Valve Company, Oskaloosa, IA was immediately notified and arrived at the site on Thursday, August 23. The subsoil was observed and all sampling activities were halted.

Today, Monday, August 27, Mr. Barry Robison, VP Environmental Affairs, McWane Inc., contacted Ms. Sandra Wages. At that time Ms. Wages asked us to fax this brief report to your attention addressing the discovery of the release. Clow is in the process of contracting Mr. Joe Wilson, Advanced Environmental Services to conduct further sampling in an effort to define the vertical and horizontal extent of the petroleum impacted soil. Ms. Wages stated that all further sampling activities will have to be scheduled through your office to ensure compliance with local regulations.

Please consider this fax (hard copy to be mailed) as our notification to you concerning the discovery of the release.

If there are any other reporting or notification requirements needed concerning this matter please let us know. I look forward to further discussing this matter with you in the near future.

Respectively,

Mark A. Willett
Environmental Engineer

Re: **Preliminary Phase II Sampling Work Plan**
Clow Valve Abandoned Rail Spur Area
1375 Magnolia Avenue
Corona, CA 91719

Dear Mr. Baily:

Advanced Environmental Services, Inc. (AESI) on behalf of our client Clow Valve (CLOW VALVE) has prepared the attached work plan to be submitted for approval to the County of Riverside Environmental Health Department (CREHD). During a preliminary trenching investigation of the currently abandoned rail spur area, detectable concentrations of hydrocarbons and metals were identified at shallow depths. This work plan is designed to preliminarily characterize the entire lot and an area adjacent to the lot at which historically a diesel tank had been removed to assess the overall extent of contamination in the subject area.

The Phase II subsurface investigation scope of work contained herein includes the lot and an area adjacent to the reportedly removed diesel tank along the three remaining railroad spurs. Based on a site visit conducted on August 31, 2001; AESI proposes performing grid sampling at 35 locations to depths of 2', 5' and 7' below ground surface (bgs). Five of the borings will be further advanced to depths of 10', 15' and 20' bgs in the area where known diesel contamination was identified (please refer to Figure 2, Site Boring Plan). Furthermore, five (5) background samples will be acquired from other locations on the property to ensure an accurate baseline for any future potential remediation requirements.

In order to manage project costs, only the 2' and 5' samples will be analyzed and the remainder of the samples placed on HOLD at the laboratory. Depending on the results of the 2' and 5' samples, AESI will direct the laboratory to test specific remaining samples. Each sample analyzed will be tested for Total Petroleum Hydrocarbons (TPH) via method 8015 specific for diesel, CAM Metals and VOCs via method 8010. The additional five samples will be analyzed from the existing on-site stockpiles to assist in characterization

The work will be conducted under the supervision of a California Registered Geologist and our field staff to oversee the sampling effort and upon completion of the sampling a detailed report with recommendations will be generated. It is estimated that the sampling will require four (4) days to complete. Should you have any questions or comments please do not hesitate to call me directly at **(909) 520-9270** or our Project Manager, Mr. John Talbot at **(562) 688-1846**.

Respectfully,

Work Plan for CLOW VALVE Preliminary Phase II Site Assessment at 1375 Magnolia Avenue, Corona, CA 91719

Background

Advanced Environmental Services, Inc. (AESI) on behalf of our client Clow Valve (CLOW VALVE) has prepared the attached work plan to be submitted for approval to the County of Riverside Environmental Health Department (CREHD). During a preliminary trenching investigation of the currently abandoned rail spur area detectable concentrations of hydrocarbons and metals were identified at shallow depths. This work plan is designed to preliminarily characterize the entire lot and an area adjacent to the lot at which historically a diesel tank had been removed to assess the extent of contamination. The Phase II subsurface investigation scope of work contained herein includes the lot and an area adjacent to the reportedly removed diesel tank along the three remaining railroad spur.

Scope of Work

Possible Foundry Sand

1.0 Soil Sampling

Based on a site visit conducted on August 31, 2001; AESI proposes performing grid sampling at 35 locations to depths of 2', 5' and 7' below ground surface (bgs). Five of the borings will be further advanced to depths of 10', 15' and 20' bgs in the area where known diesel contamination was identified (please refer to Figure 2, Site Boring Plan). Furthermore, five (5) background samples will be acquired from other locations on the property to ensure an accurate baseline for any future potential remediation requirements.

In order to manage project costs, only the 2' and 5' samples will be analyzed and the remainder of the samples placed on HOLD at the laboratory. Depending on the results of the 2' and 5' samples, AESI will direct the laboratory to test specific remaining samples. Each sample analyzed will be tested for Total Petroleum Hydrocarbons (TPH) via method 8015 specific for diesel, CAM Metals and VOCs via method 8010. The additional five samples will be analyzed from the existing on-site stockpiles to assist in characterization for possible on-site reuse or disposal. The work will be conducted under the supervision of a California Registered Geologist and our field staff to oversee the sampling effort and upon completion of the sampling prepare a final report. It is estimated that the sampling will require four (4) days to complete.

The sampling was determined based on the suspicion of hydrocarbon (possibly diesel) and metals having been previously encountered at the site resulting in notification to the agency. The additional sampling for VOCs will assist in characterizing the type of hydrocarbon contamination and to determine if any solvent related issues may accompany the target compounds.

Should groundwater be encountered or a thick clay lens which may or may not be continuous below the site, soil sampling in the location will be stopped so as not to puncture a potential aquiclude. Soil borings will be advanced utilizing a pneumatically advanced geoprobe soil sampling system. This work plan should only be considered preliminary with the understanding that should the contamination be deeper than 20' below ground surface (bgs), additional sampling will possibly need to be performed.

2.0 Sampling Methodology

The exploration program for this study will consist of pneumatic push probe advancement for the collection of soil samples. No fluids, including clean water, or additives will be used during probe advancement. After the sampler has been removed from the probe location, each soil sample will be collected for chemical analyses, placed on ice and transported following all chain of custody and sampling methodologies as prescribed in EPA SW-846.

3.0 Assumptions

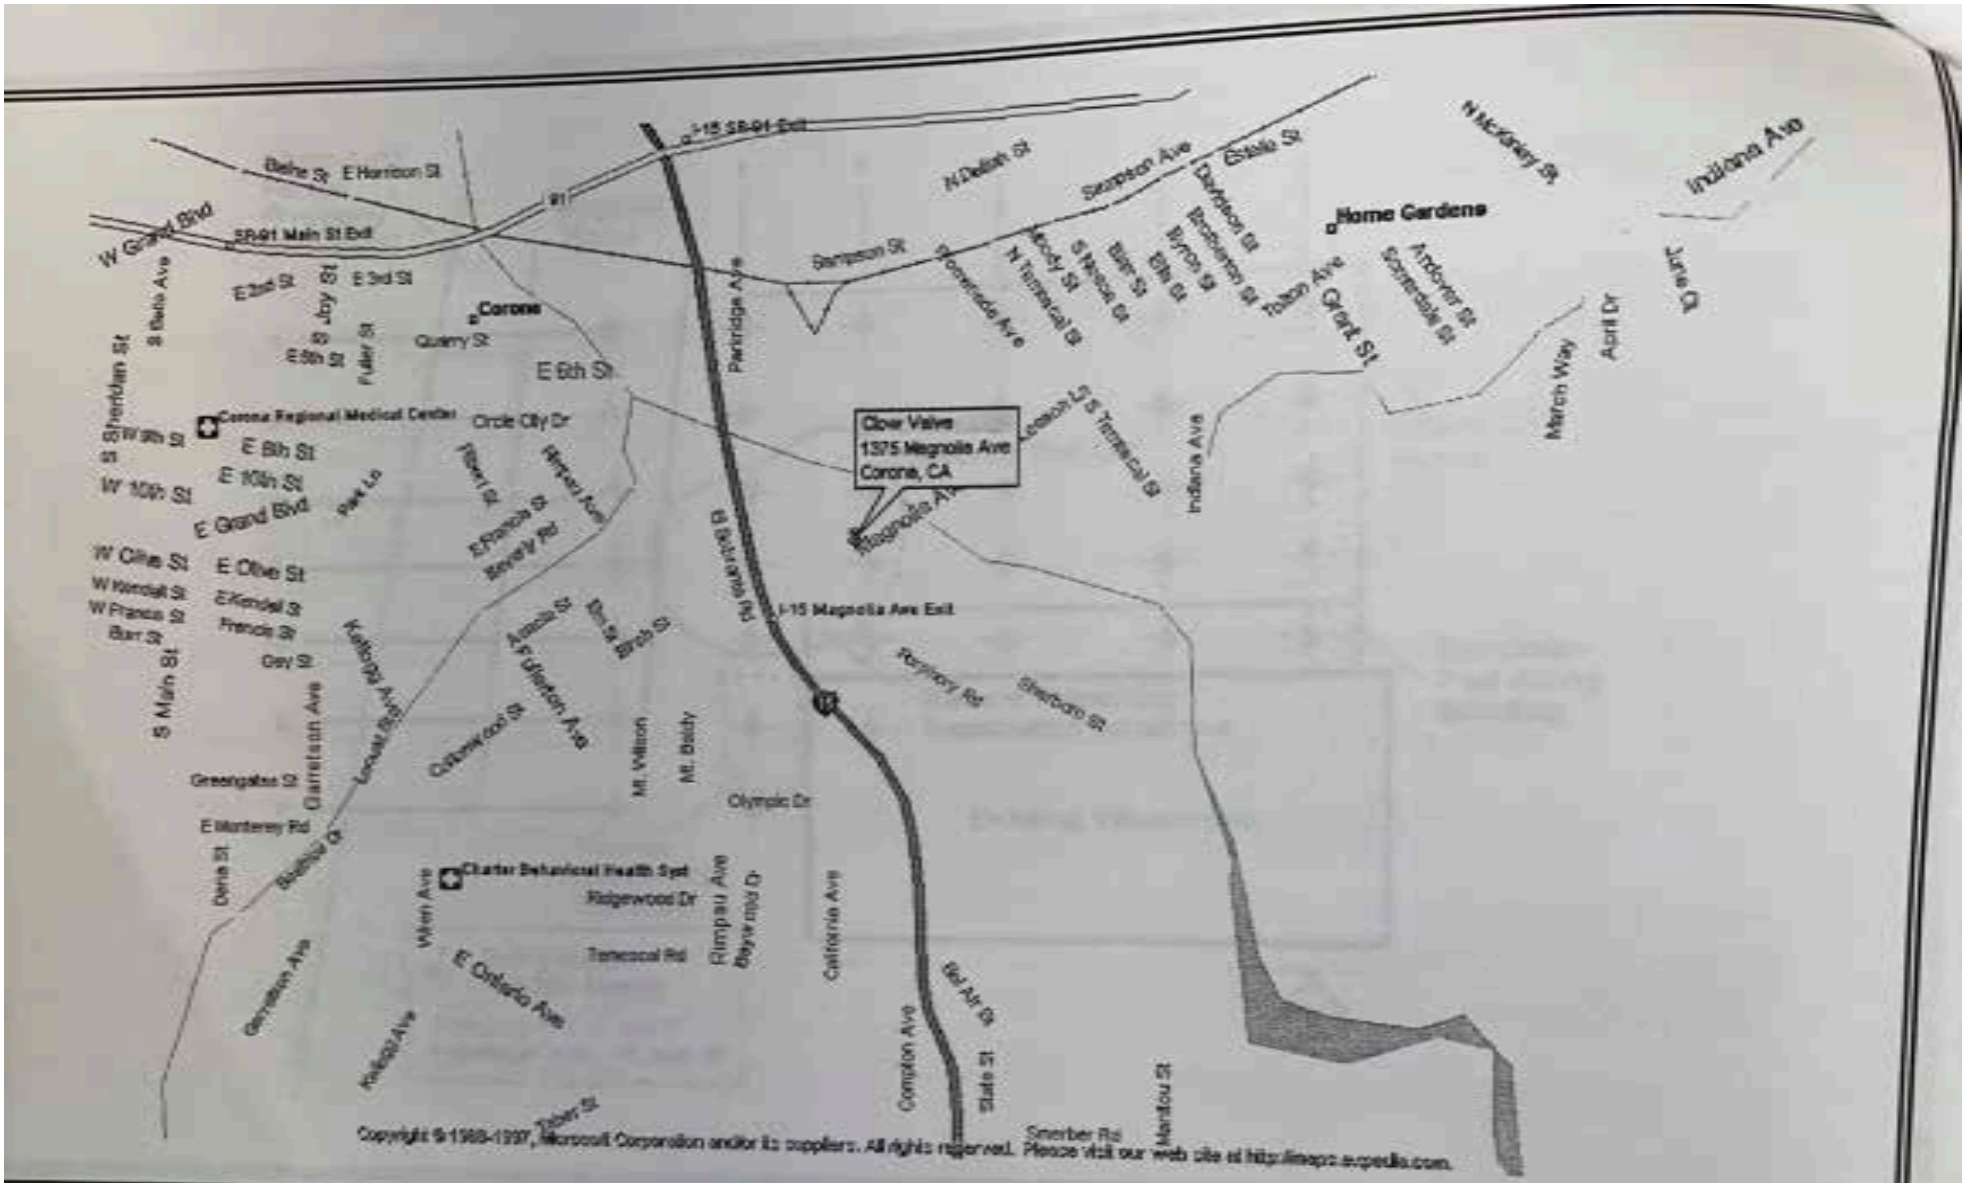
AESI will follow all sampling protocols including decontamination of sampling equipment, proper chain of custody documentation and proper health and safety. Soil analysis data will be cross-checked with in-field photo-ionizing detector (PID) measurements. AESI will request the laboratory to HOLD the samples for a period of thirty days should additional testing be required, provided the samples do not fall outside of allowable method specific holding times.

