In February 2017, two additional groundwater monitoring wells were installed on-Site as identified by the locations illustrated on Figure 2. Installation of these wells allowed for calculation of the Site-specific groundwater flow direction and gradient, which confirmed that MW-1 was appropriately positioned to evaluate potential groundwater impacts related to the former TPH-d release at AOC-1. Groundwater monitoring events were conducted in March 2017 and subsequently in May 2017. Groundwater samples reported concentrations of various compounds below their associated MCLs with the exception of arsenic (March 2017 event only). However, the arsenic concentrations reported in MW-1 through MW-3 was within the local background arsenic concentrations. Therefore, it was determined that groundwater would not be incorporated into the overall scope of this CMS and the wells were removed.

The historical data, Human Health Risk Assessment, and current Site operations were used to prepare a CMS for the Site (EarthCon, 2018). The CMS identified that excavation (AOC7) and capping in place (AOC1, AOC5, and AOC7) as the selected remedy. However, due to the presence of PCBs at AOC-7, additional Site assessment activities were conducted in July 2018, October 2018, and January 2019 under the oversight of the USEPA. The USEPA also required that further assessment of potential PCB impacted soil would be evaluated at AOC3 and AOC6 as well. The results were summarized in a document titled *Risk-Based Approval Application 40 CFR 761.61 (c)(1)* (EarthCon, 2019). Based on the results from the PCB related Site assessment activities, EarthCon recommended that rather than excavating PCB-impacted soil at AOC7 that the Site remained capped, with the existing concrete cap having the ability to protect industrial workers from exposure to PCB concentration in the underlying soil. In a letter dated April 23, 2019, the USEPA approved the application with the conditions including preparation of the following: Deed Restriction, Operations and Maintenance Plan, and Soil Management Plan, and PCB Cleanup Report (CMI Report).

Upon receipt of the approval letter from the USEPA, the DTSC approved the CMS in a letter dated May 16, 2019. The CMIWP presented details associated with the cap design, installation and implementation schedule for AOC1 and AOC5. The proposed schedule for the evaluation and repair of the exiting ground cover in AOC2, AOC4, and AOC9 is also addressed. Additionally, potential cap repair and/or construction, if necessary, associated with AOC3, AOC6, and AOC7 was identified to require the oversight of the USEPA.

3.0 SOIL MANAGEMENT

3.1 Pre-Field Activities

Requirements of the Soil Management Plan apply to a portion of the Site depicted in Figure 4, a land survey of an area of the Site subject to 40 CFR 761.3 (PCB impacted soil), and an area subject to SMP and O&M Plan (lead impacted soil at or above 320 mg/kg). Figure 4 was prepared by a California licensed Professional Land Surveyor. Figure 4A, "Site Plan With Areas Subject to Land Use Covenant", depicts historical Site features and identifies the boundary of the area to be capped during the Corrective Measures implementation in addition to depicting the boundary of the area with lead concentrations exceeding 320 mg/kg (the same as in the land survey).

Prior to the commencement of activities that disturb soil, designated Site personnel will ensure that all proper underground utility clearances are conducted and marked with white paint as appropriate. Underground Services Alert (USA) will be subsequently notified at least 72-hours prior to initiation of field activities. Persons conducting soil disturbing activities will coordinate with knowledgeable Site personnel to determine the location of subsurface utilities and a geophysical survey will be conducted if necessary. In addition, field activities should not occur without a Site-specific Site Health and Safety Plan (HASP), elements of which should be discussed daily during tail-gate safety meetings. The current HASP for the Site, associated with the implementation of the CMIWP by Clow, is provided for reference in Appendix A. Updated health and safety documentation (e.g. HAZWOPER) for on-Site personnel will be provided to the DTSC prior to implementing field work.

Site personnel will notify the DTSC a minimum of 30 days before field work begins (see Section 6.1.1). Should the scope of work involve management of soil containing PCBs over 1 part per million (ppm) (AOC-6 or AOC-7), Site personnel will also notify the USEPA[1]. Notification to the DTSC and USEPA may require the submittal of documentation, such as excavation plan, soil confirmation sampling plan, waste profiling, transportation plan, destination facility, and City and/or County approved grading plans, to show how the soil under the LUC will be disturbed and ensure proper soil management. See Section 6.1 for details.

3.1.1 Work Description

In accordance with the CMIWP, grading operations within areas with lead impacted soil will involve

1 The Site Cleanup criteria for PCBs is based on the USEPA approved industrial cleanup level of 15 mg/kg. However, McWane may elect to remove impacted soil exceeding 1 mg/kg PCBs in order to remove references to PCBs from the LUC.

moisture conditioning for dust suppression purposes and recompacting of soil in place. Areas AOC-1 and AOC-5 depicted on Figure 4A and in Appendix D, Drawing No. 20-026P will be graded and paved to establish a barrier between lead contaminated soil and surface receptors and also to facilitate proper Site drainage. Moisture will be applied to soil prior to recompacting it within the borders of areas AOC1 and AOC5. The soil will not be moved to other areas of the project. The project is not anticipated to generate any excess lead contaminated soil to be transported from the Site for off-Site disposal so long as current conditions are encountered.

During Site redevelopment activities, if soil in the vicinity of AOC-6 and/or AOC-7 with PCB concentrations exceeding 1 mg/kg is disturbed, that soil will be removed and managed appropriately. Likewise, areas identified by samples AOC1-B3, AOC1-B17, SW-2, and SW-3 containing lead concentrations exceeding 1,000 mg/kg will be removed and appropriately managed, as discussed further in Sections 4.0, 4.1.1. and 4.2.1.

3.1.2 Unknowns

DTSC will be notified within 24 hours should previously unknown features such as underground storage tanks and/or odorous/discolored soil be encountered during soil excavation or grading activities. If such conditions are encountered, that area will be isolated and samples will be collected for laboratory analysis to assess the nature of the unknown condition.

3.1.3 Off Site Disposal

Any soil brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law. In the event soil is excavated from areas identified on Figure 3K with lead concentrations detected at or above California Code of Regulations, Title 22, Toxicity Threshold Limit Concentrations (1,000 mg/kg) the soil will be profiled and transported to an off-Site permitted hazardous waste treatment or disposal facility consistent with the procedures presented in Section 4 and Section 5.

For disposal purposes, in-situ sampling of PCB-impacted soil is required prior to excavation. Prior to excavating soil from areas identified on Figure 3F or Figure 3G with PCB concentrations above 1 mg/kg, McWane will provide a PCB Removal Workplan, including an in-situ soil sampling plan to US EPA for approval. Consistent with the procedures presented in Section 4 and Section 5, excavated soil will be profiled and soil at or above 50 ppm PCBs will either be transported to a TSCA landfill or with a TSCA

approval to a RCRA hazardous waste landfill. Additionally, McWane will notify USEPA, at a minimum 30 days prior to any soil disturbing activity at the Site, further details are provided in Section 6.1.1(b).

3.1.4 Soil Import

If needed, any off-Site soils brought to the Site for use as backfill (import fill) must be tested in general conformance with the DTSC, *Information Advisory Clean Imported Fill Material* document (DTSC, 2001). Import fill shall be tested for target compounds based on the location of the fill source area; however, at a minimum, the fill should be tested for the following constituents:

- TPHcc using EPA Method 8015;
- VOCs using EPA Method 5035/8260B;
- PCBs using EPA Method 8082 (using soxhlet extraction method 3540C); and
- Title 22 metals using 6010B/7271 A

Other analyses may be required contingent on the source of the import fill or recommendations by the supervising PG or PE. A minimum of one sample will be collected for laboratory analysis per each 1,000 tons, up to 5,000 tons, of import fill per borrow site (single source). For quantities above 5,000 tons of import fill per borrow site (single source), one additional sample will be collected for laboratory analysis per each additional 5,000 tons of import fill. In-situ samples (from the borrow source) will be collected randomly from surface, two feet, and five feet below ground surface, and from the bottom of the excavation if deeper than 5 feet. For PCBs, import soil shall contain less than 1 mg/kg of total PCBs.

3.2 Stockpile Management

Prior to initiation of earthmoving/soil disturbing activities, areas for stockpiling excess soil should be established to control contact by Site employees and dispersal into the environment. Management of excavated soil and subsequent characterization for proper off-Site disposal to an appropriate disposal facility is discussed in further detail in Section 4.

3.3 Air Quality Management

The constituents of concern at the Site do not include Volatile Organic Compound (VOC) contaminated soil. Therefore, Site activities conducted in accordance with this SMP are not expected to require a Rule 1166 permit under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). However, based on the metal and PCB concentrations present in

the soil, earth-moving activities are required to be conducted in accordance with SCAQMD Rule 1466. Rule 1466 requires training and certification from SCAQMD, monitoring, notification, and record keeping.

Ambient air monitoring (AAM) will be conducted during on-Site activities to quantify dust concentrations in the work area breathing zone and at the Site fence line. In accordance with SCAQMD Rule 1466, AAM will be conducted to determine if a two (2) hour average PM_{10} concentration exceeds 25 micrograms per cubic meter (ug/m^3). If the average concentration has been exceeded, earth-moving activities will cease, and dust suppression measures will be implemented as needed until the PM_{10} concentration is equal to or less than 25 ug/m^3 averaged over 30 minutes. At a minimum, PM_{10} AAM will include one (1) upwind monitor and one (1) downwind monitor which will record the collected direct-reading data every 10 minutes or less using a DustTrak, or equivalent. In addition, when earth-moving activities occur, the wind direction and speed will also be monitored using a weather station.

AAM data will be collected by a qualified designee at each monitoring location (which will include on-Site and fence line locations). Measurements will be recorded via electronic data logging and/or an air monitoring log. Windspeed and direction will be monitored and, if the wind speed is greater than 15 mph average over a 15-minute period or instantaneous wind speeds greater than 25 mph, earth moving activities will cease.

AAM monitoring for dust within the on-Site work zones will be conducted on a continuous basis using a direct reading instrument such as a Miniram, or equivalent. The detected values will be compared to the DTSC required criteria for total dust of 0.05 mg/m^3.

During excavation activities, Site workers will implement standard engineering controls available in the industry to manage dust emissions. Minimizing dust will also minimize potential hazards associated with airborne contaminants. The following table summarizes the control measures for the different activities:

Activity	Control Measure
Earth Moving Activities	- Apply water to prevent generation of visible dust plumes - Adequately wet to the depth of earth moving activity and allow time for penetration. - Setup fencing with windscreen (50+/-5% porosity). - Stabilize soil once earth-moving activities are completed.

Activity	Control Measure
	- If earth-moving activities will not occur for three (3) or more consecutive days, application of a chemical stabilizer to potential sources of fugitive dusts, diluted to the concentration required to maintain a stabilized surface for the period of inactivity, is required. - Within five (5) days of excavation, excess soil will be removed from the site.
Export of Material	- Pre-water material prior to loading into the hauling trucks, if applicable. - Provide water while loading/unloading to reduce visible dust plumes. - Post signs stating that vehicle speed will be limited on-Site to 15 mph or less. - Maintain at least six inches of freeboard on the hauling trucks. - Stabilize material while transporting. Use tarps or other suitable enclosures on the hauling trucks. - Comply with track-out prevention/mitigation requirements. Stabilize surface of vehicular traffic by applying dust suppressant, as needed.
Truck Loading	- Pre-water material prior to loading. - Empty loader bucket slowly so no dust plumes are created. - Ensure that freeboard exceeds six inches. - Ensure that the loader bucket is close to the truck to minimize drop height while loading. - Completely tarp the truck prior to leaving site.
Off-Site/ Perimeter	- Track-out will not extend beyond 25 feet of property line. Remove track-out each day using a vacuum sweeper equipped with a filter(s) rated by the manufacturer to achieve 99.97% capture efficiency for 0.3 micron particles. - Use shaker plates (minimum of 24 feet long and 10 feet wide) and stabilized construction entrance. - Sweep the immediate surroundings continuously or on an as-needed basis. - Clean soil from exterior of trucks prior to leaving site, if applicable. - Apply water as required.
Backfilling	- Apply water to prevent generation of visible dust plumes. - Empty loader buckets slowly so dust plumes are not created. - Stabilize material when not actively handling. - Stabilize material during handling. - Stabilize soil at completion of activity. - Minimize drop height from loader bucket.

Site personnel will provide an on-Site dust control supervisor that will be present during earthmoving activities to expeditiously employ sufficient dust control measures to ensure compliance with SCAQMD Rule 1466. Site personnel will have previously completed the SCAQMD Fugitive Dust Control Class and subsequently received a Certificate of Completion. Certificates will be retained with the project related records in accordance with the project record keeping

requirements identified in Section (h) of Rule 1466.

Site personnel will electronically notify the SCAQMD Executive Officer of the intent to conduct soil disturbing activities a minimum of 72 hours, and no more than 30 days, prior to such activities. Requirements of notification are listed in Section (f)(1) of Rule 1466. In addition, the Executive Officer must also be notified electronically of any exceedance of the PM_{10} emission limit within 72 hours of occurrence (See Section (f)(2) of Rule 1466).

3.4 Storm Water Management

Construction activities that result in land disturbance of 1 acre or greater are regulated by the NPDES *General Permit for Storm Water Discharges Associated with Construction Activity* (Construction General Permit) administered by the State Water Resources Control Board. However, land disturbance of less than 1 acre may be identified as a "Significant Redevelopment Project" according to the City of Corona. This designation requires preparation of a Water Quality Management Plan (WQMP) per the City of Corona Public Works Department for the Site. Therefore, field work associated with the capping of AOC1 and AOC5 (less than 1 acre) requires the preparation of a WQMP in accordance with the City of Corona and/or County of Riverside guidance is required prior to initiating field work, elements of which will be incorporated into Grading Plans for the Site. Future Site activities associated with redevelopment will involve a project area of greater than 1 acre; therefore, preparation of a construction Storm Water Pollution Prevention Plan (SWPPP) will be required prior to initiation of earth disturbing activities.

3.5 Noise Management

Soil disturbing activities at the Site will be conducted from Monday through Friday between the hours of 7:00 AM and 5:00 PM, without causing a nuisance, as defined in the City of Corona municipal code. Noise will be monitored on an as-needed basis with a calibrated noise level meter at the perimeter of the Site and recorded on field logs. Whenever possible, Site workers will conduct the more noise intense activities during less intrusive times such as mid-morning to mid-afternoon. Internal combustion equipment will be equipped with proper and well-maintained mufflers. Access doors and hatches will remain closed when the units are in operation. The Site is located in an industrial area; therefore, noise is not expected to be a concern.

4.0 WASTE MANAGEMENT & CLASSIFICATION

4.1 Waste Management

Any soil removed from the areas of higher lead levels (AOC1-B3, AOC1-B17, SW-2, and SW-3) identified on Figure 3K will be placed into stockpiles and sampled. As noted previously, areas for stockpiles of excess soil will be designated prior to implementation of field activities. Areas with unpaved surfaces will have the upper surface wheel rolled and lined with thick gauge plastic sheeting prior to accepting the excess soil. Soil stockpiles will be covered with thick gauge plastic sheeting at the end of each working day and perimeter berms will be constructed to provide run-on and run-off control. Stockpiled excess material will be characterized prior to transport to an appropriate off-Site disposal facility as discussed in Section 4.2. Stockpiled soil must be transported to a permitted off-site disposal facility within 90 days.

However, soil and/or concrete containing PCBs, that has not been previously characterized, must be tested in-situ prior to excavation and cannot be stockpiled. Further details on the PCB sampling protocol will be provided to the USEPA in a PCB Removal Workplan that will be approved by USEPA prior to implementation.

Following removal of the lead and PCBs hot spot areas, the planned future redevelopment of the Site may include removal of the concrete and asphalt and over-excavation and re-compaction of the soil as part of geotechnical requirements. As the soil is of economic value, it will be the intent of the future redevelopment to reuse all soil excavated during geotechnical grading on Site. Future Site redevelopment must include construction of a cover in the area subject to the Soil Management Plan and Operation & Maintenance Plan as depicted on Figure 4A to prevent exposure to contaminated soil by future Site occupants.

4.1.1 PCBs and Lead

If Site remedial activities during capping of AOC1 and AOC5 include soil disturbance in the vicinity of lead “hot spot” areas exceeding 1,000 mg/kg, or in the event future Site redevelopment activities warrant the removal of soil from areas with elevated lead concentrations associated with sample locations AOC1-B3, AOC1-B17, SW2, and SW3, soil hot spots will be excavated and transported off-Site to Soil Safe facility in Adelanto, CA, the Waste Management facility in Kettleman Hills, CA, or another waste disposal facility subject to DTSC approval upon review of waste profile report.

As noted previously, the Site cleanup criteria for PCBs is based on the USEPA approved Site-specific industrial cleanup level of 15 mg/kg. However, McWane may elect to remove impacted soil exceeding 1 mg/kg PCBs in order to remove references to PCBs from the LUC. PCB "hot spot" areas (>15 mg/kg) in AOC6 and AOC7 are identified on Figure 4 as the area subject to PCB management in accordance with 40 CFR 761.61. In the event soil from this area is being disturbed during future Site development activities following Corrective Measures Implementation, soil with PCB concentrations of 15 ppm or greater will be removed as required by the USEPA[2], and soil with PCB concentrations greater than 1 ppm may also be removed at McWane's discretion under the oversight of the USEPA. Once sampled in-situ and characterized, excavated PCB-impacted soil will be loaded directly into labeled containers and securely covered pending transportation. Soil characterized with PCB concentrations at or above 50 ppm will be transported off-Site for disposal at a TSCA-approved facility. Soil from lead impacted areas and soil characterized with PCB concentrations below 50 ppm will be managed and transported to either the Soil Safe facility in Adelanto, CA, the Waste Management facility in Kettleman Hills, CA, or another appropriate facility in accordance with applicable federal, state, and local laws and 40 CFR 761.50(a)(6).

DTSC and USEPA notification requirements, including details associated with confirmation soil sampling for soil disturbing activities, are provided in Section 6.1.1.

4.1.2 Sampling and Analysis Plan

As noted above, in-situ sampling required for the PCB impacted material will be conducted prior to excavation. Characterization sampling for PCB impacted soil will be conducted in-situ, details of which will be provided in a PCB Workplan submitted for approval to the USEPA prior to initiation of field work activities.

Soil and impacted material from area identified on Exhibit E "Legal Description" and Exhibit D "Sketch to Accompany Legal Description" and illustrated on Figure 4A as subject to SMP and O&M Plans with lead concentration at or above 320 mg/kg will be excavated, stockpiled and sampled for waste characterization purposes to determine appropriate management and disposal requirements. Each stockpile will be uniquely numbered in consecutive order and marked in the field with labeled stakes to ensure accurate management.

For stockpiles of lead impacted soil, a sufficient number of samples will be collected to represent the volume of soil to be classified. Therefore, for stockpiles containing up to 1,000 cubic yards, a total of 6 samples will be collected (Simple Random Sampling – USEPA SW-846 Chapter 9). However, the appropriate number of samples should be verified with the selected receiving facility, including for volumes that exceed 1,000 cubic yards.

Each sample container will be labeled with the following information, as appropriate, at the time of sampling:

- Sample Number
- Sample Date
- Container Designation
- Sample Location
- Time of Sampling
- Preservatives, if any
- Sample Type
- Handling Precautions
- Requested Analyses
- Laboratory Name
- Initials of Sampling Personnel

After labeling, the laboratory samples should be placed in a cooler on ice for transportation to the appropriate laboratory. In accordance with Chapter 9, Section 9.2.2.7 of SW-846, a chain of custody record will document sample possession from the time of collection until the samples are analyzed. The record also serves as a sample inventory and analysis order form.

The chain of custody record should be completed with a waterproof pen. When possession of the samples is transferred from sampling personnel to a courier or to the laboratory, both parties will sign the chain of custody. The chain of custody record should be placed in a large resealable plastic bag inside the cooler. Sampling personnel, a courier, a laboratory representative, or a commercial carrier can transport samples to the laboratory. The laboratory should be notified of the time by which analysis must begin so that the sample holding times are not exceeded.

---

2 A PCB Removal Workplan will be submitted to the USEPA and approved prior to removal of PCB impacted soil.

Based on previous analytical results, the analytical methods required for waste classification will include one or more of the following:

- CAM 17 Metals in accordance with USEPA Methods 6010B and 7471A
- PCBs in accordance with USEPA Method 8082 with Soxhlet extraction (SW-846 Method 3500B/3540C)

4.2 Waste Classification

4.2.1 Metals

Total metals concentrations for soil that is to be disposed should initially be compared to the Toxicity Threshold Limit Concentrations (TTLC)[3] and the screening levels for Soluble Threshold Limit Concentrations (STLC)[5] and Toxicity Characteristic Leaching Potential (TCLP)[4] analyses. Additional analysis to determine soluble metal concentrations should be performed for those samples that indicate total concentrations greater than 10 times the STLC. If the constituent concentration exceeds 10 times the STLC limit but does not exceed the California TTLC limit, the California Waste Extraction Test (WET) should be performed for the specific metal, or metals, exceeding the criterion. A TCLP extraction and subsequent analysis of a constituent should be performed if the constituent total concentration exceeds 20 times the toxicity characteristic leaching procedure (TCLP) limit.

Reported concentrations exceeding the applicable TTLC and/or STLC criteria should be identified as California Hazardous Waste and concentrations exceeding the applicable TCLP criteria should be identified as RCRA Hazardous Waste. Materials to be transported off-Site for disposal must be classified and profiled in accordance with the results of the waste classification analyses. A reference containing both state and federal hazardous waste criteria is provided in Appendix B.

4.2.2 PCBs

Previous investigations identified PCB concentrations ranging up to 2,220 mg/kg at AOC-6 and AOC-7. Additional PCB impacted soil with concentrations greater than the USEPA's Site-specific industrial risk-based threshold of 15 mg/kg are not expected to be encountered. However, PCB impacted soil will be characterized in-situ and transported to the appropriate disposal facility, as noted in Section 4.1.1.

3 As defined in 22CCR 66261.24 a.2.A
4 As defined in 22CCR 66261.24 a.1.B

5.0 Transportation and Disposal

The trucks will be staged on the Site and out of traffic lanes to the extent possible. Once on the Site, the trucks will be loaded by a front-end loader. Water will be sprayed on the material to limit dust emissions during the loading process. Once loaded, the truck will proceed to the decontamination area where the load will be covered with a tarp, and material will be removed from the tires and flat surfaces of the trailer as necessary prior to leaving the Site. A stabilized entrance/exit will be used to clean the truck tires. The area outside the access gate will be swept as necessary to remove any residual material.

Each load will be issued a uniquely identified manifest for transportation and each truck will use the appropriate placard as required by the Department of Transportation. Based on previous soil characterization and off-Site disposal, it is assumed that non-hazardous material (soil, concrete, etc.) will be transported via Interstate 15/395 to the Soil Safe facility in Adelanto, CA, or another appropriate location. Depending on the characterization of PCB-impacted soil, subsequent transportation will likely be to a TSCA disposal facility such as the Waste Management facility in Kettleman, CA, or another appropriate location, subject to DTSC approval upon review of the waste profile report. After characterization, PCB impacted material not required to go to a TSCA disposal facility and lead impacted soil will be transported to either a non-hazardous, Cal-haz, or RCRA disposal facility, as appropriate.

Trucks leaving the Site will travel west on Magnolia Street to the entrance of Interstate 15. The trucks will be operated Monday through Friday between 7:00 AM and 5:00 PM only and avoid leaving the Site during peak traffic hours. A hazardous materials response company will be available on an on-call basis for response to any accidents involving the trucks utilized to transport Site wastes.

5.1 Disposal Facility

The proposed off-Site disposal facilities identified above should be contacted to determine if their environmental permits have additional required laboratory testing requirements for the acceptance of soil from the Site. Waste classification/profiling by a proposed disposal facility may include additional or modified parameters. Therefore, the specific list of analyses should be verified with the selected receiving facility. The property owner is responsible for appropriate management of waste soil that is transported off-Site. Laboratory reports and facility disposal information associated

with waste characterization will also be provided to the DTSC prior to transportation off-Site

6.0 IMPLEMENTATION OF SOIL MANAGEMENT PLAN

6.1 Responsibilities

The property owner has ultimate responsibility for following the SMP, HASP, LUC, and grading plan/permit (See Appendix D). The property owner shall oversee implementation of this SMP at the Site. In addition, the property owner shall make available a copy of the SMP to contractors performing soil disturbance activities at the Site. The contractor shall be responsible for adhering to this SMP, following project specifications, and ensuring job site safety. The contractor also is responsible for providing a copy of the SMP to its subcontractors.

6.1.1 Notifications

McWane will notify DTSC and/or the USEPA, as appropriate, at a minimum 30 days prior to any soil disturbing activity at the Site as described in the LUC as Exhibit C, "Legal Description" and/or illustrated in Exhibit D, "Sketch", also illustrated in Figure 4A as the "Area subject to SMP and O&M Plan (lead concentrations > 320 mg/kg)".

a. Notification of soil disturbing activities associated with lead and/or PCB "hot spot" areas will include details of the excavation activities and associated confirmation sampling protocol using the timeline provided below: McWane will notify DTSC 30 days prior to excavation of lead impacted soil (>1,000 mg/kg) (Figure 3K). The notification will include a detailed excavation, disposal, transportation route, and confirmation soil sampling plan and field work schedule. DTSC approval is required before initiating work.
b. McWane will notify USEPA 30 days prior to excavation of PCB impacted soil (>1 mg/kg) (Figure 3F and Figure 3G). In addition, USEPA approval is required before initiating any future work proposed that will impact the soil, concrete, and/or asphalt with PCB levels over 1 ppm.

6.2 Reporting

Following completion of soil disturbing and associated off-Site disposal activities, a final report will be prepared documenting the results of such activities. The report will summarize on-Site activities, provide figures illustrating soil disturbing activities, and will provide the associated supporting documentation including but not limited to, laboratory data, including waste characterization and confirmation sampling; air monitoring; field sampling data; field notes; pictures; and waste manifest documents. The report will be submitted to the DTSC and the USEPA within 30 days from

receiving the manifests from the destination disposal facility.

PROJECT HEALTH & SAFETY PLAN (HASP)

Corrective Measures Study
Clow Valve
1375 Magnolia Avenue
Corona, California

EarthCon Project No. 04.20150013.00

August 22, 2016
Revised October 2, 2017

Project Health and Safety Plan (HASP)

Project Name: Corrective Measures Study - Clow Valve
1375 Magnolia Avenue
Corona, California

Project Number: 04.20150013.00

Prepared by:	Jennifer McGervey EarthCon Consultants CA, Inc.	8/19/16
Project Manager:	Jeff Bennett, PG EarthCon Consultants CA, Inc.	8/19/16
Approved by:	J. Ryan Clarke EarthCon HASP Reviewer	08/20/2016

Brief Description of Amendment	**Amendment Date**
Update field scope to include capping; updated dust action level;	10/2/17
Update of EarthCon H&S personnel	10/2/17

Health and Safety Plan Consent Agreement

Because of the potentially hazardous nature of this site and activity occurring at the site, it is not possible to discover, evaluate, and provide protection for all possible hazards that may be encountered. Strict adherence to the health and safety guidelines set forth in this document will reduce, but may not eliminate, the potential for injury and illness at this site. Guidelines in this Plan were prepared specifically for this site and should not be used on any other site without prior evaluation by trained health and safety personnel.

Site workers must also review this HASP. The Site Safety Officer (SSO) must conduct a pre-work briefing prior to initiating this project. All sections of this HASP must be reviewed during this briefing and documented via **Appendix A**. Any worker not attending the initial meeting must be trained by the SSO on the information covered in the pre-work briefing meeting. ***The SSO must hold tailgate meetings at the beginning of each work shift to discuss important safety and health issues concerning tasks to be performed on that day.*** After reading the HASP and attending a pre-work briefing, workers must sign the following acknowledgment statement.

I have read, understand, and will abide by the information set forth in this HASP. I have also attended a pre-work briefing. I agree to perform my work in accordance with this HASP **(See Appendix F).**

1.0 HASP SUMMARY INFORMATION

The first phase of this project is anticipated to include the collection of soil samples, using a direct push drill rig, at a total depth of 10 feet below ground surface (ft bgs) and installation of two groundwater monitoring wells. The second phase is to implement the CMS activities which includes removing impacted soil, collection of soil confirmation samples, and capping the identified exposed surfaces. This HASP will be updated or amended, as necessary, to reflect any changes that may be encountered. Personnel responsibilities are described in **Table 1** and personnel training requirements are provided in **Table 2.**

Project Name…….	Corrective Measures Study
Project Location…..……..…….	Clow Valve 1375 Magnolia Avenue Corona, California (see Figures 1 and 2)

2.0 INTRODUCTION

This HASP serves the following purposes:

- Identifies and describes the potentially hazardous substances and working conditions that may be encountered during the field work;
- Specifies personal protective and monitoring equipment to be used during onsite activities; and
- Outlines measures to be implemented in the event of an emergency.

2.1 Site Location and Description

The Site is southwest corner of the intersection at 1375 Magnolia Avenue in Corona, California. **Figure 1** shows the site location. **Figure 2** provides a site layout for the facility. It is identified as Riverside County Assessor Parcel Number 107-030-022-3 and covers approximately 16 acres. Approximately 60% of the property is currently used for machining, product finishing and testing, and product storage. The remaining 40% includes asphalt-paved parking areas and unpaved areas. Unused foundry buildings, small offices and open areas are leased to other tenants.

2.2 Project Objectives

EarthCon will collect soil samples to assess the extent of soil contamination on-Site. The soil samples will be managed according to the workplan protocol.

EarthCon will provide oversight of advancement for well installation using a subcontracted drilling company. EarthCon will collect and manage water samples according to the workplan protocol.

EarthCon will provide oversight of the grading and asphalt cap placement associated with AOC-1 and AOC-5.

The ultimate objective is to conduct all activities in a safe and compliant manner.

2.3 Personnel Requirements and Responsibilities

Provisions of this HASP apply to all EarthCon personnel and subcontractors that will be participating in the above noted field activities. On-site personnel will be required to review the HASP prior to commencement of field activities and conduct all field activities in accordance with plan specifications. Other personnel on the site are expected to follow the provisions of the health and safety procedures outlined in this HASP as a minimum base standard but will retain full responsibility for the health and safety of their own employees or sub-subcontractors.

General safe work practices that must be implemented during work activities at this site are included in **Table 3**.

EarthCon considers each subcontractor to be an expert in all aspects of the work operations which they are tasked to provide, and each subcontractor is responsible for compliance with those regulatory and/or legal requirements which pertain to those services. While the EarthCon HASP will be the minimum H&S requirements for the work completed by EarthCon and its subcontractors, each subcontractor, in coordination with EarthCon's H&S personnel, is expected to perform its operations in accordance with its own H&S plans, policies and procedures unique to the subcontractor's work to ensure that hazards associated with the performance of the subcontractor's work activities are properly controlled. Copies of any required safety documentation for a subcontractor's work activities will be provided to EarthCon for review prior to the start of on-site activities. No review of any subcontractor plan or document by EarthCon will serve as an approval or ratification of such plan by or on behalf of EarthCon, and no such review will operate as any assumption of any duty or responsibility on the part of EarthCon (or any EarthCon employee or representative) for or as to any aspect of any subcontractor's own H&S responsibilities. Any comments or feedback from EarthCon to any subcontractor following any review by EarthCon of any subcontractor document or practice is provided solely for informational purposes and not for reliance.

In the event that the subcontractor's procedures/requirements conflict with requirements specified in this HASP, the more stringent guidance will be adopted after discussion and agreement between the subcontractor and EarthCon project H&S personnel. Hazards not listed in this HASP, but known to the subcontractor or known to be associated with the subcontractor's services, must be identified by the subcontractor and addressed to the EarthCon Project Manager prior to beginning work operations.

EarthCon personnel who have responsibility for the safe operations of this project include the Project Manager (PM), EarthCon Corporate Safety and Health Manager (CSHM), the Site Safety Officer (SSO) and the Project Field Staff. Responsibilities of each of the above referenced personnel as they relate to project safety and health are provided in **Table 1**.

2.4 Site Control

Site control procedures must be implemented **before** the start of site tasks to control worker exposures to hazardous substances. A Vicinity Map that shows the site location is included as **Figure 1**. A Site Layout Plan with proposed sampling locations is included as **Figure 2**. Changes may be made to the site map by the SSO, as needed, based on site conditions. The site map should be posted in the work area and/or field notebook.This site control program is designed to reduce the spread of hazardous substances from contaminated areas to clean areas, to identify and isolate contaminated areas of the site, to facilitate emergency evacuation and medical care, to prevent unauthorized entry to the site, and to deter vandalism and theft. The Site Safety Officer is responsible for evaluating site conditions and for verifying that the

site control program functions effectively. The site control program will be updated regularly to reflect current site conditions, work operations, and procedures.

2.4.1 Site Access

Access to the site shall be controlled using the following method(s):

☐	Security fence	☒	Temporary barricades and/or warning tape
☐	Sign in/Sign out log	☐	Guard
☐	Identification badges	☐	Other: Onsite Manager

2.4.2 Work Zones

Restricted work zones may be established to limit the spread of hazardous substances (when applicable) by workers from potentially affected areas to non-affected areas. The exact location and extent of the work zones will be modified as necessary as site investigation information becomes available. Delineation of work zones is as follows:

- Exclusion Zone: The Exclusion Zone is the area where the potential for exposure to hazards and contact with hazardous materials could occur. The zone may be marked by caution tape. Personnel working within the Exclusion Zone will be expected to follow protective measures as prescribed by the SSO.

- Contamination Reduction Zone: The Contamination Reduction Zone is a transition area between the potentially affected areas/materials and assumed non-affected areas/materials. Decontamination of personnel and equipment, if necessary, shall be conducted in this area to reduce the probability of contamination transfer to a non-affected area. The Contamination Reduction Zone shall be situated upwind of the Exclusion Zone.

- Support Zone: The Support Zone is the area, outside the Exclusion and Contamination Reduction Zone, where administrative and other project support functions are performed. The Support Zone shall be situated upwind of the Contamination Reduction Zone and/or the Exclusion Zone.

See Figure 2A for the location of the work zones.

2.4.3 Communications

Typical on-site communications may be conducted through the use of:

☒	Verbal		
☐	Two-way radio	☐	Horn
☒	Cellular telephone	☐	Siren
☒	Hand signals	☐	Other:_____

Off-site communications may be conducted through the use of:

☒ Cellular telephone: Verify cell phone reception in all work areas prior to starting work.
☐ Site Phone: Location & No. _____
☐ Pay phone: Location & No. _____
☐ Other: _____

Cell Phone reception should be verified throughout the site prior to commencing work.

2.4.4 Visitors

Visitors to the Site shall be continually escorted in order to assure their safety. Visitors will not be allowed past the Support Zone (if such a zone is established at this Site) unless they read, understand, sign, and abide by the requirements outlined in this HASP.

2.5 Worker Training

Table 2 will be used to document on-site workers who have received the appropriate training according to the company Environmental, Health, and Safety (EH&S) Training Program**. Table 2** must be completed prior to initiation of field activities. Pre-work briefing and routine tailgate meetings will be conducted to facilitate on-site training. Subcontractors must provide information requested in **Appendix G** prior to starting to work.

2.6 Safety Meetings

Project personnel who will be involved with on-site field activities must be appropriately trained in accordance with 29 CFR Part 1910.120 "Hazardous Waste Operations and Emergency Response". Before field work begins, the SSO will review the HASP with the field workers addressing the potential hazards associated with the proposed field activities. Components of the safety meeting will include, but will not be limited to, a review of the following:

- Location of sanitation facilities as seen on site plan.
- Potential chemical, operational and physical hazards present at the site.
- Personal protective equipment (PPE)/personal protection procedures.
- Hazardous materials handling procedures.
- Buddy system.
- Personal hygiene - general guidelines.
- Personal and equipment decontamination procedures.
- Emergency response procedures.
- Symptom awareness.
- Stop Work Authority

Periodic meetings with project personnel may be conducted by the SSO pending changes to the scope of work or modification to this HASP. To document the meetings, the SSO will complete

the Site Safety Meeting Minutes Form provided in **Appendix A**. Verification will be provided to the CHSM upon request.

2.7 Medical Monitoring Requirements

OSHA requires medical monitoring for personnel potentially exposed to chemical hazards at concentrations in excess of the PEL for more than 30 days per year and for personnel who must use respiratory protection for more than 30 days per year.

Will personnel working at this site be enrolled in a medical monitoring program? ☐**Yes** ☒**No**

Personnel who are diagnosed as having medical conditions which could directly or indirectly be aggravated by either exposure to chemical substances suspected of being present at the Site, or by the use of Personal Protective Equipment (PPE), will not be allowed to participate in field activities. In addition, personnel with injuries or illnesses involving open wounds may not be allowed on-site. Field personnel who develop an illness or injury during the project may be examined by a physician. A physician must determine if the employee is fit to return to work before they can return to field activities. In addition, the CHSM, SSO, or Site employees may request additional medical testing if a chemical exposure is suspected.

2.8 Hazard Communication Requirements

When chemicals are used on-site, EarthCon workers must adhere to the company's Hazard Communication Program (29 CFR §1910.1200). The following procedures must be followed for chemicals brought on-site (i.e., decontamination solution, sampling preservatives, etc.):

- Labels on incoming primary chemical containers must not be defaced (until after the container is empty, decontaminated and ready for disposal).
- Chemical containers must be stored in appropriate storage cabinets.
- Secondary containers and storage cabinets must be correctly and clearly labeled using the Hazardous Materials Identification System (HMIS).
- Incompatible chemicals must not be stored together.
- Workers must receive training on the hazards indicated in **Table 4.**
- Containers must be secured closed unless adding to or removing something from the container.
- Safety Data Sheets for the chemicals should be recent and are included in **Appendix B**.; they should be made available to workers upon request and applicable hazards covered during safety meetings.
- Workers must receive training on the hazards of the chemicals indicted in **Appendix C.**
- Include a safety training sign off sheet to document this training and provide a copy to the CHSM.
- Training on this information should be documented in **Appendix F**.