- All soil samples will be transported on ice to a state certified environmental testing laboratory for analyses by the EPA methods described above.
- On site observations will be used to determine soil characteristics relating to soil permeability and stratography.
- We will conduct a second site visit, upon approval of the work plan to examine the potential drilling locations and possible logistical conflicts. Drilling locations will be marked.
- We will coordinate with Underground Service Alert at least 48 hours prior to the commencement of subsurface exploratory work, as required by law. Any on-site locations will also be checked for utility conflicts by a private underground utility locating service.
- We will prepare a site-specific Health and Safety Plan in accordance with Occupational Safety and Health Administration (OSHA) regulations.

- Soils will be sampled in accordance with procedures specific in California Code of Regulations (CCR) Title 22, Division 4.5, Chapter 11, Article 3, Section 66261.20(c). This will include screening of each sample obtained by an Organic Vapor Analyzer (OVA) during sampling.

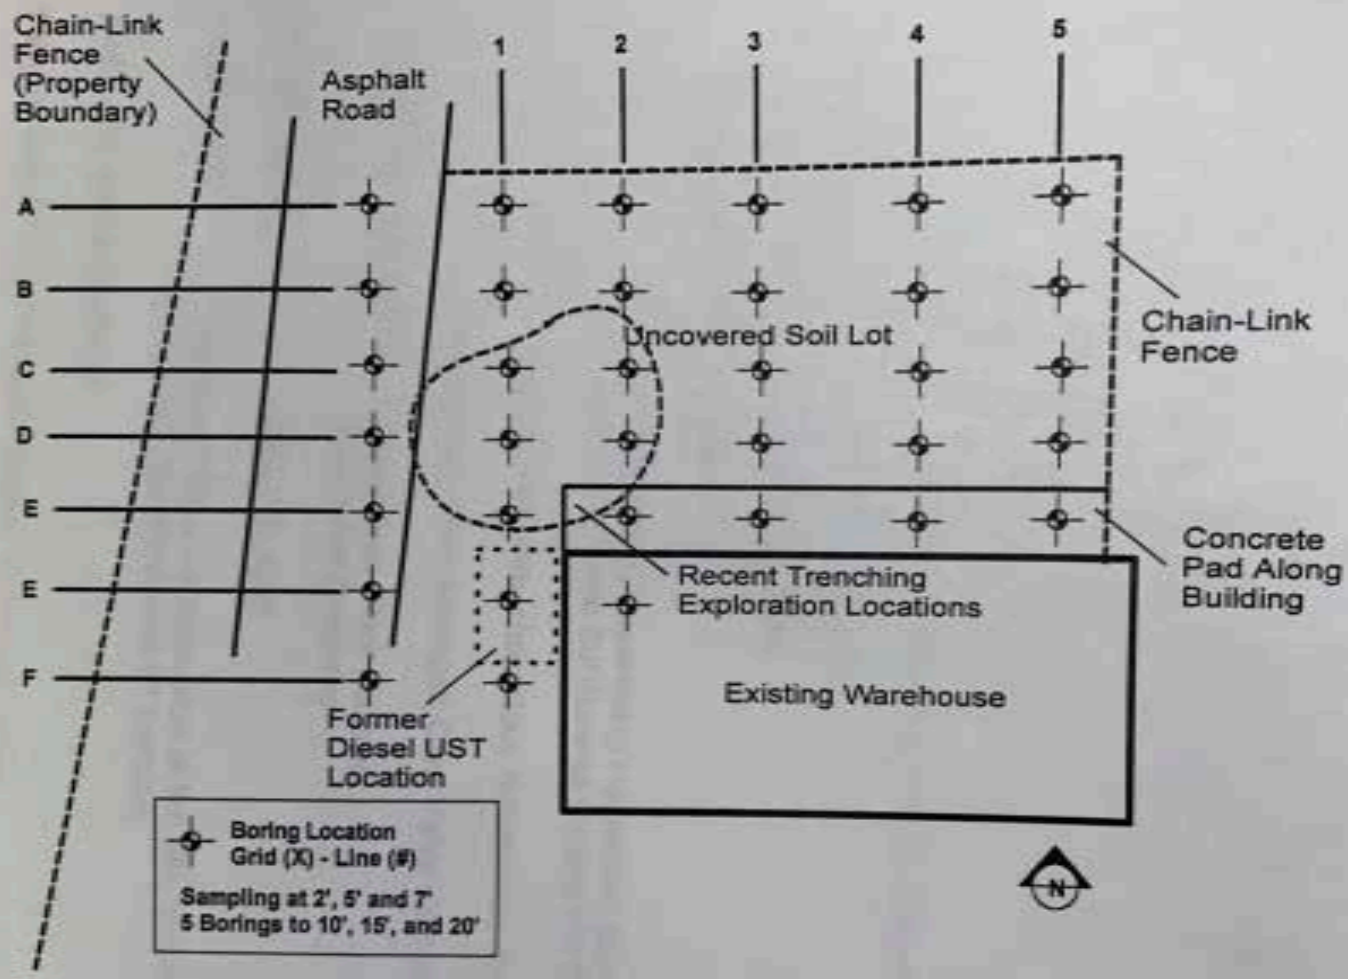
This investigation does not include identification of surface or subsurface utilities, sewerage or other unidentified systems, building materials or matrices. The information provided to AESI is that the subject area was once used for locomotive refueling. This information is consistent with our knowledge of the similar types of facilities. No drawings of existing underground utilities were provided by the owner. Since we are required to sample at specific locations, Dig-Alert (the standard underground utilities identification service) may not be able to provide all details related to underground conduits within the subject area. Any underground structures not identified by Dig-Alert or the client prior to the performance of the field work will be repaired at the client's sole cost.

4.0 Stockpile Sampling



In addition to the soil sampling locations proposed, there are currently a few stockpiles which exist at the site. We propose performing stockpile sampling to characterize these piles for on-site reuse or possible disposal pending the analytical results. Stockpile sampling will be performed by digging 2' into the pile at opposite locations and acquiring a grab sample to be placed in a 4-ounce Teflon capped jar to be transported along with the other samples to the laboratory for analysis.

Pertinent information obtained by AESI during this investigation will be compiled in a report, which will serve as the basis for the recommendation of any further actions at the site.



NOTICE

This work plan is designed to provide accurate and authoritative information with regard to the subject matter covered. However, it is provided with the understanding that the contents reflect AESI's (AESI) best judgment in light of the information available at the time of preparation and the fact that judgments or opinions relating to unknown future events are called for. AESI does not make any warranty, express or implied, or assume any liability with respect to use of, or damage resulting from the use of any data, information, and/or projections contained herein. The final report, and the data and information contained herein, are PRIVILEGED & CONFIDENTIAL and are provided for the sole and exclusive use of client. The final report and its contents may not be shared, distributed, or copied for use by other companies, partnerships, or individuals without the express written authorization of AESI.

PHASE 1 ENVIRONMENTAL ASSESSMENT INSPECTION REPORT

FACILITY NAME: Clow Valve Company

EPA ID NUMBER: CAD 063 115 133

PHYSICAL ADDRESS: 1375 Magnolia Avenue
Corona, CA 91719

FACILITY CONTACT: Mark A. Willett, Environmental Engineer

TELEPHONE: (641) 673-8611

SITE VISIT DATE: March 15, 2001

REPRESENTATIVES PRESENT:

Yvonne Sanchez, Supervising Hazardous Substances Scientist, Department of Toxic Substances Control (DTSC)

Elizabeth Mathews, Hazardous Substances Scientist, DTSC

Daniel Dart, Plant Manager, Clow Valve Company

CONSENT GIVEN BY: Daniel Dart, Plant Manager
Clow Valve Company

TELEPHONE: (909) 735-5555

PURPOSE: This was a follow-up inspection at the site, to further assess a previously identified Area Of Concern.

FACILITY INFORMATION:

Current Owner: Clow Valve Company, Oskaloosa, Iowa.

Current Operator: Clow Valve Company

CURRENT STATUS OF FACILITY:

Small Quantity Generator of RCRA Hazardous Waste

WASTE STREAMS:

Waste oils, paint solvents, coolants, waste rags, metal chips

TYPE OF BUSINESS:

Fabrication of large cast iron valves and fire hydrants.

SITE WALKTHROUGH:

On March 15, 2001, at approximately 10:00 a.m. accompanied by Ms. Yvonne Sanchez of DTSC, I met with Daniel Dart of Clow Valve Company. Ms. Sanchez explained that the purpose of this inspection was to conduct a follow up inspection done by Mr. Dennis Hosteler on October 12, 2000, and to inspect some previously identified Areas Of Concern. Ms. Sanchez also discussed steps to be to be taken for corrective action. Mr. Dart gave us consent to conduct the inspection.

Mr. Dart, Ms. Sanchez, and I proceeded to conduct a brief walk-thru of the facility beginning with the waste oil area. I observed this was an area was recently overlain with asphalt, and appeared to be fairly clean. The waste oil container had been removed. Adjacent to the waste oil area is the roll off bin area. I observed the area was heavily stained with standing liquid and is used to catch drippings from metal chips. The standing liquid appeared to be contaminated from spillage. At the hazardous waste storage area, I observed no indication of contamination. We proceeded to three different areas that had exposed soil. These areas were identified by Mr. Dart as the scrap iron storage, crates storage area, and the paint storage area. These appeared to have no visible contamination. We proceeded to walk thru the process/operation building, where I observed some cracks in the concrete and they showed no signs of deterioration. These cracks were in the middle of the main plant operations building, and not adjacent to chemical use treatment area.

EXIT INTERVIEW:

At the end of the walk-thru, we reconvened in Mr. Dart's office. We discussed with Mr. Dart our observations, and attempted to conference call with Mark Willet, the Project Manager in Iowa. Due to a timing conflict, Mr. Willett could not be contacted. I informed Mr. Dart that I would be in touch with Mr. Willet after I estimate costs for corrective action cleanup of the waste oil area. At approximately 11:30, on March 15, 2001, we thanked Mr. Dart for the site tour and ended the walk-thru and left the facility.

AREAS OF CONCERN:

The following are the areas of concern that were identified as a result of the inspection:

AOC 1 - Waste oil roll off bin area

RECOMMENDATION AND CONCLUSION:

Upon my return to the office, I drafted a cost estimate for cleanup of the waste oil roll off bin area. I faxed a copy of it to Mark Willet on April 18, 2001 for review. The recommendation for this area is to demolish area, excavate soil, sample the area to evaluate it through risk assessment, and finally to have a concrete overlay.

1.0 PURPOSE OF INTERIM MEASURES WORK PLAN

This Interim Measure (IM) Work Plan (work plan) was prepared to address California Environmental Protection Agency (Cal-EPA) Department of Toxic Substances and Control (DTSC) requirements outlined in correspondence to Clow Valve Company (Clow) dated December 22, 2004. This purpose of this work plan is to guide the removal of metal-impacted foundry sand stockpiles located at the Clow site at 1375 Magnolia Avenue in Corona, California, and the subsequent manifesting and transporting as a hazardous waste by Ecology Control Industries (ECI) to the Chem-Waste Management Class 1 disposal facility located at 35251 Old Skyline Road in Kettleman City, California. The objective of the proposed activities is to remove a possible source of contamination and to prepare the site for subsequent soil sampling. The proposed project meets the definition of a small or medium cleanup action without potential for significant effects based on its size, cost, location, and the controlled manner that the activities will be conducted.

1.1 PROJECT BACKGROUND

The approximate location of the Clow site is shown in **Figure 1**. Clow manufactures fire hydrants and valves using foundry and machining processes. The Clow facility is referenced as DTSC Facility ID Number 331709 and holds Hazardous Materials Management Permit No. CAD 063115133, Facility No. 81952 from the County of Riverside Department of Environmental Health. The Clow site is not on the Hazardous Waste Sites list pursuant to Section 65962.5 of the Government Code. Clow entered into a Corrective Action Consent Agreement (SRPD 00/01 SCC-4208) with DTSC on March 6, 2002. Clow has submitted a Preliminary Endangerment Assessment (PEA) and Facility Investigation (FI) Work Plan for the site as part of the requirements of the Corrective Action Consent Agreement. Development of the PEA/FI work plan is summarized below.

McWane, Inc., parent company and owner of Clow, retained Advanced Environmental Services, Inc. (AESI) during 2002 to prepare a Preliminary Endangerment Assessment and Facility Investigation Work Plan for the property located Corona, California. AESI prepared and submitted *Clow Valve Inc.* (March 28, 2002) on behalf of Clow to comply with DTSC requirements outlined in a consent order agreement. Following review of the work plan, DTSC provided written comments in letters to Clow dated June 7, 2002, July 1, 2002, and September 13, 2002. Due to the number of DTSC comments concerning the work plan and the excessive scope of work, Clow retained Environmental Support Technologies, Inc. (EST) to prepare a revised work plan.

An on-site meeting was held on August 13, 2002 to familiarize DTSC staff with the facility and to discuss the work plan comments. A tour of the plant was conducted to observe facility processes and site features. The meeting culminated with the agreement for EST to provide responses to comments related to documentation of previous site clean-up activities, to revise the previously submitted work plan. A second meeting was held at the site on October 30, 2002. Each of the areas of concern was inspected during the site-walk, and methods to accomplish the proposed soil investigation were discussed. EST then prepared and submitted *Addendum to Preliminary Endangerment Assessment and Facility Investigation Work Plan* (July 22, 2003) (addendum) to the DTSC.

The addendum was intended to supplement the previously submitted *Preliminary Endangerment Assessment and Facility Work Plan – Clow Valve Inc.* (AESI, March 28, 2002). Upon receipt of the addendum, the DTSC responded in a letter to Clow dated August 5, 2003 by requesting a complete "stand-alone" document. On March 11, 2004, EST submitted *Preliminary Endangerment and Facility Investigation Workplan*, to comply with comments contained in the August 5, 2003 DTSC letter. Following DTSC review, several questions and/or comments were raised and a meeting was held at the Clow Corona facility on May 18, 2004. A brief walk-through of the investigation areas was conducted to confirm and/or modify the sampling locations, modify the investigation area names, and develop a plan to include soil gas sampling in lieu of soil sampling for volatile organic compounds. Based on the latest information and comments, EST prepared and submitted *Preliminary Endangerment and Facility Investigation Workplan* (June 21, 2004) that has been approved for implementation.

1.2 REQUIREMENT FOR INTERIM MEASURES WORK PLAN

A map of the approximate 16.94 acre Clow site is provided as **Figure 2**. The Clow buildings occupy approximately 89,860 square feet (sq. ft). The Tyler shipping business occupies approximately 16,900 sq. ft. The ANACO operation occupies approximately 60,950 sq. ft. The total square footage for the buildings at the site is approximately 167,710 sq. ft.

Several areas of concern (AOC) at the Clow site were identified in the *Preliminary Endangerment and Facility Investigation Workplan* (June 21, 2004), one of which is referred to as AOC-1 (or the Rail-Spur Area). Detail of AOC-1 is shown in **Figure 3**, including a centrally-located stockpile of dry, unconsolidated foundry sand waste. The foundry sand stockpile is present in AOC-1 as a result of former brass foundry operations performed nearby, and also because of the subsequent dismantling of the brass foundry.

Removal of the foundry sand stockpile was proposed in the *Preliminary Endangerment and Facility Investigation Workplan* work plan, not only because of characterization results (elevated copper and lead content), but also to level the area and allow access for sampling and evaluation of the potential metals impact to underlying native soil. This IM Work Plan was developed to address removal of the foundry sand stockpile as required by DTSC. The background information provided in this work plan and the proposed investigation activities are intended to:

- Briefly provide site background information;
- Identify and characterize the involved AOC using historical and current information;
- Aid in the assessment of the potential threat to human health and the environment;
- Minimize the potential dispersion of contaminants;
- Provide data to aid in developing long-term remedial actions, if necessary;
- Guide the safe completion of field work.

1.3 PREVIOUS CHARACTERIZATION OF THE FOUNDRY SAND STOCKPILE

EST performed foundry sand stockpile sampling on August 25, 2004 for purposes of chemical characterization and amenability to potential stabilization technologies. Results of the sampling were presented in *Foundry Sand Stockpile Sampling and Analysis Report* (January 21, 2005). Based on measurements performed in the field, the volume of the stockpile was estimated to be approximately 90 to 100 cubic yards. The approximate locations of the eight (8) stockpile samples (identified with a "SP" prefix) are shown in **Figure 3**. Stockpile sampling was performed by digging several feet into the pile at random locations and driving a 2-inch-diameter by 6-inch-long stainless steel soil sample sleeve into the freshly exposed material. Teflon squares and tight-fitting plastic caps were placed over the ends of each labeled sample sleeve. Samples for volatile organic compound analysis were collected in EnCore™ sample containers by coring directly into the freshly exposed soil.

A composite soil sample was collected using soil from each previous stockpile sampling location to evaluate feasibility of soil stabilization treatment options. The stockpile samples were analyzed for Title 22 Metals including total concentration, soluble concentration, and toxicity, Volatile Organic Compounds (VOCs), Semi-VOCs, and Pesticides and PCBs, by a state-certified environmental laboratory. Analyses results for detected concentrations for the stockpile samples are provided in **Table 1**. A copy of the foundry sand stockpile sampling and analysis report is provided in **Appendix A**.