3.0 GENERAL PERFORMANCE REQUIREMENTS

General safe work practices that must be implemented during work activities at this site are included in **Table 3**.

3.1 Performance Requirements

- Workers are expected to show up alert and ready to work. No sleeping is allowed on the job.
- Any unsafe equipment, condition or work practice and injuries, no matter how slight, must be reported to the SSO immediately.
- Procedures for the proper set up and control of the worksite task area should be planned and implemented prior to starting individual tasks.
- Field personnel must have ready access to a telephone and a vehicle in case of emergency.
- Field personnel working in the Exclusion Zone are to work with another person at all times. The subcontractor's representative can serve as the second person while the work is being conducted in the field.

3.2 Hygiene Requirements

- Long hair will be secured away from the face so it does not interfere with any activities.
- Eating, drinking, chewing gum or tobacco, smoking, or any practice that increases the probability of hand-to-mouth transfer and ingestion of material is prohibited in any area designated as being potentially affected by site related chemicals.
- Hands and face must be thoroughly washed upon leaving the work area, and before eating, drinking, or other non-project activities.
- Personnel leaving potentially contaminated areas will shower (including washing hair) and change to clean clothing as soon as possible after leaving the site.
- Kneeling, sitting, leaning, or general contact with potentially affected surfaces or with surfaces suspected of being potentially affected by hazardous materials (i.e., puddles, mud, leachate, etc.) should be avoided.
- Medicine and alcohol can potentiate the effects of exposure to toxic chemicals. Neither should be taken by personnel if the likelihood of risk exists. Ingestion of alcohol during and immediately prior to field activities is prohibited.
- Sanitation facilities are provided on site. Potable water and restroom facilities are available and in accordance with 8 CCR 5192 for all employees and visitors.

4.0 HAZARD EVALUATION

A preliminary hazard evaluation was performed to identify existing site conditions and is documented in **Table 4**. The preliminary hazard evaluation addressed the following, where applicable:

- Identification of the suspected hazardous materials/wastes on-site;
- Toxicological aspects of the suspected hazardous materials on-site;
- Suspected chemical/elemental concentrations within the various media on-site;
- Inherent site hazards;
- Operational hazards; and
- Climate extremes.

Environmental site personnel have indicated fire, inhalation and skin absorption to pose a hazard on site. Reactivity including ionizing radiation is not of concern for the site due to past investigations and the operational history. All scrap steel and raw steel entering the site has been screened by radiation detection devices. Further information is documented in **Table 4**.

4.1 Suspected Chemical/Elemental Hazards

To select those contaminants that may cause health and safety concerns, henceforth referred to as potential Contaminants of Concern (COCs), a review of the site remediation and sampling history was performed. Based on this review, potential COCs were selected and are listed in **Table 5**. Chemical information for each of the potential COCs are provided in the NIOSH Pocket Guide pages located in **Appendix C**.

Information from the NIOSH Pocket Guide (e.g., flash point, water reactive, etc.) has been used in performing the chemical hazard analysis in **Table 5** (e.g., fire, inhalation, reactivity, and skin absorption hazards). If, based on the hazard analysis, chemical hazards exist, hazard mitigators must be implemented (**Appendix D**). In addition, air monitoring and personal protective equipment must also be used to evaluate airborne concentrations and protect workers.

After review of the relevant background information and data, if there is a potential for dermal and/or respiratory exposure to the materials or contaminants of concern, personnel shall perform the monitoring requirements summarized in **Section 5.2** and execute actions as appropriate. If action levels are exceeded, work shall be suspended until on-site conditions can be re-assessed and this HASP modified.

4.2 Operational/Physical Hazards/Biological Hazards

Potential operational/physical associated with tasks to be performed and the site have been analyzed in **Table 4**. If, based on the hazard analysis, these hazards exist; the hazard mitigators described in **Appendix D** must be implemented.

- **Utility (e.g., Electrical) hazards:** Utility hazards include buried cables, which pose a danger of shock or electrocution if workers or equipment contact or sever them during site operations. Onsite personnel are advised to pay special attention to the presence of utility hazards. Observe as built plans (if available) for the presence of underground hazards and advance the borings cautiously. A subsurface survey shall be conducted at each of the suspect locations, if necessary.

Lockout/Tag out procedures, in accordance with the EarthCon Lockout/Tag out Program, will be followed when working in the vicinity of electrical equipment. Electrical equipment will be considered energized unless tested and determined otherwise. Energized parts will be insulated or guarded from personal contact. Extension cords used with electrical tools will be the 3-wire type and connected to a ground fault circuit interrupter (GFCI). Wooden or fiberglass ladders will be used. Metal ladders will not be used in the work area.

- **Mechanical hazards:** Mechanical hazards include being struck by heavy equipment and being injured by excavation cave-ins. Onsite personnel are advised to stand at least 15 feet clear of heavy equipment and excavations, and wear appropriate protective equipment, including steel-toe boots and hard hats during the field activities. Fall, slip, and/or trip hazards exist when working with equipment and tools. Field personnel will observe walking surfaces in the work area to prevent tripping on equipment/tools placed on the ground. Good housekeeping will also be practiced. All walking surfaces with a drop of more than six feet will have fall protection devices. Fall protection devices may include adequate delineation of the excavation and trenches, guardrails, or climbing devices such as a harness and lanyard.

- **Noise Hazards:** Noise hazards may exist when working around heavy equipment. Loud noises interfere with communication and also lead to temporary and/or permanent hearing loss. Noise hazards may exist wherever heavy equipment such as loaders and any operating machinery, produce noise levels at or above the Action Level of 85 dBA for 8-hr Time Weighted Average (TWA). Noise in excess of 85 dBA may produce the following effects:

  1. Distraction, annoyance, or sudden surprise
  2. Inability to effectively communicate with co-workers
  3. Physical damage expressed initially as a Temporary Threshold Shift (TTS) and then, as a Permanent Threshold Shift (PTS), or immediately as a Permanent Threshold Shift if the impact noise is sufficient enough (usually greater than 100 dBA)

  Appropriate hearing protection must be utilized in areas of unacceptable noise levels.

If, based on the hazard analysis (**Table 4**), biological hazards exist associated with tasks to be performed and site location (e.g., allergic reactions to poisonous plants or insects indigenous to the area, etc.); hazard mitigators (**Appendix D**) must be implemented.

5.0 PERSONAL PROTECTION

5.1 Personal Protective Equipment (PPE)

The levels of personal protection required for each task are provided **in Appendix E.** This PPE is based on the hazards identified in **Section 4.** Required equipment and types of protective clothing materials are listed, as well as an indication of the initial level of protection.

Is there potential for a respirator to be donned during fieldwork? ☐Yes ☒No

It is not anticipated that the use of respirators will be needed, however during the drilling work and sampling the area will be monitored via dust particulate monitor (MiniRam or equivalent). If there is an indication that a respirator is required work will be halted until tasks have been re-evaluated and the HASP has been updated as needed.

The general use of PPE is acceptable when engineering controls cannot adequately eliminate the hazard. The use of PPE is intended to provide protection for on-site personnel from chemical, physical, and operational hazards that cannot be controlled through other safety procedures. Initially, Level D Protection will be employed by on-site personnel and will include varying levels of eye, head, body, hand, foot, and hearing protection.

Respiratory protection will not be required. However, if respirators are worn, workers must adhere to the company's Respiratory Protection Program (29 CFR §1910.134). **Table 2** should be used to provide a record of the site workers' last fit test. Beards (i.e., facial hair interfering with the respirator seal) are not allowed.

Acceptable PPE are further described below.

- Eye Protection: Eye protection will include the use of chemical splash goggles and/or face shields and impact resistant safety glasses with side shield protection that meet the current ANSI standard Z87.1.

- Head Protection: Non-metallic hard hats meeting the current ANSI standard Z89.1 will be worn by on-site personnel as required during field activities.

- Body Protection: Body protection will include the use of long sleeved shirt and pants work clothes.

- Hand Protection: Hand protection will include the use of nitrile gloves when hand contact with affected materials (e.g., groundwater and soil) may occur. Otherwise use work gloves of leather or other appropriate material.

- Foot Protection: Foot protection will include the use of impact resistant boots meeting the current ANSI standard Z41.1.

These levels shall only be downgraded upon approval by either the CSHM or SSO. Project personnel are not permitted to deviate from the specified levels of protection without prior approval of the SSO.

5.2 Personal Air Monitoring

Corrective measure activities may have the potential to generate dust; therefore, dust monitoring will be conducted on-Site. Airborne particulate concentrations will be measured with a portable particulate monitor (MiniRam or equivalent) to ensure compliance with the action levels (stop work level) and Cal OSHA Permissible Exposure Limits (PELs). The PELs for COCs potentially present on-Site, along with stop work levels are provided in Table 5.

According to calculations using the site specific maximum concentrations documented in **Table 5** and the OSHA Permissible Exposure Limit (PEL) for total dust, the only constituent of concern is lead. Total dust must measure below 6.8 mg per cubic meter (mg/m^3) to remain below the PEL for lead. However, at the direction of the DTSC the action level for total dust is 0.05 mg/m^3. A MiniRam will be on site at all times monitoring dust concentrations. The MiniRam is gravimetrically calibrated in mg/m^3using the standard SAE Fine (ISO fine) test dust. A zeroing kit will be present to accomplish zeroing in particle free air when on-site. In the case where dust levels measure over 0.05 mg/m3, work will be suspended and on-site conditions will be re-assessed.

5.3 Vehicle Safety

Vehicle safety requires the following:

- Vehicles are to be operated in a safe manner and in compliance with statutory traffic regulations and ordinances.
- Operators are to practice defensive driving and drive in a courteous manner.
- Operators are required to have a valid driver's license and liability insurance (per local/state laws).
- Seat belts are to be worn by the driver and passengers.
- No persons are allowed to ride in the back of any trucks or vans.
- Vehicles are to be driven in conformance with local speed limits.
- Personnel who are impaired by fatigue, illness, alcohol, illegal or prescription drugs, or who are otherwise physically unfit, are not allowed to drive.
- Personnel are to avoid using cellular phones or engaging in other distractions while driving.
- Vehicles should be maintained in a safe and clean condition.
- Field vehicles should be equipped with the following items; first-aid kit, fire extinguisher, spares tire and jack.
- Motor vehicle accidents shall be reported to the responsible law enforcement agency (when appropriate), the EarthCon CHSM, the EarthCon HR Director, the SSO and the EarthCon PM.
- Daily and monthly check lists to verify safe operations have been generated and should be utilized prior to operating a vehicle.
- If the site has specific driving rules, these should be reviewed and adhered to.

5.4 Illumination

Work will be completed during daylight hours only. This will ensure all work is done in accordance with 8 CCR 5192(m) illumination requirements.

6.0 DECONTAMINATION

The following decontamination (cleansing) procedures for the sampling equipment and PPE have been developed with the intent of reducing the potential for the transfer of hazardous chemicals.

6.1 Sampling Equipment

To reduce the potential for the distribution of contaminants or cross contamination of samples, the following procedures will be used. Decontamination of the sampling equipment will include washing the equipment in a detergent solution (Liqui-nox and water), rinse with potable water, rinse with organic-free/distilled water, and allow to air dry. Disposable equipment will be used when practical to eliminate the need for on-site decontamination.

6.2 Personnel and PPE

During this project the goal will be to use disposal PPE (nitrile gloves), therefore no PPE decontamination will be required. If this cannot be accomplished, PPE must be decontaminated (cleaned) per 29 CFR §1910.120(k). In an emergency, the primary concern is *to prevent the loss of life or severe injury to site personnel. If immediate medical treatment is* required to save a life, decontamination should be delayed until the victim is stabilized. If decontamination can be performed without interfering with essential life saving measures or first-aid, or if a worker has been contaminated with an extremely toxic or corrosive material that could cause severe injury or loss of life, decontamination must be performed in coordination with or prior to initial medical treatment at the scene.

Decontamination of PPE (e.g., gloves) shall be accomplished by passing personnel through appropriate stages of contamination reduction and removing contaminated clothing and equipment in decreasing order of the degree of potential contamination. Personnel who have entered areas suspected of containing hazardous materials (i.e., the Exclusion Zone) will be subjected to decontamination. The personnel decontamination corridor may be comprised of the following procedural stages. These stages/procedures are listed sequentially below.

Stage No. 1: Segregated Equipment Drop – Personnel will brush off loose dirt and wash off remaining soil, sediment, and dirt from clothes and shoes upon completion of sampling and field work. Equipment and consumables that require either disposal or special handling (e.g., special and/or equipment decontamination) shall remain in this area and be decontaminated, if appropriate, or disposed of with the excavated materials or other potentially contaminated materials.

Stage No. 2: PPE Decontamination - PPE that has been potentially contaminated will be washed with a TSP and water mixture followed by a water rinse.

Stage No. 3: General Field Wash - Personnel shall wash and rinse face and hands with soap and water before leaving the site and/or eating. If a change of clothing is necessary, it shall be done at this time.

6.3 Decontamination Fluids and Investigation-Derived Waste Disposal

Decontamination water and drill cuttings will be placed in appropriate containers. Disposal methods will be determined after characterizations have been completed. Solid waste generated during decontamination and field activities (i.e., paper towels, plastic tarps, used PPE) will be removed from the Site and disposed as refuse/trash.

6.4 Vehicles

Typically, vehicles will not be allowed inside the exclusion zone. If vehicles are required in the exclusion zone (e.g., drill rigs) the following procedures will be used. Personnel will wash or remove boots and change to dry clothing prior to vehicle entry. Non-disposable equipment will be washed or bagged before placement into field vehicles. Drill rigs will be decontaminated with detergent solution and rinsed with water before leaving the exclusion zone.

7.0 EMERGENCY PROCEDURES

A list of Emergency Response contacts and telephone numbers for applicable local off-site emergency responders is provided in **Table 6**. The following emergency response equipment is required for this project:

☒ Fire Extinguisher(s): ☐ Type A ☐ Type B ☐ Type C ☒ Type ABC
☒ Air Monitoring: ☐ PID ☐ Air Sampling Pumps ☐ CG/O2 meter
☒ MiniRam ☐ H2S Meter ☐ Radiation Meter
☐ Draeger Pump w/ Sample Tubes ☐ Other:
☒ Eyewash (Note: portable eyewash bottle)
☐ SCBA
☒ First Aid Kit
☐ Shower (Note: for acids and caustics)
☐ Personal Flotation Device(s)
☐ Windsock
☐ Stop Watch &Thermoscan for Measuring Heart Rate and Heat Stress
☐ Global Positioning System
☐ Other:

As a minimum, the project shall have the following equipment available during field activities:

- A first aid kit (mandatory, including adhesive Band-Aids, gauze, tape, gloves, CPR shield, triangle bandage) shall be available in the Support Zone at all times.

  Check additional items required for the site.

  ☐ Emergency Blanket ☒ Sunscreen (as needed)

  ☒ Insect Repellent (as needed) ☐ Other: ointment for poison plants and insect bites_____

- Copious amounts of cool potable water shall be readily available for both drinking purposes and for personal hygiene purposes (e.g., washing, rinsing, and cooling of face and body, etc.).
- Emergency references (e.g., nearest phone, emergency phone numbers and services, etc.) shall accompany the first aid kit.
- Communication equipment such as a cellular phone will be accessible in case of an emergency.
- A vehicle shall be easily accessible for transport/emergency.

The emergency response communication system for the site is:

- ☒ Verbal
- ☐ Two-way radio
- ☒ Hand signals: Hand gripping throat ="Out of Air, Can't Breathe"
  Grip partner's wrist or both hands around waist ="Leave area immediately"
  Hands on top of head ="Need assistance"
  Thumps up ="OK; I am all right; I understand"
  Thumps down ="No; negative"
- ☐ Horn
- ☐ Siren
- ☒ Other: Cellular Phone

If an on-site emergency develops, the procedures outlined in **Table 7** shall be followed immediately.

7.1 Natural Disasters

In the event of emergency conditions associated with natural disasters, such as severe weather, site personnel will remain calm, turn off equipment and ignition sources, and move away from buildings, cranes, and overhead utilities. Following an emergency, personnel will proceed to a designated meeting place. The SSO will take a head count to ensure that all personnel are present. Crews must remain together until accounted for. The SSO will assess any injuries and the need for emergency assistance.

7.2 Workplace Violence

If any employee or visitor is confronted by a potentially hostile person, he/she will remain calm and refrain from further aggravating the individual. Site personnel should contact the SSO. Protocol established by the site will be followed or local police will be contacted for assistance when needed.

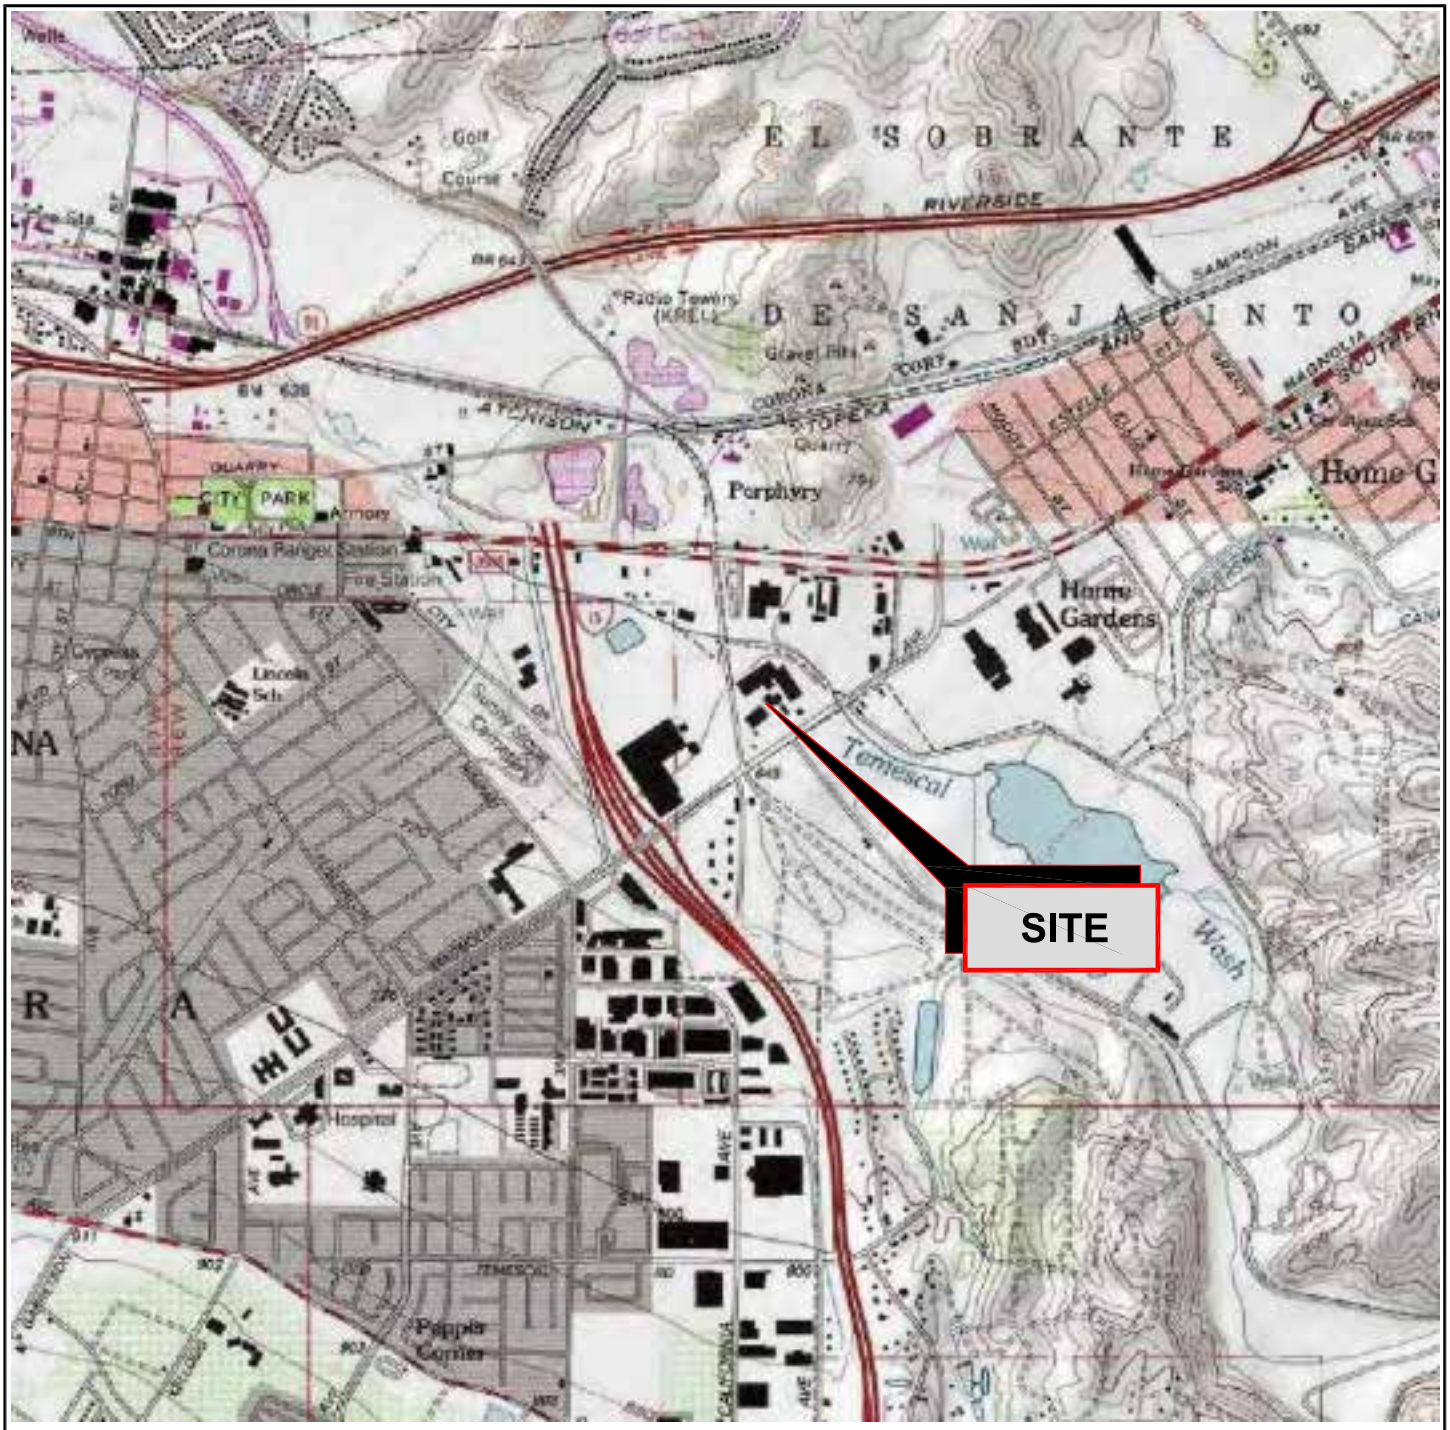
8.0 SHIPMENT OF RESTRICTED ARTICLES

Federal laws and international guidelines place restrictions on what materials may be shipped by passenger and cargo aircraft. In the course of field activities, the following items may be shipped to and from the site in the following manner.

Item	Hazardous Constituent	Quantity	Packaging	How Shipped
Soil samples	*NA	5	8 oz. glass jar with Teflon lid. Laboratory provided	EarthCon Personnel

Item	Hazardous Constituent	Quantity	Packaging	How Shipped
Groundwater Samples	HCL & HNO3 – lab preservatives	3	VOAs and HDPE laboratory provided containers	EarthCon Personnel

*soil samples do not have preservatives



9.0 SPILL CONTAINMENT

An evaluation was conducted to determine the potential for hazardous substance spills at this site. That evaluation indicates that there is no potential for a hazardous substance spill of a sufficient quantity to require containment planning, equipment, and procedures. For that reason, no spill containment program is implemented at this site. Employee training on how to respond and take protective measures during incidental releases of hazardous substances are provided consistent with the Hazard Communication Standard, 29 CFR 1910.12

Incidental spills are different from emergency releases. Incidental spills can safely be absorbed, neutralized, or otherwise controlled by EarthCon employees or contractors with the appropriate training.

Table 1

Key Personnel and Health & Safety Responsibilities

Project Manager (PM) Jeff Bennett	**Regional H&S Coordinator** Hugh Walker	**Site Safety Officer (SSO)** Lindsey Langer/Jenn McGervey	**Project Field Staff** Lindsey Langer/Jenn McGervey
• Coordinate, approve, implement and manage this HASP and amendments, if any. • Incorporate H&S planning, implementation, and supplies (PPE, decontamination materials) into project plans and budget. • Select and assign responsibility to the SSO to implement HASP. • Monitor the Field Logbooks for health and safety work practices employed. • Coordinate with SSO so that emergency response procedures are implemented, if needed. • Inform CSHM of HASP violations, if any, and verify corrective actions are implemented. • Ensure personnel receive this plan, are aware of its provisions, are aware of the potential hazards associated with site operations, are instructed in safe work practices, are familiar with emergency response procedures and document this information • Coordinate with Client and SSO. • In the event of an incident or other emergency complete & submit appropriate forms and make proper notifications.	• Review and approve HASP; approve any associated amendments. • Evaluate documentation presented of site hazards for HASP preparation. Maintain a final copy of the completed HASP. • Perform periodic audits of documentation of project activities to evaluate general compliance with policies, procedures, directives and guidelines presented in this HASP. • Assist with the implementation of the Corporate Health and Safety Program. • Provide environmental, health and industrial hygiene consultation as needed. • In the event of an emergency, if required set up an incident investigation team and notify applicable outside agencies.	• Be present on-site, as appropriate, with the authority to implement HASP and EarthCon H&S protocols. • Confirm that site personnel meet the training and medical requirements. • Verify that monitoring equipment and personal protective equipment is operating correctly according to manufacturer's instructions and such equipment is utilized by on site personnel. Calibrate or verify calibration of monitoring equipment and record results. • Verify that decontamination procedures are being implemented and Site Control Plan is in place. • Provide and document pre-work briefing and daily tailgate safety meetings, monitor activities for safe work practices and HASP compliance. • Perform routine H&S inspections. Document meetings and inspections. Provide copies to CHSM as requested. • Report to the Project Manager deviations from the anticipated conditions, and authorize the cessation of work if necessary. • Notify the PM and CSHM in the event an emergency occurs, and implement site emergency response and follow-up procedures, provide First Aid, as needed. • Work with PM to verify appropriate notifications and forms are completed for any incident or near miss. • Secure the scene after an emergency until given notification to release the scene by the CHSM.	• Provide verification of required health and safety training and medical surveillance prior to arriving at the site. • Notify the SSO of any special medical conditions (e.g., allergies). • Review, be familiar with and abide by the HASP. • Attend pre-work briefings and daily tailgate safety meetings. • Comply with requests of PM, SSO, and HASP. • Perform work using safe techniques; be responsible for their personal safety. • Immediately report any accidents and/or unsafe conditions to the SSO.

Table 2

Name	*EHS Category*	*Initial 40-Hour*	*Annual 8-Hour Refresher*	*8-Hour Supervisor (if applicable)*	*CPR/ First Aid[1] (initial or refresher)*	*Medical Surveillance[2] (if applicable)*	*Annual Respirator Fit Test[3] (if applicable)*	*Other:[4]*
		Date	***Date***	***Date***	***Date***	***Date***	***Date***	***Date***
Jeff Bennett	I	1990	1/2017	6/1990	1/2016	N/A	N/A	---
Jenn McGervey	I	8/2015	1/2017		1/2016	NA	NA	---
Lindsey Langer	I	8/2019						

Footnotes:

1 CPR Refresher: every year; First Aid Refresher: every three years.
2 Annual Medical Surveillance for EHS Category I.
3 For EHS Categories I & II only.
4 Could include task-specific training, project-specific training, or project-specific medical surveillance.

Table 3

General Safe Work Practices

- Report to work alert and ready to perform assigned duties; no sleeping is allowed at the jobsite.
- Immediately report any unsafe acts, incidents, accidents, or near misses. Utilize Stop Work Authority if needed.
- Minimize contact with excavated or contaminated materials. Do not place equipment on the ground. Do not sit or kneel on potentially contaminated surfaces.
- Smoking, eating, or drinking after entering the work zone and before decontamination is prohibited. Use of illegal drugs and alcohol are prohibited. Workers taking prescribed medication that may cause drowsiness should not be operating heavy equipment, and should be prohibited from performing tasks where Level C, B, or A personal protective equipment is required.
- Practice good housekeeping. Keep everything orderly and out of potentially harmful situations.
- Use of contact lenses on-site shall only be allowed when dictated by working conditions.
- The following conditions must be observed when operating a motor vehicle.
  - Wearing of seat belts is mandatory
  - During periods of rain, fog, or other adverse weather conditions, the use of headlights is mandatory
  - A backup warning system or use of vehicle horn is mandatory when the vehicle is engaged in a backward motion
  - Posted traffic signs and directions from flagmen must be observed
  - Equipment and/or samples transported in vehicles must be secured from movement
  - The use of contractor acquired vehicles by non-contractor personnel is prohibited
  - Daily inspection sheets should be completed by driver and kept with equipment for the duration of the project.
- In an unknown situation, always assume the worst conditions.
- Be observant of your immediate surroundings and the surroundings of others. It is a team effort to notice and warn of impending dangerous situations. Withdrawal from a hazardous situation to reassess procedures is the preferred course of action.
- Conflicting situations may arise concerning safety requirements and working conditions and must be addressed and resolved rapidly by the SSO and PM to relieve any motivations or pressures to circumvent established safety policies.
- Unauthorized breaches of specified safety protocol must not be allowed. Workers unwilling or unable to comply with the established procedures must be removed from the site immediately.

Table 4

Hazard Analysis

Tasks	
① Capping	⑤
② Soil Sampling	⑥
③ Well Installation	⑦
④ GW Sampling	⑧

	①	②	③	④	⑤	⑥		
I. Chemical Hazards								
Fire	X	X	X	X				
Inhalation	X	X	X	X

Table 7

Emergency Response Procedures

- This plan must be discussed with verbal training for onsite EarthCon employees and subcontractors
- This training should be documented and a copy provided to the CHSM.
- The SSO (or alternate) should be immediately notified via the on-site communication system.
- If applicable, the SSO must notify off-site emergency responders (i.e., fire department, hospital, police department, etc.) and must inform the response team as to the nature and location of the emergency on site.
- If applicable, the SSO evacuates the site. Site workers should move to their respective refuge stations using the evacuation routes provided on the Site Map. SSO must account for all workers associated with the project.
- The SSO notifies the PM, Principal, and the CHSM of the emergency. If an EarthCon employee is injured, the SSO must contact the worker's Regional Manager/Branch Office Manager immediately. If the Regional Manager/Branch Office Manager cannot be contacted, then the Corporate Human Resources Department must be notified.
- For small fires, flames should be extinguished using the fire extinguisher. Large fires should be handled by the local fire department.
- In an unknown situation or if responding to toxic gas emergencies, appropriate PPE, including SCBAs, should be donned.
- If chemicals are accidentally spilled or splashed into eyes or on skin, use eyewash and/or shower.
- Before continuing site operations after an emergency involving toxic gas, the appropriate responder will don a SCBA and utilize appropriate air monitoring equipment to verify that the site is safe.
- An injured worker must be decontaminated appropriately.
- If a worker is injured, first aid will be administered by workers certified in first aid.
- If necessary, the SSO will secure the scene after the response. The scene should not be released until notification from the CHSM.
- After the response, the SSO and /or PM must complete and submit the appropriate incident reports.
- The PM or SSO should secure written /signed witness statements as appropriate, take pictures, etc. immediately and before the end of the shift.
- If an investigation is required, the CHSM and Safety Team will set up a team to start the investigation with input from the DL.
- The CHSM will notify outside agencies as appropriate.

Breathing: Respiratory support
Swallow: Medical attention immediately

Respirator Recommendations

NIOSH

At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:
(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode
(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter.

Click here (pgintrod.html#nrp) for information on selection of N, R, or P filters.

Any appropriate escape-type, self-contained breathing apparatus

Important additional information about respirator selection (pgintrod.html#mustread)

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Arsenic	7440-38-2	100

Toxicological Data on Ingredients: Arsenic: ORAL (LD50): Acute: 763 mg/kg [Rat]. 145 mg/kg [Mouse].

Section 3: Hazards Identification

Potential Acute Health Effects:
Very hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant), of eye contact (irritant).

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A1 (Confirmed for human.) by ACGIH. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, lungs, the nervous system, mucous membranes. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Flammable in presence of open flames and sparks, of heat, of oxidizing materials.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards:
Material in powder form, capable of creating a dust explosion. When heated to decomposition it emits highly toxic fumes.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Use appropriate tools to put the spilled solid in a convenient waste disposal container.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable

protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents, acids, moisture.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.01 from ACGIH (TLV) [United States] [1995] Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Lustrous solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 74.92 g/mole

Color: Silvery.

pH (1% soln/water): Not applicable.

Boiling Point: Not available.

Melting Point: Sublimation temperature: 615°C (1139°F)

Critical Temperature: Not available.

Specific Gravity: 5.72 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water, hot water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Reactive with oxidizing agents, acids, moisture.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals: Acute oral toxicity (LD50): 145 mg/kg [Mouse].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A1 (Confirmed for human.) by ACGIH. Causes damage to the following organs: kidneys, lungs, the nervous system, mucous membranes.

Other Toxic Effects on Humans:
Very hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Identification: : Arsenic UNNA: UN1558 PG: II

Special Provisions for Transport: Not available.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Arsenic California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Arsenic Pennsylvania RTK: Arsenic Massachusetts RTK: Arsenic TSCA 8(b) inventory: Arsenic

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada):
CLASS D-1A: Material causing immediate and serious toxic effects (VERY TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R22- Harmful if swallowed. R45- May cause cancer.

HMIS (U.S.A.):

Health Hazard: 3

Fire Hazard: 1

Reactivity: 2

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 3

Flammability: 1

Reactivity: 2

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Safety glasses.

Material Safety Data Sheet
Cadmium MSDS

Section 1: Chemical Product and Company Identification

Product Name: Cadmium

Catalog Codes: SLC3484, SLC5272, SLC2482

CAS#: 7440-43-9

RTECS: EU9800000

TSCA: TSCA 8(b) inventory: Cadmium

CI#: Not applicable.

Synonym:

Chemical Name: Cadmium

Chemical Formula: Cd

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call:
1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Cadmium	7440-43-9	100

Toxicological Data on Ingredients: Cadmium: ORAL (LD50): Acute: 2330 mg/kg [Rat.]. 890 mg/kg [Mouse]. DUST (LC50): Acute: 50 ppm 4 hour(s) [Rat].

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer), of eye contact (irritant). Severe over-exposure can result in death.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, lungs, liver. Repeated or prolonged exposure to the substance can produce target organs damage. Repeated exposure to an highly toxic material may produce general deterioration of health by an accumulation in one or many human organs.

Section 4: First Aid Measures

Eye Contact: No known effect on eye contact, rinse with water for a few minutes.

Skin Contact:
After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact: Not available.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. WARNING: It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled material is toxic, infectious or corrosive. Seek immediate medical attention.

Ingestion:
Do not induce vomiting. Examine the lips and mouth to ascertain whether the tissues are damaged, a possible indication that the toxic material was ingested; the absence of such signs, however, is not conclusive. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: 570°C (1058°F)

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances:
Non-flammable in presence of open flames and sparks, of heat, of oxidizing materials, of reducing materials, of combustible materials, of moisture.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards:
Material in powder form, capable of creating a dust explosion. When heated to decomposition it emits toxic fumes.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Use appropriate tools to put the spilled solid in a convenient waste disposal container.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable protective clothing In case of insufficient ventilation, wear suitable respiratory equipment If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage:
Keep container dry. Keep in a cool place. Ground all equipment containing material. Keep container tightly closed. Keep in a cool, well-ventilated place. Highly toxic or infectious materials should be stored in a separate locked safety storage cabinet or room.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.01 (ppm) Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Lustrous solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 112.4 g/mole

Color: Silvery.

pH (1% soln/water): Not applicable.

Boiling Point: 765°C (1409°F)

Melting Point: 320.9°C (609.6°F)

Critical Temperature: Not available.

Specific Gravity: 8.64 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water, hot water, methanol, diethyl ether, n-octanol.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Not considered to be corrosive for metals and glass.

Special Remarks on Reactivity: Reacts violently with potassium.

Special Remarks on Corrosivity: Not available.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals:
WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 890 mg/kg [Mouse]. Acute toxicity of the dust (LC50): 229.9 mg/m3 4 hour(s) [Rat].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. The substance is toxic to kidneys, lungs, liver.

Other Toxic Effects on Humans:
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: An allergen. 0047 Animal: embryotoxic, passes through the placental barrier.

Special Remarks on other Toxic Effects on Humans: May cause allergic reactions, exzema and/or dehydration of the skin.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

See: NMAM or OSHA Methods

Physical Description

Clear liquid with a characteristic odor.

Molecular Weight

110 (approx)

Boiling Point

102°F

Freezing Point

?

Solubility

Insoluble

Vapor Pressure

Vapor Pressure
38-300 mmHg

Ionization Potential
?

Specific Gravity
(60°F): 0.72-0.76

Flash Point
-45°F

Upper Exposive Limit
7.6%

Lower Explosive Limit
1.4%

Class IB Flammable Liquid: Fl.P. below 73°F and BP at or above 100°F.