Results of stockpile sampling indicated relatively elevated concentrations of copper, lead, and zinc in many of the foundry sand samples. Copper exceeded regulatory levels for Total Threshold Limit Concentrations (TTLC) and Soluble Threshold Limit Concentrations (STLC), lead for TTLC, STLC, and Toxicity Characteristic Leaching Potential (TCLP), and zinc for TTLC. The foundry sand has been classified as a hazardous waste based on the levels of copper, lead, and zinc. The highest TTLC concentrations for copper, lead, and zinc were 6,400 milligrams per kilogram (mg/Kg), 1,200 mg/Kg, and 2,600 mg/Kg, respectively. The highest STLC concentrations for copper, lead, and zinc were 435 mg/Kg, 72.8 mg/Kg, and 350 mg/kg, respectively. The highest TCLP concentration for lead was 10.3 mg/Kg.

2.0 CONCEPTUAL MODEL OF CONTAMINANT MIGRATION

Exposure pathways that may threaten the environment include the vertical migration of copper, lead, and zinc from the exposed stockpiles by leaching. The site climate is semi-arid with rainfall averaging approximately 10 inches per year. The natural site drainage has been modified by grading, asphalt paving, and a storm drain system that directs runoff from the greater portion to the eastern portion of the property and the flood control channel. Runoff water from precipitation and irrigation discharges to concrete-lined Temescal Wash through manmade and natural drainage structures. However, the majority of AOC-1 is unpaved, and surficial materials at the site are unconsolidated sand, gravel, and silt associated with the intermittent Temescal Wash adjacent to the site (approximately 20 feet east/northeast). Depths to groundwater reported by others range from 23-28 feet bgs and 42-47 feet bgs in perched zones to approximately 124 feet bgs for the regional aquifer. Current depths to groundwater in City of Corona municipal wells range from approximately 190-193 feet bgs. Exposure pathways that may potentially threaten

human health include inhalation, dermal contact, or ingestion of metal-bearing dust. The Corona area is susceptible to very high westward Santa Ana winds on a seasonal basis. The site, situated on a low-lying area in open land, is located in a well-recognized wind tunnel area. Mountains surrounding the region add to the wind-channeling effect. The daily prevailing wind is from the west, but seasonal Santa Ana wind conditions periodically fluctuate from the east and north. Wind dispersion rates range from an average of 8 miles per hour (mph) to 30 mph for approximately 160 to 200 days per year. Inversion layers, indicating low wind conditions, are predominant during the summer months (per South Coast Air Quality Management District – *Corona Wind Pattern Reports, undated).*

2.1 SITE NEIGHBORHOOD

The Clow site is located in relatively open land that is currently undergoing extensive development. Interstate Highway 15 is located less than one mile west of the site. An Atchison, Topeka, and Santa Fe (ATST) railroad line and numerous spurs border the western and northern portion of the property. The area is zoned commercial with future land use for light industrial business. There are no known biological or cultural resources in the vicinity of the site. Site security restricts access to authorized personnel only and prevents potential public exposure to hazardous substances. Current land usage in the vicinity is shown in **Figure 4** and described below.

The surrounding area is primarily industrial. There are no sensitive receptors (i.e. schools, day care centers, nursing homes, senior citizen communities, and hospitals) within a two-mile radius of the site. Significant buffer zones are present surrounding the property. The nearest residential area is a trailer park to the north, more than 880 feet from the stockpile and should be unaffected by proposed activities because of its distance. Temescal Wash is directly adjacent to the eastern and northeastern boundaries of the site and is approximately 20 feet from the property line in these directions. Temescal Wash is concrete-lined and contains no habitat. The foundry sand stockpile is located approximately 525 feet from the edge of the wash, and there is no potential for a release to the wash. However, as a precaution, sandbags with filter-paper will be placed around on-site storm drains that may be in the vicinity of stockpile removal activities. This precaution will prevent releases that could potentially affect water quality in the wash.

Approximately 50 yards to the north of the proposed work area lies the ANACO Pipe Manufacturing facility, its extensive asphalt-paved parking area separated from the work area by a chain-link fence. A large open ARB building material supply yard is present on the other side of Temescal Wash, approximately 700 feet from the proposed work area. A mobile home park is located across Temescal Wash, approximately over a quarter mile north of the work area. Approximately 300 feet west of the site, across a set of train tracks and former Compton Avenue (now El Camino Avenue), lies the newly completed Corona Pointe Shopping Center. Buildings within the shopping center were constructed near the central portion of a large parking lot. A block wall was recently constructed along the east side of El Camino Avenue, preventing view and access into the ATSF track and the ANACO/Clow property to the east.

Magnolia Avenue lies approximately 700 feet south of the proposed work area. Directly across Magnolia Avenue from the site an extensive area is currently being graded for development. A newly-constructed industrial business park is located across Magnolia Avenue and

approximately a quarter mile southwest of the site. Southeast of the site, across Magnolia Avenue and Temescal Wash, is Corona Auto Parts, a salvage yard that occupies several acres. There is very little vegetation, and marshlands/wetlands, wildlife habitats, and reservoirs and other sensitive potential receptors are not present in the site vicinity. Surface water in the vicinity consists only of northwesterly-flowing Temescal Wash, a tributary to the Santa Ana River. The Santa Ana River is located approximately 15 miles northwest of the site.

3.0 EVALUATION OF INTERIM MEASURE ALTERNATIVES

Interim measures to mitigate the impact of potential contaminant dispersion arising from the stockpiled foundry sand that were evaluated included:

Moistening and Covering Stockpile – A temporary measure that would be ineffective under Santa Ana wind conditions. Periodic addition of water would increase the potential for downward contaminant migration due to leaching.

Capping Stockpile – Capping the stockpile would effectively prevent wind dispersion and wetting, but is not feasible due to the height and location of the stockpile. Capping the stockpile would not allow future access for pending characterization of AOC-1.

In-place Stabilization – Has the same advantages and disadvantages as stockpile capping, except with higher costs involved.

Excavation, Containerizing, and Disposal as a Hazardous Waste – Excavation and loading into trucks for off-site disposal as a hazardous waste would directly address contaminants by physical removal from the site. However, this measure is likely to generate dust on a short-term basis during excavation and loading activities. Proposed dust suppression and worker protection measures are discussed in Sections 13.2, 13.2, 13.2, and 13.4 of this IM Work Plan.

4.0 DESCRIPTION OF INTERIM MEASURES

Excavation of the foundry sand stockpiles for off-site transport and disposal as a hazardous waste have been selected as the most feasible interim remedial measure. Excavation would physically remove the contaminant source in an expeditious and cost effective manner and prevent wind-dispersion and leaching. Excavation will be performed using heavy equipment with a trained operator. Excavated material will be placed directly into dump trucks, covered, manifested and transported off-site for disposal as a hazardous waste. Excavation will proceed until the former stockpile location is relatively level and underlying native soil is encountered. Dust mitigation practices, including lightly spraying the stockpile with water, and upwind positioning will be implemented. Work area air monitoring, general on-site air monitoring, site perimeter air monitoring, and continuous personal and work area air sampling for dust will be performed during field activities. Worker protective measures, including dust monitoring and use of personal protective equipment (PPE) will be implemented. Airborne dust levels will be measured using a MiniRAM PDM-3 real-time dust meter or equivalent. More information concerning dust mitigation and use of PPE is provided elsewhere in this IM Work Plan.

5.0 DATA SUFFICIENCY

Existing data from a series of previous assessment and remediation activities performed at the Clow site were provided in *Preliminary Endangerment and Facility Investigation Workplan* (EST, June 21, 2004). Previous investigations and cleanups in AOC-1 included the removal of bag-house dust and stockpiles of foundry sand, and shallow remedial excavation at a former iron foundry sand stockpile location. EST has reviewed the available data for this specific AOC in addition to the recent stockpile characterization results for adequacy to safely and effectively proceed with the proposed interim remedial excavation measures.

6.0 PROJECT MANAGEMENT

Personnel involved with field activities will include a Project Manager, a Project Geologist/Site Safety Officer, Heavy Equipment Operator, and dump truck operators. All personnel entering the exclusion zones shall be trained in compliance with 29 CFR 1910.120(e). Training records will be available to DTSC staff on-site. Personnel who will be performing administrative, managerial, and field activities are identified below.

6.1 PROJECT MANAGER

Mr. Kevin Aardahl will serve as project manager for the proposed interim remedial measures proposed for the Clow site. He will be responsible for overall administration of the project. His duties include project planning, budgeting, communications, and coordination. Mr. Aardahl will report to the McWane Group Environmental Compliance Director, Mr. Mark Willett.

6.2 PROJECT GEOLOGIST/SITE SAFETY OFFICER

Mr. Martin Kilhullen will serve as the project geologist/field supervisor for this project. He will be responsible for all on-site activities on a daily basis. His operational responsibilities will include the field management of the stockpile sand loading operations, health and safety monitoring, and manifesting the loads of soil. The Project Geologist will report to the Project Manager, Mr. Willett, and on-site agency staff.

The project geologist will also serve as the site safety officer (SSO) and enforce the site Health and Safety Plan (HASP). The SSO will be onsite during all field activities. The SSO has the knowledge and authority necessary to enforce the HASP and shut-down all activities in case of an emergency. The SSO evaluates real-time monitoring data to make field decisions regarding safety and health. The SSO may authorize work area or site evacuation. The SSO will ensure that health and safety provisions are implemented and that the subcontractor complies with its provisions. The SSO will delineate work zones. The SSO will verify monitoring equipment calibration and perform ambient air monitoring. In the event of a sudden release of a substance the SSO will initiate the cessation of site activities contributing to the release. The SSO will be responsible for notifying appropriate emergency response agencies as well as DTSC.

6.3 SUBCONTRACTOR - HEAVY EQUIPMENT AND DUMP TRUCK OPERATORS

Loading and transportation of the foundry sand will be performed by ECI from Torrance, California. Stockpiles will be moved and loaded using machinery operated by a Heavy Equipment Operator. The operator selected for site activities will have received specialized training and have extensive experience in hazardous waste operations. The equipment operator and dump truck driver will report to the project geologist/field supervisor.

7.0 PROJECT SCHEDULE

The interim soil remediation measure will be implemented soon after DTSC approval of this IM Work Plan. The volume of the foundry sand stockpile to be excavated and removed is approximately 100 cubic yards. Removal, loading, and off-site transport of the entire foundry sand stockpile is anticipated to be accomplished in less than two days. A report documenting the excavation and disposal of the foundry sand stockpile will be submitted to DTSC within 30 days of interim measure completion.