Incompatibilities & Reactivities
Strong oxidizers such as peroxides, nitric acid & perchlorates

Exposure Routes
inhalation, skin absorption, ingestion, skin and/or eye contact

Symptoms
irritation eyes, skin, mucous membrane; dermatitis; headache, lassitude (weakness, exhaustion), blurred vision, dizziness, slurred speech, confusion, convulsions; chemical pneumonitis (aspiration liquid); possible liver, kidney damage; [potential occupational carcinogen]

Target Organs
Eyes, skin, respiratory system, central nervous system, liver, kidneys

Cancer Site
[in animals: liver & kidney cancer]

Personal Protection/Sanitation
(See protection codes (protect.html))
Skin: Prevent skin contact
Eyes: Prevent eye contact
Wash skin: When contaminated
Remove: When wet (flammable)
Change: No recommendation
Provide: Eyewash, Quick drench

First Aid
(See procedures (firstaid.html))
Eye: Irrigate immediately
Skin: Soap flush immediately
Breathing: Respiratory support
Swallow: Medical attention immediately

Respirator Recommendations

NIOSH

At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:
(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode

(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister

Any appropriate escape-type, self-contained breathing apparatus

Important additional information about respirator selection (pgintrod.html#mustread)

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Lead	7439-92-1	100

Toxicological Data on Ingredients: Lead LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects: Slightly hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation.

Potential Chronic Health Effects:
Slightly hazardous in case of skin contact (permeator). CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to blood, kidneys, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation: Not available.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Non-flammable in presence of open flames and sparks, of shocks, of heat.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: When heated to decomposition it emits highly toxic fumes of lead.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable

protective clothing. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.05 (mg/m3) from ACGIH (TLV) [United States] TWA: 0.05 (mg/m3) from OSHA (PEL) [United States] TWA: 0.03 (mg/m3) from NIOSH [United States] TWA: 0.05 (mg/m3) [Canada]Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Metal solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 207.21 g/mole

Color: Bluish-white. Silvery. Gray

pH (1% soln/water): Not applicable.

Boiling Point: 1740°C (3164°F)

Melting Point: 327.43°C (621.4°F)

Critical Temperature: Not available.

Specific Gravity: 11.3 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials, excess heat

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Can react vigorously with oxidizing materials. Incompatible with sodium carbide, chlorine trifluoride, trioxane + hydrogen peroxide, ammonium nitrate, sodium azide, disodium acetylide, sodium acetylide, hot concentrated nitric acid, hot concentrated hydrochloric acid, hot concentrated sulfuric acid, zirconium.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. May cause damage to the following organs: blood, kidneys, central nervous system (CNS).

Other Toxic Effects on Humans: Slightly hazardous in case of skin contact (irritant), of ingestion, of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans:
Acute Potential: Skin: Lead metal granules or dust: May cause skin irritation by mechanical action. Lead metal foil, shot or sheets: Not likely to cause skin irritation Eyes: Lead metal granules or dust: Can irritate eyes by mechanical action. Lead metal foil, shot or sheets: No hazard. Will not cause eye irritation. Inhalation: In an industrial setting, exposure to lead mainly occurs from inhalation of dust or fumes. Lead dust or fumes: Can irritate the upper respiratory tract (nose, throat) as well as the bronchi and lungsby mechanical action. Lead dust can be absorbed through the respiratory system. However, inhaled lead does not accumulate in the lungs. All of an inhaled dose is eventually abssorbed or transferred to the gastrointestinal tract. Inhalation effects of exposure to fumes or dust of inorganic lead may not develop quickly. Symptoms may include metallic taste, chest pain, decreased physical fitness, fatigue, sleep disturbance, headache, irritability, reduces memory, mood and personality changes, aching bones and muscles, constipation, abdominal pains, decreasing appetite. Inhalation of large amounts may lead to ataxia, deliriuim, convulsions/seizures, coma, and death. Lead metal foil, shot, or sheets: Not an inhalation hazard unless metal is heated. If metal is heated, fumes will be released. Inhalation of these fumes may cause "fume metal fever", which is characterized by flu-like symptoms. Symptoms may include metallic taste, fever, nausea, vomiting, chills, cough, weakness, chest pain, generalized muscle pain/aches, and increased white blood cell count. Ingestion: Lead metal granules or dust: The symptoms of lead poisoning include abdominal pain or cramps (lead cholic), spasms, nausea, vomiting, headache, muscle weakness, hallucinations, distorted perceptions, "lead line" on the gums, metallic taste, loss of appetite, insomnia, dizziness and other symptoms similar to that of inhalation. Acute poisoning may result in high lead levels in the blood and urine, shock, coma and death in extreme cases. Lead metal foil, shot or sheets: Not an ingestion hazard for usual industrial handling.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are less toxic than the product itself.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (female) which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (male) which would require a warning under the statute: Lead California prop. 65 (no significant risk level): Lead: 0.0005 mg/day (value) California prop. 65: This product contains the following ingredients for which the State of California has found to cause birth defects which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Lead Connecticut hazardous material survey.: Lead Illinois toxic substances disclosure to employee act: Lead Illinois chemical safety act: Lead New York release reporting list: Lead Rhode Island RTK hazardous substances: Lead Pennsylvania RTK: Lead

Other Regulations:
OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada): CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R20/22- Harmful by inhalation and if swallowed. R33- Danger of cumulative effects. R61- May cause harm to the unborn child. R62- Possible risk of impaired fertility. S36/37- Wear suitable protective clothing and gloves. S44- If you feel unwell, seek medical advice (show the label when possible). S53- Avoid exposure - obtain special instructions before use.

HMIS (U.S.A.):

Health Hazard: 1

Fire Hazard: 0

Reactivity: 0

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 1

Flammability: 0

Reactivity: 0

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Safety glasses.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

Appendix C

Chemical Information Directory

Included in HASP	*Chemical Name*	*Synonyms*
	Acetone	Dimethyl Ketone; Ketone propane; 2-Propanone
	Aldrin	HHDN; Octalene
	Aniline	Aminobenzene; Aniline Oil; Benzeneamine
X	Arsenic	Arsenic metal; Arsenia
	Barium	Barium metal
	Benzene	Benzol; Phenyl hydride
	Bis(2-ethylhexyl)phthalate	Di(2-ethylhexyl)phthalate
X	Cadmium	Cadmium metal
	Carbon disulfide	Carbon bisulfide
	Chlorobenzene	Benzene chloride; Chlorobenzyl; MCB; Phenyl chloride
	Chloroethane	Ethyl chloride
	Chloroform	Methane trichloride; Trichloromethane
	Chromic Acid	Chromic anhydride; Chromium trioxide
	Chromium	Chromium metal
	Cobalt	Cobalt metal dust, cobalt metal fume
	Copper	Copper metal dusts; Copper metal mists
	Cyanide	Cyanide
	Cyclohexane	Benzene Hexahydride; hexamethylene
	Dieldrin	Dieldrin
	DIPE	Diisopropyl ether
	Dioxin	Dioxin
	1,2-Dichlorobenzene	O-DCB; Orthodichlorobenzene
	1,1-Dichloroethane	Ethylidene chloride
	1,2-Dichloroethane	Ethylene dichloride; Glycol dichloride
	1,1-Dichloroethylene	1,1-Dichloroethene, vinylidene chloride
	1,2-Dichloroethylene	1,2-Dichloroethene; (cis, trans, or sym-) Acetylene dichloride
	1,2-Dichloropropane	Propylene dichloride; Dichloro-1,2-propane
	2,4-Dinitrotoluene	Dinitrotoluene; DNT; Methyldinitrobenzene
	1,4-Dioxane	Dioxane, Diethylene dioxide, Diethylene ether

Appendix C

Chemical Information Directory
(continued)

Included in HASP	*Chemical Name*	*Synonyms*
	Ethylbenzene	Ethylbenzol; Phenylethane
	ETBE	Ethyl tert-butyl ether
	Ethylene Dibromide	EDB; 1,2-Dibromoethane, Ethylene bromide, Glycol dibromide
	Formaldehyde	Methanal; Methyl aldehyde; Methylene oxide
X	Gasoline& Diesel	Motor fuel; Motor spirits; Natural gasoline; Petrol
	Motor oil	Motor oil
	Hexachloroethane	Carbon hexachloride; Ethane hexachloride; Perchloroethane
	Hydrochloric Acid	Anhydrous hydrogen chloride; Aqueous hydrogen chloride; Muriatic acid
	Hydrogen Sulfide	Hydrosulfuric acid; Sewer gas; Sulfuretted hydrogen
	Iron	Iron
	Isophorone	Isoacetophorone; 3,5,5-Trimethyl 2- cyclohexenone
	Isopropanol	Isopropyl alcohol; IPA; 2-Propanol
X	Lead (inorganic)	Lead metal
	Manganese	Manganese
	MTBE	Methyl Tert Butyl Ether
	Mercury	Colloidal mercury; Metallic mercury; Quicksilver
	Methane	Fire damp; March gas; Methyl hydride
	Methanol	Carbinol; Columbian spirits; Pyroligneous spirit; Wood alcohol; Wood naphtha; Wood spirit
	Methoxyclor	p,p-Dimethoxydiphenyl/trichlorethane; DMDY
	Methyl chloroform	1,1,1-Trichloroethane
	Methylcyclohexane	Cyclohexylmethane; Hexahydrotoluene
	Methylene chloride	Dichloromethane; Methylene Dichloride
	Naphthalene	Naphthalin; Tar Camphor; White Tar
	Nickel	Nickel catalyst

Appendix C

Chemical Information Directory
(continued)

Included in HASP	*Chemical Name*	*Synonyms*
	Nitrobenzene	Essence of mirbane; Nitrobenzol; Oil of mirbane
	PAHs	Poly Aromatic Hydrocarbons
	Pentachlorophenol	PCP; Penta; 2,3,4,5,6-Pentachlorophenol
	Phenol	Carbonic acid; Hydroxybenzene; Monohydroxybenzene; Phenol alcohol; Phenyl hydroxide
	Phosgene	Carbonyl chloride; Carbon oxychloride; Chloroformyl chloride
X	Polychlorinated biphenyls (54%)	PCBs; Chlorodiphenyl
	Sodium bisulfate	
	Synergist-D	Proprietary product
	Silver	Silver metal; Argentum
	TAME	Tertiary-amyl methyl ether
	TBA	Tert butyl alchol
	Tetrachloroethylene	Tetrachloroethylene; Perchlorethylene; Perk
	Toluene	Methyl benzene; Methyl benzol
	Toxaphene	Chlorinated camphene
	1,1,2-Trichloroethane	Ethane trichloride; B-Trichloroethane; Vinyl trichloride
	1,2,4-Trichlorobenzene	Trichlorobenzene; 1,2,4-Trichlorobenzel
	Trichloroethene	Trichloroethylene; TCE
	Trichlorofluoromethane	Fluorotrichloromethane; Freon II
	Trichlorotrifluoroethane	Freon 113; 1,1,2-Trichloro-1,2,2-trifluoroethane; CFC-113
	1,2,3-Trichloropropane	Allyl trichloride, Glycerol trichorohydrin, Glyceryl trichlorohydrin; Trichlorohydrin
	1,2,3-Trimethylbenzene	Hemellitol
	1,2,4-Trimethylbenzene	psi-Cumene; Pseudocumene
	1,3,5-Trimethylbenzene	Mesitylene; sym-Trimethylbenzene
	Vinyl chloride	Chloroethene; VC; VCM
	Xylene (Mixed Isomers)	o-xylene; p-xylene; m-xylene

* All members of the drilling crews shall be trained in the safety features and procedures to be utilized during operation, inspection, and maintenance of the equipment.
* Conduct a survey, prior to bringing drilling equipment to the job site, to identify overhead electrical hazards, potential subsurface hazards, and terrain hazard. Once on-site, before drilling equipment is moved, the travel route shall again be visually surveyed for overhead and terrain hazards.
* Use only drilling equipment equipped with two easily accessible emergency shutdown devices, one for the operator and one for the helper.
* Do not transport drilling equipment with the mast in the upward position.
* Set up equipment on stable ground. Cribbing (a system of timbers, arranged in a rectangular pattern, used to support and distribute the weight of the equipment) shall be used when necessary.
* Extend outriggers per the manufacturer's specifications.
* Monitor weather conditions. Operations shall cease during electrical storms or when electrical storms are imminent.
* Wearing of loose clothing or equipment is not permitted.
* Use auger guides on hard surfaces.
* Verbally alert employees and visually ensure employees are clear from dangerous parts of equipment prior to starting or engaging equipment.
* Channel the discharge of drilling fluids away from the work area to prevent the pooling of water.
* Use hoists only for their designed intent. Hoists shall not be loaded beyond their rated capacity. Steps shall be taken to prevent two-blocking of hoists (the condition when the lower load block or hook assembly comes in contact with the upper load block, or when the load block comes in contact with the boom tip).
* Follow the equipment manufacturer's procedures if ropes become caught in, or objects are pulled into a cathead.

* Do not run or rotate drill rods through rod slipping devices. No more than one foot of drill rod column shall be hoisted above the top of the drill mast. Drill rod tool joints shall not be made up, tightened, or loosened while the rod column is supported by a rod slipping device.
* Control dust using dust suppression techniques.
* Clean augers only when the rotating mechanism is in neutral and the auger is stopped. Tools such as long handled shovels shall be used to remove cuttings from the auger.
* Cap and flag open boreholes; open excavations shall be barricaded.
* Keep all hand tool used during drilling operations clean and in good working condition.
* Wear hard hats and steel-toed boots at all times when performing drilling operations.
* Wear hearing protection when required.

During Geoprobe drilling

- Pay close attention to acetate sampling sleeves; can cause minor cuts when they become jiggered
- Probes /rods can have pinch points; take care when removing or adjusting.
- There will be noise so use hearing protections

- Be aware of the potential hazards of the contents of drums or containers before handling.
- Inspect the integrity of the drum or container before moving. Any drum or container lacking integrity shall be over packed.
- Consider any unlabeled drum or container as containing a hazardous substance and leave alone until contents are properly identified and labeled.
- Organize site operations to minimize the amount of drum or container movement.
- Never stand on drums or containers.
- Know that bulging drums or containers are an indication of pressure build-up. Pressure can be relieved slowly by carefully loosening the bung. If the possibility of fire or explosion exists, protective shield and/or remote opening devices should be used.
- Utilize drum/container handling equipment whenever possible. The equipment utilized should have a sufficiently rated load capacity, and should be able to operate smoothly on the available surface.
- Use proper lifting and moving techniques to prevent back injuries, if handling equipment is not available.
- Have a clear view of the available pathway when moving drums. If needed, an additional person should be available to provide guidance.
- Set up drum/container staging areas to safely identify and classify contents for proper shipment. Staging areas shall be provided with adequate ingress and egress routes.
- Label and identify drums and containers as to their contents when moved to the staging areas.
- Cease all site operations immediately if site activities uncover buried drums or containers. The SSO must be notified. The SSO will evacuate the site. All unknown situations must be evaluated before site activities are resumed. The services of a specialized contractor trained in handling unknown contaminants may be needed. If, after evaluating the situation, only a portion of the site is affected, that
- Use only drums and containers that meet the appropriate DOT, OSHA, and EPA regulations.

- When scheduling or work conditions necessitate leaving excavations open overnight, security fencing will be erected to restrict access to the site or work zones. An exclusion zone, contamination reduction zone and support zone will be identified for each soil disturbance site, as described in Section 2.4.5.

- Underground Service Alert must be notified of subsurface work at a minimum of 48 hours prior to the commencement of field activities.

- As part of the on-site health and safety meeting, a Site walk with the operators will be conducted to identify work locations (locations shown on the work plan/site plan will be in areas free of utilities/subsurface structures). Mark outs of all utilities will be verified.

- If pea-gravel is encountered while excavating all work must stop and the SSO will be contacted for further instruction. Pea-gravel is a potential indication of underground storage tank(s) or utility bedding/backfilling material.

- If any utility/subsurface feature is hit or damaged the SSO will be IMMEDIATELY contacted for further instruction. If the SSO cannot be reached contact the Project Manager for further instruction.

* A minimum clearance of 12 feet (radius) will be maintained between heavy equipment (i.e., drill rig) and any overhead power lines, regardless of voltage.
* Before subsurface work, a utilities search for underground lines will occur and will be documented.
* Installation and maintenance of electrical facilities or equipment must only be performed by qualified and properly authorized personnel or electrical subcontractors. Apprentice personnel permitted to work on electrical equipment shall be under the surveillance of a fully qualified electrician.
* Electricians shall be familiar with the National Electrical Code; state and local electric codes; OSHA standards, including 29 CFR 1926, Subpart K; and applicable sections of the National Fire Protection Association Codes.
* When working on energized circuits of 440 volts or higher, at least one qualified electrician and one other employee shall be present.
* Do not wear rings, watches or metallic objects that could act as conductors when working with electrical circuits.
* Do not use metal ladders and un-insulated tools while working with electrical circuits and equipment.
* Follow the company Lock-out/Tag-out procedures when applicable. Electrical equipment and lines shall always be considered “energized” until proven “de-energized”. Before beginning work, each electrical circuit shall be inspected, tested, and where possible, isolated from the power source. Extreme care shall be exercised as wires designed to operate at ground potential may become energized by faulty or inadequate connections.
* Use only approved grounding equipment as a ground for electrical equipment. Metal frames on electricity powered equipment, electrical facilities, and transmission equipment shall be connected to the grounding system. Alternative grounding systems complying with applicable electrical codes may be used for temporary portable equipment.
* Protect electrical wires with suitable protective conduits or devices where they are exposed to possible damage.
* Connect grounding devices to a ground before contacting any conductor of a circuit. When grounding devices are removed, they shall be disconnected from the circuit before being disconnected from ground.
* Equip all portable extension cords with a non-conducting plug and/or another socket shell. All electrical cords shall be equipped with three-blade grounding type plugs.

* Use only heavy duty electrical cords that are not subjected to excessive bending, stretching, or kicking. All cords and wires shall be frequently inspected for signs of defects. Damaged or frayed electrical wires, cords, and plugs shall be immediately replaced by a qualified electrician or other properly trained personnel.
* Install adequate warning signs and barriers (in plain sight) in all areas where hazardous electrical facilities exist.
* Do not permit overloading of electrical circuits at any time. The replacement of fuses or circuit breakers with makeshift materials or over-capacity fuses is strictly prohibited.
* The type of circuit shall determine the type of protective equipment required. Rubber gloves, sleeves, blankets, mats, and insulated platforms shall be used as required. Questions regarding PPE should be directed to the SSO.
* Inspect all insulated protective equipment continuously for defects or damages. Any defective equipment shall be replaced before using.
* Establish and enforce testing schedules for insulation qualities for protective equipment. All users shall verify that equipment has been satisfactorily tested prior to use.

* Wear appropriate eye protection according to the task at hand (e.g., goggles if liquid splash could occur, welding lenses, etc.).

* Minimize the amount of vapor or particulate matter generated, if possible.

* Avoid touching the face and eyes.

* Flush eye with water for at least 15 minutes if chemicals do get into the eye.

* Be aware of “pinch points” when working with tools and heavy equipment.
* Use proper lifting techniques to avoid dropping heavy loads on hands and feet.
* Be aware of moving machinery and heavy equipment in the work area.
* Wear protective gloves as required in the Health and Safety Plan.
* Wear steel-toed boots as required in the Health and Safety Plan.

Fatal exposures to cold among workers have almost always resulted from accidental exposures involving failure to escape from low environmental air temperatures or from immersion in low temperature water. The single most important aspect of life-threatening hypothermia is the fall in the deep core temperature of the body. Workers should be protected from exposure to cold so that the deep core temperature does not fall below 96.8°F; lower body temperatures will very likely result in reduced mental alertness, reduction in rational decision making, or loss of consciousness with the threat of fatal consequences. Pain in the extremities may be the first early warning of danger to cold stress. During exposure to cold, maximum severe shivering develops when the body temperature has fallen to 95°F. This must be taken as a sign of danger to the workers and exposure to cold should be immediately terminated for any workers when severe shivering becomes evident. Since prolonged exposure to cold air, or to immersion in cold water, at temperatures well above freezing can lead to dangerous hypothermia, whole body protection must be provided.

Adequate insulating dry clothing to maintain core temperatures above 96.8°F must be provided to workers if work is performed in air temperatures below 40°F. Wind chill cooling rate must also be considered when determining protective clothing. The equivalent chill temperature should be used when estimating the combined cooling effect of wind and low air temperatures on exposed skin or when determining clothing insulation requirements to maintain the deep body core temperature.

Unless there are unusual or extenuating circumstances, cold injury to other than hands, feet, and head is not likely to occur without the development of the initial signs of hypothermia. Older workers or workers with circulatory problems require special precautionary protection against cold injury. The use of extra insulating clothing and/or a reduction in the duration of the exposure period are among the special precautions which should be considered.

Workers handling evaporative liquid (gasoline, alcohol, or cleaning fluids) at air temperatures below 39.2°F should take special precautions to avoid soaking of clothing or gloves with the liquids because of the added danger of cold injury due to evaporative cooling. Special note should be taken of the particularly acute effects of splashes of “cryogenic fluids” or those liquids and gases with a boiling point that is just above ambient temperature.

Heat stress is a medical condition where a worker exerts energy above his body's ability to adapt to the stress. Malfunctioning or overload of the body's temperature and sweat mechanisms results in heat stress. Poor adaptation to heat may lead to heat cramps, heat exhaustion, or heat stroke. There are three primary causes of heat stress: insufficient water intake; insufficient salt intake; and a deficiency in the production of sweat, the evaporation of which helps to cool the body naturally. Heat stress or heat exhaustion can result in a more life-threatening condition called heat stroke, which is an overexposure to extreme heat, where the body can no longer provide natural regulation of heat. The body overheats and core temperatures may reach 107F which can result in a coma and death

Field team members shall be observed for signs and symptoms of heat stress that include: confusion, dizziness, profuse sweating, skin color change, increased heart rate and vision problems. Personnel who exhibit any of these symptoms shall be removed from field work and requested to consume two to four pints of electrolyte fluid or cool water every hour while resting in a shaded area. The individual should not return to work until the symptoms are no longer recognizable. If symptoms appear critical, persist, or get worse, seek immediate medical attention.

To control the potential occurrence of heat stress, preventive measures will be evaluated and implemented on a daily basis. These measures may include:

- Frequent rest periods;
- Inducement of fluids (e.g., water, Gatorade, etc.) at a rate of one-half to one cup of cool (55ºF) water every 20 minutes of the workday; and
- Periodic cooling of personnel (e.g., via shaded areas, hose-downs with water, etc.).
- Sensitive personnel should wear sunscreen containing a minimum Sun Protection Factor of 15 when working outdoors in the sun. Sunscreen lotion should be applied prior to entering the work zones.

ainst heat, sun exposure, and other hazards. Employers and employees should know the potential hazards in their workplaces and how to manage them.

Sun

Sunlight contains ultraviolet (UV) radiation, which causes premature aging of the skin, wrinkles, cataracts, and skin cancer. There are no safe UV rays or safe suntans. Be especially careful in the sun if you burn easily, spend a lot of time outdoors, or have any of the following physical features: numerous, irregular, or large moles; freckles; fair skin; or blond, red, or light brown hair. Here's how to block those harmful rays:

- Cover up. Wear loose-fitting, long-sleeved shirts and long pants.
- Use sunscreen with a sun protection factor (SPF) of at least 30. Be sure to follow application directions on the bottle or tube.
- Wear a hat. A wide brim hat, not a baseball cap, works best because it protects the neck, ears, eyes, forehead, nose, and scalp.
- Wear UV-absorbent sunglasses (eye protection). Sunglasses don't have to be expensive, but they should block 99 to 100 percent of UVA and UVB radiation. Before you buy sunglasses, read the product tag or label.
- Limit exposure. UV rays are most intense between 10 a.m. and 4 p.m.

OSHA Card—Protecting Yourself in the Sun
www.osha.gov/Publications/osha3166.pdf

Heat

The combination of heat and humidity can be a serious health threat during the summer months. If you work outside (for example, at a beach resort, on a farm, at a construction site) or in a kitchen, laundry, or bakery you may be at increased risk for heat-related illness. So, take precautions. Here's how:

- Drink small amounts of water frequently.
- Wear light-colored, loose-fitting, breathable clothing—cotton is good.
- Take frequent short breaks in cool shade.
- Eat smaller meals before work activity.
- Avoid caffeine and alcohol or large amounts of sugar.
- Work in the shade.
- Find out from your health care provider if your medications and heat don't mix.
- Know that equipment such as respirators or work suits can increase heat stress.

There are three kinds of major heat-related disorders—heat cramps, heat exhaustion and heat stroke. You need to know how to recognize each one and what first aid treatment is necessary.

OSHA Heat Stress Fact Sheet:
www.osha.gov/OshDoc/data_Hurricane_Facts/heat_stress.pdf

OSHA Heat Stress Quick Card:
www.osha.gov/Publications/osha3154.pdf

Lyme Disease/Tick-Borne Diseases

These illnesses (i.e., Rocky Mountain spotted fever) are transmitted to people by bacteria from bites of infected deer (blacklegged) ticks. In the case of Lyme disease, most, but not all, victims will develop a "bulls-eye" rash. Other signs and symptoms may be non-specific and similar to flu-like symptoms such as fever, lymph node swelling, neck stiffness, generalized fatigue, headaches, migrating joint aches, or muscle aches. You are at increased risk if your work outdoors involves construction, landscaping, forestry, brush clearing, land surveying, farming, railroads, oil fields, utility lines, or park and wildlife management. Protect yourself with these precautions:

- Wear light-colored clothes to see ticks more easily.

- Wear long sleeves; tuck pant legs into socks or boots.
- Wear high boots or closed shoes that cover your feet completely.
- Wear a hat.
- Use tick repellants, but not on your face.
- Shower after work. Wash and dry your work clothes at high temperature.
- Examine your body for ticks after work. Remove any attached ticks promptly and carefully with fine-tipped tweezers by gripping the tick. Do not use petroleum jelly, a hot match, or nail polish to remove the tick.

OSHA Lyme Disease Fact Sheet: www.osha.gov/OshDoc/data_LymeFacts/lymefac.pdf

West Nile Virus

West Nile virus is transmitted by the bite of an infected mosquito. Mild symptoms include fever, headache, and body aches, occasionally with a skin rash on the trunk of the body and swollen lymph glands. Symptoms of severe infection include headache, high fever, neck stiffness, stupor, disorientation, coma, tremors, convulsions, muscle weakness, and paralysis. You can protect yourself from mosquito bites in these ways:

- Apply Picaridin or insect repellent with DEET to exposed skin.
- Spray clothing with repellents containing DEET or permethrin. (Note: Do not spray permethrin directly onto exposed skin.)
- Wear long sleeves, long pants, and socks.
- Be extra vigilant at dusk and dawn when mosquitoes are most active.
- Get rid of sources of standing water (used tires, buckets) to reduce or eliminate mosquito breeding areas.

OSHA West Nile Virus Fact Sheet: www.osha.gov/OshDoc/data_Hurricane_Facts/west_nile_virus.pdf

OSHA Safety and Health Information Bulletin: "Workplace Precautions Against West Nile Virus"

http://www.osha.gov/dts/shib/shib082903b.pdf

Poison Ivy-Related Plants

Poison ivy, poison oak and poison sumac have poisonous sap (urushiol) in their roots, stems, leaves and fruits. The urushiol may be deposited on the skin by direct contact with the plant or by contact with contaminated objects, such as clothing, shoes, tools, and animals.

Approximately 85 percent of the general population will develop an allergy if exposed to poison ivy, oak or sumac. Forestry workers and firefighters who battle forest fires have developed rashes or lung irritations from inhaling the smoke of burning plants.

- Wear long-sleeved shirts and long pants, tucked into boots. Wear cloth or leather gloves.
- Apply barrier creams to exposed skin.
- Educate workers on the identification of poison ivy, oak, and sumac plants.
- Educate workers on signs and symptoms of contact with poisonous ivy, oak, and sumac.
- Keep rubbing alcohol accessible. It removes the oily resin up to 30 minutes after exposure.

OSHA Web Page—Poisonous Plants: www.osha.gov/SLTC/etools/sawmills/poison.html

This is one in a series of informational fact sheets highlighting OSHA programs, policies or standards. It does not impose any new compliance requirements. For a comprehensive list of compliance requirements of OSHA standards or regulations, refer to Title 29 of the Code of Federal Regulations. This information will be made available to sensory impaired individuals upon request. The voice phone is (202) 693-1999; teletypewriter (TTY) number: (877) 889-5627.

OSHA Occupational Safety and Health Administration

U.S. Department of Labor

www.osha.gov

(800) 321-OSHA

DSTM 9/2005

* Apply Hazard Mitigators for motor vehicles when utilizing heavy equipment (where applicable).

* Remember, heavy equipment has the right-of-way over regular vehicles. Yield to heavy equipment.

* Listen for warning signals on heavy equipment.

* Perform a visual inspection and walk around parked heavy equipment before moving to assure that equipment is in good condition and that there are no personnel on the ground that could be injured or objects that could be damaged by vehicle movement.

* Use hand rails and footholds when mounting and dismounting equipment,

* Follow appropriate equipment startup procedures. Brakes, steering, clutches and controls shall be tested.

* Pay attention to workers on the ground that may be in the path and provide warning prior to moving the equipment.

* Permit no one to ride on, or in, heavy equipment. This includes any portion of a backhoe, bulldozer, forklift or the back of a pickup truck, except in locations specifically designed for passenger use and approved by the SSO.

* Locate and flag underground utilities and buried cables, whenever possible, prior to intrusive activities (such as excavation and drilling).

* Keep haulage vehicles under positive control at all times while operating. Vehicles shall be kept in gear when descending grades.

* Do not use heavy equipment on slopes with steepness exceeding 3H:1V unless operations are consistent with manufacturer's recommendations (if the Owner's Manual is not with the equipment or does not specify slope operating procedures, see the SSO).

* Operate equipment with booms, blades, buckets, beds, etc., lowered or in a stable position while on slopes. Safety cables tethered to appropriate anchors shall be used for equipment working on steep slopes, where appropriate. The use of cables and anchors must be approved by the SSO.

* Use rollover protection and seat belts.

* Lower hydraulic systems (e.g., blades, rippers, etc.) to the ground, set brakes, and shut down equipment if malfunction occurs which impairs the ability to control a piece of equipment.

* Suspend in slings or support by hoists or jacks heavy equipment in need of repair. The equipment must also be blocked or cribbed before workers are permitted to work underneath. Working under heavy equipment can pose a crushing hazard.

* Shut off motors, do not allow smoking, and use proper dispensing equipment when refueling gasoline-operated equipment to prevent fire hazards.

* Wear hearing protection if required.

* Maintain eye contact with the heavy equipment operator when working near equipment.

* Be aware of changes in sound of equipment that may indicate a change in direction or activity.

* Know and practice proper lifting techniques.
* Limit continuous lifting of weights to 50 pounds or less. Lifts of heavier weights are permitted on an interim basis. Help shall be obtained for lifting of loads greater than 50 pounds. Mechanical equipment should be used on heavy materials when possible. If mechanical assistance is not available, adequate manpower to maintain the 50-pound limit per employee will be required.
* Do not lift more weight than can be handled comfortably, regardless of load weight. If necessary, help should be requested to lift a load so that the lifting is comfortable.
* Use drum dollies when moving drums or barrels.
* Inspect objects for grease or slippery substances before they are lifted to ensure that the object will not slip.
* Do not carry long, bulky or heavy objects without first verifying that the way is clear and that vision is unobstructed. This ensures that other persons or objects will not be struck by the load.
* Do not carry loads that cannot be seen over or around.
* Make sure workers are physically suited for the job before assigning jobs requiring heavy and/or frequent lifting. A person's lifting ability is not necessarily indicated by his height or weight.
* Before lifting an object, consideration should be given to how the object will be set down without pinching or crushing hands or fingers. For example, to place an object on a bench or table, the object should be set on the edge and pushed far enough onto the support so it will not fall. The object can then be released gradually as it is set down, and pushed in place with the hands and body from in front of the object.
* When two or more persons are handling the same object, one should "call the signals". All the persons on the lift should know who this person is and should warn him if anyone in the crew is about to relax his grip.
* Proper lifting includes:
  - *Feet* - Feet should be parted, with one foot alongside the object being lifted and one behind. Feet should be comfortably spread to give greater stability. The rear foot should be in position for the upward thrust of the lift.
  - *Back* - Use the sit-down position and keep the back straight, but remember that "straight" does not mean "vertical". A straight back keeps the spine, back muscles, and organs of the body in correct alignment. It minimizes the compression of the abdomen that can cause a hernia.
  - *Arms and Elbows* - The load should be drawn close, and the arms and elbows should be tucked into the side of the body. When the arms are held away from the body, they lose much of their strength and power. Keeping the arms tucked in also helps keep body

weight centered.

- *Palm* - The palm grip is one of the most important elements of lifting. The fingers and the hand are extended around the object to be lifted. Use the full palm; fingers alone have very little power.
- *Chin* - Tuck in the chin so the neck and head continue the straight back line. Keep the spine straight and firm.
- *Body Weight* - Position the body so its weight is centered over the feet. This provides a more powerful line of thrust and assures better balance. Start the lift with a thrust of the rear foot. Shift hand positions so the object can be boosted after knees are bent. Straighten knees as object is lifted or shifted to the shoulders. To change direction, lift the object to a carrying position, and turn the entire body, including the feet. Do not twist your body. In repetitive work, both the person and the material should be positioned so that the worker will not have to twist his body when moving the material. If the object is too heavy to be handled by one person, get help.

* Know the effects of noise, including:
  - Workers being startled, annoyed, or distracted.
  - Physical damage to the ear, pain, and temporary and/or permanent hearing loss.
  - Communication interference that may increase potential hazards due to the inability to warn of danger and proper safety precautions to be taken.
* Utilize feasible administrative or engineering controls if workers are subjected to noise exceeding an 8-hour, time-weighted average (TWA) sound level of 90 dBA (decibels on the A-weighted scale).
* Implement the company Hearing Conservation Program when noise exposures equal or exceed an 8-hour, TWA sound level of 85 dBA.
* Wear hearing protection where applicable.

* Route cords, hoses, and cables supplying power to portable power tools to prevent tripping hazards or contact with equipment or machinery.
* Avoid abusing the power supply lines of portable equipment. Excessive scraping, kicking, stretching, and exposure to grease and oils will damage lines or cause them to fail prematurely, and possibly injure the operator or fellow workers.
* Inspect cords, hoses, and cables for wear or deterioration prior to each use. Defective power supply lines shall not be used.
* Do not use electrically powered tools near flammable materials or explosive atmosphere, unless they are of the explosion-proof type meeting the National Electrical Code for explosive area. Employees operating the equipment should be aware of sparks and or metal fragments when using this equipment.
* Ground-check portable electric power tools with metal cases initially and quarterly. At no time will electrical power equipment be operated without proper grounding. All electrical cords and cables, including extension cords, shall include a third wire ground.
* Prohibit operations of electric tools in wet or damp areas except in unusual emergency circumstances. When operation is required in wet or damp conditions, extreme care will be exercised to ensure effective grounding of equipment and proper use of protective gear.
* Size cords adequately for length and the electrical demand of the tool. Otherwise, they may cause a fire hazard.
* Limit use of tools to the purpose for which the tool is intended (e.g., wrenches will not be used as hammers). Defective tools (e.g., with mushroomed heads or split or defective handles) shall not be used.
* Protect tools from corrosion damage.
* Keep tools free of accumulated dirt and unnecessary oil or grease. Moving and adjustable parts shall be lubricated frequently to prevent wear and misalignment.
* Replace or repair damaged or worn tools promptly. Temporary or makeshift repairs are prohibited. At the discretion of the supervisor, discard all tools that cannot be repaired safely. Supervisors shall decide when to discard a tool.
* Store tools in suitable boxes or containers. Loose tools shall not be stored on ledges or where they might fall. Tools shall be picked up when a job is completed and not be allowed to accumulate in the work area. Store all tools in a safe place.
* Do not use conducting (i.e., metal) tools around electrical facilities. Insulated tools, approved for electrical work, shall be tested frequently for proper insulation.

* Select the correct size and type of wrench for each job. Wrench handles shall not be extended with a pipe or cheater because the jaws will spread.
* Repair mushroomed punch, drift and chisel heads. Mushroomed heads represent crystallized metal that will break and fly off when struck.
* Wear eye protection at all times.

* Wear the proper footwear for the task at hand.
* Pay attention to the environment and use caution when moving about on site.
* Follow the easiest and safest path to the destination.
* Follow good housekeeping procedures.
* Remove objects that pose tripping hazards where practicable.
* Prevent water accumulation where practicable.

The following sections address the major workplace fire hazards and the procedures for controlling the hazards.

A. Electrical Fire Hazards

Electrical system failures and the misuse of electrical equipment are leading causes of workplace fires. Fires can result from loose ground connections, wiring with frayed insulation, or overloaded fuses, circuits, motors, or outlets.

To prevent electrical fires, employees shall:

1. Make sure that worn wires are replaced.
2. Use only appropriately rated fuses.
3. Never use extension cords as substitutes for wiring improvements.
4. Use only approved extension cords [i.e., those with the Underwriters Laboratory (UL) or Factory Mutual (FM) label].
5. Check wiring in hazardous locations where the risk of fire is especially high.
6. Check electrical equipment to ensure that it is either properly grounded or double insulated.
7. Ensure adequate spacing while performing maintenance.

B. Portable Heaters

All portable heaters shall be approved by **SSO**. Portable electric heaters shall have tip-over protection that automatically shuts off the unit when it is tipped over. There shall be adequate clearance between the heater and combustible furnishings or other materials at all times.

C. Office Fire Hazards

Fire risks are not limited to industrial facilities. Fires in offices have become more likely because of the increased use of electrical equipment, such as computers and fax machines. To prevent office fires, employees shall:

1. Avoid overloading circuits with office equipment.
2. Turn off nonessential electrical equipment at the end of each workday.
3. Keep storage areas clear of rubbish.
4. Ensure that extension cords are not placed under carpets.
5. Ensure that trash and paper set aside for recycling is not allowed to accumulate.

D. Cutting, Welding, and Open Flame Work

The **SSO**will ensure the following:

1. All necessary hot work permits have been obtained prior to work beginning.
2. Cutting and welding are done by authorized personnel in designated cutting and welding areas whenever possible.