8.0 DESIGN BASIS

Because contaminants will simply be removed by excavation and off-site transport, the engineering design criteria for a soil clean-up system are not applicable.

9.0 CONCEPTUAL PROCESS/SCHEMATIC DIAGRAMS

Because contaminants will be removed by excavation and off-site transport, conceptual process and schematic diagrams for a remediation machinery system are not applicable.

10.0 SITE PLAN SHOWING PRELIMINARY PLANT LAYOUT

The requirement for a site plan showing preliminary plant layout of a remediation system is not applicable because contaminants will be removed by excavation and off-site transport.

11.0 TABLES OF MAJOR COMPONENTS WITH DIMENSIONS

The requirement for tables listing component specifications and dimensions of major remediation system machinery is not applicable for proposed stockpile removal by excavation.

12.0 PRELIMINARY MASS BALANCE TABLES

The entire stockpile will be removed. Preliminary mass balance tables showing the weight(s) of contaminant(s) extracted per day and the cumulative mass of extracted contaminants are therefore not applicable for proposed interim measures.

13.0 SITE SAFETY AND SECURITY PROVISIONS

EST prepared *Health and Safety Plan (HASP) for Preliminary Endangerment Assessment – Clow Valve Company* (dated June 21, 2004) to ensure protection of the field investigation team, site employees, and the general public during the proposed PEA site assessment. The HASP is undergone DTSC review. The HASP provides detailed information proposed for the pending site-wide PEA. Pertinent safety and security provisions to be implemented during the proposed stockpile removal are briefly summarized below, and include restricting access to the work area, dust suppression measures, dust monitoring measures, use of personal protective equipment (PPE), and decontamination procedures.

13.1 RESTRICTED ACCESS TO WORK AREA

The site is located within an expanse of open land and significant buffer zones are present surrounding the property. The level of security restricts access to authorized personnel only and prevents potential exposure to hazardous substances stored or accidentally released. The nearest schools, day care centers, nursing homes, senior citizens community, and hospital are beyond a two mile radius from the site. EST will be responsible for conducting site operations so as to reduce the possibility of contact and prevent the spread of potential contaminants. Access to the work area will be controlled to reduce the potential for physical injury to field personnel and site employees. Brightly colored flagging tape, traffic-cones, and delineators will indicate and prevent access to the AOC when work is in progress. Work zones will be established to help:

- *Ensure field and nearby personnel are protected against the hazards present;*
- *Ensure work activities and potential contamination are confined to appropriate areas;*
- *Aid in the location and evacuation of personnel in case of emergency.*

Each work area will be encompassed by an *exclusion zone*, a *contamination reduction zone*, and a *support zone*. All personnel entering the exclusion zone shall be trained in accordance with 29 CFR 1910.120(e). Exclusion zones shall encompass the immediate vicinity of each soil boring, including the drilling machinery and support vehicles. The exclusion zones will be clearly delineated using brightly colored flagging tape and traffic control cones. Access to the exclusion zones will be strictly controlled by the SSO and a visitor log will be maintained. Access control points will be established at the perimeter of each exclusion zone. A decontamination station will be established within the Contamination Reduction Zone (CRZ). The CRZ will have clean water and soap for field worker decontamination, as well as provisions for decontamination of personnel protective equipment (PPE) or other equipment that has entered the exclusion zone. The support zone will be a clean area where the possibility of encountering hazards is minimal. The support zone will be used for staging of equipment and materials and for administrative purposes. Telephones, emergency phone numbers, a copy of the HASP, hospital route maps, and vehicle keys will be available in the support zone. Break/lunch areas, conference areas, and sanitary facilities will be located in the support zone. Eating and drinking will be permitted only in the support zone.

13.2 DUST SUPPRESSION MEASURES

The site is located in an area of occasional strong gusty winds. Fugitive soil dust is anticipated during stockpile removal. The proposed countermeasures include:

- *Water will be lightly sprayed as needed to control dispersion of potential metal-bearing dust;*
- *Limiting the fall of dumped material into containers or dump trucks;*
- *The pathways used by field personnel will be swept clean as necessary;*
- *Excavation equipment will be decontaminated prior to exiting each exclusion zone;*
- *Trucks will be covered prior to transporting waste to eliminate dusting during transportation.*

13.3 DUST MONITORING

Stockpile removal using heavy equipment may create dust potentially contaminated with metals (i.e. lead and copper). Water mist and safe work practices will be used to minimize dust generation. Field personnel in the exclusion zone will be positioned upwind of dust generating activities. Additionally, EST will establish and implement an air monitoring program to identify potentially elevated concentrations of dust at the site.

Work area air monitoring, general on-site air monitoring, site perimeter air monitoring, and continuous personal and work area air sampling for dust will be performed during field activities. Airborne dust levels will be measured using a MiniRAM PDM-3 real-time dust meter or equivalent. The MiniRAM meter will be calibrated and operated per the manufacturers instructions. Monitoring times, locations, and meter readings will be recorded in the field logbook for air monitoring documentation. If requested, the Site Safety Officer (SSO) will verbally inform on-site DTSC staff of air monitoring results.

Work area dust monitoring will be conducted at approximate 30-minute intervals using the MiniRAM meter. **General on-site** dust monitoring will be performed at approximate 30 minute intervals using the MiniRAM meter at locations up-wind and down-wind from the work area. The meter will also be used to monitor potential dust dispersion by moving in a cross-wind direction. Down-wind dust monitoring results will be compared to up-wind (background) monitoring results and evaluated. **Perimeter** dust monitoring will be conducted at approximate 30-minute intervals using the MiniRAM meter to assess potential dust migration away from the site.

The Occupational Safety and Health Administration (OSHA) lead dust action level is 0.03 milligrams per cubic meter (mg/m^3) for a sustained reading greater than five minutes duration. (A dust cloud is visible at a concentration of 5 mg/m^3) The proposed work area dust action level was conservatively based on the presence of lead in the stockpiled foundry sand, and on respective OSHA Personal Exposure Limits (PELs) or Threshold Limit Values (TLVs) for dust and lead in air. If MiniRAM readings in the work area exceed the OSHA PEL of 0.05 mg/m^3, excavation activities will be suspended until further dust control measures can be implemented.

Continuous **Personal** and **Work Area** dust sampling will be performed during field activities. Personal and area sampling pumps fitted with air sample cassettes will be strategically positioned and operating continuously during stockpile removal activities. Selected air monitoring sample cassettes will be analyzed for metals of concern (i.e. copper and lead) at the conclusion of the project. The cassette samples will be visually inspected and selected for dust analysis based on worst-case conditions (most dust trapped) for each monitored area (i.e. work area, general on-site, downwind perimeter, and the excavation equipment operator). EST will maintain a sampling record as part of the air monitoring program.

13.4 PERSONNEL PROTECTIVE EQUIPMENT

Field activities will generally be performed using Level C personnel protective equipment (PPE). Level C PPE is recommended due to the possibility of inhalation and/or ingestion of dust contaminated with metals. Personal and area monitoring will be performed during excavation and decontamination activities. All workers in the vicinity of the excavation and stockpile areas will be required to wear hard hats, steel toe boots, Tyvek™ coveralls, HEPA cartridge respirator, gloves, eye protection, and hearing protection. Used health and safety clothing will be stored in a waste container on-site for later disposal. Workers will be required to wash exposed sections of the body prior to eating, drinking, smoking, or leaving the site.

13.5 DECONTAMINATION PROCEDURES

Personnel and equipment will be decontaminated prior to entering the clean zone. Decontamination will be performed in the CRZ. Decontamination procedures will be monitored by the SSO to evaluate their effectiveness. Personnel leaving the exclusion zone shall proceed to the contamination reduction zone (CRZ). All personnel in the CRZ shall be wearing the same level of PPE as those in the exclusion zone. Basins, scrub brushes, wipe cloths, and paper towels will be set up to aid the decontamination process. Much of the field work will be performed in Level C gear. Disposable gloves, Tyvek suits, and hearing protection will be discarded in a steel 55-gallon drum located in the CRZ. Work shoes and boots will be brushed off in the CRZ. Respirators will be cleaned with sanitizing wipes if minimal contamination. If additional cleaning is necessary, the respirators will be scrubbed in detergent solution, rinsed, and wiped dry. Coveralls, gloves, respirator cartridges, and other disposable PPE will be removed and drummed if they cannot be adequately cleaned.

End-dump trucks used to carry soil will be parked on the asphalt road west of the foundry sand piles and a single front-end loader will load each truck. Only the loader will be in contact with the soil. Soil placed in the trucks will be covered with tarps and the area around the trucks will be swept clean prior to departure. Trucks will be inspected for loose material. When all the loading is complete, the loader will be driven into a decontamination station with a 30-mil thick polyethylene liner. The loader will be cleaned with a pressure washer and the water will be collected and pumped into a drum. The liner will be placed in a drum for disposal.

14.0 WASTE MANAGEMENT

Wastes will include the excavated foundry sand, rinsate generated by equipment decontamination, and used PPE. Approximately 300 tons of excavated foundry sand will be placed directly into dump trucks, covered, and transported off-site. Manifests will be used to document the transport and disposal of the hazardous foundry sand. Copies of the manifests will be provided to DTSC. It is estimated that a total of less than 10 trucks will be used to transport the soil to the Chem-Waste Management Class 1 waste disposal facility at 35251 Old Skyline Road (California Highway 41) in Kettleman City, California (EPA ID No. CAT000646117). The facility is located in a rural area on an approximate 1,600 acre parcel, of which 499 acres are permitted for accepting hazardous waste.

The route to the Chem-Waste facility is shown in **Figure 5**. Shipments will be timed to avoid peak commute hours. Trucks exiting the Clow site will proceed approximately ½ mile west on Magnolia Avenue before entering the northbound 15 Freeway. There are no potentially sensitive receptors (i.e. churches, hospitals, schools, etc.) on this portion of the route. Trucks will then proceed north on the 15 Freeway until encountering the westbound 210 Freeway. The trucks will then proceed west on the 210 Freeway until the northbound 5 Freeway is encountered. Trucks will proceed north on the 5 Freeway towards Kettleman City, where they will exit at California Highway 41. From this intersection, the trucks will proceed southwest on California Highway 41 approximately 4 miles to the Chem-Waste facility. According to Ms. Terry Yarborough (Chem-Waste Executive Secretary), there are no potentially sensitive receptors along the route and within a 5-mile radius of the Chem-Waste facility.