3. Adequate ventilation is provided.
4. Torches, regulators, pressure-reducing valves, and manifolds are UL listed or FM approved.
5. Oxygen-fuel gas systems are equipped with listed and/or approved backflow valves and pressure-relief devices.
6. Cutters, welders, and helpers are wearing eye protection and protective clothing as appropriate.
7. Cutting or welding is prohibited in sprinklered areas while sprinkler protection is out of service.
8. Cutting or welding is prohibited in areas where explosive atmospheres of gases, vapors, or dusts could develop from residues or accumulations in confined spaces.
9. Cutting or welding is prohibited on metal walls, ceilings, or roofs built of combustible sandwich-type panel construction or having combustible covering.
10. Confined spaces such as tanks are tested to ensure that the atmosphere is not over ten percent of the lower flammable limit before cutting or welding in or on the tank.
11. Small tanks, piping, or containers that cannot be entered are cleaned, purged, and tested before cutting or welding on them begins.
12. Fire watch has been established.

E. Flammable and Combustible Materials

The **SSO** shall regularly evaluate the presence of combustible materials at.

Certain types of substances can ignite at relatively low temperatures or pose a risk of catastrophic explosion if ignited. Such substances obviously require special care and handling.

1. Class A combustibles.

These include common combustible materials (wood, paper, cloth, rubber, and plastics) that can act as fuel and are found in non-specialized areas such as offices.

To handle Class A combustibles safely:

a. Dispose of waste daily.
b. Keep trash in metal-lined receptacles with tight-fitting covers (metal wastebaskets that are emptied every day do not need to be covered).
c. Keep work areas clean and free of fuel paths that could allow a fire to spread.
d. Keep combustibles away from accidental ignition sources, such as hot plates, soldering irons, or other heat- or spark-producing devices.
e. Store paper stock in metal cabinets.
f. Store rags in metal bins with self-closing lids.
g. Do not order excessive amounts of combustibles.
h. Make frequent inspections to anticipate fires before they start.

Water, multi-purpose dry chemical (ABC), and halon 1211 are approved fire extinguishing agents for Class A combustibles.

2. Class B combustibles.

These include flammable and combustible liquids (oils, greases, tars, oil-based paints, and lacquers), flammable gases, and flammable aerosols.

To handle Class B combustibles safely:

a. Use only approved pumps, taking suction from the top, to dispense liquids from tanks, drums, barrels, or similar containers (or use approved self-closing valves or faucets).
b. Do not dispense Class B flammable liquids into containers unless the nozzle and container are electrically interconnected by contact or by a bonding wire. Either the tank or container must be grounded.
c. Store, handle, and use Class B combustibles only in approved locations where vapors are prevented from reaching ignition sources such as heating or electric equipment, open flames, or mechanical or electric sparks.
d. Do not use a flammable liquid as a cleaning agent inside a building (the only exception is in a closed machine approved for cleaning with flammable liquids).
e. Do not use, handle, or store Class B combustibles near exits, stairs, or any other areas normally used as exits.
f. Do not weld, cut, grind, or use unsafe electrical appliances or equipment near Class B combustibles.
g. Do not generate heat, allow an open flame, or smoke near Class B combustibles.
h. Know the location of and how to use the nearest portable fire extinguisher rated for Class B fire.

Water should not be used to extinguish Class B fires caused by flammable liquids. Water can cause the burning liquid to spread, making the fire worse. To extinguish a fire caused by flammable liquids, exclude the air around the burning liquid. The following fire-extinguishing agents are approved for Class B combustibles: carbon dioxide, multi-purpose dry chemical (ABC), halon 1301, and halon 1211. (**NOTE:** Halon has been determined to be an ozone-depleting substance and is no longer being manufactured. Existing systems using halon can be kept in place.)

F. Smoking

Smoking is prohibited at the facility.

–

- Be aware of chemicals of concern that can directly injure the skin or that can be absorbed into the bloodstream and subsequently transported to other organs.
- Know that skin absorption is enhanced by abrasions, cuts, heat, and moisture.
- Do not wear contact lenses in contaminated atmospheres (since they may trap chemicals against the eye surface). The eye is particularly vulnerable because airborne chemicals can dissolve in its moist surface and be carried to the rest of the body through the bloodstream (capillaries are very close to the surface of the eye).
- Keep hands away from face.
- Minimize contact with liquid and solid chemicals.

Wear protective clothing (e.g., suits and gloves) as required by the Health and Safety Plan

– .

* Adhere to the 0.05 mg/m^3 action level for dust

* Be aware that the lungs are extremely vulnerable to chemical agents. Even substances that do not directly affect the lungs may pass through lung tissue into the bloodstream, where they are transported to other vulnerable areas of the body.

* Know the odor and odor threshold of the chemicals of concern. Some toxic chemicals present in the atmosphere may not be detected by human senses (i.e., they may be odorless and colorless, and their toxic effects may not produce any immediate symptoms).

* Use engineering controls to reduce vapor concentrations (e.g., ventilation) or dusty atmospheres (e.g., dust suppression techniques).

* Wear respiratory protection as indicated by air monitoring results and/or as required by the Health and Safety Plan.

* Conduct work zone air monitoring as required by the Health and Safety Plan.

Appendix E

Personal Protective Equipment Per Task

Applies to Task: ☒ **1.Excavation, soil sampling, well installation, GW sampling and capping**

☒ *Modified Level D**		☐ *Level C**		☐ *Level B**	
Equipment	***Material/ Type***	***Equipment***	***Material/Type***	***Equipment***	***Material/Type***

OSHA Onsite Training Documentation Form

After completion of the OSHA 40-hour training class, 29 CFR 1910.120 states that 3 days of onsite experience under the direct supervision of a trained, experienced supervisor are required to complete the OSHA HAZWOPER training requirements. This form is to be used to document this requirement, and shall be completed by a qualified supervisor (i.e., someone who has completed the 8-hour supervisory training class). Upon completion of this form, please submit it to the EarthCon project manager.

Health & Safety Inspection Checklist

Project: _____ Date: _____

Inspected by: _____

Category	***Observations/Corrective Actions (N/A, if Not Applicable)***
Pre-field activity briefing records are current	
Tailgate meeting records are current	
Training/medical surveillance/respiratory protection records are current	
Site map is posted	
Buddy system is implemented	
Work zones are identified	
Site access is controlled	
Visitors are escorted	
On-site/off-site communications are in working order	
Safe work practices are implemented	
Any additional hazards incurred?	
Air monitoring equipment is in working condition	
Air monitoring records are being recorded in field logbook	
Air monitoring calibration records are recorded in field logbook	
PPE storage area is neat and organized	
Standard operating procedures are implemented	
Housekeeping at decontamination zone is appropriate	
Decontamination procedures are implemented	
Emergency response equipment is in working condition	
Route to hospital is posted	
Confined space entry program is implemented	
Spill containment equipment is available	
Chemical inventory is up to date	
Safety data sheets are available	
Primary and secondary containers are properly labeled	
Housekeeping at the chemical storage area is appropriate	

APPENDIX B

FEDERAL (RCRA-TCLP) AND STATE (TITLE 22-STLC,TTLC) HAZARDOUS WASTE CRITERIA

Inorganic Parameters/Metals (Methods: EPA 6010B, 7000 Series)

Parameters	TCLP mg/l	STLC mg/l	TTLC[a] mg/kg
Antimony		15	500
Arsenic	5.0	5.0	500
Barium	100	100	10,000[b]
Beryllium		0.75	75
Cadmium	1.0	1.0	100
Chromium	5	5 (560)	2,500
Cobalt		80	8,000
Copper		25	2,500
Lead	5.0	5.0	1,000
Mercury	0.2	0.2	20
Molybdenum		350	3,500
Nickel		20	2,000
Selenium	1.0	1.0	100
Silver	5	5	500
Thallium		7.0	700
Vanadium		24	2,400
Zinc		250	5,000
Chromium (VI)		5	500
Fluoride Salts		180	18,000
Asbestos			1%

Volatiles (Method: EPA 8260B)

Benzene	0.5		
Carbon tetrachloride	0.5		
Chlorobenzene	100.0		
Chloroform	6.0		
1,4-Dichlorobenzene	7.5		
1,2-Dichloroethane	0.5		
1,1-Dichloroethylene	0.7		
Methyl ethyl ketone (MEK)	200.0		
Tetrachloroethylene (PCE)	0.7		
Trichloroethylene (TCE)	0.5	204	2,040
Vinyl chloride	0.2		

[a] *Values expressed as wet weight* [b] *Excluding barium sulfate.*

Chlorophenoxy Acid Herbicides (Method: EPA 8151A)

Compound	TCLP mg/l	STLC mg/l	TTLC[a] mg/kg
2,4-Dichlorophenoxyacetic acid	10.0	10	100
2,4,5-TP (Silvex)	1.0	1.0	10

Organochlorine Pesticides / PCBs (Method: EPA 8081A)

Aldrin		0.14	1.4
Chlordane	0.03	0.25	2.5
DDT/DDE/DDD		0.1	1.0
Dieldrin		0.8	8.0
Endrin	0.02	0.02	0.2
Heptachlor (& its Epoxide)	0.008	0.47	4.7
Kepone		2.1	21
Lindane	0.4	0.4	4.0
Methoxychlor	10.0	10	100
Mirex		2.1	21
Toxaphene	0.5	0.5	5.0

Semi-Volatiles (Method: EPA 8270C)

o-Cresol	200.0		
m-Cresol	200.0		
p-Cresol	200.0		
Cresols (Total)	200.0		
2,4-Dinitrotoluene	0.13		
Hexachlorobenzene	0.13		
Hexachlorobutadiene	0.5		
Hexachloroethane	3.0		
Nitrobenzene	2.0		
Pentachlorophenol	100.0	1.7	17
Pyridine	5.0		
2,4,5-Trichlorophenol	400.0		
2,4,6-Trichlorophenol	2.0		

Miscellaneous (Methods: EPA 8280*, CADHS-LUFT/7420)**

Dioxin (2,3,7,8-TCDD)*		0.001	0.01
Organic Lead Compounds**			13

See Sec 22-66261.27.(a).(7) for Additional Toxicity Compound/Criteria. Title (26) 22 Toxicity Criteria Section 22-66261.24

HAZARDOUS WASTE CHARACTERISTICS

	Matrix	Method	Criteria
Ignitability (40 CFR 261.21) (T22: 22-66261.21)	Liquid	ASTM D-93	Exhibits the characteristic of ignitability: if it is a liquid, and has a flash point <60°C (140°F). Aqueous solutions containing >24% alcohol by volume are considered ignitable and do not require flash point testing.
	Solid		Exhibits the characteristic of ignitability: if it is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard.
Corrosivity (40 CFR 261.22) (T22: 22-66261.22)	Liquid	EPA 9040 EPA 1110, NACE	Exhibits the characteristic of corrosivity if it is aqueous and has a pH ≤ 2 or ≥12.5 (Sec 260.20 and 260.21) If it corrodes steel (SAE 1020) at rate >6.35 mm or 0.250 in. per year at a test temperature of 55°C (130°F)
	Solid	EPA 9045	If it is not aqueous and, when mixed with an equivalent weight of water, produces a solution having a pH ≤ 2 or ≥12.5
Reactivity (40 CFR 261.22) (T22:22-66261.23)		SW846, Chapter 7	Exhibits the characteristic of reactivity: if the waste has any of the following properties: 1. It is normally unstable and readily undergoes violent change without detonating. 2. It reacts violently with water. 3. It forms potentially explosive mixtures with water. 4. When mixed with water, it generates toxic gases, vapors, or fumes in a quantity sufficient to present a danger to human health or environment. 5. It is a cyanide or sulfide bearing waste which, when exposed to pH conditions between 2 and 12.5 can generate toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.
		Sec.7.3.3.	The current EPA guidance level is: Total releasable cyanide: 250 mg HCN/kg waste. The current EPA guidance level is: Total releasable sulfide: 500 mg H_2S/kg waste. 6. It is readily capable of detonation or explosive reaction if it is a subjected to a strong initiating source or if heated under confinement. 7. It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure 8. It is a forbidden explosive, as defined in 49 CFR 173.51 or a class A or B explosive, as defined in 49 CFR 173.53 and 173.88.

TOXICITY Fish {Title 26 sec 66261.24(6)} **SMWW 18th Ed.** A waste, or material is toxic and hazardous if (6) has an acute aquatic 96-Hour LC50 less than 500mb/L.

NOTE: Criteria and limits are abbreviated for quick reference purposes only. Specific sources should always be referenced for a detailed, complete and up-to-date listing of regulatory criteria.

San Francisco, CA 94105-3901

SPACE ABOVE THIS LINE RESERVED FOR RECORDER'S USE

LAND USE COVENANT AND AGREEMENT
ENVIRONMENTAL RESTRICTIONS

County of Riverside, Assessor Parcel Number(s): 107-030-022-3
Clow Valve Company
(Department Site Code 600876-48)

This Land Use Covenant and Agreement ("Covenant") is made by and between Clow Valve Company (the "Covenantor"), the current owner of property located at 1375 Magnolia Avenue, Corona in the County of Riverside, State of California (the "Property"), and the Department of Toxic Substances Control (the "Department"). Pursuant to Civil Code section 1471, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined

in Health and Safety Code section 25260. The Covenantor and the Department hereby agree that, pursuant to Civil Code section 1471 and Health and Safety Code section 25202.5 the use of the Property be restricted as set forth in this Covenant and that the Covenant shall conform with the requirements of California Code of Regulations, title 22, section 67391.1. With respect to the Polychlorinated Biphenyls (PCBs) at the Property, the provisions of this Covenant shall be for the benefit of, and shall be enforceable by, the United States Environmental Protection Agency ("U.S. EPA"), as a third party beneficiary pursuant to general contract law, including but not limited to Civil Code section 1559.

ARTICLE I
STATEMENT OF FACTS

1.01. Property Location. The Property, located at 1375 Magnolia Avenue, Corona, County of Riverside, California, that is subject to this Covenant, totaling approximately 16 acres, is more particularly described in the attached Exhibit A, "Legal Description of the Property", and depicted in Exhibit B, "Plot Plan". The Property is located in the area generally bounded by Magnolia Avenue on the south, railroad tracks and El Camino Avenue on the west, and a storm water channel towards the north and east. The Property is also identified as County of Riverside, Assessor's Parcel Number 107-030-022-3.

(a) A limited portion of the Property is more particularly described in Exhibit C, "Legal Description of the Capped Property", and illustrated in Exhibit D, "Sketch", referred to as the "Capped Property". The "Capped Property", totaling approximately 9.964 acres of soil impacted by hazardous substances, is located on the northern portion of the Property now generally bounded by railroad and El Camino Avenue on the west, storm channel on the north and east. Its southern border runs parallel to Magnolia Avenue, approximately 195 feet north of Magnolia Avenue.

(b) A limited portion of the Property is more particularly described in Exhibit D as "Area 1" a Former Asphalt Dip Tank and as "Area2" a PCB Transformer area. Former Asphalt Dip Tank was previously located, approximately 620 feet north of Magnolia

Avenue, 510 feet east of El Camino Avenue, and 200 feet west of the storm channel western edge. The PCB Transformer area is located approximately 240 feet west of the storm channel western edge, 510 feet east of El Camino Avenue, and 600 feet north of Magnolia Avenue.

1.02. Hazardous Substances. Hazardous wastes, or constituents of hazardous waste, including Polychlorinated Biphenyl's (PCBs) (Total Aroclors up to a maximum of 2,220 milligrams per kilogram (mg/kg)), Total Petroleum Hydrocarbons (TPH) (up to a maximum of 9,300 mg/kg), arsenic (up to a maximum of 52.9 mg/kg), cadmium (up to a maximum of 43.9 mg/kg), hexavalent chromium (up to a maximum of 6.6 mg/kg), and lead (up to a maximum of 7,360 mg/kg) in soil, and volatile organic compounds, such as tetrachloroethylene (PCE) (up to a maximum of 3 microgram/liter (ug/l)), in the soil gas remain at the Property above levels acceptable for unrestricted land use.

As of February 25, 2021, PCB concentrations in the soil at the Former Asphalt Dip Tank Bottom and PCB Transformer exceed the level for unrestricted use and the USEPA's site-specific industrial risk-based threshold of 15 mg/kg. PCB concentrations present in soils of the PCB Transformer area exceed the California hazardous waste level of Total Threshold Limit Concentration (TTLC) of 50 mg/kg.

As of February 25, 2021, lead concentrations detected in the soil at the Capped Property exceeded 320 milligrams per kilogram, a level deemed safe by DTSC for the continued use of the Site for industrial use and the TTLC of 1,000 mg/kg. A Human Health Risk Assessment (HHRA) was performed to evaluate the potential health risks associated with direct exposure of workers at the Property to soil containing Chemicals of Potential Concern (COPCs). Based on the HHRA, potential health risk to a commercial or industrial worker is $1x10^{-5}$ and to a construction worker is $2x10^{-4}$. The estimated Hazard Index (HI) for a commercial/industrial worker at the Property is 1.9, primarily due to the potential exposure to PCBs and cadmium. The estimated HI for a construction worker at the Property is 458. U.S. EPA recommends an HI of 1 or below and health risk below $1x10^{-6}$. The calculated risks were primarily associated with direct exposure to impacted soil and associated soil ingestion or dermal exposure, both of which will be eliminated by installation and maintenance of the capping materials described herein.

1.03. Remediation of Property. This Property has been investigated and/or remediated under the Department's oversight. The Department approved a Corrective Measures Study, dated February 19, 2018, prepared by EarthCon Consultants CA, Inc, in accordance with Health and Safety Code, Division 20, Chapter 6.5. The remediation activities at the Property include:

a) Construction of an approximately 5,000 square foot, 6-inch thick concrete or 3-inch thick asphalt cap in two areas encompassing approximately one-half acre, identified as Areas of Concern (AOCs), AOC-1 and AOC-5 (see Exhibit B).
b) Repair and maintenance of the existing asphalt and/or concrete surface cover of the Capped Property;
c) Soil Management Plan and Operation and Maintenance Plan preapproval by the Department for all future construction work involving soil excavation at the Capped Property; and,
d) Land use restriction recorded with the Riverside County Assessor's Office to prohibit sensitive uses.

1.04. PCB Remediation overseen by U.S. EPA. In addition to the corrective action measures for the Property under the Department's oversight, U.S. EPA approved with conditions the Risk-Based Approval Application submitted by EarthCon Consultants, CA, Inc. on behalf of Clow Valve Company dated April 9, 2019 to remediate PCBs at the Property. PCBs are regulated by the U.S. EPA pursuant to the Toxic Substances Control Act (TSCA), 15 U.S.C. Section 2601 et seq., and the PCB regulations at 40 Code of Federal Regulations (CFR) Part 761. This document is available in Envirostor, an online document repository at https://www.envirostor.dtsc.ca.gov/public/deliverable_documents/1318022012/2019-04-23_EPA%20to%20Clow%20Valve_761.61%28c%29_SIGNED.pdf

1.05. Basis for Environmental Restrictions. As a result of the presence of Hazardous Wastes, PCBs, TPH, arsenic, cadmium, lead, and PCE, which are also hazardous materials as defined in Health and Safety Code section 25260, at the Property, the Department has concluded that it is reasonably necessary to restrict the

use of the Property in order to protect present or future human health or safety or the environment, and that this Covenant is required as part of the Department-approved remedy for the Property. The Department has also concluded that the Property, as remediated and when used in compliance with the Environmental Restrictions of this Covenant, does not present an unacceptable risk to present and future human health or safety or the environment.

1.06. Land Use Covenant. A land use covenant is necessary to preclude potential users' exposure to hazardous substances that remain at the Property and to complete the remedy selected in the Corrective Measures Study. U.S. EPA, with the concurrence of the Department, has concluded that the Property, remediated to the goals presented in the Corrective Measures Study, subject to the restrictions of this Covenant, and used in compliance with such restrictions, does not present an unacceptable threat to present or future human health or safety or the environment. Additional information about the Site, including the 2019 PCB risk analysis by U.S. EPA, is available at the Envirostor, an online repository listed in paragraph 1.04, above.

ARTICLE II
DEFINITIONS

2.01. Department. "Department" means the California Department of Toxic Substances Control and includes its successor agencies, if any.

2.02. Environmental Restrictions. "Environmental Restrictions" means all protective provisions, covenants, restrictions, requirements, prohibitions, and terms and conditions as set forth in this Covenant.

2.03. Improvements. "Improvements" includes, but is not limited to buildings, structures, roads, driveways, improved parking areas, wells, pipelines, or other utilities.

2.04. Lease. "Lease" means lease, rental agreement, or any other document that creates a right to use or occupy any portion of the Property.

2.05. Occupant. "Occupant" or "Occupants" means Owner and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.06. Owner. "Owner" or “Owners” means the Covenantor, and any successor in interest including any heir and assignee, who at any time holds title to all or any portion of the Property.

2.07. U.S. EPA. “U.S. EPA” means the United States Environmental Protection Agency, and includes its successor agencies, if any.

ARTICLE III
GENERAL PROVISIONS

3.01. Runs with the Land. This Covenant sets forth Environmental Restrictions that apply to and encumber the Property and every portion thereof no matter how it is improved, held, used, occupied, leased, sold, hypothecated, encumbered, or conveyed. This Covenant: (a) runs with the land pursuant to Civil Code section 1471 and Health and Safety Code section 25202.5; (b) inures to the benefit of and passes with each and every portion of the Property; (c) is for the benefit of, and is enforceable by the Department; and (d) is imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding upon Owners/Occupants. This Covenant: (a) binds all Owners of the Property, their heirs, successors, and assignees; and (b) the agents, employees, and lessees of the Owners and the Owners’ heirs, successors, and assignees. Pursuant to Civil Code section 1471, all successive Owners of the Property are expressly bound hereby for the benefit of the Department; this Covenant, however, is binding on all Owners and Occupants, and their respective successors and assignees, only during their respective periods of ownership or occupancy except that such Owners or Occupants shall continue to be liable for any violations of, or non-compliance with, the Environmental Restrictions of this Covenant or any acts or omissions during their ownership or occupancy.

3.03. Written Notice of the Presence of Hazardous Substances. Prior to the sale, lease, assignment, or other transfer of the Property, or any portion thereof, the Owner, lessor, or sublessor shall give the buyer, lessee, or sublessee written notice of the existence of this Covenant and its Environmental Restrictions.

3.04. Incorporation into Deeds and Leases. This Covenant shall be

incorporated by reference in each and every deed and Lease for any portion of the Property.

3.05. Conveyance of Property. The Owner and new Owner shall provide Notice to the Department and the U.S. EPA not later than 30 calendar days after any conveyance or receipt of any ownership interest in the Property (excluding Leases, and mortgages, liens, and other non-possessory encumbrances). The Notice shall include the name and mailing address of the new Owner of the Property and shall reference the site name and site code as listed on page one of this Covenant. The notice shall also include the Assessor's Parcel Number(s) noted on page one. If the new Owner's property has been assigned a different Assessor Parcel Number, each such Assessor Parcel Number that covers the Property must be provided. The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect proposed conveyance, except as otherwise provided by law or by administrative order.

3.06. Costs of Administering the Covenant to Be Paid by Owner. The Department has already incurred and will in the future incur costs associated with this Covenant. Therefore, the Covenantor hereby covenants for the Covenantor and for all subsequent Owners that, pursuant to California Code of Regulations, title 22, section 67391.1(h), the Owner agrees to pay the Department's costs in administering, implementing and enforcing this Covenant.

ARTICLE IV
RESTRICTIONS AND REQUIREMENTS

4.01. Prohibited Uses. The Property shall not be used for any of the following purposes without prior written approval by the Department pursuant to Health and Safety Code section 25227 and prior written notice to U.S. EPA :

(a) A residence, including single or multifamily housing, mobile homes, or factory-built housing constructed or installed for use as residential human habitation.

(b) A hospital for humans.

(c) A public or private school for persons under 18 years of age.

(d) A day care center or a playground for children.

4.02. Soil Management. Soil management activities at the Capped Property are subject to the following requirements in addition to any other applicable Environmental Restrictions:

(a) No activities that will disturb the soil at or below grade or below concrete (e.g., excavation, grading, removal, trenching, filling, earth movement, mining, or drilling) shall be allowed at the Property without a Soil Management Plan pre-approved by the Department and U.S. EPA in writing.

(b) Any soil brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law.

4.03. Prohibited Activities. The following activities shall not be conducted at the Property:

(a) Drilling for any water, oil, or gas without prior written approval by the Department.

(b) Extraction or removal of groundwater without a Groundwater Management Plan pre-approved by the Department in writing.

(c) Activity that may alter, interfere with, or otherwise affect the integrity or effectiveness of, or the access to, monitoring, operation or maintenance of the concrete cover at the Capped Property without prior written approval of the Department and U.S. EPA.

4.04. Written Notice of Covenant. Prior to any sale, lease, or rental of any portion of the Property, the Owner shall provide a copy of this Covenant to the buyer, lessee, or renter to ensure that the buyer, lessee, or renter is on notice of the restrictions and requirements of this Covenant. Prior to recordation of any easement on any portion of the Property, the Owner shall provide a copy of this Covenant to the easement holder to ensure that the easement holder is on notice of the restrictions and requirements of this Covenant. Covenantor shall also provide a copy of this Covenant to all existing Occupants and easement holders of record within 30 days of recording this Covenant.

4.05. Access for Department. The Department shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the Department in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect the Department's right of entry and access, or authority to take response actions, under any applicable State Law.

4.06. Access for U.S EPA. The U.S. EPA shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the U.S. EPA in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect U.S. EPA's right of entry and access, or U.S. EPA's authority to take actions, under any applicable law.

4.07. Access for Implementing Operation and Maintenance. The entity or person responsible for implementing the operation and maintenance activities, if any, shall have reasonable right of entry and access to the Property for the purpose of implementing such operation and maintenance activities until the Department determines that no further operation and maintenance activity is required.

4.08. Inspection and Reporting Requirements. The Owner shall conduct an annual inspection of the Property verifying compliance with this Covenant; shall submit an annual inspection report to the Department for its approval by January 15th of each year; and also send a copy to U.S. EPA. Attached as Exhibit F is a sample format for an annual inspection report. The annual inspection report must include the dates, times, and names of those who conducted the inspection and reviewed the annual inspection report. It also shall describe how the observations that were the basis for the statements and conclusions in the annual inspection report were performed (e.g., drive by, fly over, walk in, etc.). If any violation is noted, the annual inspection report must detail the steps taken to correct the violation and return to compliance. If the Owner identifies any violations of this Covenant during the annual inspection or at any other

time, the Owner must within 10 calendar days of identifying the violation: (a) determine the identity of the party in violation; (b) send a letter advising the party of the violation of the Covenant; and (c) demand that the violation cease immediately. Additionally, a copy of any correspondence related to the violation of this Covenant shall be sent to the Department and U.S. EPA within 10 calendar days of its original transmission.

4.09. Five-Year Review. In addition to the annual reviews noted above, after a period of five (5) years from January 15, 2021 and every five (5) years thereafter, Owner shall submit a Five-Year Review report documenting its review of the remedy implemented and its evaluation to determine if human health and the environment are being adequately protected by the remedy as implemented. The Owner shall submit this report to DTSC, and submit a copy to U.S. EPA. The report shall describe the results of all inspections, sampling analyses, tests and other data generated or received by Owner and evaluate the adequacy of the implemented remedy in protecting human health and the environment. As a result of any review work performed, Department may require Owner to perform additional review work or modify the review work previously performed by Owner.

4.10. Changes to Use or Condition of Property. Any changes to land use, movement of PCB contaminated soils, or discovery of new contamination requires notification to, and may require additional approval from, the U.S. EPA by the Owner and/or Occupant.

4.11. Access for Five-Year Reviews. The entity, person or persons responsible for Five-Year Reviews shall have reasonable right of entry and access to the Property for the purpose of implementing these activities. Such right of entry and access shall continue until such time as the U.S. EPA and DTSC both determine that no further Five-Year Review activities are required.

ARTICLE V
ENFORCEMENT

5.01. Enforcement. Failure of the Owner or Occupant to comply with this Covenant shall be grounds for the Department to require modification or removal of any Improvements constructed or placed upon any portion of the Property in violation of this

Covenant. Violation of this Covenant, such as failure to submit (including submission of any false statement) record or report to the Department, shall be grounds for the Department to pursue administrative, civil, or criminal actions, as provided by law.

5.02. Enforcement Rights of U.S. EPA as Third-Party Beneficiary. U.S. EPA, as a third-party beneficiary, has the right to enforce the Environmental Restrictions contained herein.

ARTICLE VI
VARIANCE, REMOVAL AND TERM

6.01. Variance from Environmental Restrictions. Any person may apply to the Department for a written variance from any of the Environmental Restrictions imposed by this Covenant. Such application shall be made in accordance with Health and Safety Code section 25223. A copy of the application shall be submitted to the U.S. EPA simultaneously with the application submitted to the Department. No variance may be granted under this paragraph without prior notice and opportunity to comment by U.S. EPA.

6.02 Termination, Modification, and/or Removal of Environmental Restrictions. Any person may apply to the Department to terminate, modify, and/or remove any or all of the Environmental Restrictions imposed by this Covenant or terminate the Covenant in its entirety. Such application shall be made in accordance with Health and Safety Code section 25224 and a copy of the application shall be submitted to U.S. EPA simultaneously with the application submitted to the Department. No termination may be granted under this paragraph without prior notice to and opportunity to comment by U.S. EPA.

6.03 Term. Unless ended in accordance with paragraph 6.02, by law, or by the Department in the exercise of its discretion, this Covenant, after providing notice to and an opportunity to comment by U.S. EPA, shall continue in effect in perpetuity.

ARTICLE VII
MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be

construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof, to the general public or anyone else for any purpose whatsoever.

7.02. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of Riverside within 10 calendar days of the Covenantor's receipt of a fully executed original. The Covenantor shall also provide copies showing the County Recorder's tracking information of its recording (i.e., document number or book and page number information) to the Department and U.S. EPA within ten (10) days of receiving it from the County Recorder's Office.

7.03. Notices. Whenever any person gives or serves any Notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (a) when delivered, if personally delivered to the person being served or to an officer of a corporate party being served; or (b) five calendar days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

To U.S. EPA:
U.S. Environmental Protection Agency
Region IX
Attention**:** PCB Coordinator (Land Chemicals and Redevelopment Division)
75 Hawthorne Street
San Francisco, CA 94105-3901

Any party may change its address or the individual to whose attention a Notice is to be

sent by giving advance written Notice in compliance with this paragraph.

7.04. Partial Invalidity. If this Covenant or any of its terms are determined by a court of competent jurisdiction to be invalid for any reason, the surviving portions of this Covenant shall remain in full force and effect as if such portion found invalid had not been included herein.

7.05. Statutory References. All statutory or regulatory references include successor provisions.

7.06. Incorporation of Exhibits. All exhibits and attachments to this Covenant are incorporated herein by reference.

IN WITNESS WHEREOF, the Covenantor and the Department hereby execute this Covenant.

LAND USE COVENANT
SAMPLE ANNUAL INSPECTION REPORT (2 Pages)

Site name:

Site address:

Current Site owner:

Date and times of inspection:

Name(s) of individual(s) who performed inspection:

How inspection observations were made (e.g. drive-by, fly-over, walking the Property):

1. Since the last annual inspection, has there been a change in the land use, such that there are now residences, a hospital for humans, a public or private school for persons under 21 years of age, or a day care center for children on the restricted Property?
   ☐ Yes ☐ No ☐ Not an applicable restriction

2. Since the last annual inspection, has the soil been disturbed on the restricted Property? Was evidence of soil disturbance observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

3. Since the last annual inspection, has there been any drilling on the restricted Property? Was evidence of drilling observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

Cap Condition

4. Since the last annual inspection, has there been any damage to, disturbance of, or modifications to the existing building foundation and/or surrounding pavement that serves as the cap over contaminated soil?
   ☐ Yes ☐ No

5. Has there been any damage to, disturbance of, or modifications to the asphalt/concrete Cap covering the restricted Property?
   ☐ Yes ☐ No

Land Use Covenant Compliance

6. Has there been a change in the land use of the property from commercial/industrial?
   ☐ Yes ☐ No

If the response to any of the above questions is yes, describe the circumstances.

Photos should be attached to this report that show the use of the Restricted Property at the time of the inspection and the condition of any Caps on the restricted Property. Photos showing any cracks in or damage to the Cap should also be included.

I certify under penalty of law that this document and all attachments were prepared by me or under my direction or supervision. With the exception of any areas of non-compliance noted above, all uses and activities on the restricted Property were found to be in compliance with the restrictions and requirements of the Land Use Covenant. Based on my personal knowledge or inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

ALL GRADING SHALL COMPLY WITH THE REQUIREMENTS OF THE CITY OF CORONA GRADING REGULATIONS– CORONA MUNICIPAL CODE 15.36, THESE PLANS, SPECIAL INSTRUCTIONS ON THE PERMIT, AND THE GEOTECHNICAL INVESTIGATION AND LIQUEFACTION EVALUATION DATED SEPTEMBER 10, 2019 BY GEOTECHNICAL PROFESSIONALS INC., AND ALL SUBSEQUENT ADDENDA.
2. SOURCE OF TOPOGRAPHY IS BASED ON FIELD SURVEY DATED SEPTEMBER 23, 2018.
3. A PRE–GRADING MEETING AT THE SITE IS REQUIRED BETWEEN THE CITY INSPECTOR, THE CIVIL ENGINEER, THE GEOTECHNICAL ENGINEER AND THE GRADING CONTRACTOR. CALL THE PUBLIC WORKS DEPARTMENT INSPECTION DIVISION AT (951) 279–3511 TO SCHEDULE A PRE–GRADING MEETING AT LEAST 48 HOURS PRIOR TO START OF ANY WORK.
4. HOURS OF OPERATION ARE 7:00 A.M. TO 5:00 P.M. – MONDAY THROUGH FRIDAY EXCLUDING HOLIDAYS.
5. SEPARATE PERMITS SHALL BE REQUIRED FOR ANY IMPROVEMENT WORK IN THE PUBLIC RIGHT–OF–WAY.
6. CONSTRUCTION MATERIAL AND EQUIPMENT SHALL NOT OCCUPY ANY PORTION OF THE PUBLIC RIGHT–OF–WAY, SUCH AS STREET, ALLEY OR PUBLIC SIDEWALK AT ANY TIME. TEMPORARY USE OF PUBLIC RIGHT–OF–WAY, WHENEVER REQUESTED, MUST BE REVIEWED AND APPROVED BY THE PUBLIC WORKS DIRECTOR.
7. REPAIR OR REPLACE ALL EXISTING DAMAGED OR ALTERED PUBLIC IMPROVEMENTS AS REQUIRED BY THE PUBLIC WORKS DIRECTOR.
8. ALL SURVEY MONUMENTS SHALL BE PROTECTED AND PERPETUATED IN PLACE. ANY DISTURBED OR COVERED MONUMENTS SHALL BE RESET BY A QUALIFIED CIVIL ENGINEER OR A LICENSED LAND SURVEYOR.
9. PRIOR TO TAKING WATER FROM A CITY FIRE HYDRANT, THE CONTRACTOR SHALL MAKE ARRANGEMENTS WITH THE PUBLIC WORKS DEPARTMENT TO OBTAIN A FIRE HYDRANT WATER METER. METER LOCATION MAY NOT BE ALTERED WITHOUT DEPARTMENT OF WATER AND POWER APPROVAL.
10. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE LOCATION OF ALL UTILITIES OR STRUCTURES ABOVE OR BELOW GROUND, SHOWN OR NOT SHOWN ON THESE PLANS. THE CONTRACTOR WILL BE HELD RESPONSIBLE FOR ALL DAMAGE TO ANY UTILITIES OR STRUCTURES CAUSED BY HIS OPERATION.
11. STRICT ADHERENCE TO DUST CONTROL REQUIREMENTS SHALL BE ENFORCED. ADJACENT STREETS ARE TO BE CLEANED DAILY OF ALL DIRT AND DEBRIS RESULTING FROM THIS OPERATION.
12. SEPARATE PERMITS FROM THE BUILDING DIVISION SHALL BE REQUIRED FOR ALL WALLS.
13. AN APPROVED PRECISE GRADING PLAN WILL BE REQUIRED PRIOR TO A BUILDING PERMIT BEING ISSUED.
14. THE DESIGN CIVIL ENGINEER/GEOTECHNICAL ENGINEER/ENGINEERING GEOLOGIST OF RECORD SHALL EXERCISE SUFFICIENT CONTROL DURING GRADING AND CONSTRUCTION TO ENSURE COMPLIANCE WITH THE PLANS, SPECIFICATIONS, AND CODE REQUIREMENTS WITHIN THEIR PURVIEW. THE ENGINEERS SHALL SUBMIT "ACKNOWLEDGMENT CONCERNING EMPLOYMENT" FORM TO THE CITY PRIOR TO THE ISSUANCE OF A GRADING PERMIT.
15. REVISIONS TO THE PLANS ARE TO BE SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR REVIEW AND APPROVAL PRIOR TO CHANGING ORIGINAL MYLARS.
16. THE CIVIL ENGINEER SHALL SUBMIT WRITTEN CERTIFICATION OF COMPLETION OF ROUGH GRADING IN ACCORDANCE WITH THE APPROVED GRADING PLAN AND CERTIFICATION OF BUILDING PAD ELEVATION PRIOR TO ISSUANCE OF THE BUILDING PERMIT. PAD ELEVATION GRADING TOLERANCE SHALL NOT EXCEED ±0.10'.
17. AN "AS–BUILT" GRADING PLAN SHALL BE SUBMITTED AT THE COMPLETION OF WORK SHOWING ALL WATER QUALITY MANAGEMENT PLAN FACILITIES.
18. GRADING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE GEOTECHNICAL ENGINEER WHO SHALL CERTIFY THAT ALL FILL HAS BEEN PROPERLY PLACED AND SUBMIT A FINAL COMPACTION REPORT FOR ALL FILLS OVER 1' DEEP.
19. THE GEOTECHNICAL ENGINEER SHALL, AFTER CLEARING AND PRIOR TO THE PLACEMENT OF FILL IN CANYONS, INSPECT EACH CANYON FOR AREAS OF ADVERSE STABILITY AND TO DETERMINE THE PRESENCE OR ABSENCE OF SUBSURFACE WATER OR SPRING FLOW. IF NEEDED, DRAINS WILL BE DESIGNED AND CONSTRUCTED PRIOR TO THE PLACEMENT OF FILL IN EACH RESPECTIVE CANYON.
20. FILL AREAS SHALL BE CLEANED OF ALL VEGETATION AND DEBRIS, SCARIFIED TO A MINIMUM DEPTH OF 12 INCHES AND INSPECTED BY THE GEOTECHNICAL ENGINEER PRIOR TO THE PLACING OF FILL.
21. ALL DELETERIOUS MATERIALS, I.E., LUMBER, LOGS, BRUSH, OR ANY OTHER ORGANIC MATERIALS OR RUBBISH SHALL BE REMOVED FROM ALL AREAS TO RECEIVE COMPACTED FILL.
22. UNSUITABLE MATERIALS, SUCH AS TOPSOIL, WEATHERED BEDROCK, ETC., SHALL BE REMOVED AS REQUIRED BY GEOTECHNICAL ENGINEER (AND ENGINEERING GEOLOGIST, WHERE EMPLOYED) FROM ALL AREAS TO RECEIVE COMPACTED FILL OR DRAINAGE STRUCTURES.
23. FILLS SHALL BE BENCHED INTO COMPETENT MATERIAL.
24. WHEN CUT PADS ARE BROUGHT TO NEAR GRADE, THE GEOTECHNICAL ENGINEER SHALL DETERMINE IF THE BEDROCK IS EXTENSIVELY FRACTURED OR FAULTED AND WILL READILY TRANSMIT WATER. IF CONSIDERED NECESSARY BY THE GEOTECHNICAL ENGINEER, A COMPACTED FILL BLANKET WILL BE PLACED.
25. WHERE SUPPORT OR BUTTRESSING OF CUT AND NATURAL SLOPES IS DETERMINED TO BE NECESSARY BY THE GEOTECHNICAL ENGINEER, THE GEOTECHNICAL ENGINEER SHALL SUBMIT DESIGN, LOCATIONS AND CALCULATIONS TO THE PUBLIC WORKS DIRECTOR PRIOR TO CONSTRUCTION. THE GEOTECHNICAL ENGINEER WILL INSPECT AND CONTROL THE CONSTRUCTION OF THE BUTTRESSING AND CERTIFY TO THE STABILITY OF THE SLOPE AND ADJACENT STRUCTURES UPON COMPLETION.
26. ALL CUT SLOPES SHALL BE INVESTIGATED, BOTH DURING AND AFTER GRADING BY THE GEOTECHNICAL ENGINEER, TO DETERMINE IF ANY SLOPE HAS STABILITY PROBLEMS. SHOULD EXCAVATION DISCLOSE ANY GEOLOGICAL HAZARDS, THE GEOTECHNICAL ENGINEER SHALL RECOMMEND NECESSARY TREATMENT TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL. ALL APPROVALS TO BE GRANTED ON THE BASIS OF DETAILED GEOLOGICAL MAPPING AND WRITTEN RECOMMENDATION FROM THE GEOTECHNICAL ENGINEER.
27. MAXIMUM ALLOWABLE CUT AND FILL SLOPES ARE 2 TO 1 OR 30' IN HEIGHT WITHOUT APPROVAL OF THE PUBLIC WORKS DIRECTOR. IF PROPOSED CUT AND FILL SLOPES ARE STEEPER THAN 2:1 OR OVER 30' IN HEIGHT, STABILITY CALCULATIONS WITH A SAFETY FACTOR OF AT LEAST ONE AND FIVE TENTHS (1.5) SHALL BE SUBMITTED BY A GEOTECHNICAL ENGINEER FOR APPROVAL FROM THE PUBLIC WORKS DIRECTOR.
28. PROVIDE 4' WIDE BY 1' HIGH BERM OR EQUIVALENT ALONG THE TOP OF ALL FILL SLOPES OVER 5' HIGH, EXCEPT WHERE SHOWN OTHERWISE ON THE PLANS.
29. ALL SLOPES ADJACENT TO PUBLIC RIGHT–OF–WAY SHALL CONFORM TO SECTION 15.36.220 OF THE CORONA MUNICIPAL CODE.
30. ALL SLOPES 4' OR HIGHER SHALL BE PLANTED AND COMPLY WITH REQUIREMENTS OF CHAPTER 17 OF THE CORONA MUNICIPAL CODE.
31. TERRACE DRAINS, INTERCEPTOR DRAINS AND DOWN DRAINS SHALL BE CONSTRUCTED OF 4" P.C.C. (OR GUNITE) REINFORCED WITH 6"x6" –2 1.4x1.4 W.W.M. REBAR SHALL BE GRADE 60 BILLET STEEL CONFORMING TO ASTM A615.
32. ALL CONCRETE STRUCTURES THAT COME IN CONTACT WITH THE ON–SITE SOILS SHALL BE CONSTRUCTED WITH TYPE II OR V CEMENT AS DEEMED NECESSARY BY SOLUBLE SULFATE CONTENT TEST CONDUCTED BY THE GEOTECHNICAL ENGINEER. ALL CONCRETE SHALL BE CITY STANDARD 560–C–3250 (600–E 3250 FOR GUNITE) PER CITY STANDARD SPECIFICATIONS.
33. GROUND SHALL BE PRE–WETTED PRIOR TO THE PLACEMENT OF CONCRETE. MOISTURE LOSS RETARDANT SHALL BE USED WHEN REQUIRED BY THE GEOTECHNICAL ENGINEER OR PUBLIC WORKS DIRECTOR.
34. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND/OR OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL.

POST CONSTRUCTION BMP GENERAL NOTES:

1. THIS PLAN UTILIZES STRUCTURAL BEST MANAGEMENT PRACTICES (BMPS) FOR POST CONSTRUCTION STORM WATER TREATMENT.
2. CONSTRUCT THE STORM WATER TREATMENT FACILITIES AFTER ALL CONTRIBUTING DRAINAGE AREAS ARE STABILIZED AND TO THE SATISFACTION OF THE ENGINEER OF RECORD.
3. DO NOT USE THE DEVICES AS TEMPORARY SEDIMENT CONTROL FACILITIES DURING CONSTRUCTION.
4. THE FOLLOWING BMPS HAVE BEEN DESIGNED INTO THE PLANS. PLEASE REFER TO THE PROJECT'S APPROVED WATER QUALITY MANAGEMENT PLAN (WQMP) FOR ADDITIONAL BMP's AND OPERATION AND MAINTENANCE DETAILS:

   A. BIORETENTION FACILITY AND OR ON–SITE RETENTION

NOTE:

1. A SEWER BACKFLOW PREVENTOR IS NOT REQUIRED FOR THIS PROJECT
2. WATER PRESSURE REDUCING VALVES ARE REQUIRED FOR THIS PROJECT

NOTICE TO CONTRACTORS

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES, CONDUITS, OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF AVAILABLE RECORDS. TO THE BEST OF OUR KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT THOSE SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN ON THESE DRAWINGS. THE CONTRACTOR FURTHER ASSUMES ALL LIABILITY AND RESPONSIBILITY FOR THE UTILITY PIPES, CONDUITS OR STRUCTURES, SHOWN OR NOT SHOWN ON THESE PLANS

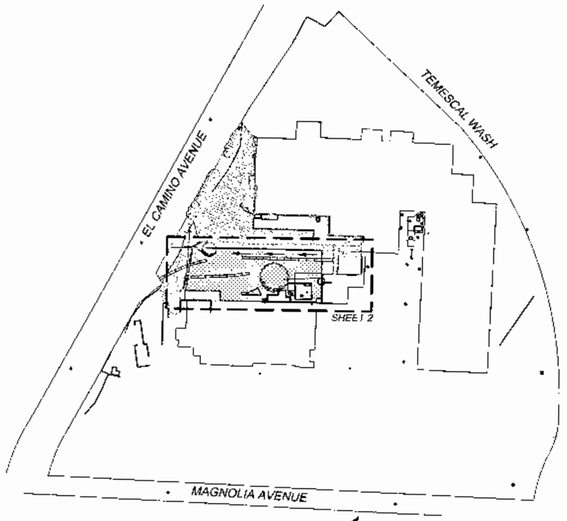
CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOBSITE CONDITIONS DURING THE COURSE OF CONSTRUCTION ON THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS OR PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE CITY, THE OWNER, AND THE ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT.

THE CONTRACTOR SHALL CALL IN A LOCATION REQUEST TO UNDERGROUND SERVICE ALERT (USA) PH. 811, TWO (2) WORKING DAYS PRIOR TO DIGGING. NO CONSTRUCTION PERMIT ISSUED BY THE PUBLIC WORKS DEPARTMENT SHALL BE VALID INVOLVING UNDERGROUND FACILITIES UNLESS THE APPLICANT HAS AN INQUIRY IDENTIFICATION NUMBER ISSUED BY U.S.A.

CARE SHOULD BE TAKEN TO PREVENT GRADED DITCHES AND SWALES FROM UNDERMINING STREET IMPROVEMENTS. UPON INSPECTION OF THE SITES, THE PUBLIC WORKS DIRECTOR MAY REQUIRE TEMPORARY GUNITE SWALES, ENTERING OR LEAVING IMPROVEMENTS.

DECLARATION OF ENGINEER OF RECORD

I HEREBY DECLARE THAT THE DESIGN OF THE IMPROVEMENTS SHOWN ON THESE PLANS COMPLIES WITH ALL PROFESSIONAL ENGINEERING STANDARDS AND PRACTICES. AS THE ENGINEER OF RECORD FOR THE PLANS, I ASSUME FULL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. WITH RESPECT TO THE PLAN CHECK PERFORMED BY THE CITY OF CORONA, I UNDERSTAND AND ACKNOWLEDGE THE FOLLOWING: (1) THE PLAN CHECK IS A REVIEW FOR THE LIMITED PURPOSE OF ENSURING THE PLANS COMPLY WITH THE CITY'S STANDARDS, PROCEDURES, POLICIES, AND ORDINANCES; (2) THE PLAN CHECK IS NOT A DETERMINATION OF THE TECHNICAL ADEQUACY OF THE DESIGN OF THE IMPROVEMENTS, AND (3) THE PLAN CHECK DOES NOT RELIEVE ME OF MY LEGAL AND PROFESSIONAL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. AS THE ENGINEER OF RECORD, I AGREE TO DEFEND, INDEMNIFY, AND HOLD HARMLESS THE CITY, ITS ELECTED OFFICIALS, EMPLOYEES, AND AGENTS FROM ANY AND ALL ACTUAL OR ALLEGED CLAIMS, DEMANDS, CAUSES OF ACTION, LIABILITY, LOSS, DAMAGE, OR INJURY TO PROPERTY OR PERSONS, INCLUDING WRONGFUL DEATH, WHETHER IMPOSED BY A COURT OF LAW OR BY ADMINISTRATIVE ACTION OF ANY FEDERAL, STATE, OR LOCAL GOVERNMENTAL AGENCY, ARISING OUT OF OR INCIDENT TO ANY NEGLIGENT ACTS, OMISSIONS, OR ERRORS BY THE ENGINEER OF RECORD, ITS EMPLOYEES, CONSULTANTS, OR AGENTS.



WILLIAM D. BROOKS, RCE 53114 — EXPIRES 6/30/21 — DATE 3/8/2021
ENGINEER OF RECORD

GEOTECHNICAL ENGINEER'S STATEMENT

THIS PLAN HAS BEEN REVIEWED BY GEOTECHNICAL PROFESSIONALS INC. AND APPEARS TO BE IN GENERAL CONFORMANCE WITH RECOMMENDATIONS IN OUR REPORT DATED SEPTEMBER 10, 2019–PROJECT NO. 2945.1. THIS PLAN HAS BEEN REVIEWED FOR GEOTECHNICAL ASPECTS ONLY. WE MAKE NO REPRESENTATION REGARDING ACCURACY OF DIMENSIONS, QUANTITIES, MEASUREMENTS, CALCULATIONS, OR ANY PORTION OF THE DESIGN. GEOTECHNICAL CONDITIONS AND RECOMMENDATIONS SHOULD BE CONFIRMED BY THE GEOTECHNICAL CONSULTANT IN THE FIELD AT TIME OF CONSTRUCTION.

PAUL SCHADE, GEOTECHNICAL ENGINEER — RCE# GE#2371 — EXP. 9-30-22
ENGINEERING GEOLOGIST — CEG# — EXP.

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF CORONA, IN THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THAT PORTION OF THE NORTHWEST QUARTER OF SECTION 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, AS SHOWN BY SECTIONALIZED SURVEY OF THE RANCHO EL SOBRANTE DE SAN JACINTO AND OF LOT 13 IN BLOCK 63 OF THE LANDS OF THE RIVERSIDE LAND AND IRRIGATING COMPANY, AS SHOWN BY MAP ON FILE IN BOOK 1 PAGE 70 OF MAPS, SAN BERNARDINO COUNTY RECORDS, BOUNDED AS FOLLOWS: ON THE SOUTHEAST BY THE SOUTHWESTERLY EXTENSION OF THE NORTHWEST LINE OF MAGNOLIA AVENUE, AS SHOWN ON RECORD OF SURVEY ENTITLED "RECORD OF SURVEY OF A PORTION OF LOTS 11, 12, 13, 14, 15, IN BLOCK 63 OF RIVERSIDE LAND AND IRRIGATING COMPANY AND A PORTION OF SECTIONS 29 AND 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, SAN BERNARDINO BASE AND MERIDIAN" ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS; ON THE WEST BY THE EASTERLY LINE OF THE PROPERTY SPUR OF THE ATCHINSON, TOPEKA, AND SANTA FE RAILWAY COMPANY; AND ON THE NORTHEAST BY THE SOUTHERLY AND SOUTHWESTERLY LINE OF PARCELS 5 TO 11, INCLUSIVE, OF SAID RECORD OF SURVEY ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS.

EXCEPTING THEREFROM THAT PORTION GRANTED TO THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER DISTRICT CONSERVATION DISTRICT BY DEED RECORDED OCTOBER 22, 1984 AS INSTRUMENT NO. 84–227387 AND RE–RECORDED FEBRUARY 11, 1985 AS INSTRUMENT NO. 85–028214 BOTH OF OFFICIAL RECORDS.

EARTHWORK QUANTITIES

NOTE: THE CONSTRUCTION QUANTITIES SHOWN ON THESE PLANS ARE FOR CITY FEE PURPOSES ONLY.
IT IS THE CONTRACTOR'S RESPONSIBILITY TO PERFORM INDIVIDUAL TAKEOFFS FOR BIDDING PURPOSES.

(PRELIMINARY QUANTITIES DO NOT INCLUDE SHRINKAGE FACTOR AND OVEREXCAVATION OVER THE SITE)

RAW CUT	582 CU. YDS.
RAW FILL	0 CU. YDS.
NET EXPORT	–582 CU. YDS.

SITE AREA

TOTAL AREA – 16.9 ACRES
DISTURBED AREA – 0.7 ACRES
TOTAL LOTS: 1

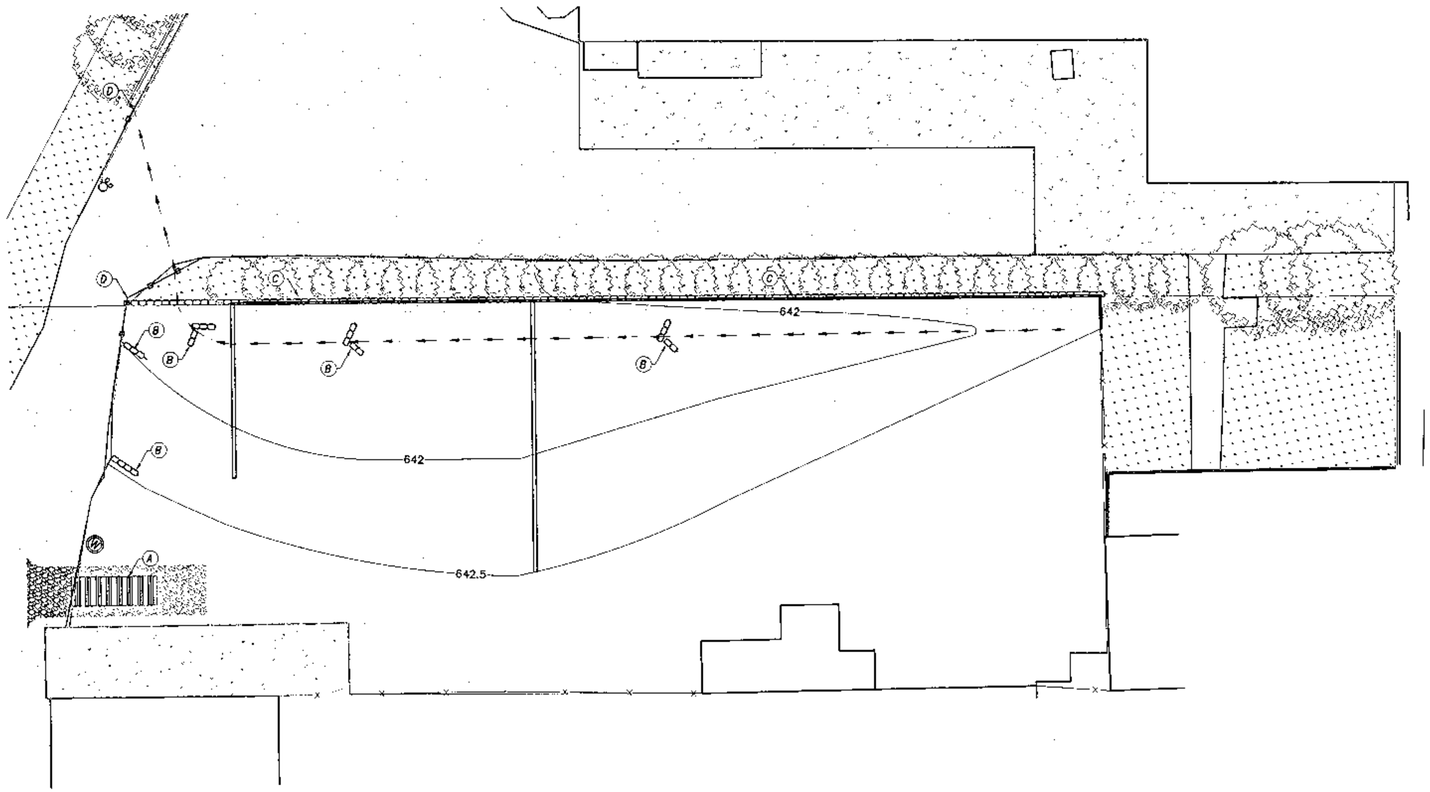
GRADING PLANS



Drawing No. 20-026P
Sh 3 of 4

24" x 36"

EROSION CONTROL GENERAL NOTES:

1. EROSION CONTROL IS REQUIRED FOR GRADING OPERATIONS ON A YEAR ROUND BASIS. APPROVED PLANS ARE REQUIRED FOR ALL WORK REQUIRING A GRADING PERMIT.
2. IN CASE OF EMERGENCY CALL TIFFANY SMITH OF CLOW VALVE MANUFACTURING AT 317-364-0898.
3. THE ENGINEER OF RECORD WILL SUPERVISE EROSION CONTROL WORK AND INSURE THAT WORK IS IN ACCORDANCE WITH APPROVED PLANS.
4. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL
5. THE PUBLIC WORKS DIRECTOR RESERVES THE RIGHT TO MAKE CHANGES OR MODIFICATIONS TO THIS PLAN AS DEEMED NECESSARY.
6. STANDBY CREW FOR EMERGENCY WORK SHALL BE MADE AVAILABLE AT ALL TIMES. NECESSARY MATERIALS SHALL BE AVAILABLE ON SITE AND STOCKPILED AT CONVENIENT LOCATIONS TO FACILITATE RAPID CONSTRUCTION OF TEMPORARY EROSION AND SEDIMENT CONTROL BEST MANAGEMENT PRACTICES (BMPS) OR TO REPAIR ANY DAMAGED BMP's WHEN RAIN IS IMMINENT.
7. AN EFFECTIVE COMBINATION OF EROSION AND SEDIMENT CONTROL BMPS SHALL BE IMPLEMENTED AND MAINTAINED TO PREVENT AND/OR MINIMIZE THE TRANSPORT OF SOIL IN RUNOFF FROM DISTURBED SOIL AREAS ON THE CONSTRUCTION SITE AT ALL TIMES. IN ADDITION, BMPS SHALL BE INSPECTED PRIOR TO PREDICTED STORM EVENTS AND FOLLOWING STORM EVENTS. BMPS SHALL NOT BE MOVED OR MODIFIED WITHOUT THE APPROVAL OF THE CITY INSPECTOR.
8. ALL REMOVABLE PROTECTIVE DEVICES SHOWN SHALL BE IN PLACE AT THE END OF EACH WORKING DAY WHEN THE FIVE-DAY RAIN PROBABILITY FORECAST EXCEEDS 40 PERCENT, AS FORECASTED BY THE NATIONAL WEATHER SERVICE.
9. AFTER A RAIN EVENT EXCEEDING ONE-QUARTER INCH IN ANY 12 HOUR PERIOD, OR UPON DIRECTION OF THE PUBLIC WORKS DIRECTOR, ALL SILT AND DEBRIS SHALL BE REMOVED FROM CHECK DAMS, SILT FENCES, AND DESILTING BASINS; AND THE BASINS SHALL BE PUMPED DRY AND RESTORED TO ORIGINAL DESIGN CONDITION. ANY EROSION CONTROL MEASURES DAMAGED DURING A RAIN EVENT SHALL ALSO BE IMMEDIATELY REPAIRED.
10. DESILTING BASINS ARE TO BE CONSTRUCTED AS GRADING OF INDIVIDUAL GRADING AREAS ARE COMPLETE PER ROUGH GRADING PLANS.
11. THE CONTRACTOR SHALL BE RESPONSIBLE AND SHALL TAKE NECESSARY PRECAUTIONS TO PREVENT PUBLIC TRESPASS ONTO AREAS WHERE IMPOUNDED WATER CREATES A HAZARDOUS CONDITION.
12. AREAS SHALL BE MAINTAINED IN SUCH A STATE THAT FIRE ACCESS SHALL BE MAINTAINED AT ALL TIMES (INCLUDING ACCESS TO NEIGHBORING PROPERTIES).
13. GRADED AREAS AROUND THE SITE PERIMETER MUST DRAIN AWAY FROM THE FACE OF SLOPE AT THE CONCLUSION OF EACH WORKING DAY.
14. TEMPORARY EROSION PROTECTION IS REQUIRED FOR MANUFACTURED SLOPES PRIOR TO PERMANENT PLANTING.
15. ALL DISTURBED SLOPES SHALL BE PLANTED AND PROTECTED WITHIN 45 DAYS OF THE COMPLETION OF EACH STAGE OF GRADING. SUITABLE MEASURES TO PREVENT SLOPE EROSION INCLUDING, BUT NOT LIMITED TO, RAPID GROWTH VEGETATION SUFFICIENT TO STABILIZE THE SOIL, SHALL BE INSTALLED ON ALL DISTURBED AREAS UNTIL SUCH TIME AS THE PERMANENT VEGETATIVE COVER SUFFICIENTLY MATURES TO PROVIDE PERMANENT STABILITY.
16. NO OBSTRUCTION OR DISTURBANCE OF NATURAL DRAINAGE COURSES OR EXISTING STORM DRAIN INLETS SHALL OCCUR DURING GRADING OPERATIONS, UNLESS ADEQUATE TEMPORARY/PERMANENT DRAINAGE FACILITIES HAVE BEEN APPROVED AND INSTALLED TO CARRY SURFACE WATER TO THE NEAREST PRACTICAL STREET, STORM DRAIN OR NATURAL WATER COURSE. ALL EXISTING DRAINAGE COURSES ON THE PROJECT SITE MUST BE MAINTAINED IN A STATE TO ALLOW FOR CONTINUOUS FUNCTION.
17. THE CONTRACTOR SHALL CONDUCT HIS OPERATIONS IN SUCH A MANNER THAT STORM RUNOFF WILL BE CONTAINED WITHIN THE PROJECT OR CHANNELED INTO THE STORM DRAIN SYSTEM WHICH SERVES THE RUNOFF AREA. STORM RUNOFF FROM ONE AREA SHALL NOT BE ALLOWED TO DIVERT TO ANOTHER RUNOFF AREA.
18. CONFORMANCE WITH THE REQUIREMENTS OF THESE PLANS SHALL IN NO WAY RELIEVE THE CONTRACTOR FROM HIS RESPONSIBILITIES TO THIS SITE AND ADJACENT PROPERTIES. DURING GRADING OPERATIONS, TEMPORARY DRAINAGE CONTROL SHALL BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES. TEMPORARY DRAINAGE CONTROL SHALL CONSIST OF, BUT NOT BE LIMITED TO, CONSTRUCTING SUCH FACILITIES AND TAKING SUCH MEASURES AS ARE NECESSARY TO PREVENT, CONTROL AND ABATE WATER, MUD AND EROSION DAMAGE TO PUBLIC AND PRIVATE PROPERTY AS A RESULT OF THE CONSTRUCTION OF THIS PROJECT.
19. FILL AREAS WHILE BEING BROUGHT UP TO GRADE AND DURING PERIODS OF COMPLETION PRIOR TO FINAL GRADE, SHALL BE PROTECTED BY VARIOUS MEASURES TO ELIMINATE EROSION AND THE SILTATION OF DOWNSTREAM FACILITIES AND ADJACENT AREAS. THESE MEASURES MAY INCLUDE, BUT SHALL NOT BE LIMITED TO: TEMPORARY DOWN DRAINS, EITHER IN THE FORM OF PIPES OR PAVED DITCHES TO DESILT RUNOFF; PROTECTION SUCH AS SAND BAGS AROUND INLETS WHICH HAVE NOT BEEN BROUGHT UP TO GRADE; AND EARTH BERMS AND APPROPRIATE GRADING TO DIRECT DRAINAGE AWAY FROM THE EDGE OF THE TOP OF SLOPES SHALL BE CONSTRUCTED AND MAINTAINED ON THOSE FILL AREAS WHERE EARTHWORK OPERATIONS ARE NOT IN PROGRESS.
20. CLEARING AND GRUBBING SHOULD BE LIMITED TO AREAS THAT WILL RECEIVE IMMEDIATE GRADING. EROSION CONTROL MEASURES WILL BE REQUIRED TO PROTECT AREAS WHICH HAVE BEEN CLEARED AND GRUBBED PRIOR TO GRADING OPERATION, AND WHICH ARE SUBJECT TO RUNOFF DURING A RAIN EVENT. THESE MEASURES MAY INCLUDE BUT SHALL NOT BE LIMITED TO: GRADED DITCHES; BRUSH BARRIERS AND SILT FENCES. CARE SHALL BE EXERCISED TO PRESERVE VEGETATION BEYOND LIMITS OF GRADING.
21. CONSTRUCTION SITES SHALL BE MANAGED TO MINIMIZE THE EXPOSURE TIME OF DISTURBED SOIL AREAS THROUGH PHASING AND SCHEDULING OF GRADING TO THE EXTENT FEASIBLE AND THE USE OF TEMPORARY AND PERMANENT SOIL STABILIZATION.
22. STOCKPILES OF SOIL SHALL BE PROPERLY CONTAINED TO ELIMINATE OR REDUCE SEDIMENT TRANSPORT FROM THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJACENT PROPERTIES VIA RUNOFF, VEHICLE TRACKING, OR WIND.
23. CONSTRUCTION SITES SHALL BE MAINTAINED IN SUCH A CONDITION THAT WIND OR RUNOFF DOES NOT CARRY WASTES OR POLLUTANTS OFF THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJORNING PROPERTIES.
24. DISCHARGES OTHER THAN STORM WATER (NON-STORM WATER DISCHARGES) ARE PROHIBITED, EXCEPT AS AUTHORIZED BY AN INDIVIDUAL NPDES PERMIT, THE STATEWIDE GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY, OR OTHER APPLICABLE GENERAL NPDES PERMIT. POTENTIAL POLLUTANTS INCLUDE BUT ARE NOT LIMITED TO: SOLID OR LIQUID CHEMICAL SPILLS; WASTES FROM PAINTS, STAINS, SEALANTS, SOLVENTS, DETERGENTS, GLUES, LIME, PESTICIDES, HERBICIDES, FERTILIZERS, WOOD PRESERVATIVES, AND ASBESTOS FIBERS, PAINT FLAKES OR STUCCO FRAGMENTS; FUELS, OILS, LUBRICANTS, AND HYDRAULIC, RADIATOR OR BATTERY FLUIDS; CONCRETE AND RELATED CUTTING OR CURING RESIDUES; FLOATABLE WASTES; WASTES FROM STREET CLEANING; SUPER-CHLORINATED POTABLE WATER FROM LINE FLUSHING AND TESTING, AND RUNOFF FROM EQUIPMENT AND VEHICLE WASHING. DURING CONSTRUCTION, DISPOSAL OF SUCH MATERIALS SHOULD OCCUR IN A SPECIFIED AND CONTROLLED TEMPORARY AREA ONSITE PHYSICALLY SEPARATED FROM POTENTIAL STORM WATER RUNOFF, WITH ULTIMATE DISPOSAL IN ACCORDANCE WITH LOCAL, STATE AND FEDERAL REQUIREMENTS.
25. AT THE END OF EACH DAY OF CONSTRUCTION ACTIVITY ALL CONSTRUCTION DEBRIS AND WASTE MATERIALS SHALL BE COLLECTED AND PROPERLY DISPOSED IN TRASH OR RECYCLE BINS
26. PAVED STREETS, SIDEWALKS AND OTHER IMPROVEMENTS SHALL BE MAINTAINED IN A NEAT CLEAN CONDITION, FREE OF LOSE SOIL, CONSTRUCTION DEBRIS AND TRASH. STREET SWEEPING OR OTHER EQUALLY EFFECTIVE MEANS SHALL BE USED ON A REGULAR BASIS TO CONTROL SILT THAT HAS BEEN DEPOSITED ON STREETS OR SIDEWALKS. WATERING SHALL NOT USED TO CLEAN STREETS.
27. DISCHARGING CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING GROUNDWATER THAT HAS INFILTRATED INTO THE CONSTRUCTION SITE IS PROHIBITED. DISCHARGING OF CONTAMINATED SOILS VIA SURFACE EROSION IS ALSO PROHIBITED. DISCHARGING NON-CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING ACTIVITIES MAY REQUIRE A NPDES PERMIT FROM THE SANTA ANA REGIONAL BOARD.
28. ALL CONSTRUCTION CONTRACTOR AND SUBCONTRACTOR PERSONNEL ARE TO BE MADE AWARE OF THE REQUIRED BEST MANAGEMENT PRACTICES AND GOOD HOUSEKEEPING MEASURES FOR THE PROJECT SITE AND ANY ASSOCIATED CONSTRUCTION STAGING AREAS.

Additional Notes: CONSTRUCT ON SITE GRADING IMPROVEMENTS PER APPROVED PLAN. ANY OFF SITE WORK WILL REQUIRE A SEPARATE ENCROACHMENT PERMIT.

Applicant/Owner hereby requests permission to perform work as described below. It is expressly agreed that such work and all Traffic Control shall be performed in accordance with applicable ordinances, Standard Plans and Special Provisions of the City of Corona, approved plans and the latest edition of the Work Area Traffic Control Handbook (WATCH Manual). Only that person listed below is duly authorized by Applicant/Owner to obtain this permit.

INDEMNIFICATION

Applicant/Owner shall defend and hold the City, it's officers, employees, and agents (Indemnities) free and harmless from any and all claims, demands, causes of injury arising out of or incident to any alleged acts, omissions or willful misconduct or Applicant/Owner, its officials, officers, employees, agents, consultants or contractors in connection with the performance of any work under this Permit, including, without limitation, the payment of all consequential damages, attorneys fees and other related costs and expenses. Applicant/Owner shall pay any judgement award or decree that may be rendered against the Indemnities for any and all legal expenses and costs incurred by any of them in connection therewith or in enforcing the indemnity herein provided. Applicant/Owner's obligation to indemnify shall not be restricted to insurance proceeds, if any, received by the Indemnities.

THIS PERMIT EXPIRES ONE YEAR FROM THE DATE OF ISSUANCE.

LAND USE COVENANT AND AGREEMENT
ENVIRONMENTAL RESTRICTIONS

County of Riverside, Assessor Parcel Number(s): 107-030-022-3
Clow Valve Company
(Department Site Code 600876-48)

This Land Use Covenant and Agreement ("Covenant") is made by and between Clow Valve Company (the "Covenantor"), the current owner of property located at 1375 Magnolia Avenue, Corona in the County of Riverside, State of California (the "Property"), and the Department of Toxic Substances Control (the "Department"). Pursuant to Civil Code section 1471, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined

in Health and Safety Code section 25260. The Covenantor and the Department hereby agree that, pursuant to Civil Code section 1471 and Health and Safety Code section 25202.5 the use of the Property be restricted as set forth in this Covenant and that the Covenant shall conform with the requirements of California Code of Regulations, title 22, section 67391.1. With respect to the Polychlorinated Biphenyls (PCBs) at the Property, the provisions of this Covenant shall be for the benefit of, and shall be enforceable by, the United States Environmental Protection Agency ("U.S. EPA"), as a third party beneficiary pursuant to general contract law, including but not limited to Civil Code section 1559.

ARTICLE I

STATEMENT OF FACTS

1.01. Property Location. The Property, located at 1375 Magnolia Avenue, Corona, County of Riverside, California, that is subject to this Covenant, totaling approximately 16 acres, is more particularly described in the attached Exhibit A, "Legal Description of the Property", and depicted in Exhibit B, "Plot Plan". The Property is located in the area generally bounded by Magnolia Avenue on the south, railroad tracks and El Camino Avenue on the west, and a storm water channel towards the north and east. The Property is also identified as County of Riverside, Assessor's Parcel Number 107-030-022-3.

a) A limited portion of the Property is more particularly described in Exhibit C, "Legal Description of the Capped Property", and illustrated in Exhibit D, "Sketch", referred to as the "Capped Property". The "Capped Property", totaling approximately 9.964 acres of soil impacted by hazardous substances, is located on the northern portion of the Property now generally bounded by railroad and El Camino Avenue on the west, storm channel on the north and east. Its southern border runs parallel to Magnolia Avenue, approximately 195 feet north of Magnolia Avenue

b) A limited portion of the Property is more particularly illustrated in Exhibit D as "Area 1" a Former Asphalt Dip Tank and as "Area 2" a PCB Transformer area. Former Asphalt Dip Tank was previously located, approximately 620 feet north of Magnolia

Avenue, 510 feet east of El Camino Avenue, and 200 feet west of the storm channel western edge. The PCB Transformer area is located approximately 240 feet west of the storm channel western edge, 510 feet east of El Camino Avenue, and 600 feet north of Magnolia Avenue.

1.02. Hazardous Substances. Hazardous wastes, or constituents of hazardous waste, including Polychlorinated Biphenyl's (PCBs) (Total Aroclors up to a maximum of 2,220 milligrams per kilogram (mg/kg)), Total Petroleum Hydrocarbons (TPH) (up to a maximum of 9,300 mg/kg), arsenic (up to a maximum of 52.9 mg/kg), cadmium (up to a maximum of 43.9 mg/kg), hexavalent chromium (up to a maximum of 6.6 mg/kg), and lead (up to a maximum of 7,360 mg/kg) in soil, and volatile organic compounds, such as tetrachloroethylene (PCE) (up to a maximum of 3 microgram/liter (ug/l)), in the soil gas remain at the Property above levels acceptable for unrestricted land use.

As of February 25, 2021, PCB concentrations in the soil at the Former Asphalt Dip Tank Bottom and PCB Transformer exceed the level for unrestricted use and the USEPA's site-specific industrial risk-based threshold of 15 mg/kg. PCB concentrations present in soils of the PCB Transformer area exceed the California hazardous waste level of Total Threshold Limit Concentration (TTLC) of 50 mg/kg.

As of February 25, 2021, lead concentrations detected in the soil at the Capped Property exceeded 320 milligrams per kilogram, a level deemed safe by DTSC for the continued use of the Site for industrial use and the TTLC of 1,000 mg/kg. A Human Health Risk Assessment (HHRA) was performed to evaluate the potential health risks associated with direct exposure of workers at the Property to soil containing Chemicals of Potential Concern (COPCs). Based on the HHRA, potential health risk to a commercial or industrial worker is $1x10^{-5}$ and to a construction worker is $2x10^{-4}$. The estimated Hazard Index (HI) for a commercial/industrial worker at the Property is 1.9, primarily due to the potential exposure to PCBs and cadmium. The estimated HI for a construction worker at the Property is 458. U.S. EPA recommends an HI of 1 or below and health risk below $1x10^{-6}$. The calculated risks were primarily associated with direct exposure to impacted soil and associated soil ingestion or dermal exposure, both of which will be eliminated by installation and maintenance of the capping materials described herein.

1.03. Remediation of Property. This Property has been investigated and/or remediated under the Department's oversight. The Department approved a Corrective Measures Study, dated February 19, 2018, prepared by EarthCon Consultants CA, Inc.,in accordance with Health and Safety Code, Division 20, Chapter 6.5. The remediation activities at the Property include:

a) Construction of an approximately 5,000 square foot, 6-inch-thick concrete or 3-inch thick asphalt cap in two areas encompassing approximately one-half acre, identified as Areas of Concern (AOCs), AOC-1 and AOC-5 (see Exhibit B).
b) Repair and maintenance of the existing asphalt and/or concrete surface cover of the Capped Property;
c) Soil Management Plan and Operation and Maintenance Plan preapproval by the Department for all future construction work involving soil excavation at the Capped Property; and,
d) Land use restriction recorded with the Riverside County Assessor's Office to prohibit sensitive uses.