Decontamination rinsate will be stored on-site in a labeled and secured 55-gallon steel drum. Used PPE will be stored on-site in a labeled and secured 55-gallon steel drum. An area or areas will be designated for drum storage. DTSC will receive profiling and disposal information before final disposition of the waste.

15.0 REQUIRED PERMITS AND PUBLIC NOTIFICATION

The removal of stockpiled foundry sand is not considered site grading, and a permit is not required for the proposed activities. Per DTSC requirements and public notice requirements under the California Environmental Quality Act, the following will be performed:

- Submittal and posting of "*Notice of Preparation of an Environmental Document Pursuant to the California Environmental Quality Act*" at the Office of the County Recorder (Riverside County);
- Notice of the proposed work published in an English newspaper of general circulation;
- Posting both on- and off-site in the area where the project is located, and;
- Direct mailing to owners and occupants of properties within ¼-mile of the border of the project.

An address search was performed for business and residential listings within a quarter-mile of the Clow property boundary. The searches were performed by a commercially-available service using the City of Corona business license list and other sources. The list of addresses is provided in Appendix B. In addition, for reference purposes, a list of federal, state, and local governmental contacts are provided in Appendix C.

16.0 SAMPLING AND MONITORING

Because the foundry sand stockpiles have been adequately characterized, soil sampling is not proposed during implementation of the interim remedial measures. Air monitoring for dust as described above will be performed only during stockpile removal activities.

mg/kg = milligrams per kilogram
TTLC = Total Threshold Limit Concentration (reported in mg/kg)
STLC = Soluble Threshold Limit Concentration (reported in mg/L). 10xSTLC reported in mg/kg
TCLP = Toxicity Characteristic Leaching Procedure (reported in mg/L). 20xTCLP reported in mg/kg
ND = Not Detected. Sample is below the reported method detection limit.
NA = Not Applicable.
(a) = Exceeds TTLC limit.
(b) = Exceeds 10xSTLC limit.
(c) = Exceeds 20xTCLP limit.

Notes:

1. If the total concentration of a substance equals or exceeds the TTLC value, it is considered a hazardous toxic waste (California standards).
2. If the total concentration of a substance is ten times (by rule of thumb) the STLC value, the Waste Extraction Test (WET) should be performed. If any substance in a waste analyzed equals or exceeds the STLC value, it is considered a hazardous toxic waste (California standards).
3. If the total concentration of a substance is twenty times (by rule of thumb) the TCLP value, the TCLP test should be performed. If any substance in a waste analyzed equals or exceeds the TCLP value, it is considered a hazardous toxic waste (Federal standards).
4. Bold values indicate exceedence of the regulatory limit.

mg = milligrams per kilogram
TC = Total Threshold Limit Concentration (reported in mg/kg).
TC = Soluble Threshold Limit Concentration (reported in mg/L). 10xSTLC reported in mg/kg.
P = Toxicity Characteristic Leaching Procedure (reported in mg/L). 20xTCLP reported in mg/kg.
= Not Detected; Sample is below the reported method detection limit.
= Not Applicable.
Exceeds TTLC limit.
Exceeds 10xSTLC limit.
Exceeds 20xTCLP limit.

1. If the total concentration of a substance equals or exceeds the TTLC value, it is considered a hazardous toxic waste (California standards).

2. If the total concentration of a substance is ten times (by rule of thumb) the STLC value, the Waste Extraction Test (WET) should be performed. If any substance in a waste analyzed equals or exceeds the STLC value, it is considered a hazardous toxic waste (California standards).

3. If the total concentration of a substance is twenty times (by rule of thumb) the TCLP value, the TCLP test should be performed. If any substance in a waste analyzed equals or exceeds the TCLP value, it is considered a hazardous toxic waste (Federal standards).

4. Bold values indicate exceedence of the regulatory limit.

LIMITATIONS AND WARRANTIES

Environmental Support Technologies, Inc. (EST) has prepared this *Foundry Sand Stockpile Sampling and Analysis Report – Clow Valve Company – Corona, California* for the exclusive use of Clow Valve Company (parent company McWane, Inc.) and assigned interested parties only. The services described within this document were performed in accordance with generally accepted professional consulting principles and practices. No other warranty, expressed or implied, is made.

The information contained in this report was based on measurements performed in specific areas during a specific time period. EST's professional opinions and conclusions are based in part on interpretation of data from discrete sampling or measurement locations that may not represent actual conditions at unsampled or unmeasured locations.

EST assumes no responsibility for issues arising from changes in environmental standards, practices, or regulations subsequent to performance of site assessment work. In the event that any changes occur in waste management practices, site conditions, or uses of the property, the conclusions and recommendations contained in this document should be reviewed and modified or verified in writing by EST. EST does not warrant the accuracy of information supplied by others, or the use of segregated portions of this document.

Kevin B. Aardahl
Project Manager/Senior Geologist

Michael E. Tye, RG
Project Hydrogeologist/Registered Geologist

1.0 INTRODUCTION

Environmental Support Technologies, Inc. (EST) has prepared this report, which summarizes the collection and analysis of soil samples from a stockpile of foundry sand located at the Clow Valve Company facility located at 1375 Magnolia Avenue in Corona, California (site). The approximate location of the site is located in **Figure 1**.

2.0 SUMMARY OF PREVIOUS INVESTIGATIONS

The Clow facility is referenced as DTSC Facility ID Number 331709 and holds Hazardous Materials Management Permit No. CAD 063115133, Facility No. 81952 from the County of Riverside Department of Environmental Health. The facility is referenced with Consent Order docket number SRPD 00/01 SCC-4208.

McWane, Inc., parent company and owner of Clow, retained Advanced Environmental Services, Inc. (AESI) during 2002 to prepare a Preliminary Endangerment Assessment and Facility Investigation Work Plan for the property located at 1375 Magnolia Avenue, Corona, California. AESI prepared and submitted– *Clow Valve Inc.* (March 28, 2002) on behalf of Clow to comply with DTSC requirements outlined in a consent order agreement. Following review of the work plan, DTSC provided written comments in letters to Clow dated June 7, 2002, July 1, 2002, and September 13, 2002. Due to the number of DTSC comments concerning the work plan and the excessive scope of work, Clow retained Environmental Support Technologies, Inc. (EST) to prepare a revised work plan.

An on-site meeting was held on August 13, 2002 to familiarize DTSC staff with the facility and to discuss the work plan comments. A tour of the plant was conducted to observe facility processes and site features. The meeting culminated with the agreement for EST to provide responses to comments related to documentation of previous site clean-up activities, to revise the previously submitted work plan.

A second meeting was held at the site on October 30, 2002. Each of the areas of concern was inspected during the site-walk, and methods to accomplish the proposed soil investigation were discussed. EST then prepared and submitted *Addendum to Preliminary Endangerment Assessment and Facility Investigation Work Plan* (July 22, 2003) (addendum) to the DTSC. The addendum was intended to supplement the previously submitted *Preliminary Endangerment Assessment and Facility Work Plan – Clow Valve Inc.* (AESI, March 28, 2002). Upon receipt of the addendum, the DTSC responded in a letter to Clow dated August 5, 2003 by requesting a complete "stand-alone" document. On March 11, 2004, EST submitted *Preliminary Endangerment and Facility Investigation Workplan*, to comply with comments contained in the August 5, 2003 DTSC letter.

Following DTSC review, several questions and/or comments were raised and a meeting was held at the Clow Corona facility on May 18, 2004. A brief walk-through of the investigation areas was conducted to confirm and/or modify the sampling locations, modify the investigation area names, and develop a plan to include soil gas sampling in lieu of soil sampling for volatile organic compounds. Based on the latest information and comments, EST prepared and submitted *Preliminary Endangerment and Facility Investigation Workplan* (June 21, 2004) that has been approved for implementation.

3.0 PROJECT OBJECTIVES

The objectives of the foundry sand stockpile sampling and analysis were the following:

- Collect and analyze soil samples from a stockpile of foundry sand for chemical characterization;
- Evaluate laboratory results from the sampling to determine the ultimate disposition of the foundry sand;

4.0 SCOPE OF WORK

The scope of work included the following elements to address project requirements:

- Determine the approximate volume of foundry sand through a series of field measurements;
- Division of the stockpile into approximate 10 to 12 cubic yard sections;
- Collection and analysis of soil samples;
- Data evaluation and report preparation.

5.0 FIELD SAMPLING AND ANALYSIS

5.1 Sample Collection

On August 25, 2004, EST collected samples from a stockpile of foundry sand located north of a former on-site brass foundry. The location of the stockpile and the former brass foundry are shown in **Figure 2**. Based on measurements performed in the field, the volume of the stockpile was estimated to be approximately 90 to 100 cubic yards. The approximate locations of the eight (8) stockpile samples (identified with a "SP" prefix) are shown in **Figure 3**. Stockpile sampling was performed by digging several feet into the pile at random

locations (based on an estimate of soil volume) and driving a 2-inch-diameter by 6-inch-long stainless steel soil sample sleeve into the freshly exposed material using a slide hammer sampler. Teflon squares and tight-fitting plastic caps were placed over the ends of each labeled sample sleeve. The sample sleeves were labeled, placed into resealable plastic bags and placed into a cooler with ice. Samples for volatile organic compound analysis were collected in EnCore™ sample containers by coring directly into the freshly exposed soil. The EnCore™ containers were used and handled per the manufacturers specifications. They were labeled, inserted into separate pre-labeled foil bags and placed in a cooler with ice pending delivery to the analytical laboratory.

Sampling equipment was decontaminated between each location by scrubbing with a brush in a bucket with tap water and non-phosphate detergent. The equipment was double rinsed in tap water and final rinsed with distilled water and allowed to air dry. Decontamination water was place into a 55-gallon steel drum that remained on-site.

5.2 Sample Analysis

The samples were transported by EST under chain-of-custody to Sierra Analytical Labs, Inc. (Sierra) in Laguna Hills, California for analysis. Sierra is a California-certified analytical laboratory (ELAP No. 2320).