1.04. PCB Remediation overseen by U.S. EPA. In addition to the corrective action measures for the Property under the Department's oversight, U.S. EPA approved with conditions the Risk-Based Approval Application submitted by EarthCon Consultants, CA, Inc. on behalf of Clow Valve Company, dated April 9, 2019, to remediate PCBs at the Property. PCBs are regulated by the U.S EPA pursuant to the Toxic Substances Control Act (TSCA), 15 U.S C Section 2601 et seq., and the PCB regulations at 40 Code of Federal Regulations (CFR) Part 761. This U.S. EPA approval is available in EnviroStor, an online document repository at https://www.envirostor.dtsc.ca.gov/public/deliverable_documents/1318022012/2019-04-23_EPA%20to%20Clow%20Valve_761.61%28c%29_SIGNED.pdf

1.05. Basis for Environmental Restrictions. As a result of the presence of Hazardous Wastes, PCBs, TPH, arsenic, cadmium, lead, and PCE, which are also hazardous materials as defined in Health and Safety Code section 25260, at the Property, the Department has concluded that it is reasonably necessary to restrict the

use of the Property in order to protect present or future human health or safety or the environment, and that this Covenant is required as part of the Department-approved remedy for the Property. The Department has also concluded that the Property, as remediated and when used in compliance with the Environmental Restrictions of this Covenant, does not present an unacceptable risk to present and future human health or safety or the environment.

1.06. Land Use Covenant. A land use covenant is necessary to preclude potential users' exposure to hazardous substances that remain at the Property and to complete the remedy selected in the Corrective Measures Study. U.S. EPA, with the concurrence of the Department, has concluded that the Property, remediated to the goals presented in the Corrective Measures Study, subject to the restrictions of this Covenant, and used in compliance with such restrictions, does not present an unacceptable threat to present or future human health or safety or the environment. Additional information about the Site, including the 2019 PCB risk analysis by U.S. EPA,is available at the EnviroStor, an online repository listed in paragraph 1.04, above.

ARTICLE II
DEFINITIONS

2.01. Department. "Department" means the California Department of Toxic Substances Control and includes its successor agencies, if any.

2.02. Environmental Restrictions. "Environmental Restrictions" means all protective provisions, covenants, restrictions, requirements, prohibitions, and terms and conditions as set forth in this Covenant

2.03 Improvements. "Improvements" includes, but is not limited to buildings, structures, roads, driveways, improved parking areas, wells, pipelines, or other utilities.

2.04. Lease. "Lease" means lease, rental agreement, or any other document that creates a right to use or occupy any portion of the Property.

2.05. Occupant. "Occupant" or "Occupants" means Owner and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.06. Owner. "Owner" or "Owners" means the Covenantor, and any successor in interest including any heir and assignee, who at any time holds title to all or any portion of the Property.

2.07. U.S. EPA. "U.S. EPA" means the United States Environmental Protection Agency, and includes its successor agencies, if any.

ARTICLE III
GENERAL PROVISIONS

3.01. Runs with the Land. This Covenant sets forth Environmental Restrictions that apply to and encumber the Property and every portion thereof no matter how it is improved, held, used, occupied, leased, sold, hypothecated, encumbered, or conveyed. This Covenant: (a) runs with the land pursuant to Civil Codesection 1471 and Health and Safety Code section 25202.5; (b) inures to the benefit of and passes with each and every portion of the Property; (c) is for the benefit of, and is enforceable by the Department; and (d) is imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding upon Owners/Occupants. This Covenant: (a) binds all Owners of the Property, their heirs, successors, and assignees, and (b) the agents, employees, and lessees of the Owners and the Owners' heirs, successors, and assignees. Pursuant to Civil Code section 1471, all successive Owners of the Property are expressly bound hereby for the benefit of the Department. this Covenant, however, is binding on all Owners and Occupants, and their respective successors and assignees, only during their respective periods of ownership or occupancy except that such Owners or Occupants shall continue to be liable for any violations of, or non-compliance with, the Environmental Restrictions of this Covenant or any acts or omissions during their ownership or occupancy.

3.03. Incorporation into Deeds and Leases. This Covenant shall be

incorporated by reference in each and every deed and Lease for any portion of the Property.

3.04. Conveyance of Property. The Owner and new Owner shall provide Notice to the Department and the U.S. EPA not later than 30 calendar days after any conveyance or receipt of any ownership interest in the Property (excluding Leases, and mortgages, liens, and other non-possessory encumbrances). The Notice shall include the name and mailing address of the new Owner of the Property and shall reference the site name and site code as listed on page one of this Covenant. The notice shall also include the Assessor's Parcel Number(s) noted on page one. If the new Owner's property has been assigned a different Assessor Parcel Number, each such Assessor Parcel Number that covers the Property must be provided. The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect proposed conveyance, except as otherwise provided by law or by administrative order.

3.05. Costs of Administering the Covenant to Be Paid by Owner. The Department has already incurred and will in the future incur costs associated with this Covenant. Therefore, the Covenantor hereby covenants for the Covenantor and for all subsequent Owners that, pursuant to California Code of Regulations, title 22, section 67391.1(h), the Owner agrees to pay the Department's costs in administering, implementing, and enforcing this Covenant.

ARTICLE IV
RESTRICTIONS AND REQUIREMENTS

4.01. Prohibited Uses. The Property shall not be used for any of the following purposes without prior written approval by the Department pursuant to Health and Safety Code section 25227 and prior written notice to U.S. EPA :

a) A residence, including single or multifamily housing, mobile homes, or factory-built housing constructed or installed for use as residential human habitation.

b) A hospital for humans.

c) A public or private school for persons under 18 years of age.

d) A day care center or a playground for children.

4.02. Soil Management. Soil management activities at the Capped Property are subject to the following requirements in addition to any other applicable Environmental Restrictions:

a) No activities that will disturb the soil at or below grade or below concrete (e.g., excavation, grading, removal, trenching, filling, earth movement, mining, or drilling) shall be allowed at the Property without a Soil Management Plan pre-approved by the Department and U.S. EPA in writing.

b) Any soil brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law.

4.03 Prohibited Activities. The following activities shall not be conducted at the Property:

a) Drilling for any water, oil, or gas without prior written approval by theDepartment

b) Extraction or removal of groundwater without a Groundwater ManagementPlan pre-approved by the Department in writing.

c) Activity that may alter, interfere with, or otherwise affect the integrity or effectiveness of, or the access to, monitoring, operation, or maintenance ofthe concrete cover at the Capped Property without prior written approval of the Department and U.S. EPA.

4.04 Written Notice of Covenant and the Presence of Hazardous Substances Prior to the sale, lease, assignment, or other transfer of the Property, or any portion thereof, the Owner, lessor, or sublessor shall give the buyer, lessee, or sublessee written notice of the existence of this Covenant and its Environmental Restrictions. Prior to recordation of any easement on any portion of the Property, the Owner shall provide a copy of this Covenant to the easement holder to ensure that the easement holder is on notice of the restrictions and requirements of this Covenant. Covenantor shall also provide a copy of this Covenant to all existing Occupants and easement holders of record within 30 days of recording this Covenant.

4.05. Access for Department. The Department shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the Department in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect the Department's right of entry and access, or authority to take response actions, under any applicable State Law.

4.06. Access for U.S EPA. The U.S. EPA shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the U.S. EPA in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect U S. EPA's right of entry and access, or U.S. EPA's authority to take actions, under any applicable law.

4.07. Access for Implementing Operation and Maintenance. The entity or person responsible for implementing the operation and maintenance activities, if any, shall have reasonable right of entry and access to the Property for the purpose of implementing such operation and maintenance activities until the Department determines that no further operation and maintenance activity is required.

4.08. Inspection and Reporting Requirements. The Owner shall conduct an annual inspection of the Property verifying compliance with this Covenant; shall submit an annual inspection report to the Department for its approval by January 15th of each year; and also send a copy to U.S. EPA. Attached as Exhibit E is a sample format for an annual inspection report. The annual inspection report must include the dates, times, and names of those who conducted the inspection and reviewed the annual inspection report. It also shall describe how the observations that were the basis for the statements and conclusions in the annual inspection report were performed (e.g , drive by, fly over, walk in, etc.). If any violation is noted, the annual inspection report must detail the steps taken to correct the violation and return to compliance. If the Owner identifies any violations of this Covenant during the annual inspection or at any other

time, the Owner must within 10 calendar days of identifying the violation: (a) determine the identity of the party in violation, (b) send a letter advising the party of the violation of the Covenant, and (c) demand that the violation cease immediately. Additionally, a copy of any correspondence related to the violation of this Covenant shall be sent to the Department and U.S. EPA within 10 calendar days of its original transmission.

4.09. Five-Year Review. In addition to the annual reviews noted above, after a period of five (5) years from January 15, 2021 and every five (5) years thereafter, Owner shall submit a Five-Year Review report documenting its review of the remedy implemented and its evaluation to determine if human health and the environment are being adequately protected by the remedy as implemented. The Owner shall submit this report to DTSC, and submit a copy to U.S. EPA. The report shall describe the results of all inspections, sampling analyses, tests and other data generated or received by Owner and evaluate the adequacy of the implemented remedy in protecting human health and the environment. As a result of any review work performed, Department may require Owner to perform additional review work or modify the review work previously performed by Owner.

4.10. Changes to Use or Condition of Property. Any changes to land use, movement of PCB contaminated soils, or discovery of new contamination requires notification to, and may require additional approval from, the U.S. EPA by the Owner and/or Occupant.

4.11. Access for Five-Year Reviews. The entity, person, or persons responsible for Five-Year Reviews shall have reasonable right of entry and access to the Property for the purpose of implementing these activities. Such right of entry and access shall continue until such time as the U.S. EPA and DTSC both determine that no further Five-Year Review activities are required.

ARTICLE V
ENFORCEMENT

5.01. Enforcement. Failure of the Owner or Occupant to comply with this Covenant shall be grounds for the Department to require modification or removal of any Improvements constructed or placed upon any portion of the Property in violation of this

Covenant. Violation of this Covenant, such as failure to submit (including submission of any false statement) record or report to the Department, shall be grounds for the Department to pursue administrative, civil, or criminal actions, as provided by law.

5.02. Enforcement Rights of U.S. EPA as Third-Party Beneficiary. U.S. EPA, as a third-party beneficiary, has the right to enforce the Environmental Restrictions contained herein.

ARTICLE VI
VARIANCE, REMOVAL AND TERM

6.01. Variance from Environmental Restrictions. Any person may apply to the Department for a written variance from or other modification of any of the Environmental Restrictions imposed by this Covenant. Such application shall be made in accordance with Health and SafetyCode section 25223. A copy of the application shall be submitted to the U.S. EPA simultaneously with the application submitted to the Department. No variance or modification may be granted under this paragraph without prior notice and opportunity to comment by U S. EPA.

6.02 Removal of Environmental Restrictions. Any person may apply to the Department to terminate or otherwise remove any or all of the Environmental Restrictions imposed by this Covenant or terminate the Covenant in its entirety Such application shall be made in accordance with Health and Safety Code section 25224 and a copy of the application shall be submitted to U.S. EPA simultaneously with the application submitted to the Department. No termination may be granted under this paragraph without prior notice to and opportunity to comment by
U.S. EPA.

6.03. Term Unless ended in accordance with paragraph 6.02, by law, or by the Department in the exercise of its discretion, this Covenant, shall continue in effect in perpetuity.

ARTICLE VII
MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof, to the general public or anyone else for any purpose whatsoever.

7.02. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of Riverside within 10 calendar days of the Covenantor's receipt of a fully executed original. The Covenantor shall also provide copies showing the County Recorder's tracking information of its recording (i.e., document number or book and page number information) to the Department and U.S.EPA within ten (10) days of receiving it from the County Recorder's Office.

7.03. Notices. Whenever any person gives or serves any Notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (a) whendelivered, if personally delivered to the person being served or to an officer of a corporate party being served; or (b) five calendar days after deposit in the mail, if mailedby United States mail, postage paid, certified, return receipt requested:

To Owner:
Mark Willett, General Manager
Clow Valve Company
1375 Magnolia Avenue
Corona, California 91719

And

To Department.
A. Edward Morelan, Chief
Cypress Cleanup Branch
Site Miligation and Restoration Program
Department of Toxic Substances Control
5796 Corporate Avenue
Cypress, California 90630

To U.S. EPA:
U.S. Environmental Protection Agency
Region IX
Attention: PCB Coordinator (Land Chemicals and
Redevelopment Division)
75 Hawthorne Street
San Francisco, CA 94105-3901

Any party may change its address or the individual to whose attention a Notice is to be sent by giving advance written Notice in compliance with this paragraph.

7.04. Partial Invalidity. If this Covenant or any of its terms are determined by a court of competent jurisdiction to be invalid for any reason, the surviving portions of thisCovenant shall

remain in full force and effect as if such portion found invalid had not been included herein.

7.05. Statutory References. All statutory or regulatory references includesuccessor provisions.

7.06. Incorporation of Exhibits All exhibits and attachments to this Covenantare incorporated herein by reference.

IN WITNESS WHEREOF, the Covenantor and theDepartment hereby execute this Covenant.

LAND USE COVENANT
SAMPLE ANNUAL INSPECTION REPORT (2 Pages)

Site name:

Site address:

Current Site owner:

Date and times of inspection:

Name(s) of individual(s) who performed inspection:

How inspection observations were made (e.g. drive-by, fly-over, walking the Property):

1. Since the last annual inspection, has there been a change in the land use, such that there are now residences, a hospital for humans, a public or private school for persons under 21 years of age, or a day care center for children on the restricted Property?
   ☐ Yes ☐ No ☐ Not an applicable restriction

2. Since the last annual inspection, has the soil been disturbed on the restricted Property? Was evidence of soil disturbance observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

3. Since the last annual inspection, has there been any drilling on the restricted Property? Was evidence of drilling observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

<u>Cap Condition</u>

4. Since the last annual inspection, has there been any damage to, disturbance of, or modifications to the existing building foundation and/or surrounding pavement that serves as the cap over contaminated soil?
   ☐ Yes ☐ No

5. Has there been any damage to, disturbance of, or modifications to the asphalt/concrete Cap covering the restricted Property?

   ☐ Yes ☐ No

Land Use Covenant Compliance

6. Has there been a change in the land use of the property from commercial/industrial?

   ☐ Yes ☐ No

If the response to any of the above questions is yes, describe the circumstances.

Photos should be attached to this report that show the use of the Restricted Property at the time of the inspection and the condition of any Caps on the restricted Property. Photos showing any cracks in or damage to the Cap should also be included.

I certify under penalty of law that this document and all attachments were prepared by me or under my direction or supervision. With the exception of any areas of non-compliance noted above, all uses and activities on the restricted Property were found to be in compliance with the restrictions and requirements of the Land Use Covenant. Based on my personal knowledge or inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

1.0 INTRODUCTION AND REGULATORY STATUS

On behalf of Clow Valve Company (Clow), a Division of McWane, EarthCon Consultants CA, Inc (EarthCon), has prepared this Operations and Maintenance Plan (O&M Plan) for the property located at 1375 Magnolia Avenue in Corona, California (Site; see Figures 1 and 2). The O&M Plan is required by the Corrective Measures Study (CMS) (EarthCon, 2019).

Clow will implement the field activities as identified in the Corrective Measures Implementation Workplan (CMIWP) for the Site during the Winter/Spring 2021. Proposed CMIWP activities will be conducted under the supervision of the Department of Toxic Substances Control (DTSC) and in accordance with the Corrective Action Consent Agreement between the California Department of Toxic Substances Control (DTSC) and Clow [Docket No. SPRD 00/01SCC-4208, March 2002]. The DTSC-approved corrective measures will be implemented to yield conditions suitable for continued commercial/industrial use. The entire Site is restricted for industrial use in accordance with the Land Use Covenant (LUC), executed by Clow and DTSC on (draft – TBD)

As noted in the CMS, the majority of the Site is covered by concrete or asphalt, with the exception of AOC1 and AOC5. A discussion of the capping activities associated with AOC1 and AOC5 are provided in the CMIWP. Minor localized cracking was identified in some of the remaining AOCs on-Site. Further, requirements for the Site included the implementation of institutional controls including an O&M Plan, as discussed in detail in the following sections.

1.1 O&M Plan Goals and Objectives

The O&M Plan has been designed to establish a set of procedures for LUC required inspection of the Site and inspection and maintenance of the concrete and/or asphalt cover (cap) on-Site. Additionally, this O&M Plan has been prepared in order to ensure compliance with the LUC and applicable State and Federal Hazardous Waste Control laws and regulations. The goal of the O&M Plan is to prevent contact with contaminated soil, reduce water infiltration, erosion, and dispersion of soil contaminated with constituents of concern. In addition, the O&M Plan will be utilized to protect on-Site personnel, contractors, personnel conducting O&M activities, and/or visitors. Therefore, this O&M Plan will address the following objectives:

- Provide a schedule and procedures for routine inspections and unplanned events.
- Provide procedures, construction details, and schedule for timely repair and/or replacement for concrete/asphalt cover (cap) on-Site.
- Maintain O&M related documentation (inspections, repairs, reporting to agencies, etc.) .
- Notify DTSC and US EPA of O&M and redevelopment plans that involve soil disturbance and or soil cover disturbance activities (See Section 5).
- Notify future Site lessees/occupants of the LUC requirements (See Section 3 and Appendix C). Provide annual notifications to DTSC and US EPA of the inspections outcome and return to compliance.

A summary of previous investigations as well as elements of the O&M Plan are described in detail in the following sections.

1.2 Responsibilities

The property owner has ultimate responsibility for following the O&M Plan, HASP, and LUC. The property owner shall oversee implementation of this O&M Plan at the Site. In addition, the property owner shall make available a copy of the O&M Plan to contractors that may be performing O&M activities at the Site and to lessees / occupants.

Any maintenance and redevelopment activities conducted by the property owner will be done in accordance with the requirements of this O&M Plan. In addition, both the DTSC and US EPA will be notified of such activities prior to implementation.

2.0 SUMMARY OF PREVIOUS INVESTIGATIONS

A DTSC Compliance Evaluation Inspection at the Site lead to development of a Corrective Action Consent Agreement (CACA) that was finalized on March 6, 2002 (Docket No. SPRD 00/01SCC-4208). In accordance with the CACA, the following nine (9) areas of concern (AOC) were identified at the Site (see Figure 2 and Figures 3A through 3J):

- AOC1 – Rail Spur Area (including area of diesel impact)
- AOC2 – Chip-Bin Storage Area
- AOC3 – Water Pressure Test Area
- AOC4 – Former Iron Foundry Sand Cleanup Area
- AOC5 – Oil-Stained Pad (eastern portion of AOC1)
- AOC6 – Former Asphalt Dip Tank
- AOC7 – Transformer Area 1
- AOC8 – Transformer Area 2
- AOC9 – Former Test-Pond (filled)

Groundwater investigations at the Site included installation of an initial groundwater monitoring well (MW-1) and sampling results from 2006 showed a low level of TCE (1.43 ug/L, which is below the Maximum Contaminant Level of 5 ug/L). Given the absence of any chlorinated solvent use at the Site, the TCE detection was postulated to be related to an off-Site source.

In February 2017, two additional groundwater monitoring wells (MW-2, MW-3) were installed on-Site as identified by the locations illustrated on Figure 2. Installation of these wells allowed for calculation of the Site-specific groundwater flow direction and gradient, which confirmed that MW-1 was appropriately positioned to evaluate potential groundwater impacts related to the former TPH-d release at AOC1. Subsequent monitoring demonstrated that groundwater chemistry beneath the Site was similar to local background concentrations; therefore, it was determined that groundwater would not be incorporated into the corrective measures for the Site.

The historical data, a Human Health Risk Assessment, and current Site operations were used to

prepare a *Corrective Measures Study* (CMS) for the Site (EarthCon, 2018). The CMS identified that excavation (AOC7) and capping in place (AOC1, AOC5, and AOC7) as the selected remedy. However, due to the presence of PCBs at AOC-7, additional Site assessment activities were conducted in July 2018, October 2018, and January 2019 under the oversight of the USEPA. The USEPA also required that further assessment of potential PCB impacted soil would be evaluated at AOC3 and AOC6 as well. The results were summarized in a document titled *Risk-Based Approval Application 40 CFR 761.61 (c)(1)* (EarthCon, 2019). Based on the results from the PCB related Site assessment activities, EarthCon recommended that rather than excavating PCB-impacted soil at AOC7 that the Site remained capped, with the existing concrete cap having the ability to protect industrial workers from exposure to PCB concentration in the underlying soil. In a letter dated April 23, 2019, the USEPA approved the application with the conditions including preparation of the following: Deed Restriction, Operations and Maintenance Plan, and Soil Management Plan, and PCB Cleanup Report (CMI Report).

Upon receipt of the approval letter from the USEPA, the DTSC approved the CMS in a letter dated May 16, 2019. The *Corrective Measures Implementation Work Plan* presented details associated with the cap design and the installation and implementation schedule for AOC1 and AOC5. The proposed schedule for the evaluation and repair of the exiting ground cover in AOC2, AOC4, and AOC9 was also addressed. Additionally, potential cap repair and/or construction, if necessary, associated with AOC3, AOC6, and AOC7 was identified to require the oversight of the USEPA.

3.0 LAND USE COVENANT

As noted previously, a LUC will be recorded to restrict the future use of the entire Site to commercial/industrial uses appropriate for the human health risk hazard and prohibits Site development for residential and sensitive receptor uses for the entire Site. For all restrictions and requirements in the LUC see Appendix C. In addition, for AOC3, AOC6, and AOC7, specific requirements of 40 CFR 761.61(a)(8) must also be met, including:

- Record deed restriction within 60 days of completion of cleanup activity
- Indicate that land has been used for PCB remediation waste disposal and is restricted to use as a low occupancy area as defined in 40 CFR 761.3
    - *Low occupancy area* means any area where PCB remediation waste has been disposed of on-site and where occupancy for any individual not wearing dermal and respiratory protection for a calendar year is: less than 840 hours (an average of 16.8 hours per week) for non-porous surfaces and less than 335 hours (an average of 6.7 hours per week) for bulk PCB remediation waste. Examples could include an electrical substation or a location in an industrial facility where a worker spends small amounts of time per week (such as an unoccupied area outside a building, an electrical equipment vault, or in the non-office space in a warehouse where occupancy is transitory).
- Identify the existence of the cap and the requirement to maintain the cap
- Denote the applicable cleanup levels used at the site, under the cap
- Submit a certification, signed by the owner, that he/she has recorded the notation specified in 40 CFR 761.61 (a)(8)(i)(A) to the EPA Regional Administrator
- If, in the future, additional cleanup activities are conducted to remove PCBs to achieve cleanup levels specified in 40 CFR 761.61(a)(4), which do not require a cap, the owner may remove the notice on the deed no earlier than 30 days after achieving the applicable cleanup levels.[1]
- A land survey was prepared by a California licensed Professional Land Surveyor is be included to provide a basis for the LUC. This survey depicts the Site, area subject to 40 CFR 761.3 (PCB impacted soil), and the area subject to soil cover O&M (lead impacted soil) (See Figure 4).

1 As noted in the *Site Management Plan* the Site soil with PCB concentrations of 15 ppm or greater will be removed, as required by the USEPA. Soil characterized with PCB concentrations $\geq$ to 50 ppm will be transported off-Site for disposal at a TSCA-approved facility.

4.0 O&M PLAN IMPLEMENTATION

The purpose of the O&M Plan is to ensure clarity of the ongoing requirements for the remedial surface cover (concrete/asphalt cap) for the Site after the CMIWP has been completed. The O&M Plan will be implemented while the LUC remains in effect. Projected costs associated with the O&M Plan are provided in Appendix D.

4.1 Routine Inspections

As noted in the CMIWP, annual inspections of the surface cover will continue in perpetuity until the contaminated material is removed or demonstrated to no longer represent a risk to human health or the environment.

During inspection of the surface cover, any crack visible at the surface should be identified as a "penetrating crack". One or more of following observations will identify which cracks that will require repair:

- Length equal or greater to 12 inches
- Width equal or greater to 0.25 inches
- Evidence of base course or soil exposure
- Evidence of vegetation (e.g. grass, weeds, etc.) growing through crack
- Evidence of surface deterioration
- Evidence of difference in elevation
- Evidence of ponding water

The corrective action for cracks, if warranted, should be identified on the inspection form. Corrective action may include a rubberized asphalt-emulsion crack filler, application of an area-wide slurry seal, or repaving. In addition, repairs will be made in the event that ponding is present/observed.

In addition to the inspection of the surface cover, the following items must be reported to if observed during inspections:

- Cap disturbing activities,
- Activities that bring soil to the surface,
- Unauthorized Site use for residential, or

- Unauthorized Site use for a school or day care for children under 18 years of age.

Annual inspections will be conducted by knowledgeable personnel as designated by the property owner. The knowledgeable personnel will inspect the condition of the surface cover noting observations on a Site-specific inspection form (see Appendix B for an example).

4.2 Inspections for Unplanned Events

Additional inspections should be conducted in the case of unexpected events occur that have the potential to affect the integrity of the surface cover (i.e. earthquake, on-Site fire, etc.). Details of the unplanned event should be noted on the inspection form. In the case of an earthquake, identify the magnitude and proximity to the Site. Generally, an earthquake with a magnitude 5.0 or greater within 100 miles would trigger an unexpected event inspection. Damage noted by Site personnel will be investigated whether it was determined to have been the result of a specific unplanned event or not.

4.3 Reporting

Written reporting of both annual and unplanned event inspections shall be submitted to DTSC for review within three (3) weeks of completing the on-Site inspection. In addition, a “Five Year Review” of the O&M inspections will be prepared and subsequently submitted to the DTSC.

4.4 Recordkeeping

Records will be maintained on-Site while the LUC remains in effect. Records will include, but not be limited to, inspections, Five Year Review, and associated agency correspondence. Cap repair records, soil management, and disposal records.

5.0 SOIL MANAGEMENT PLAN

The purpose of the Soil Management Plan (SMP) is to provide guidance for management of soils in the event excavation or soil disturbance is required. Areas of the Site subject to the SMP are identified in Figure 4. In the event repairs and/or replacement of the concrete/asphalt surface cover (cap) may require soil disturbing activities, such activities will be conducted in accordance with the SMP Plan. The O&M knowledgeable personnel is responsible for identifying such activities and subsequently notifying the property owner and/or designated individuals responsible for implementing the SMP.

CITY OF CORONA
PRECISE GRADING PLAN
1375 MAGNOLIA AVENUE

GRADING GENERAL NOTES

1. A GRADING PERMIT FROM THE PUBLIC WORKS DEPARTMENT IS REQUIRED. ALL GRADING SHALL COMPLY WITH THE REQUIREMENTS OF THE CITY OF CORONA GRADING REGULATIONS– CORONA MUNICIPAL CODE 15.36. THESE PLANS, SPECIAL INSTRUCTIONS ON THE PERMIT, AND THE GEOTECHNICAL INVESTIGATION AND LIQUEFACTION EVALUATION DATED SEPTEMBER 10, 2019 BY GEOTECHNICAL PROFESSIONALS INC., AND ALL SUBSEQUENT ADDENDA.
2. SOURCE OF TOPOGRAPHY IS BASED ON FIELD SURVEY DATED SEPTEMBER 23, 2018.
3. A PRE–GRADING MEETING AT THE SITE IS REQUIRED BETWEEN THE CITY INSPECTOR, THE CIVIL ENGINEER, THE GEOTECHNICAL ENGINEER AND THE GRADING CONTRACTOR. CALL THE PUBLIC WORKS DEPARTMENT INSPECTION DIVISION AT (951) 279–3511 TO SCHEDULE A PRE–GRADING MEETING AT LEAST 48 HOURS PRIOR TO START OF ANY WORK.
4. HOURS OF OPERATION ARE 7:00 A.M. TO 5:00 P.M. – MONDAY THROUGH FRIDAY EXCLUDING HOLIDAYS.
5. SEPARATE PERMITS SHALL BE REQUIRED FOR ANY IMPROVEMENT WORK IN THE PUBLIC RIGHT–OF–WAY.
6. CONSTRUCTION MATERIAL AND EQUIPMENT SHALL NOT OCCUPY ANY PORTION OF THE PUBLIC RIGHT–OF–WAY, SUCH AS STREET, ALLEY OR PUBLIC SIDEWALK AT ANY TIME. TEMPORARY USE OF PUBLIC RIGHT–OF–WAY, WHENEVER REQUESTED, MUST BE REVIEWED AND APPROVED BY THE PUBLIC WORKS DIRECTOR.
7. REPAIR OR REPLACE ALL EXISTING DAMAGED OR ALTERED PUBLIC IMPROVEMENTS AS REQUIRED BY THE PUBLIC WORKS DIRECTOR.
8. ALL SURVEY MONUMENTS SHALL BE PROTECTED AND PERPETUATED IN PLACE. ANY DISTURBED OR COVERED MONUMENTS SHALL BE RESET BY A QUALIFIED CIVIL ENGINEER OR A LICENSED LAND SURVEYOR.
9. PRIOR TO TAKING WATER FROM A CITY FIRE HYDRANT, THE CONTRACTOR SHALL MAKE ARRANGEMENTS WITH THE PUBLIC WORKS DEPARTMENT TO OBTAIN A FIRE HYDRANT WATER METER. METER LOCATION MAY NOT BE ALTERED WITHOUT DEPARTMENT OF WATER AND POWER APPROVAL.
10. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE LOCATION OF ALL UTILITIES OR STRUCTURES ABOVE OR BELOW GROUND, SHOWN OR NOT SHOWN ON THESE PLANS. THE CONTRACTOR WILL BE HELD RESPONSIBLE FOR ALL DAMAGE TO ANY UTILITIES OR STRUCTURES CAUSED BY HIS OPERATION.
11. STRICT ADHERENCE TO DUST CONTROL REQUIREMENTS SHALL BE ENFORCED. ADJACENT STREETS ARE TO BE CLEANED DAILY OF ALL DIRT AND DEBRIS RESULTING FROM THIS OPERATION.
12. SEPARATE PERMITS FROM THE BUILDING DIVISION SHALL BE REQUIRED FOR ALL WALLS.
13. AN APPROVED PRECISE GRADING PLAN WILL BE REQUIRED PRIOR TO A BUILDING PERMIT BEING ISSUED.
14. THE DESIGN CIVIL ENGINEER/GEOTECHNICAL ENGINEER/ENGINEERING GEOLOGIST OF RECORD SHALL EXERCISE SUFFICIENT CONTROL DURING GRADING AND CONSTRUCTION TO ENSURE COMPLIANCE WITH THE PLANS, SPECIFICATIONS, AND CODE REQUIREMENTS WITHIN THEIR PURVIEW. THE ENGINEERS SHALL SUBMIT "ACKNOWLEDGMENT CONCERNING EMPLOYMENT" FORM TO THE CITY PRIOR TO THE ISSUANCE OF A GRADING PERMIT.
15. REVISIONS TO THE PLANS ARE TO BE SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR REVIEW AND APPROVAL PRIOR TO CHANGING ORIGINAL MYLARS.
16. THE CIVIL ENGINEER SHALL SUBMIT WRITTEN CERTIFICATION OF COMPLETION OF ROUGH GRADING IN ACCORDANCE WITH THE APPROVED GRADING PLAN AND CERTIFICATION OF BUILDING PAD ELEVATION PRIOR TO ISSUANCE OF THE BUILDING PERMIT. PAD ELEVATION GRADING TOLERANCE SHALL NOT EXCEED ±0.10'.
17. AN "AS–BUILT" GRADING PLAN SHALL BE SUBMITTED AT THE COMPLETION OF WORK SHOWING ALL WATER QUALITY MANAGEMENT PLAN FACILITIES.
18. GRADING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE GEOTECHNICAL ENGINEER WHO SHALL CERTIFY THAT ALL FILL HAS BEEN PROPERLY PLACED AND SUBMIT A FINAL COMPACTION REPORT FOR ALL FILLS OVER 1' DEEP.
19. THE GEOTECHNICAL ENGINEER SHALL, AFTER CLEARING AND PRIOR TO THE PLACEMENT OF FILL IN CANYONS, INSPECT EACH CANYON FOR AREAS OF ADVERSE STABILITY AND TO DETERMINE THE PRESENCE OR ABSENCE OF SUBSURFACE WATER OR SPRING FLOW. IF NEEDED, DRAINS WILL BE DESIGNED AND CONSTRUCTED PRIOR TO THE PLACEMENT OF FILL IN EACH RESPECTIVE CANYON.
20. FILL AREAS SHALL BE CLEANED OF ALL VEGETATION AND DEBRIS, SCARIFIED TO A MINIMUM DEPTH OF 12 INCHES AND INSPECTED BY THE GEOTECHNICAL ENGINEER PRIOR TO THE PLACING OF FILL.
21. ALL DELETERIOUS MATERIALS, I.E., LUMBER, LOGS, BRUSH, OR ANY OTHER ORGANIC MATERIALS OR RUBBISH SHALL BE REMOVED FROM ALL AREAS TO RECEIVE COMPACTED FILL.
22. UNSUITABLE MATERIALS, SUCH AS TOPSOIL, WEATHERED BEDROCK, ETC., SHALL BE REMOVED AS REQUIRED BY GEOTECHNICAL ENGINEER (AND ENGINEERING GEOLOGIST, WHERE EMPLOYED) FROM ALL AREAS TO RECEIVE COMPACTED FILL OR DRAINAGE STRUCTURES.
23. FILLS SHALL BE BENCHED INTO COMPETENT MATERIAL.
24. WHEN CUT PADS ARE BROUGHT TO NEAR GRADE, THE GEOTECHNICAL ENGINEER SHALL DETERMINE IF THE BEDROCK IS EXTENSIVELY FRACTURED OR FAULTED AND WILL READILY TRANSMIT WATER. IF CONSIDERED NECESSARY BY THE GEOTECHNICAL ENGINEER, A COMPACTED FILL BLANKET WILL BE PLACED.
25. WHERE SUPPORT OR BUTTRESSING OF CUT AND NATURAL SLOPES IS DETERMINED TO BE NECESSARY BY THE GEOTECHNICAL ENGINEER, THE GEOTECHNICAL ENGINEER SHALL SUBMIT DESIGN, LOCATIONS AND CALCULATIONS TO THE PUBLIC WORKS DIRECTOR PRIOR TO CONSTRUCTION. THE GEOTECHNICAL ENGINEER WILL INSPECT AND CONTROL THE CONSTRUCTION OF THE BUTTRESSING AND CERTIFY TO THE STABILITY OF THE SLOPE AND ADJACENT STRUCTURES UPON COMPLETION.
26. ALL CUT SLOPES SHALL BE INVESTIGATED, BOTH DURING AND AFTER GRADING BY THE GEOTECHNICAL ENGINEER, TO DETERMINE IF ANY SLOPE HAS STABILITY PROBLEMS. SHOULD EXCAVATION DISCLOSE ANY GEOLOGICAL HAZARDS, THE GEOTECHNICAL ENGINEER SHALL RECOMMEND NECESSARY TREATMENT TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL. ALL APPROVALS TO BE GRANTED ON THE BASIS OF DETAILED GEOLOGICAL MAPPING AND WRITTEN RECOMMENDATION FROM THE GEOTECHNICAL ENGINEER.
27. MAXIMUM ALLOWABLE CUT AND FILL SLOPES ARE 2 TO 1 OR 30' IN HEIGHT WITHOUT APPROVAL OF THE PUBLIC WORKS DIRECTOR. IF PROPOSED CUT AND FILL SLOPES ARE STEEPER THAN 2:1 OR OVER 30' IN HEIGHT, STABILITY CALCULATIONS WITH A SAFETY FACTOR OF AT LEAST ONE AND FIVE TENTHS (1.5) SHALL BE SUBMITTED BY A GEOTECHNICAL ENGINEER FOR APPROVAL FROM THE PUBLIC WORKS DIRECTOR.
28. PROVIDE 4' WIDE BY 1' HIGH BERM OR EQUIVALENT ALONG THE TOP OF ALL FILL SLOPES OVER 5' HIGH, EXCEPT WHERE SHOWN OTHERWISE ON THE PLANS.
29. ALL SLOPES ADJACENT TO PUBLIC RIGHT–OF–WAY SHALL CONFORM TO SECTION 15.36.220 OF THE CORONA MUNICIPAL CODE.
30. ALL SLOPES 4' OR HIGHER SHALL BE PLANTED AND COMPLY WITH REQUIREMENTS OF CHAPTER 17 OF THE CORONA MUNICIPAL CODE.
31. TERRACE DRAINS, INTERCEPTOR DRAINS AND DOWN DRAINS SHALL BE CONSTRUCTED OF 4" P.C.C. (OR GUNITE) REINFORCED WITH 6"x6" –2 1.4x1.4 W.W.M. REBAR SHALL BE GRADE 60 BILLET STEEL CONFORMING TO ASTM A615.
32. ALL CONCRETE STRUCTURES THAT COME IN CONTACT WITH THE ON–SITE SOILS SHALL BE CONSTRUCTED WITH TYPE II OR V CEMENT AS DEEMED NECESSARY BY SOLUBLE SULFATE CONTENT TEST CONDUCTED BY THE GEOTECHNICAL ENGINEER. ALL CONCRETE SHALL BE CITY STANDARD 560–C–3250 (600–E 3250 FOR GUNITE) PER CITY STANDARD SPECIFICATIONS.
33. GROUND SHALL BE PRE–WETTED PRIOR TO THE PLACEMENT OF CONCRETE. MOISTURE LOSS RETARDANT SHALL BE USED WHEN REQUIRED BY THE GEOTECHNICAL ENGINEER OR PUBLIC WORKS DIRECTOR.
34. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND/OR OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL.

POST CONSTRUCTION BMP GENERAL NOTES:

1. THIS PLAN UTILIZES STRUCTURAL BEST MANAGEMENT PRACTICES (BMPS) FOR POST CONSTRUCTION STORM WATER TREATMENT.
2. CONSTRUCT THE STORM WATER TREATMENT FACILITIES AFTER ALL CONTRIBUTING DRAINAGE AREAS ARE STABILIZED AND TO THE SATISFACTION OF THE ENGINEER OF RECORD.
3. DO NOT USE THE DEVICES AS TEMPORARY SEDIMENT CONTROL FACILITIES DURING CONSTRUCTION.
4. THE FOLLOWING BMPS HAVE BEEN DESIGNED INTO THE PLANS. PLEASE REFER TO THE PROJECT'S APPROVED WATER QUALITY MANAGEMENT PLAN (WQMP) FOR ADDITIONAL BMP's AND OPERATION AND MAINTENANCE DETAILS:

   A. BIORETENTION FACILITY AND OR ON–SITE RETENTION

NOTE:

1. A SEWER BACKFLOW PREVENTOR IS NOT REQUIRED FOR THIS PROJECT
2. WATER PRESSURE REDUCING VALVES ARE REQUIRED FOR THIS PROJECT

NOTICE TO CONTRACTORS

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES, CONDUITS, OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF AVAILABLE RECORDS. TO THE BEST OF OUR KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT THOSE SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN ON THESE DRAWINGS. THE CONTRACTOR FURTHER ASSUMES ALL LIABILITY AND RESPONSIBILITY FOR THE UTILITY PIPES, CONDUITS OR STRUCTURES, SHOWN OR NOT SHOWN ON THESE PLANS

CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOBSITE CONDITIONS DURING THE COURSE OF CONSTRUCTION ON THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS OR PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE CITY, THE OWNER, AND THE ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT.

THE CONTRACTOR SHALL CALL IN A LOCATION REQUEST TO UNDERGROUND SERVICE ALERT (USA) PH. 811, TWO (2) WORKING DAYS PRIOR TO DIGGING. NO CONSTRUCTION PERMIT ISSUED BY THE PUBLIC WORKS DEPARTMENT SHALL BE VALID INVOLVING UNDERGROUND FACILITIES UNLESS THE APPLICANT HAS AN INQUIRY IDENTIFICATION NUMBER ISSUED BY U.S.A.

CARE SHOULD BE TAKEN TO PREVENT GRADED DITCHES AND SWALES FROM UNDERMINING STREET IMPROVEMENTS. UPON INSPECTION OF THE SITES, THE PUBLIC WORKS DIRECTOR MAY REQUIRE TEMPORARY GUNITE SWALES, ENTERING OR LEAVING IMPROVEMENTS.

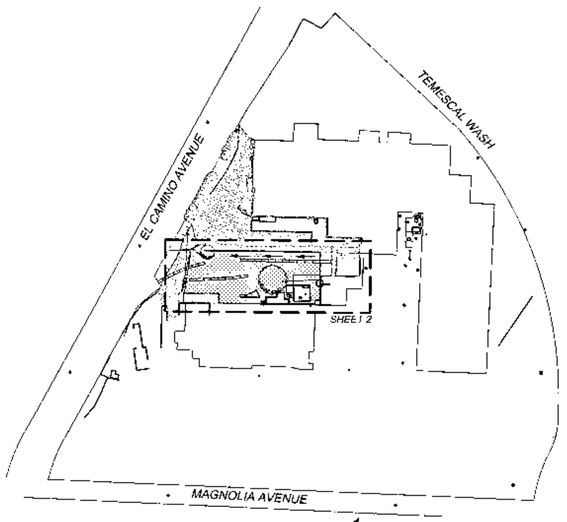
DECLARATION OF ENGINEER OF RECORD

I HEREBY DECLARE THAT THE DESIGN OF THE IMPROVEMENTS SHOWN ON THESE PLANS COMPLIES WITH ALL PROFESSIONAL ENGINEERING STANDARDS AND PRACTICES. AS THE ENGINEER OF RECORD FOR THE PLANS, I ASSUME FULL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. WITH RESPECT TO THE PLAN CHECK PERFORMED BY THE CITY OF CORONA, I UNDERSTAND AND ACKNOWLEDGE THE FOLLOWING: (1) THE PLAN CHECK IS A REVIEW FOR THE LIMITED PURPOSE OF ENSURING THE PLANS COMPLY WITH THE CITY'S STANDARDS, PROCEDURES, POLICIES, AND ORDINANCES, (2) THE PLAN CHECK IS NOT A DETERMINATION OF THE TECHNICAL ADEQUACY OF THE DESIGN OF THE IMPROVEMENTS, AND (3) THE PLAN CHECK DOES NOT RELIEVE ME OF MY LEGAL AND PROFESSIONAL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. AS THE ENGINEER OF RECORD, I AGREE TO DEFEND, INDEMNIFY, AND HOLD HARMLESS THE CITY, ITS ELECTED OFFICIALS, EMPLOYEES, AND AGENTS FROM ANY AND ALL ACTUAL OR ALLEGED CLAIMS, DEMANDS, CAUSES OF ACTION, LIABILITY, LOSS, DAMAGE, OR INJURY TO PROPERTY OR PERSONS, INCLUDING WRONGFUL DEATH, WHETHER IMPOSED BY A COURT OF LAW OR BY ADMINISTRATIVE ACTION OF ANY FEDERAL, STATE, OR LOCAL GOVERNMENTAL AGENCY, ARISING OUT OF OR INCIDENT TO ANY NEGLIGENT ACTS, OMISSIONS, OR ERRORS BY THE ENGINEER OF RECORD, ITS EMPLOYEES, CONSULTANTS, OR AGENTS.

WILLIAM D. BROOKS, RCE 53114 — EXPIRES 6/30/21 — 3/8/2021 DATE

ENGINEER OF RECORD

GEOTECHNICAL ENGINEER'S STATEMENT



THIS PLAN HAS BEEN REVIEWED BY GEOTECHNICAL PROFESSIONALS INC. AND APPEARS TO BE IN GENERAL CONFORMANCE WITH RECOMMENDATIONS IN OUR REPORT DATED SEPTEMBER 10, 2019–PROJECT NO. 2945.1. THIS PLAN HAS BEEN REVIEWED FOR GEOTECHNICAL ASPECTS ONLY. WE MAKE NO REPRESENTATION REGARDING ACCURACY OF DIMENSIONS, QUANTITIES, MEASUREMENTS, CALCULATIONS, OR ANY PORTION OF THE DESIGN. GEOTECHNICAL CONDITIONS AND RECOMMENDATIONS SHOULD BE CONFIRMED BY THE GEOTECHNICAL CONSULTANT IN THE FIELD AT TIME OF CONSTRUCTION.

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF CORONA, IN THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THAT PORTION OF THE NORTHWEST QUARTER OF SECTION 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, AS SHOWN BY SECTIONALIZED SURVEY OF THE RANCHO EL SOBRANTE DE SAN JACINTO AND OF LOT 13 IN BLOCK 63 OF THE LANDS OF THE RIVERSIDE LAND AND IRRIGATING COMPANY, AS SHOWN BY MAP ON FILE IN BOOK 1 PAGE 70 OF MAPS, SAN BERNARDINO COUNTY RECORDS, BOUNDED AS FOLLOWS: ON THE SOUTHEAST BY THE SOUTHWESTERLY EXTENSION OF THE NORTHWEST LINE OF MAGNOLIA AVENUE, AS SHOWN ON RECORD OF SURVEY ENTITLED "RECORD OF SURVEY OF A PORTION OF LOTS 11, 12, 13, 14, 15, IN BLOCK 63 OF RIVERSIDE LAND AND IRRIGATING COMPANY AND A PORTION OF SECTIONS 29 AND 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, SAN BERNARDINO BASE AND MERIDIAN" ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS, ON THE WEST BY THE EASTERLY LINE OF THE PROPERTY SPUR OF THE ATCHINSON, TOPEKA, AND SANTA FE RAILWAY COMPANY; AND ON THE NORTHEAST BY THE SOUTHERLY AND SOUTHWESTERLY LINE OF PARCELS 5 TO 11, INCLUSIVE, OF SAID RECORD OF SURVEY ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS.

EXCEPTING THEREFROM THAT PORTION GRANTED TO THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER DISTRICT CONSERVATION DISTRICT BY DEED RECORDED OCTOBER 22, 1984 AS INSTRUMENT NO. 84–227387 AND RE–RECORDED FEBRUARY 11, 1985 AS INSTRUMENT NO. 85–028214 BOTH OF OFFICIAL RECORDS.

EARTHWORK QUANTITIES

NOTE: THE CONSTRUCTION QUANTITIES SHOWN ON THESE PLANS ARE FOR CITY FEE PURPOSES ONLY.
IT IS THE CONTRACTOR'S RESPONSIBILITY TO PERFORM INDIVIDUAL TAKEOFFS FOR BIDDING PURPOSES.

(PRELIMINARY QUANTITIES DO NOT INCLUDE SHRINKAGE FACTOR AND OVEREXCAVATION OVER THE SITE)

RAW CUT	582 CU. YDS.
RAW FILL	0 CU. YDS.
NET EXPORT	–582 CU. YDS.

SITE AREA

TOTAL AREA – 16.9 ACRES
DISTURBED AREA – 0.7 ACRES
TOTAL LOTS: 1
PARKING SPACES: N/A

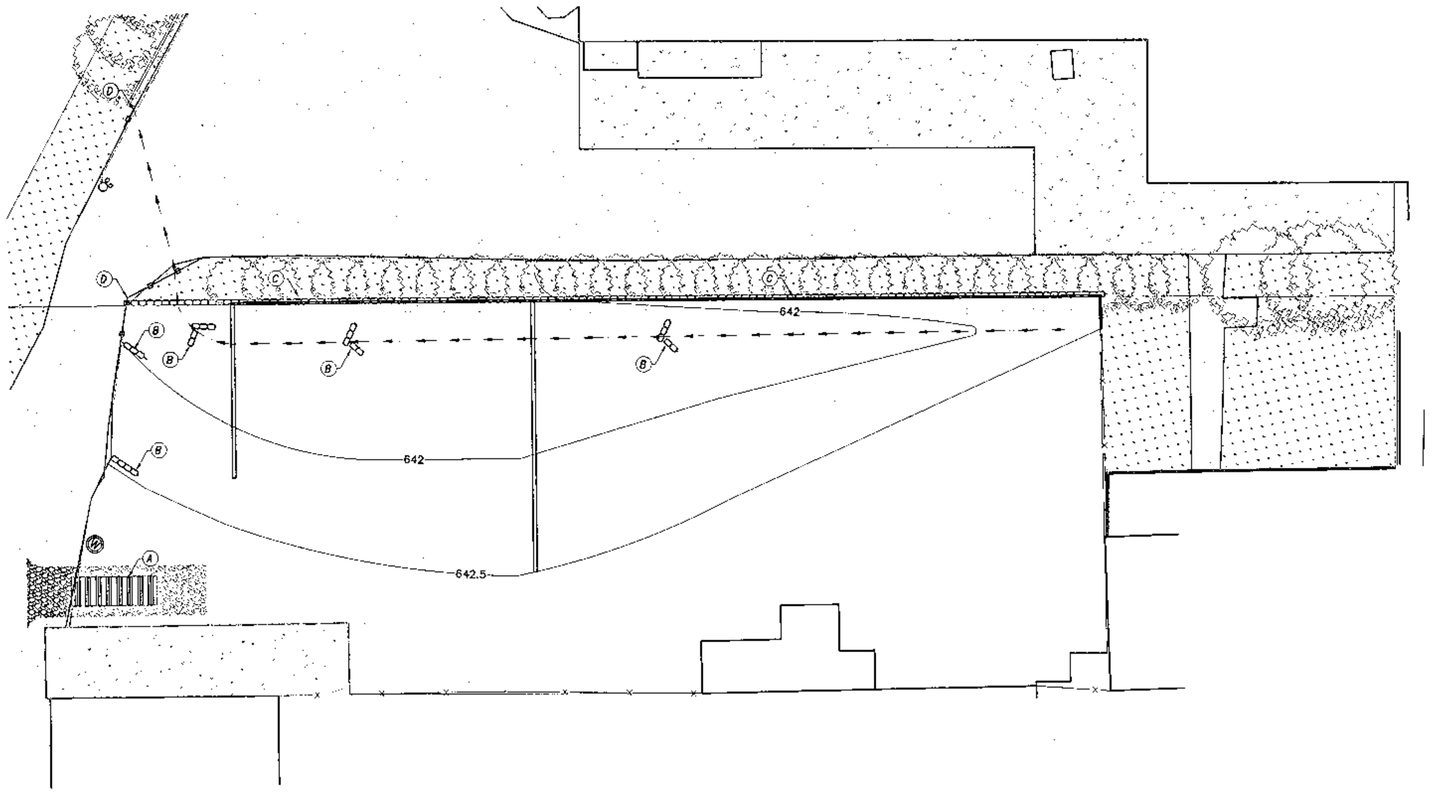
GRADING PLANS



Drawing No. 20-026P
Sh 3 of 4

24" x 36"

EROSION CONTROL GENERAL NOTES:

1. EROSION CONTROL IS REQUIRED FOR GRADING OPERATIONS ON A YEAR ROUND BASIS. APPROVED PLANS ARE REQUIRED FOR ALL WORK REQUIRING A GRADING PERMIT.
2. IN CASE OF EMERGENCY CALL TIFFANY SMITH OF CLOW VALVE MANUFACTURING AT 317-364-0898.
3. THE ENGINEER OF RECORD WILL SUPERVISE EROSION CONTROL WORK AND INSURE THAT WORK IS IN ACCORDANCE WITH APPROVED PLANS.
4. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL
5. THE PUBLIC WORKS DIRECTOR RESERVES THE RIGHT TO MAKE CHANGES OR MODIFICATIONS TO THIS PLAN AS DEEMED NECESSARY.
6. STANDBY CREW FOR EMERGENCY WORK SHALL BE MADE AVAILABLE AT ALL TIMES. NECESSARY MATERIALS SHALL BE AVAILABLE ON SITE AND STOCKPILED AT CONVENIENT LOCATIONS TO FACILITATE RAPID CONSTRUCTION OF TEMPORARY EROSION AND SEDIMENT CONTROL BEST MANAGEMENT PRACTICES (BMPS) OR TO REPAIR ANY DAMAGED BMP's WHEN RAIN IS IMMINENT.
7. AN EFFECTIVE COMBINATION OF EROSION AND SEDIMENT CONTROL BMPS SHALL BE IMPLEMENTED AND MAINTAINED TO PREVENT AND/OR MINIMIZE THE TRANSPORT OF SOIL IN RUNOFF FROM DISTURBED SOIL AREAS ON THE CONSTRUCTION SITE AT ALL TIMES. IN ADDITION, BMPS SHALL BE INSPECTED PRIOR TO PREDICTED STORM EVENTS AND FOLLOWING STORM EVENTS. BMPS SHALL NOT BE MOVED OR MODIFIED WITHOUT THE APPROVAL OF THE CITY INSPECTOR.
8. ALL REMOVABLE PROTECTIVE DEVICES SHOWN SHALL BE IN PLACE AT THE END OF EACH WORKING DAY WHEN THE FIVE-DAY RAIN PROBABILITY FORECAST EXCEEDS 40 PERCENT, AS FORECASTED BY THE NATIONAL WEATHER SERVICE.
9. AFTER A RAIN EVENT EXCEEDING ONE-QUARTER INCH IN ANY 12 HOUR PERIOD, OR UPON DIRECTION OF THE PUBLIC WORKS DIRECTOR, ALL SILT AND DEBRIS SHALL BE REMOVED FROM CHECK DAMS, SILT FENCES, AND DESILTING BASINS; AND THE BASINS SHALL BE PUMPED DRY AND RESTORED TO ORIGINAL DESIGN CONDITION. ANY EROSION CONTROL MEASURES DAMAGED DURING A RAIN EVENT SHALL ALSO BE IMMEDIATELY REPAIRED.
10. DESILTING BASINS ARE TO BE CONSTRUCTED AS GRADING OF INDIVIDUAL GRADING AREAS ARE COMPLETE PER ROUGH GRADING PLANS.
11. THE CONTRACTOR SHALL BE RESPONSIBLE AND SHALL TAKE NECESSARY PRECAUTIONS TO PREVENT PUBLIC TRESPASS ONTO AREAS WHERE IMPOUNDED WATER CREATES A HAZARDOUS CONDITION.
12. AREAS SHALL BE MAINTAINED IN SUCH A STATE THAT FIRE ACCESS SHALL BE MAINTAINED AT ALL TIMES (INCLUDING ACCESS TO NEIGHBORING PROPERTIES).
13. GRADED AREAS AROUND THE SITE PERIMETER MUST DRAIN AWAY FROM THE FACE OF SLOPE AT THE CONCLUSION OF EACH WORKING DAY.
14. TEMPORARY EROSION PROTECTION IS REQUIRED FOR MANUFACTURED SLOPES PRIOR TO PERMANENT PLANTING.
15. ALL DISTURBED SLOPES SHALL BE PLANTED AND PROTECTED WITHIN 45 DAYS OF THE COMPLETION OF EACH STAGE OF GRADING. SUITABLE MEASURES TO PREVENT SLOPE EROSION INCLUDING, BUT NOT LIMITED TO, RAPID GROWTH VEGETATION SUFFICIENT TO STABILIZE THE SOIL, SHALL BE INSTALLED ON ALL DISTURBED AREAS UNTIL SUCH TIME AS THE PERMANENT VEGETATIVE COVER SUFFICIENTLY MATURES TO PROVIDE PERMANENT STABILITY.
16. NO OBSTRUCTION OR DISTURBANCE OF NATURAL DRAINAGE COURSES OR EXISTING STORM DRAIN INLETS SHALL OCCUR DURING GRADING OPERATIONS, UNLESS ADEQUATE TEMPORARY/PERMANENT DRAINAGE FACILITIES HAVE BEEN APPROVED AND INSTALLED TO CARRY SURFACE WATER TO THE NEAREST PRACTICAL STREET, STORM DRAIN OR NATURAL WATER COURSE. ALL EXISTING DRAINAGE COURSES ON THE PROJECT SITE MUST BE MAINTAINED IN A STATE TO ALLOW FOR CONTINUOUS FUNCTION.
17. THE CONTRACTOR SHALL CONDUCT HIS OPERATIONS IN SUCH A MANNER THAT STORM RUNOFF WILL BE CONTAINED WITHIN THE PROJECT OR CHANNELED INTO THE STORM DRAIN SYSTEM WHICH SERVES THE RUNOFF AREA. STORM RUNOFF FROM ONE AREA SHALL NOT BE ALLOWED TO DIVERT TO ANOTHER RUNOFF AREA.
18. CONFORMANCE WITH THE REQUIREMENTS OF THESE PLANS SHALL IN NO WAY RELIEVE THE CONTRACTOR FROM HIS RESPONSIBILITIES TO THIS SITE AND ADJACENT PROPERTIES. DURING GRADING OPERATIONS, TEMPORARY DRAINAGE CONTROL SHALL BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES. TEMPORARY DRAINAGE CONTROL SHALL CONSIST OF, BUT NOT BE LIMITED TO, CONSTRUCTING SUCH FACILITIES AND TAKING SUCH MEASURES AS ARE NECESSARY TO PREVENT, CONTROL AND ABATE WATER, MUD AND EROSION DAMAGE TO PUBLIC AND PRIVATE PROPERTY AS A RESULT OF THE CONSTRUCTION OF THIS PROJECT.
19. FILL AREAS WHILE BEING BROUGHT UP TO GRADE AND DURING PERIODS OF COMPLETION PRIOR TO FINAL GRADE, SHALL BE PROTECTED BY VARIOUS MEASURES TO ELIMINATE EROSION AND THE SILTATION OF DOWNSTREAM FACILITIES AND ADJACENT AREAS. THESE MEASURES MAY INCLUDE, BUT SHALL NOT BE LIMITED TO: TEMPORARY DOWN DRAINS, EITHER IN THE FORM OF PIPES OR PAVED DITCHES TO DESILT RUNOFF; PROTECTION SUCH AS SAND BAGS AROUND INLETS WHICH HAVE NOT BEEN BROUGHT UP TO GRADE; AND EARTH BERMS AND APPROPRIATE GRADING TO DIRECT DRAINAGE AWAY FROM THE EDGE OF THE TOP OF SLOPES SHALL BE CONSTRUCTED AND MAINTAINED ON THOSE FILL AREAS WHERE EARTHWORK OPERATIONS ARE NOT IN PROGRESS.
20. CLEARING AND GRUBBING SHOULD BE LIMITED TO AREAS THAT WILL RECEIVE IMMEDIATE GRADING. EROSION CONTROL MEASURES WILL BE REQUIRED TO PROTECT AREAS WHICH HAVE BEEN CLEARED AND GRUBBED PRIOR TO GRADING OPERATION, AND WHICH ARE SUBJECT TO RUNOFF DURING A RAIN EVENT. THESE MEASURES MAY INCLUDE BUT SHALL NOT BE LIMITED TO: GRADED DITCHES; BRUSH BARRIERS AND SILT FENCES. CARE SHALL BE EXERCISED TO PRESERVE VEGETATION BEYOND LIMITS OF GRADING.
21. CONSTRUCTION SITES SHALL BE MANAGED TO MINIMIZE THE EXPOSURE TIME OF DISTURBED SOIL AREAS THROUGH PHASING AND SCHEDULING OF GRADING TO THE EXTENT FEASIBLE AND THE USE OF TEMPORARY AND PERMANENT SOIL STABILIZATION.
22. STOCKPILES OF SOIL SHALL BE PROPERLY CONTAINED TO ELIMINATE OR REDUCE SEDIMENT TRANSPORT FROM THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJACENT PROPERTIES VIA RUNOFF, VEHICLE TRACKING, OR WIND.
23. CONSTRUCTION SITES SHALL BE MAINTAINED IN SUCH A CONDITION THAT WIND OR RUNOFF DOES NOT CARRY WASTES OR POLLUTANTS OFF THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJORNING PROPERTIES.
24. DISCHARGES OTHER THAN STORM WATER (NON-STORM WATER DISCHARGES) ARE PROHIBITED, EXCEPT AS AUTHORIZED BY AN INDIVIDUAL NPDES PERMIT, THE STATEWIDE GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY, OR OTHER APPLICABLE GENERAL NPDES PERMIT. POTENTIAL POLLUTANTS INCLUDE BUT ARE NOT LIMITED TO: SOLID OR LIQUID CHEMICAL SPILLS; WASTES FROM PAINTS, STAINS, SEALANTS, SOLVENTS, DETERGENTS, GLUES, LIME, PESTICIDES, HERBICIDES, FERTILIZERS, WOOD PRESERVATIVES, AND ASBESTOS FIBERS, PAINT FLAKES OR STUCCO FRAGMENTS; FUELS, OILS, LUBRICANTS, AND HYDRAULIC, RADIATOR OR BATTERY FLUIDS; CONCRETE AND RELATED CUTTING OR CURING RESIDUES; FLOATABLE WASTES; WASTES FROM STREET CLEANING; SUPER-CHLORINATED POTABLE WATER FROM LINE FLUSHING AND TESTING, AND RUNOFF FROM EQUIPMENT AND VEHICLE WASHING. DURING CONSTRUCTION, DISPOSAL OF SUCH MATERIALS SHOULD OCCUR IN A SPECIFIED AND CONTROLLED TEMPORARY AREA ONSITE PHYSICALLY SEPARATED FROM POTENTIAL STORM WATER RUNOFF, WITH ULTIMATE DISPOSAL IN ACCORDANCE WITH LOCAL, STATE AND FEDERAL REQUIREMENTS.
25. AT THE END OF EACH DAY OF CONSTRUCTION ACTIVITY ALL CONSTRUCTION DEBRIS AND WASTE MATERIALS SHALL BE COLLECTED AND PROPERLY DISPOSED IN TRASH OR RECYCLE BINS
26. PAVED STREETS, SIDEWALKS AND OTHER IMPROVEMENTS SHALL BE MAINTAINED IN A NEAT CLEAN CONDITION, FREE OF LOSE SOIL, CONSTRUCTION DEBRIS AND TRASH. STREET SWEEPING OR OTHER EQUALLY EFFECTIVE MEANS SHALL BE USED ON A REGULAR BASIS TO CONTROL SILT THAT HAS BEEN DEPOSITED ON STREETS OR SIDEWALKS. WATERING SHALL NOT USED TO CLEAN STREETS.
27. DISCHARGING CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING GROUNDWATER THAT HAS INFILTRATED INTO THE CONSTRUCTION SITE IS PROHIBITED. DISCHARGING OF CONTAMINATED SOILS VIA SURFACE EROSION IS ALSO PROHIBITED. DISCHARGING NON-CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING ACTIVITIES MAY REQUIRE A NPDES PERMIT FROM THE SANTA ANA REGIONAL BOARD.
28. ALL CONSTRUCTION CONTRACTOR AND SUBCONTRACTOR PERSONNEL ARE TO BE MADE AWARE OF THE REQUIRED BEST MANAGEMENT PRACTICES AND GOOD HOUSEKEEPING MEASURES FOR THE PROJECT SITE AND ANY ASSOCIATED CONSTRUCTION STAGING AREAS.

Project Health and Safety Plan (HASP)

Project Name: Corrective Measures Study - Clow Valve
1375 Magnolia Avenue
Corona, California

Project Number: 04.20150013.00

Prepared by:	Jennifer McGervey EarthCon Consultants CA, Inc.	8/19/16
Project Manager:	Jeff Bennett, PG EarthCon Consultants CA, Inc.	8/19/16
Approved by:	J. Ryan Clarke EarthCon HASP Reviewer	08/20/2016

Brief Description of Amendment	**Amendment Date**
Update field scope to include capping; updated dust action level;	10/2/17
Update of EarthCon H&S personnel	10/2/17

Health and Safety Plan Consent Agreement

Because of the potentially hazardous nature of this site and activity occurring at the site, it is not possible to discover, evaluate, and provide protection for all possible hazards that may be encountered. Strict adherence to the health and safety guidelines set forth in this document will reduce, but may not eliminate, the potential for injury and illness at this site. Guidelines in this Plan were prepared specifically for this site and should not be used on any other site without prior evaluation by trained health and safety personnel.

Site workers must also review this HASP. The Site Safety Officer (SSO) must conduct a pre-work briefing prior to initiating this project. All sections of this HASP must be reviewed during this briefing and documented via **Appendix A**. Any worker not attending the initial meeting must be trained by the SSO on the information covered in the pre-work briefing meeting. ***The SSO must hold tailgate meetings at the beginning of each work shift to discuss important safety and health issues concerning tasks to be performed on that day.*** After reading the HASP and attending a pre-work briefing, workers must sign the following acknowledgment statement.

I have read, understand, and will abide by the information set forth in this HASP. I have also attended a pre-work briefing. I agree to perform my work in accordance with this HASP **(See Appendix F).**

1.0 HASP SUMMARY INFORMATION

The first phase of this project is anticipated to include the collection of soil samples, using a direct push drill rig, at a total depth of 10 feet below ground surface (ft bgs) and installation of two groundwater monitoring wells. The second phase is to implement the CMS activities which includes removing impacted soil, collection of soil confirmation samples, and capping the identified exposed surfaces. This HASP will be updated or amended, as necessary, to reflect any changes that may be encountered. Personnel responsibilities are described in **Table 1** and personnel training requirements are provided in **Table 2.**

2.0 INTRODUCTION

This HASP serves the following purposes:

- Identifies and describes the potentially hazardous substances and working conditions that may be encountered during the field work;
- Specifies personal protective and monitoring equipment to be used during onsite activities; and
- Outlines measures to be implemented in the event of an emergency.

2.1 Site Location and Description

The Site is southwest corner of the intersection at 1375 Magnolia Avenue in Corona, California. **Figure 1** shows the site location. **Figure 2** provides a site layout for the facility. It is identified as Riverside County Assessor Parcel Number 107-030-022-3 and covers approximately 16 acres. Approximately 60% of the property is currently used for machining, product finishing and testing, and product storage. The remaining 40% includes asphalt-paved parking areas and unpaved areas. Unused foundry buildings, small offices and open areas are leased to other tenants.

2.2 Project Objectives

EarthCon will collect soil samples to assess the extent of soil contamination on-Site. The soil samples will be managed according to the workplan protocol.

EarthCon will provide oversight of advancement for well installation using a subcontracted drilling company. EarthCon will collect and manage water samples according to the workplan protocol.

EarthCon will provide oversight of the grading and asphalt cap placement associated with AOC-1 and AOC-5.

The ultimate objective is to conduct all activities in a safe and compliant manner.

2.3 Personnel Requirements and Responsibilities

Provisions of this HASP apply to all EarthCon personnel and subcontractors that will be participating in the above noted field activities. On-site personnel will be required to review the HASP prior to commencement of field activities and conduct all field activities in accordance with plan specifications. Other personnel on the site are expected to follow the provisions of the health and safety procedures outlined in this HASP as a minimum base standard but will retain full responsibility for the health and safety of their own employees or sub-subcontractors.

General safe work practices that must be implemented during work activities at this site are included in **Table 3**.

EarthCon considers each subcontractor to be an expert in all aspects of the work operations which they are tasked to provide, and each subcontractor is responsible for compliance with those regulatory and/or legal requirements which pertain to those services. While the EarthCon HASP will be the minimum H&S requirements for the work completed by EarthCon and its subcontractors, each subcontractor, in coordination with EarthCon's H&S personnel, is expected to perform its operations in accordance with its own H&S plans, policies and procedures unique to the subcontractor's work to ensure that hazards associated with the performance of the subcontractor's work activities are properly controlled. Copies of any required safety documentation for a subcontractor's work activities will be provided to EarthCon for review prior to the start of on-site activities. No review of any subcontractor plan or document by EarthCon will serve as an approval or ratification of such plan by or on behalf of EarthCon, and no such review will operate as any assumption of any duty or responsibility on the part of EarthCon (or any EarthCon employee or representative) for or as to any aspect of any subcontractor's own H&S responsibilities. Any comments or feedback from EarthCon to any subcontractor following any review by EarthCon of any subcontractor document or practice is provided solely for informational purposes and not for reliance.

In the event that the subcontractor's procedures/requirements conflict with requirements specified in this HASP, the more stringent guidance will be adopted after discussion and agreement between the subcontractor and EarthCon project H&S personnel. Hazards not listed in this HASP, but known to the subcontractor or known to be associated with the subcontractor's services, must be identified by the subcontractor and addressed to the EarthCon Project Manager prior to beginning work operations.

EarthCon personnel who have responsibility for the safe operations of this project include the Project Manager (PM), EarthCon Corporate Safety and Health Manager (CSHM), the Site Safety Officer (SSO) and the Project Field Staff. Responsibilities of each of the above referenced personnel as they relate to project safety and health are provided in **Table 1**.

2.4 Site Control

Site control procedures must be implemented **before** the start of site tasks to control worker exposures to hazardous substances. A Vicinity Map that shows the site location is included as **Figure 1**. A Site Layout Plan with proposed sampling locations is included as **Figure 2**. Changes may be made to the site map by the SSO, as needed, based on site conditions. The site map should be posted in the work area and/or field notebook.This site control program is designed to reduce the spread of hazardous substances from contaminated areas to clean areas, to identify and isolate contaminated areas of the site, to facilitate emergency evacuation and medical care, to prevent unauthorized entry to the site, and to deter vandalism and theft. The Site Safety Officer is responsible for evaluating site conditions and for verifying that the

site control program functions effectively. The site control program will be updated regularly to reflect current site conditions, work operations, and procedures.

2.4.1 Site Access

Access to the site shall be controlled using the following method(s):

☐	Security fence	☒	Temporary barricades and/or warning tape
☐	Sign in/Sign out log	☐	Guard
☐	Identification badges	☐	Other: Onsite Manager

2.4.2 Work Zones

Restricted work zones may be established to limit the spread of hazardous substances (when applicable) by workers from potentially affected areas to non-affected areas. The exact location and extent of the work zones will be modified as necessary as site investigation information becomes available. Delineation of work zones is as follows:

- Exclusion Zone: The Exclusion Zone is the area where the potential for exposure to hazards and contact with hazardous materials could occur. The zone may be marked by caution tape. Personnel working within the Exclusion Zone will be expected to follow protective measures as prescribed by the SSO.

- Contamination Reduction Zone: The Contamination Reduction Zone is a transition area between the potentially affected areas/materials and assumed non-affected areas/materials. Decontamination of personnel and equipment, if necessary, shall be conducted in this area to reduce the probability of contamination transfer to a non-affected area. The Contamination Reduction Zone shall be situated upwind of the Exclusion Zone.

- Support Zone: The Support Zone is the area, outside the Exclusion and Contamination Reduction Zone, where administrative and other project support functions are performed. The Support Zone shall be situated upwind of the Contamination Reduction Zone and/or the Exclusion Zone.

See Figure 2A for the location of the work zones.

2.4.3 Communications

Typical on-site communications may be conducted through the use of:

☒	Verbal		
☐	Two-way radio	☐	Horn
☒	Cellular telephone	☐	Siren
☒	Hand signals	☐	Other:_____

Off-site communications may be conducted through the use of:

☒ Cellular telephone: Verify cell phone reception in all work areas prior to starting work.
☐ Site Phone: Location & No. _____
☐ Pay phone: Location & No. _____
☐ Other: _____

Cell Phone reception should be verified throughout the site prior to commencing work.

2.4.4 Visitors

Visitors to the Site shall be continually escorted in order to assure their safety. Visitors will not be allowed past the Support Zone (if such a zone is established at this Site) unless they read, understand, sign, and abide by the requirements outlined in this HASP.

2.5 Worker Training

Table 2 will be used to document on-site workers who have received the appropriate training according to the company Environmental, Health, and Safety (EH&S) Training Program**. Table 2** must be completed prior to initiation of field activities. Pre-work briefing and routine tailgate meetings will be conducted to facilitate on-site training. Subcontractors must provide information requested in **Appendix G** prior to starting to work.

2.6 Safety Meetings

Project personnel who will be involved with on-site field activities must be appropriately trained in accordance with 29 CFR Part 1910.120 "Hazardous Waste Operations and Emergency Response". Before field work begins, the SSO will review the HASP with the field workers addressing the potential hazards associated with the proposed field activities. Components of the safety meeting will include, but will not be limited to, a review of the following:

- Location of sanitation facilities as seen on site plan.
- Potential chemical, operational and physical hazards present at the site.
- Personal protective equipment (PPE)/personal protection procedures.
- Hazardous materials handling procedures.
- Buddy system.
- Personal hygiene - general guidelines.
- Personal and equipment decontamination procedures.
- Emergency response procedures.
- Symptom awareness.
- Stop Work Authority

Periodic meetings with project personnel may be conducted by the SSO pending changes to the scope of work or modification to this HASP. To document the meetings, the SSO will complete

the Site Safety Meeting Minutes Form provided in **Appendix A**. Verification will be provided to the CHSM upon request.

2.7 Medical Monitoring Requirements

OSHA requires medical monitoring for personnel potentially exposed to chemical hazards at concentrations in excess of the PEL for more than 30 days per year and for personnel who must use respiratory protection for more than 30 days per year.

Will personnel working at this site be enrolled in a medical monitoring program? ☐**Yes** ☒**No**

Personnel who are diagnosed as having medical conditions which could directly or indirectly be aggravated by either exposure to chemical substances suspected of being present at the Site, or by the use of Personal Protective Equipment (PPE), will not be allowed to participate in field activities. In addition, personnel with injuries or illnesses involving open wounds may not be allowed on-site. Field personnel who develop an illness or injury during the project may be examined by a physician. A physician must determine if the employee is fit to return to work before they can return to field activities. In addition, the CHSM, SSO, or Site employees may request additional medical testing if a chemical exposure is suspected.

2.8 Hazard Communication Requirements

When chemicals are used on-site, EarthCon workers must adhere to the company's Hazard Communication Program (29 CFR §1910.1200). The following procedures must be followed for chemicals brought on-site (i.e., decontamination solution, sampling preservatives, etc.):

- Labels on incoming primary chemical containers must not be defaced (until after the container is empty, decontaminated and ready for disposal).
- Chemical containers must be stored in appropriate storage cabinets.
- Secondary containers and storage cabinets must be correctly and clearly labeled using the Hazardous Materials Identification System (HMIS).
- Incompatible chemicals must not be stored together.
- Workers must receive training on the hazards indicated in **Table 4.**
- Containers must be secured closed unless adding to or removing something from the container.
- Safety Data Sheets for the chemicals should be recent and are included in **Appendix B**.; they should be made available to workers upon request and applicable hazards covered during safety meetings.
- Workers must receive training on the hazards of the chemicals indicted in **Appendix C.**
- Include a safety training sign off sheet to document this training and provide a copy to the CHSM.
- Training on this information should be documented in **Appendix F**.

3.0 GENERAL PERFORMANCE REQUIREMENTS

General safe work practices that must be implemented during work activities at this site are included in **Table 3**.

3.1 Performance Requirements

- Workers are expected to show up alert and ready to work. No sleeping is allowed on the job.
- Any unsafe equipment, condition or work practice and injuries, no matter how slight, must be reported to the SSO immediately.
- Procedures for the proper set up and control of the worksite task area should be planned and implemented prior to starting individual tasks.
- Field personnel must have ready access to a telephone and a vehicle in case of emergency.
- Field personnel working in the Exclusion Zone are to work with another person at all times. The subcontractor's representative can serve as the second person while the work is being conducted in the field.

3.2 Hygiene Requirements

- Long hair will be secured away from the face so it does not interfere with any activities.
- Eating, drinking, chewing gum or tobacco, smoking, or any practice that increases the probability of hand-to-mouth transfer and ingestion of material is prohibited in any area designated as being potentially affected by site related chemicals.
- Hands and face must be thoroughly washed upon leaving the work area, and before eating, drinking, or other non-project activities.
- Personnel leaving potentially contaminated areas will shower (including washing hair) and change to clean clothing as soon as possible after leaving the site.
- Kneeling, sitting, leaning, or general contact with potentially affected surfaces or with surfaces suspected of being potentially affected by hazardous materials (i.e., puddles, mud, leachate, etc.) should be avoided.
- Medicine and alcohol can potentiate the effects of exposure to toxic chemicals. Neither should be taken by personnel if the likelihood of risk exists. Ingestion of alcohol during and immediately prior to field activities is prohibited.
- Sanitation facilities are provided on site. Potable water and restroom facilities are available and in accordance with 8 CCR 5192 for all employees and visitors.