The samples were analyzed for the following:

- Volatile Organic Compounds (VOCs) by EPA Method 8260
- Semi-Volatile Organic Compounds (Semi-VOCs) by EPA Method 8270C
- Title 22 Metals (Total Threshold Limit Concentration - TTLC) by EPA Method 6000/7000 Series Methods
- Hexavalent Chromium (Cr+6) by EPA Method 7199A
- Cyanide by EPA Method 335.2
- Total Petroleum Hydrocarbons (TPH) Full Scan by EPA Method 8015B

After receipt of results for the above analyses, the samples were analyzed for the following:

- Title 22 Metals including Cr+6 (Soluble Threshold Limit Concentration - STLC) by EPA Method 6000/7000 Series Methods
- Title 22 Metals (applicable metals) (Toxic Characteristic Leach Procedure - TCLP) by EPA Method 6000/7000 Series Methods

6.0 SAMPLE RESULTS

Analytical results for the samples collected from the foundry sand stockpile showed non-detectable concentrations of VOCs, Semi-VOCs, cyanide, and TPH above their respective reporting limits. The samples had detectable concentrations of various metals analyzed by TTLC, STLC, and TCLP procedures.

Analytical results for the TTLC, STLC, and TCLP procedures for metals are summarized in **Table 1**. Laboratory analytical reports, analytical quality assurance/quality control (QA/QC) data, and chain of custody documentation for the stockpile samples are provided in **Appendix A**.

7.0 CONCLUSIONS

Analytical results for the samples collected from the foundry sand stockpile indicate that concentrations of copper, lead, and zinc exceed regulatory levels for the determination if a material is a hazardous waste. Options for management, handling, and disposal of the foundry sand will be presented in an Interim Measures Work Plan that will be prepared and submitted to DTSC for review and approval.

milligrams per kilogram
Total Threshold Limit Concentration (reported in mg/kg).
Soluble Threshold Limit Concentration (reported in mg/L). 10xSTLC reported in mg/kg.
Toxicity Characteristic Leaching Procedure (reported in mg/L). 20xTCLP reported in mg/kg.
Detected: Sample is below the reported method detection limit.
Applicable.
eds TTLC limit.
eds 10xSTLC limit.
eds 20xTCLP limit.

1. If the total concentration of a substance equals or exceeds the TTLC value, it is considered a hazardous toxic waste (California standards).

2. If the total concentration of a substance is ten times (by rule of thumb) the STLC value, the Waste Extraction Test (WET) should be performed. If any substance in a waste analyzed equals or exceeds the STLC value, it is considered a hazardous toxic waste (California standards).

3. If the total concentration of a substance is twenty times (by rule of thumb) the TCLP value, the TCLP test should be performed. If any substance in a waste analyzed equals or exceeds the TCLP value, it is considered a hazardous toxic waste (Federal standards).

4. Bold values indicate exceedence of the regulatory limit.

TCLP	8/25/2004	NA	ND<0.19	0.48	NA	ND<0.09	ND<0.12	NA	NA	NA	1.27	ND<0.0003	NA	NA	ND<0.18	ND<0.04	NA	NA	NA

mg/kg = milligrams per kilogram
TTLC = Total Threshold Limit Concentration (reported in mg/kg)
STLC = Soluble Threshold Limit Concentration (reported in mg/L). 10xSTLC reported in mg/kg
TCLP = Toxicity Characteristic Leaching Procedure (reported in mg/L). 20xTCLP reported in mg/kg
ND = Not Detected. Sample is below the reported method detection limit.
NA = Not Applicable
a = Exceeds TTLC limit.
b = Exceeds 10xSTLC limit.
c = Exceeds 20xTCLP limit.

Notes:
1. If the total concentration of a substance equals or exceeds the TTLC value, it is considered a hazardous toxic waste (California standards).
2. If the total concentration of a substance is ten times (by rule of thumb) the STLC value, the Waste Extraction Test (WET) should be performed. If any substance in a waste analyzed equals or exceeds the STLC value, it is considered a hazardous toxic waste (California standards).
3. If the total concentration of a substance is twenty times (by rule of thumb) the TCLP value, the TCLP test should be performed. If any substance in a waste analyzed equals or exceeds the TCLP value, it is considered a hazardous toxic waste (Federal standards).
4. Bold values indicate exceedance of the regulatory limit.

Dear Ms. Wages:

This correspondence is to follow up our work plan and notification concerning the recycling of lead impacted soil from the Brass Foundry Area and the stockpile of soil from Clow Valve in Corona, California.

The following is a short synopsis of how the material will be handled:

- All sheet metal will be cut out of the trench and material will be removed via backhoe and swept broom clean
- Material will be collected, consolidated and loaded into end dumps
- Material will then be transported to filter recycling services in Colton, California
- There it will be recycled into non-hazardous material and then transported to Gibson Environmental in Bakersfield, California
- Personnel will be wearing Level C personal protective equipment

* Project start date is January 11, 1995
* Project completion dated is January 12, 1995

If you have any questions, please feel free to contact me directly at your earliest convenience.

Sincerely,

Joe Wilson, REA

Re: Clow Valve Company, Inc.

Dear Mr. Robison:

Based upon the information provided by Laidlaw Environmental Services, Inc. in their letter dated October 14, 1994, this office will approve the proposed removal and disposal, under a separate and distinct Hazardous Waste Manifest, of the original stockpile of the lead-contaminated soil from directly below the stockpile of foundry sand in the rear of the facility.

As per Section 66268.7(a)(3) of Title 22 of the California Code of Regulations, McWane, Inc. (Clow Valve Company, Inc.) as the generator of said waste, must submit a notice to the facility receiving the waste that the waste is not prohibited from land disposal. This notice shall include all of the required information.

Please contact me at (909)358-5055 if there are any questions.

Sincerely,

Sandra J. Wages
Hazardous Materials Specialist

RE: Clow Valve - Corona, California

Dear Ms. Wages,

In response to your correspondence to Barry Robison of McWane regarding Clow Valve in Corona, California, please be advised of the following information.

We accept your determination that the "lead contaminated soil from directly below the site of foundry sand" warrants management as a discreet waste stream. We also agree that this waste is subject to the treatment standards prescribed in California Code of Regulations, Title 22, Section 55268.106(a)(3). However, pursuant to California Health and Safety Code, Section 25179.7(a)(3), a variance has extended the implementation date of these standards until January 1, 1995.

With this in mind, we propose to load this material on-site into certified hazardous waste end-dump trucks, transport it to Laidlaw's Imperial Valley facility at Westmorland, California, on a California Hazardous Waste Manifest where it will then be landfilled.

If you should have any further questions or concerns, please do not hesitate to contact me at (909) 983-0342.

Sincerely,
Laidlaw Environmental Services, Inc.

J.R. Fredericks

COUNTY OF RIVERSIDE • HEALTH SERVICES AGENCY
DEPARTMENT OF ENVIRONMENTAL HEALTH

September 28, 1994

Mr. Barry Robison
McWane, Inc.
P.O. Box 607
Birmingham, Alabama 35201

Dear Mr. Robison:

This office has received and reviewed the requested documentation to approve removal and proper transport of the following wastes from the Clow Valve facility in Corona: oil-contaminated soil and debris; the screened waste from screening of foundry sand; the refractory material consisting of old, unused materials; and the remaining stockpile of screened foundry sand.

As discussed during our last communication, this office will require a workplan detailing the methods of identification handling, transport, and disposal to be utilized in the clean-up of the residual foundry sand and lead-contaminated soil remaining on site. This workplan shall be submitted and approved prior to initiating further remediation procedures.

The remaining waste to be addressed is the original stockpile of lead-contaminated soil from directly below the pile of foundry sand which was in the rear of the facility. First of all, as per discussion with the California Department of Toxic Substances Control (Reference: California Code of Regulations, Title 22, Sections 66261.120-126), this soil may not be classified as a special waste. Secondly, the sample results for this soil are well above the treatment standards set forth in Title 22, Section 66268.106(a)(3). Specifically, sample number 2B2 with a soluble lead concentration of 192 mg/l and sample number 1B with a total lead concentration of 1,860 mg/kg(extrapolated) both exceed the treatment standard for lead of 67 mg/l which may not be exceeded for the allowable land disposal of such waste. Consequently, the original stockpile of lead-contaminated soil from below the pile of foundry sand in the rear of the Clow Valve facility must be chemically stabilized to meet the treatment standard prior to land disposal. In order for this office to approve removal of this lead-contaminated soil, McWane, Inc. shall submit a letter detailing the methods of removal, transport, treatment, and disposal to be utilized in the handling of this waste.

If there are any questions, please contact me at (909)358-5055.

Re: Clow Valve clean-up

Dear Mr. Robison:

The following wastes, of immediate concern to the Hazardous Materials Management Division, remain on site at the Clow Valve facility in Corona, California: oil-contaminated soil; screened debris from screening of foundry sand; lead-contaminated soil from below foundry sand stockpile in rear of facility; refractory material from bags containing old, unused materials; remaining screened foundry sand; and residual foundry sand awaiting clean-up.

In order to approve removal and proper transport of the above-mentioned wastes, McWane, Inc. shall submit a letter to this office to include the following information:

- separate and complete profiles and analyses for all of the above-mentioned wastes;
- the specific destination for each of the above-mentioned wastes;
- detailed statements as to the manner in which each of the above-mentioned wastes is to be transported (i.e. under uniform hazardous waste manifest, non-hazardous manifest, bill of lading, etc.);
- specific variances, regulations, and/or parameters which allow the respective treatment, storage, and disposal facility to accept the above-mentioned wastes in their current state.

If there are any questions, feel free to contact me at (909)358-5055.

Sincerely,

Sandra J. Wages

August 23, 1994

RE: Clow Valve, Corona

Dear Ms. Wages:

As requested, I am writing to update you on our progress in cleaning up the Corona facility and to outline the additional work we anticipate completing in the next few weeks.

As of this date, Disposal Control Service, Inc.(DCSI), has essentially removed all the foundry sands, oil contaminated soils, and the solid waste products from the site. Enclosed are copies of their progress reports through August 22, 1994, as well as copies of all the analytical results that have been made available to us. As soon as we receive their final report I will forward a copy to you. I have also requested copies of the analytical work done by DCSI to profile the wastes prior to recycling and/or disposal. I will forward these to you as soon as they are received.

Regarding the area under the sand pile at the rear of the old iron foundry. I plan to be in Corona next week to complete the evaluation, conduct follow up sampling and arrange for disposal of any and all contaminated soils. Our plan is to excavate the area (about 10 square feet) under sample point B to a point where the residual lead concentration meets the TTLC or STLC limits, whichever is appropriate. To accomplish this we will continue to excavate the area approximately one foot at a time. At each one foot interval (depth) at least two (2) samples will be collected and analyzed for total lead (Pb). If the total lead concentrations are less than 50 mg/kg no further excavation will be done. If the total lead concentrations, are greater than 50 mg/kg but less than about 100 mg/kg, the sample will be analyzed for soluble lead (STLC). If the STLC concentrations are below 5.0 mg/l no further excavation will be done. At this point, you will be contacted and requested to observe the final confirmatory sampling. This procedure will be repeated as necessary until we are satisfied that no contaminated soils remain in the area.

Once excavation is complete (and the confirmatory sampling results are received), the excavated soil will be profiled for appropriate disposal, manifested if needed, transported and disposed of at an approved facility. The profiling, transporting and final disposal will be done by a contractor, most likely DCSI or Advanced Environmental. In the interim, all excavated soils will be stockpiled on pavement or plastic and covered with plastic to prevent dispersion by wind or rain and the excavated area will be bermed to preclude run on.

I will talk to you next week. In the meantime, if you need any more information, please call.

Sincerely,

CBH

Dear Ms. Wages:

Attached is information which summarizes the work done by Advanced Environmental, Inc., to complete the contaminated sand/soil removal project at Clow Valve Company in Corona.

Included are Advanced's proposal, correspondence and final invoice which shows the quantity of material removed. Copies of all manifests are on file at Clow Valve and can be furnished if requested.

Although the initial proposal was to transport the material to Gibson Environmental in Bakersfield, circumstances requires that it be sent to Kramer Metals in Los Angeles. Mr. Wilson with Advanced assured us that this was acceptable to your Department.

Thank you for all your help and patience. I truly enjoyed working with you on this project. If you have any questions, please call or write.

Sincerely,

CBR

Dear Barry:

This correspondence is to follow up your request for a synopsis of the sequence of events concerning the removal and disposal of material in the trench area in the old brass foundry area and the removal of lead impacted soil stockpiled at the rear of the facility.

On January 11, 1995, the project started by cutting out the metal obstructions in the conveyer trench to gain access to the lead bearing material. The material was very liquid due to the substantial amount of rain Southern California had received for the year.

As much of the material as possible was removed by hand and loaded into 20 cubic yard roll-off bins along with the stockpiled material at the rear of the facility and transported via California Uniform Hazardous Waste Manifest, Classification D 008, to Filter Recycling Corporation, a licensed, permitted and insured receiving facility for recycling.

The remainder of the sludge was then vacuumed out utilizing a 5000 gallon vacuum tanker and transported to DeMenno/Kerdoon for recycling in Compton, California.

The sheet metal removed from the trench was also recycled at Kramer Metals in Los Angeles, California.

The project was completed within two weeks of the start date.

June 21, 1995

November 30, 1993

RE: Clow Valve Company, Corona

Dear Ms. Wages:

I am writing to update you on our progress toward compliance with the concerns raised as a result of your inspection on September 2, 1993. I would also take this opportunity to comment on your letter dated November 17, 1993.

Advanced Environmental has completed cleaning the test pond. The pond has been filled with inert material and all records regarding removal and disposal of the residue is available at the facility for your review.

Three of the four underground storage tanks have been removed. As you know, the fourth tank contained a considerable amount of asphalt paint residue that will require removal and disposal before the tank can be removed. We have authorized ESE to proceed and they should be in contact with you in the near future regarding their schedule. As soon as this tank is removed, ESE will complete the sampling program and we will forward to you the laboratory results along with the tank disposal documentation.

Mr. Scheliga, has conducted the annual training update for all employees. Documentation of this is available at the facility.

During the week of November 15, 1993, we began consolidating and inventorying all the bagged and drummed material at the facility. Identification is now underway and should be completed in time to include any "unknowns" in the sampling plan which we intend to submit by December 17, 1993.

Our letter of November 3, 1993, indicated that a Contingency Plan would be prepared and submitted by November 30, 1993. However, we are a little behind schedule. The plan is being prepared and should be ready for submittal no later than December 17, 1993. I trust this minor delay will be acceptable.

In regards to the issue of foundry sand; your letter of November 17, 1993, stated "...the foundry sand may qualify as a hazardous waste, a special waste, or a recylable material." However, as I understand, both the state and federal regulations exempt, from

the definition of solid waste, material that is used or reused, without further processing, as an ingredient in a manufacturing process or as an effective substitute for a raw material. As explained in our letter of November 3, 1993, this is exactly what we intend to do with the sand. Your interpretation could be extrapolated to apply to the use and/or shipment of any material that had been previously used but still was suitable for the purpose or process it was intended. We would request you review your position and/or provide further clarification of the regulatory citation used in supporting your decision.

Irregardless of the above differences in interpreting the requirements, Clow Valve is willing to develop and implement a sampling program that includes the foundry sand. We are also agreeable to providing Riverside County some type of certification that the sand was shipped to, received by and used by Clow Valve's Iowa facility. However, if your agency deemed any of the material a hazardous waste, our Iowa facility could not accept the sand since it is not a permitted TSD facility. This could result in Clow paying a premium for disposal of a potential raw material, as well as increasing the volume of waste in the environment.

Thank you for your consideration. We look forward to completing this project in a timely and satisfactory manner.

Sincerely,

CBL

EarthCon Consultants CA, Inc. (EarthCon) presents conclusions herein based solely upon the agreed upon scope of work outlined in this plan. EarthCon makes no warranties or guarantees as to the accuracy or completeness of information provided or compiled by others. It is possible that information exists beyond the scope of this plan. Additional information, which was not found or available to EarthCon at the time of writing this plan, may result in modification of the conclusions presented. This plan is not a legal opinion. The services performed by EarthCon have been conducted in a manner consistent with the level of care ordinarily exercised by members of our profession currently practicing under similar conditions. No other warranty, expressed or implied, is made.

1.0 INTRODUCTION AND REGULATORY STATUS

On behalf of Clow Valve Company (Clow), a Division of McWane, EarthCon Consultants CA, Inc (EarthCon), has prepared this Soil Management Plant (SMP) to guide future on-site activities that disturb the soil at the property located at 1375 Magnolia Avenue in Corona, California (Site; see Figures 1 and 2). Clow is currently in the process of implementing the field activities as identified in the Corrective Measures Implementation Workplan (CMIWP) for the Site. Proposed CMIWP activities will be conducted under the supervision of the Department of Toxic Substances Control (DTSC) and in accordance with the Corrective Action Consent Agreement between the California Department of Toxic Substances Control (DTSC) and Clow [Docket No. SPRD 00/01SCC-4208, March 2002]. The DTSC-approved corrective measures will be implemented to yield conditions suitable for continued commercial/industrial use. The entire Site will be restricted for industrial use in accordance with the future Land Use Covenant (LUC). Therefore, the future use of the Site must be in accordance with the deed restrictions identified in the proposed LUC. (See Appendix C draft LUC.)

The purpose of this SMP is to provide guidance for management of soils in the event soil disturbance is required during future construction and maintenance activities on-Site. Clow intends to implement the SMP during grading and capping activities at AOC1 and AOC5 associated with the approved CMIWP. Additionally, to support the future Site activities, this SMP has also been prepared to facilitate implementation of future projects and compliance with applicable laws. The current plan for the Site is industrial redevelopment with one or more tilt-up type building(s). This will entail limited over-excavation and re-compaction of the soil on-Site under the future building(s) and concrete truck courts and drive aisles for geotechnical purposes. Current plans are for Clow to retain ownership and redevelop the property in cooperation with a long-term lessee. In addition, both the DTSC and USEPA will be notified of such activities prior to implementation, as specified in Section 6.1.1.

A summary of previous investigations as well as elements of the SMP are described in detail in the following sections.

2.0 SUMMARY OF PREVIOUS INVESTIGATIONS

In October of 2000, the DTSC conducted a Compliance Evaluation Inspection at the Site and determined that there may have been potential releases of hazardous waste into the environment. A Corrective Action Consent Agreement (CACA) was prepared for the Site in October 2001 and was subsequently revised on March 6, 2002.

As required by the CACA and through negotiations with DTSC a Preliminary Endangerment Assessment and Facility Work plan was prepared (June 21, 2004) was prepared, which identified the following nine (9) areas of concern (AOC) at the Site (see Figure 2 and Figures 3A through 3J)):

- AOC1 – Rail Spur Area (including area of diesel impact)
- AOC2 – Chip-Bin Storage Area
- AOC3 – Water Pressure Test Area
- AOC4 – Former Iron Foundry Sand Cleanup Area
- AOC5 – Oil-Stained Pad (eastern portion of AOC1)
- AOC6 – Former Asphalt Dip Tank
- AOC7 – Transformer Area 1
- AOC8 – Transformer Area 2
- AOC9 – Former Test-Pond (filled)

Upon review of the revised PEA, the DTSC determined that interim measures were necessary due to the presence of a stockpile of dry, unconsolidated foundry sand waste located in the Rail Spur Area (AOC1).

Approximately 393 cubic yards of stockpile material containing elevated concentrations of copper, lead, and zinc was removed from the Site and transported to the Chemical Waste Management Class I disposal facility in Kettleman City, California in June 2005.

Additional investigation included the following:

- A soil sampling investigation was subsequently conducted in June and July of 2005 and the

results were provided in a document titled *Preliminary Summary of Site Assessment Results and Proposed Further Assessment* (November 29, 2005).

- Further delineation of the vertical and lateral extent of subsurface impacts was conducted at AOC1, AOC2, AOC3, AOC5, and AOC7 in September 2006 along with Site wide near surface soil sampling, to address a DTSC concern that metal impacted fill material may have been used on-Site. In addition, one groundwater well was installed at AOC1 to facilitate groundwater sampling. Results from this investigation were provided in a document titled *Report of Findings* (Fero, December 18, 2006).
- Groundwater sampling results from 2006 investigation showed a low level of TCE (1.43 ug/L, which is below the Maximum Contaminant Level of 5 ug/L) in groundwater beneath the Site. Given the absence of any chlorinated solvent use at the Site, the TCE detection was postulated to be related to an off-Site source.

In October 2015, Clow and DTSC reached a mutual decision to restart the stalled process due to the economic uncertainty associated with Site redevelopment. Clow subsequently contracted with EarthCon to assist with restarting the process and revising the Site Corrective Measures Study in the absence of site redevelopment. EarthCon and Clow met with the DTSC on March 15, 2016 to provide an overall project update and identify a path to move forward as requested. EarthCon evaluated the previous environmental activities, site assessment investigations, and the associated analytical results. The analytical results from the previous investigations are illustrated on Figures 1 through 3K. The results from the previous investigations were evaluated and subsequently included in a Site-specific Human Health Risk Assessment.