4.0 HAZARD EVALUATION

A preliminary hazard evaluation was performed to identify existing site conditions and is documented in **Table 4**. The preliminary hazard evaluation addressed the following, where applicable:

- Identification of the suspected hazardous materials/wastes on-site;
- Toxicological aspects of the suspected hazardous materials on-site;
- Suspected chemical/elemental concentrations within the various media on-site;
- Inherent site hazards;
- Operational hazards; and
- Climate extremes.

Environmental site personnel have indicated fire, inhalation and skin absorption to pose a hazard on site. Reactivity including ionizing radiation is not of concern for the site due to past investigations and the operational history. All scrap steel and raw steel entering the site has been screened by radiation detection devices. Further information is documented in **Table 4**.

4.1 Suspected Chemical/Elemental Hazards

To select those contaminants that may cause health and safety concerns, henceforth referred to as potential Contaminants of Concern (COCs), a review of the site remediation and sampling history was performed. Based on this review, potential COCs were selected and are listed in **Table 5**. Chemical information for each of the potential COCs are provided in the NIOSH Pocket Guide pages located in **Appendix C**.

Information from the NIOSH Pocket Guide (e.g., flash point, water reactive, etc.) has been used in performing the chemical hazard analysis in **Table 5** (e.g., fire, inhalation, reactivity, and skin absorption hazards). If, based on the hazard analysis, chemical hazards exist, hazard mitigators must be implemented (**Appendix D**). In addition, air monitoring and personal protective equipment must also be used to evaluate airborne concentrations and protect workers.

After review of the relevant background information and data, if there is a potential for dermal and/or respiratory exposure to the materials or contaminants of concern, personnel shall perform the monitoring requirements summarized in **Section 5.2** and execute actions as appropriate. If action levels are exceeded, work shall be suspended until on-site conditions can be re-assessed and this HASP modified.

4.2 Operational/Physical Hazards/Biological Hazards

Potential operational/physical associated with tasks to be performed and the site have been analyzed in **Table 4**. If, based on the hazard analysis, these hazards exist; the hazard mitigators described in **Appendix D** must be implemented.

- **Utility (e.g., Electrical) hazards:** Utility hazards include buried cables, which pose a danger of shock or electrocution if workers or equipment contact or sever them during site operations. Onsite personnel are advised to pay special attention to the presence of utility hazards. Observe as built plans (if available) for the presence of underground hazards and advance the borings cautiously. A subsurface survey shall be conducted at each of the suspect locations, if necessary.

Lockout/Tag out procedures, in accordance with the EarthCon Lockout/Tag out Program, will be followed when working in the vicinity of electrical equipment. Electrical equipment will be considered energized unless tested and determined otherwise. Energized parts will be insulated or guarded from personal contact. Extension cords used with electrical tools will be the 3-wire type and connected to a ground fault circuit interrupter (GFCI). Wooden or fiberglass ladders will be used. Metal ladders will not be used in the work area.

- **Mechanical hazards:** Mechanical hazards include being struck by heavy equipment and being injured by excavation cave-ins. Onsite personnel are advised to stand at least 15 feet clear of heavy equipment and excavations, and wear appropriate protective equipment, including steel-toe boots and hard hats during the field activities. Fall, slip, and/or trip hazards exist when working with equipment and tools. Field personnel will observe walking surfaces in the work area to prevent tripping on equipment/tools placed on the ground. Good housekeeping will also be practiced. All walking surfaces with a drop of more than six feet will have fall protection devices. Fall protection devices may include adequate delineation of the excavation and trenches, guardrails, or climbing devices such as a harness and lanyard.

- **Noise Hazards:** Noise hazards may exist when working around heavy equipment. Loud noises interfere with communication and also lead to temporary and/or permanent hearing loss. Noise hazards may exist wherever heavy equipment such as loaders and any operating machinery, produce noise levels at or above the Action Level of 85 dBA for 8-hr Time Weighted Average (TWA). Noise in excess of 85 dBA may produce the following effects:

  1. Distraction, annoyance, or sudden surprise
  2. Inability to effectively communicate with co-workers
  3. Physical damage expressed initially as a Temporary Threshold Shift (TTS) and then, as a Permanent Threshold Shift (PTS), or immediately as a Permanent Threshold Shift if the impact noise is sufficient enough (usually greater than 100 dBA)

  Appropriate hearing protection must be utilized in areas of unacceptable noise levels.

If, based on the hazard analysis (**Table 4**), biological hazards exist associated with tasks to be performed and site location (e.g., allergic reactions to poisonous plants or insects indigenous to the area, etc.); hazard mitigators (**Appendix D**) must be implemented.

5.0 PERSONAL PROTECTION

5.1 Personal Protective Equipment (PPE)

The levels of personal protection required for each task are provided **in Appendix E.** This PPE is based on the hazards identified in **Section 4.** Required equipment and types of protective clothing materials are listed, as well as an indication of the initial level of protection.

Is there potential for a respirator to be donned during fieldwork? ☐Yes ☒No

It is not anticipated that the use of respirators will be needed, however during the drilling work and sampling the area will be monitored via dust particulate monitor (MiniRam or equivalent). If there is an indication that a respirator is required work will be halted until tasks have been re-evaluated and the HASP has been updated as needed.

The general use of PPE is acceptable when engineering controls cannot adequately eliminate the hazard. The use of PPE is intended to provide protection for on-site personnel from chemical, physical, and operational hazards that cannot be controlled through other safety procedures. Initially, Level D Protection will be employed by on-site personnel and will include varying levels of eye, head, body, hand, foot, and hearing protection.

Respiratory protection will not be required. However, if respirators are worn, workers must adhere to the company's Respiratory Protection Program (29 CFR §1910.134). **Table 2** should be used to provide a record of the site workers' last fit test. Beards (i.e., facial hair interfering with the respirator seal) are not allowed.

Acceptable PPE are further described below.

- Eye Protection: Eye protection will include the use of chemical splash goggles and/or face shields and impact resistant safety glasses with side shield protection that meet the current ANSI standard Z87.1.

- Head Protection: Non-metallic hard hats meeting the current ANSI standard Z89.1 will be worn by on-site personnel as required during field activities.

- Body Protection: Body protection will include the use of long sleeved shirt and pants work clothes.

- Hand Protection: Hand protection will include the use of nitrile gloves when hand contact with affected materials (e.g., groundwater and soil) may occur. Otherwise use work gloves of leather or other appropriate material.

- Foot Protection: Foot protection will include the use of impact resistant boots meeting the current ANSI standard Z41.1.

These levels shall only be downgraded upon approval by either the CSHM or SSO. Project personnel are not permitted to deviate from the specified levels of protection without prior approval of the SSO.

5.2 Personal Air Monitoring

Corrective measure activities may have the potential to generate dust; therefore, dust monitoring will be conducted on-Site. Airborne particulate concentrations will be measured with a portable particulate monitor (MiniRam or equivalent) to ensure compliance with the action levels (stop work level) and Cal OSHA Permissible Exposure Limits (PELs). The PELs for COCs potentially present on-Site, along with stop work levels are provided in Table 5.

According to calculations using the site specific maximum concentrations documented in **Table 5** and the OSHA Permissible Exposure Limit (PEL) for total dust, the only constituent of concern is lead. Total dust must measure below 6.8 mg per cubic meter (mg/m^3) to remain below the PEL for lead. However, at the direction of the DTSC the action level for total dust is 0.05 mg/m^3. A MiniRam will be on site at all times monitoring dust concentrations. The MiniRam is gravimetrically calibrated in mg/m^3using the standard SAE Fine (ISO fine) test dust. A zeroing kit will be present to accomplish zeroing in particle free air when on-site. In the case where dust levels measure over 0.05 mg/m3, work will be suspended and on-site conditions will be re-assessed.

5.3 Vehicle Safety

Vehicle safety requires the following:

- Vehicles are to be operated in a safe manner and in compliance with statutory traffic regulations and ordinances.
- Operators are to practice defensive driving and drive in a courteous manner.
- Operators are required to have a valid driver's license and liability insurance (per local/state laws).
- Seat belts are to be worn by the driver and passengers.
- No persons are allowed to ride in the back of any trucks or vans.
- Vehicles are to be driven in conformance with local speed limits.
- Personnel who are impaired by fatigue, illness, alcohol, illegal or prescription drugs, or who are otherwise physically unfit, are not allowed to drive.
- Personnel are to avoid using cellular phones or engaging in other distractions while driving.
- Vehicles should be maintained in a safe and clean condition.
- Field vehicles should be equipped with the following items; first-aid kit, fire extinguisher, spares tire and jack.
- Motor vehicle accidents shall be reported to the responsible law enforcement agency (when appropriate), the EarthCon CHSM, the EarthCon HR Director, the SSO and the EarthCon PM.
- Daily and monthly check lists to verify safe operations have been generated and should be utilized prior to operating a vehicle.
- If the site has specific driving rules, these should be reviewed and adhered to.

5.4 Illumination

Work will be completed during daylight hours only. This will ensure all work is done in accordance with 8 CCR 5192(m) illumination requirements.

6.0 DECONTAMINATION

The following decontamination (cleansing) procedures for the sampling equipment and PPE have been developed with the intent of reducing the potential for the transfer of hazardous chemicals.

6.1 Sampling Equipment

To reduce the potential for the distribution of contaminants or cross contamination of samples, the following procedures will be used. Decontamination of the sampling equipment will include washing the equipment in a detergent solution (Liqui-nox and water), rinse with potable water, rinse with organic-free/distilled water, and allow to air dry. Disposable equipment will be used when practical to eliminate the need for on-site decontamination.

6.2 Personnel and PPE

During this project the goal will be to use disposal PPE (nitrile gloves), therefore no PPE decontamination will be required. If this cannot be accomplished, PPE must be decontaminated (cleaned) per 29 CFR §1910.120(k). In an emergency, the primary concern is *to prevent the loss of life or severe injury to site personnel. If immediate medical treatment is* required to save a life, decontamination should be delayed until the victim is stabilized. If decontamination can be performed without interfering with essential life saving measures or first-aid, or if a worker has been contaminated with an extremely toxic or corrosive material that could cause severe injury or loss of life, decontamination must be performed in coordination with or prior to initial medical treatment at the scene.

Decontamination of PPE (e.g., gloves) shall be accomplished by passing personnel through appropriate stages of contamination reduction and removing contaminated clothing and equipment in decreasing order of the degree of potential contamination. Personnel who have entered areas suspected of containing hazardous materials (i.e., the Exclusion Zone) will be subjected to decontamination. The personnel decontamination corridor may be comprised of the following procedural stages. These stages/procedures are listed sequentially below.

Stage No. 1: Segregated Equipment Drop – Personnel will brush off loose dirt and wash off remaining soil, sediment, and dirt from clothes and shoes upon completion of sampling and field work. Equipment and consumables that require either disposal or special handling (e.g., special and/or equipment decontamination) shall remain in this area and be decontaminated, if appropriate, or disposed of with the excavated materials or other potentially contaminated materials.

Stage No. 2: PPE Decontamination - PPE that has been potentially contaminated will be washed with a TSP and water mixture followed by a water rinse.

Stage No. 3: General Field Wash - Personnel shall wash and rinse face and hands with soap and water before leaving the site and/or eating. If a change of clothing is necessary, it shall be done at this time.

6.3 Decontamination Fluids and Investigation-Derived Waste Disposal

Decontamination water and drill cuttings will be placed in appropriate containers. Disposal methods will be determined after characterizations have been completed. Solid waste generated during decontamination and field activities (i.e., paper towels, plastic tarps, used PPE) will be removed from the Site and disposed as refuse/trash.

6.4 Vehicles

Typically, vehicles will not be allowed inside the exclusion zone. If vehicles are required in the exclusion zone (e.g., drill rigs) the following procedures will be used. Personnel will wash or remove boots and change to dry clothing prior to vehicle entry. Non-disposable equipment will be washed or bagged before placement into field vehicles. Drill rigs will be decontaminated with detergent solution and rinsed with water before leaving the exclusion zone.

7.0 EMERGENCY PROCEDURES

A list of Emergency Response contacts and telephone numbers for applicable local off-site emergency responders is provided in **Table 6**. The following emergency response equipment is required for this project:

☒ Fire Extinguisher(s): ☐ Type A ☐ Type B ☐ Type C ☒ Type ABC
☒ Air Monitoring: ☐ PID ☐ Air Sampling Pumps ☐ CG/O2 meter
☒ MiniRam ☐ H2S Meter ☐ Radiation Meter
☐ Draeger Pump w/ Sample Tubes ☐ Other:
☒ Eyewash (Note: portable eyewash bottle)
☐ SCBA
☒ First Aid Kit
☐ Shower (Note: for acids and caustics)
☐ Personal Flotation Device(s)
☐ Windsock
☐ Stop Watch &Thermoscan for Measuring Heart Rate and Heat Stress
☐ Global Positioning System
☐ Other:

As a minimum, the project shall have the following equipment available during field activities:

- A first aid kit (mandatory, including adhesive Band-Aids, gauze, tape, gloves, CPR shield, triangle bandage) shall be available in the Support Zone at all times.

  Check additional items required for the site.

  ☐ Emergency Blanket ☒ Sunscreen (as needed)

  ☒ Insect Repellent (as needed) ☐ Other: ointment for poison plants and insect bites_____

- Copious amounts of cool potable water shall be readily available for both drinking purposes and for personal hygiene purposes (e.g., washing, rinsing, and cooling of face and body, etc.).
- Emergency references (e.g., nearest phone, emergency phone numbers and services, etc.) shall accompany the first aid kit.
- Communication equipment such as a cellular phone will be accessible in case of an emergency.
- A vehicle shall be easily accessible for transport/emergency.

The emergency response communication system for the site is:

- ☒ Verbal
- ☐ Two-way radio
- ☒ Hand signals: Hand gripping throat ="Out of Air, Can't Breathe"
  Grip partner's wrist or both hands around waist ="Leave area immediately"
  Hands on top of head ="Need assistance"
  Thumps up ="OK; I am all right; I understand"
  Thumps down ="No; negative"
- ☐ Horn
- ☐ Siren
- ☒ Other: Cellular Phone

If an on-site emergency develops, the procedures outlined in **Table 7** shall be followed immediately.

7.1 Natural Disasters

In the event of emergency conditions associated with natural disasters, such as severe weather, site personnel will remain calm, turn off equipment and ignition sources, and move away from buildings, cranes, and overhead utilities. Following an emergency, personnel will proceed to a designated meeting place. The SSO will take a head count to ensure that all personnel are present. Crews must remain together until accounted for. The SSO will assess any injuries and the need for emergency assistance.

7.2 Workplace Violence

If any employee or visitor is confronted by a potentially hostile person, he/she will remain calm and refrain from further aggravating the individual. Site personnel should contact the SSO. Protocol established by the site will be followed or local police will be contacted for assistance when needed.

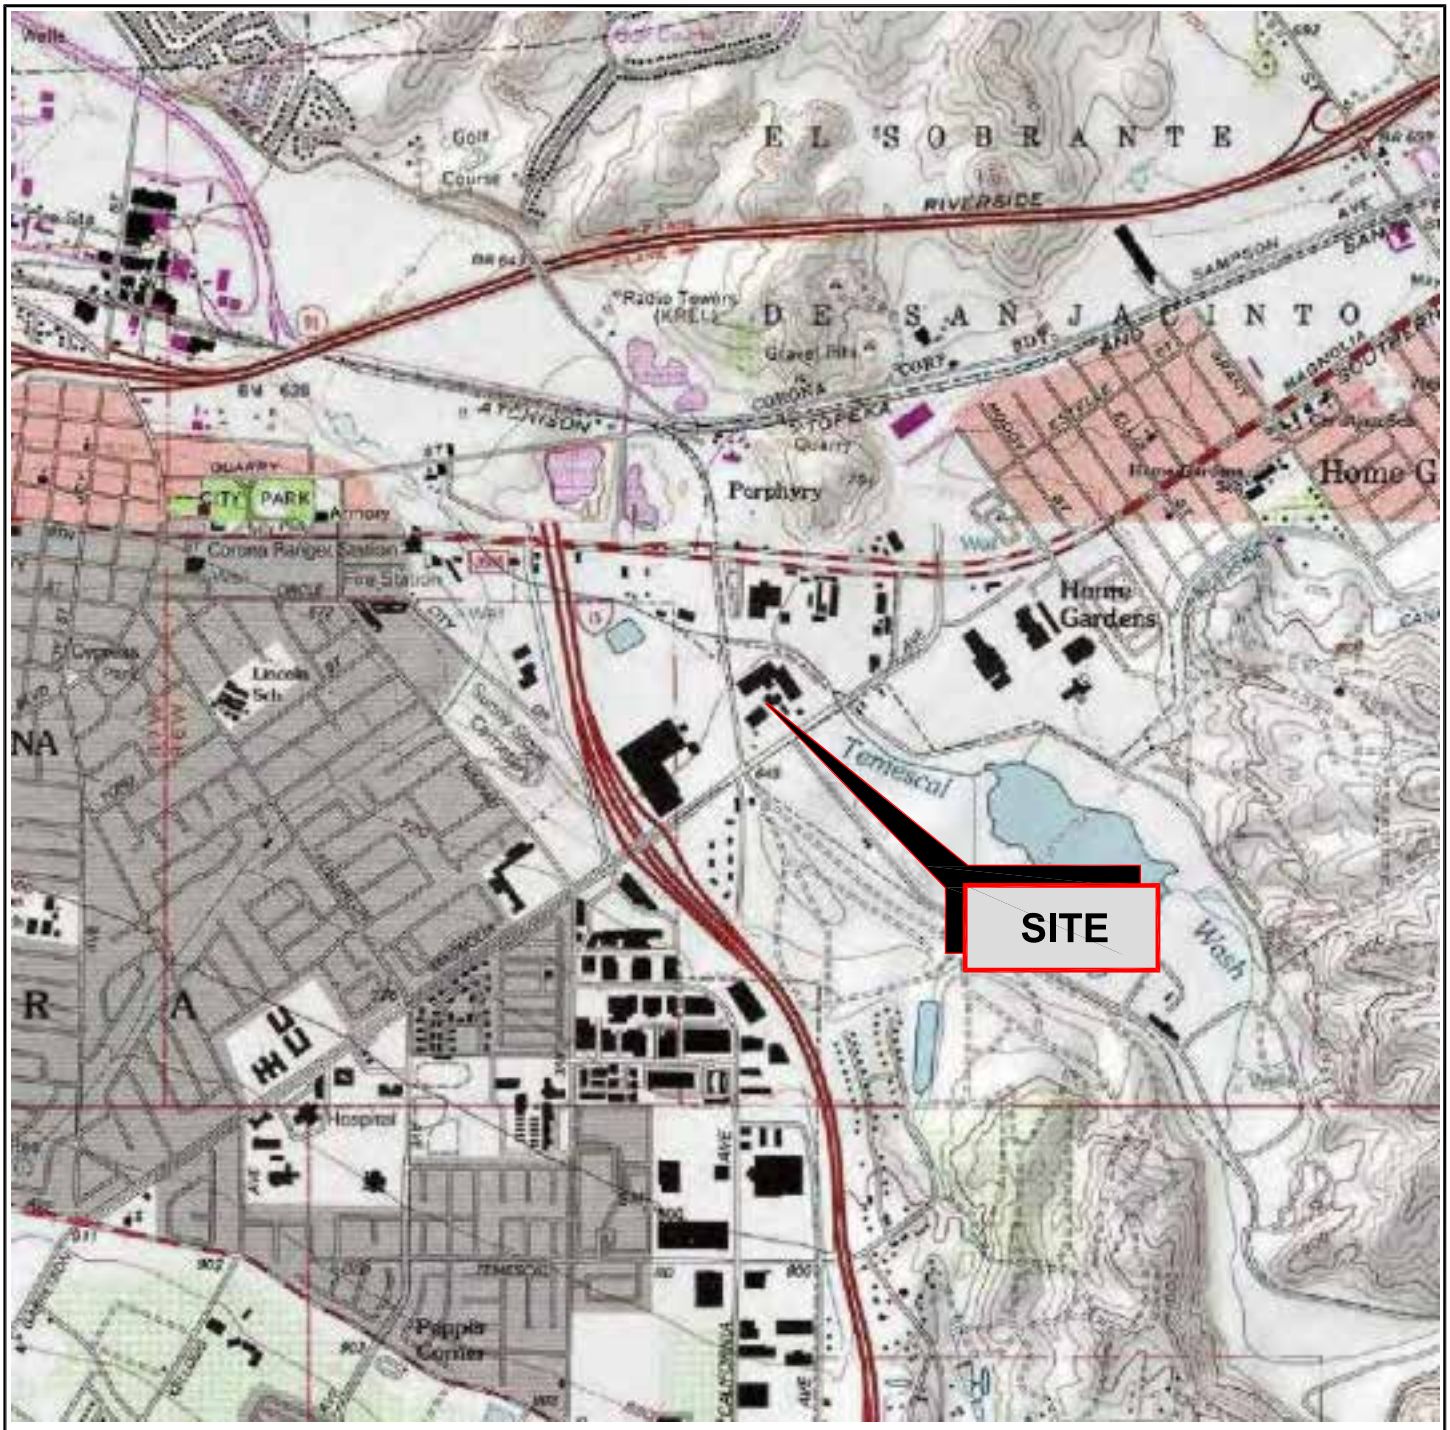
8.0 SHIPMENT OF RESTRICTED ARTICLES

Federal laws and international guidelines place restrictions on what materials may be shipped by passenger and cargo aircraft. In the course of field activities, the following items may be shipped to and from the site in the following manner.

Item	Hazardous Constituent	Quantity	Packaging	How Shipped
Soil samples	*NA	5	8 oz. glass jar with Teflon lid. Laboratory provided	EarthCon Personnel

Item	Hazardous Constituent	Quantity	Packaging	How Shipped
Groundwater Samples	HCL & HNO3 – lab preservatives	3	VOAs and HDPE laboratory provided containers	EarthCon Personnel

*soil samples do not have preservatives



9.0 SPILL CONTAINMENT

An evaluation was conducted to determine the potential for hazardous substance spills at this site. That evaluation indicates that there is no potential for a hazardous substance spill of a sufficient quantity to require containment planning, equipment, and procedures. For that reason, no spill containment program is implemented at this site. Employee training on how to respond and take protective measures during incidental releases of hazardous substances are provided consistent with the Hazard Communication Standard, 29 CFR 1910.12

Incidental spills are different from emergency releases. Incidental spills can safely be absorbed, neutralized, or otherwise controlled by EarthCon employees or contractors with the appropriate training.

Key Personnel and Health & Safety Responsibilities

Project Manager (PM) Jeff Bennett	**Regional H&S Coordinator** Hugh Walker	**Site Safety Officer (SSO)** Lindsey Langer/Jenn McGervey	**Project Field Staff** Lindsey Langer/Jenn McGervey
• Coordinate, approve, implement and manage this HASP and amendments, if any. • Incorporate H&S planning, implementation, and supplies (PPE, decontamination materials) into project plans and budget. • Select and assign responsibility to the SSO to implement HASP. • Monitor the Field Logbooks for health and safety work practices employed. • Coordinate with SSO so that emergency response procedures are implemented, if needed. • Inform CSHM of HASP violations, if any, and verify corrective actions are implemented. • Ensure personnel receive this plan, are aware of its provisions, are aware of the potential hazards associated with site operations, are instructed in safe work practices, are familiar with emergency response procedures and document this information • Coordinate with Client and SSO. • In the event of an incident or other emergency complete & submit appropriate forms and make proper notifications.	• Review and approve HASP; approve any associated amendments. • Evaluate documentation presented of site hazards for HASP preparation. Maintain a final copy of the completed HASP. • Perform periodic audits of documentation of project activities to evaluate general compliance with policies, procedures, directives and guidelines presented in this HASP. • Assist with the implementation of the Corporate Health and Safety Program. • Provide environmental, health and industrial hygiene consultation as needed. • In the event of an emergency, if required set up an incident investigation team and notify applicable outside agencies.	• Be present on-site, as appropriate, with the authority to implement HASP and EarthCon H&S protocols. • Confirm that site personnel meet the training and medical requirements. • Verify that monitoring equipment and personal protective equipment is operating correctly according to manufacturer's instructions and such equipment is utilized by on site personnel. Calibrate or verify calibration of monitoring equipment and record results. • Verify that decontamination procedures are being implemented and Site Control Plan is in place. • Provide and document pre-work briefing and daily tailgate safety meetings, monitor activities for safe work practices and HASP compliance. • Perform routine H&S inspections. Document meetings and inspections. Provide copies to CHSM as requested. • Report to the Project Manager deviations from the anticipated conditions, and authorize the cessation of work if necessary. • Notify the PM and CSHM in the event an emergency occurs, and implement site emergency response and follow-up procedures, provide First Aid, as needed. • Work with PM to verify appropriate notifications and forms are completed for any incident or near miss. • Secure the scene after an emergency until given notification to release the scene by the CHSM.	• Provide verification of required health and safety training and medical surveillance prior to arriving at the site. • Notify the SSO of any special medical conditions (e.g., allergies). • Review, be familiar with and abide by the HASP. • Attend pre-work briefings and daily tailgate safety meetings. • Comply with requests of PM, SSO, and HASP. • Perform work using safe techniques; be responsible for their personal safety. • Immediately report any accidents and/or unsafe conditions to the SSO.

4 Could include task-specific training, project-specific training, or project-specific medical surveillance.

Table 3

General Safe Work Practices

- Report to work alert and ready to perform assigned duties; no sleeping is allowed at the jobsite.
- Immediately report any unsafe acts, incidents, accidents, or near misses. Utilize Stop Work Authority if needed.
- Minimize contact with excavated or contaminated materials. Do not place equipment on the ground. Do not sit or kneel on potentially contaminated surfaces.
- Smoking, eating, or drinking after entering the work zone and before decontamination is prohibited. Use of illegal drugs and alcohol are prohibited. Workers taking prescribed medication that may cause drowsiness should not be operating heavy equipment, and should be prohibited from performing tasks where Level C, B, or A personal protective equipment is required.
- Practice good housekeeping. Keep everything orderly and out of potentially harmful situations.
- Use of contact lenses on-site shall only be allowed when dictated by working conditions.
- The following conditions must be observed when operating a motor vehicle.
  - Wearing of seat belts is mandatory
  - During periods of rain, fog, or other adverse weather conditions, the use of headlights is mandatory
  - A backup warning system or use of vehicle horn is mandatory when the vehicle is engaged in a backward motion
  - Posted traffic signs and directions from flagmen must be observed
  - Equipment and/or samples transported in vehicles must be secured from movement
  - The use of contractor acquired vehicles by non-contractor personnel is prohibited
  - Daily inspection sheets should be completed by driver and kept with equipment for the duration of the project.
- In an unknown situation, always assume the worst conditions.
- Be observant of your immediate surroundings and the surroundings of others. It is a team effort to notice and warn of impending dangerous situations. Withdrawal from a hazardous situation to reassess procedures is the preferred course of action.
- Conflicting situations may arise concerning safety requirements and working conditions and must be addressed and resolved rapidly by the SSO and PM to relieve any motivations or pressures to circumvent established safety policies.
- Unauthorized breaches of specified safety protocol must not be allowed. Workers unwilling or unable to comply with the established procedures must be removed from the site immediately.

Table 7

Emergency Response Procedures

- This plan must be discussed with verbal training for onsite EarthCon employees and subcontractors
- This training should be documented and a copy provided to the CHSM.
- The SSO (or alternate) should be immediately notified via the on-site communication system.
- If applicable, the SSO must notify off-site emergency responders (i.e., fire department, hospital, police department, etc.) and must inform the response team as to the nature and location of the emergency on site.
- If applicable, the SSO evacuates the site. Site workers should move to their respective refuge stations using the evacuation routes provided on the Site Map. SSO must account for all workers associated with the project.
- The SSO notifies the PM, Principal, and the CHSM of the emergency. If an EarthCon employee is injured, the SSO must contact the worker's Regional Manager/Branch Office Manager immediately. If the Regional Manager/Branch Office Manager cannot be contacted, then the Corporate Human Resources Department must be notified.
- For small fires, flames should be extinguished using the fire extinguisher. Large fires should be handled by the local fire department.
- In an unknown situation or if responding to toxic gas emergencies, appropriate PPE, including SCBAs, should be donned.
- If chemicals are accidentally spilled or splashed into eyes or on skin, use eyewash and/or shower.
- Before continuing site operations after an emergency involving toxic gas, the appropriate responder will don a SCBA and utilize appropriate air monitoring equipment to verify that the site is safe.
- An injured worker must be decontaminated appropriately.
- If a worker is injured, first aid will be administered by workers certified in first aid.
- If necessary, the SSO will secure the scene after the response. The scene should not be released until notification from the CHSM.
- After the response, the SSO and /or PM must complete and submit the appropriate incident reports.
- The PM or SSO should secure written /signed witness statements as appropriate, take pictures, etc. immediately and before the end of the shift.
- If an investigation is required, the CHSM and Safety Team will set up a team to start the investigation with input from the DL.
- The CHSM will notify outside agencies as appropriate.

Eye: Irrigate immediately
Skin: Soap wash immediately
Breathing: Respiratory support
Swallow: Medical attention immediately

Respirator Recommendations

NIOSH

At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:
(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode
(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter.

Click here (pgintrod.html#nrp) for information on selection of N, R, or P filters.

Any appropriate escape-type, self-contained breathing apparatus

Important additional information about respirator selection (pgintrod.html#mustread)

Nonflammable Liquid, but exposure in a fire results in the formation of a black soot containing PCBs, polychlorinated dibenzofurans, and chlorinated dibenzo-p-dioxins.

Incompatibilities & Reactivities
Strong oxidizers

Exposure Routes
inhalation, skin absorption, ingestion, skin and/or eye contact

Symptoms
irritation eyes, chloracne; liver damage; reproductive effects; [potential occupational carcinogen]

Target Organs
Skin, eyes, liver, reproductive system

Cancer Site
[in animals: tumors of the pituitary gland & liver, leukemia]

Personal Protection/Sanitation
(See protection codes (protect.html))
Skin: Prevent skin contact
Eyes: Prevent eye contact
Wash skin: When contaminated
Remove: When wet or contaminated
Change: Daily
Provide: Eyewash, Quick drench

First Aid
(See procedures (firstaid.html))
Eye: Irrigate immediately
Skin: Soap wash immediately
Breathing: Respiratory support
Swallow: Medical attention immediately

Respirator Recommendations

NIOSH

At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:
(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode
(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter.

Click here (pgintrod.html#nrp) for information on selection of N, R, or P filters.

Any appropriate escape-type, self-contained breathing apparatus

Material Safety Data Sheet
Arsenic MSDS

Section 1: Chemical Product and Company Identification

Product Name: Arsenic

Catalog Codes: SLA1006

CAS#: 7440-38-2

RTECS: CG0525000

TSCA: TSCA 8(b) inventory: Arsenic

CI#: Not applicable.

Synonym:

Chemical Name: Arsenic

Chemical Formula: As

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call:
1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Arsenic	7440-38-2	100

Toxicological Data on Ingredients: Arsenic: ORAL (LD50): Acute: 763 mg/kg [Rat]. 145 mg/kg [Mouse].

Section 3: Hazards Identification

Potential Acute Health Effects:
Very hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant), of eye contact (irritant).

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A1 (Confirmed for human.) by ACGIH. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, lungs, the nervous system, mucous membranes. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Flammable in presence of open flames and sparks, of heat, of oxidizing materials.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards:
Material in powder form, capable of creating a dust explosion. When heated to decomposition it emits highly toxic fumes.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Use appropriate tools to put the spilled solid in a convenient waste disposal container.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable

protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents, acids, moisture.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.01 from ACGIH (TLV) [United States] [1995] Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Lustrous solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 74.92 g/mole

Color: Silvery.

pH (1% soln/water): Not applicable.

Boiling Point: Not available.

Melting Point: Sublimation temperature: 615°C (1139°F)

Critical Temperature: Not available.

Specific Gravity: 5.72 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water, hot water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Reactive with oxidizing agents, acids, moisture.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals: Acute oral toxicity (LD50): 145 mg/kg [Mouse].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A1 (Confirmed for human.) by ACGIH. Causes damage to the following organs: kidneys, lungs, the nervous system, mucous membranes.

Other Toxic Effects on Humans:
Very hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Identification: : Arsenic UNNA: UN1558 PG: II

Special Provisions for Transport: Not available.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Arsenic California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Arsenic Pennsylvania RTK: Arsenic Massachusetts RTK: Arsenic TSCA 8(b) inventory: Arsenic

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada):
CLASS D-1A: Material causing immediate and serious toxic effects (VERY TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R22- Harmful if swallowed. R45- May cause cancer.

HMIS (U.S.A.):

Health Hazard: 3

Fire Hazard: 1

Reactivity: 2

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 3

Flammability: 1

Reactivity: 2

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Safety glasses.

Material Safety Data Sheet
Cadmium MSDS

Section 1: Chemical Product and Company Identification

Product Name: Cadmium

Catalog Codes: SLC3484, SLC5272, SLC2482

CAS#: 7440-43-9

RTECS: EU9800000

TSCA: TSCA 8(b) inventory: Cadmium

CI#: Not applicable.

Synonym:

Chemical Name: Cadmium

Chemical Formula: Cd

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call:
1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Cadmium	7440-43-9	100

Toxicological Data on Ingredients: Cadmium: ORAL (LD50): Acute: 2330 mg/kg [Rat.]. 890 mg/kg [Mouse]. DUST (LC50): Acute: 50 ppm 4 hour(s) [Rat].

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer), of eye contact (irritant). Severe over-exposure can result in death.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, lungs, liver. Repeated or prolonged exposure to the substance can produce target organs damage. Repeated exposure to an highly toxic material may produce general deterioration of health by an accumulation in one or many human organs.

Section 4: First Aid Measures

Eye Contact: No known effect on eye contact, rinse with water for a few minutes.

Skin Contact:
After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact: Not available.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. WARNING: It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled material is toxic, infectious or corrosive. Seek immediate medical attention.

Ingestion:
Do not induce vomiting. Examine the lips and mouth to ascertain whether the tissues are damaged, a possible indication that the toxic material was ingested; the absence of such signs, however, is not conclusive. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: 570°C (1058°F)

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances:
Non-flammable in presence of open flames and sparks, of heat, of oxidizing materials, of reducing materials, of combustible materials, of moisture.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards:
Material in powder form, capable of creating a dust explosion. When heated to decomposition it emits toxic fumes.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Use appropriate tools to put the spilled solid in a convenient waste disposal container.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable protective clothing In case of insufficient ventilation, wear suitable respiratory equipment If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage:
Keep container dry. Keep in a cool place. Ground all equipment containing material. Keep container tightly closed. Keep in a cool, well-ventilated place. Highly toxic or infectious materials should be stored in a separate locked safety storage cabinet or room.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.01 (ppm) Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Lustrous solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 112.4 g/mole

Color: Silvery.

pH (1% soln/water): Not applicable.

Boiling Point: 765°C (1409°F)

Melting Point: 320.9°C (609.6°F)

Critical Temperature: Not available.

Specific Gravity: 8.64 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water, hot water, methanol, diethyl ether, n-octanol.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Not considered to be corrosive for metals and glass.

Special Remarks on Reactivity: Reacts violently with potassium.

Special Remarks on Corrosivity: Not available.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals:
WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 890 mg/kg [Mouse]. Acute toxicity of the dust (LC50): 229.9 mg/m3 4 hour(s) [Rat].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. The substance is toxic to kidneys, lungs, liver.

Other Toxic Effects on Humans:
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: An allergen. 0047 Animal: embryotoxic, passes through the placental barrier.

Special Remarks on other Toxic Effects on Humans: May cause allergic reactions, exzema and/or dehydration of the skin.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Class IB Flammable Liquid: Fl.P. below 73°F and BP at or above 100°F.

Incompatibilities & Reactivities
Strong oxidizers such as peroxides, nitric acid & perchlorates

Exposure Routes
inhalation, skin absorption, ingestion, skin and/or eye contact

Symptoms
irritation eyes, skin, mucous membrane; dermatitis; headache, lassitude (weakness, exhaustion), blurred vision, dizziness, slurred speech, confusion, convulsions; chemical pneumonitis (aspiration liquid); possible liver, kidney damage; [potential occupational carcinogen]

Target Organs
Eyes, skin, respiratory system, central nervous system, liver, kidneys

Cancer Site
[in animals: liver & kidney cancer]

Personal Protection/Sanitation
(See protection codes (protect.html))
Skin: Prevent skin contact
Eyes: Prevent eye contact
Wash skin: When contaminated
Remove: When wet (flammable)
Change: No recommendation
Provide: Eyewash, Quick drench

First Aid
(See procedures (firstaid.html))
Eye: Irrigate immediately
Skin: Soap flush immediately
Breathing: Respiratory support
Swallow: Medical attention immediately

Respirator Recommendations

NIOSH

At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:
(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode

(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister

Any appropriate escape-type, self-contained breathing apparatus

Important additional information about respirator selection (pgintrod.html#mustread)

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Lead	7439-92-1	100

Toxicological Data on Ingredients: Lead LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects: Slightly hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation.

Potential Chronic Health Effects:
Slightly hazardous in case of skin contact (permeator). CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to blood, kidneys, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation: Not available.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Non-flammable in presence of open flames and sparks, of shocks, of heat.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: When heated to decomposition it emits highly toxic fumes of lead.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable

protective clothing. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.05 (mg/m3) from ACGIH (TLV) [United States] TWA: 0.05 (mg/m3) from OSHA (PEL) [United States] TWA: 0.03 (mg/m3) from NIOSH [United States] TWA: 0.05 (mg/m3) [Canada]Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Metal solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 207.21 g/mole

Color: Bluish-white. Silvery. Gray

pH (1% soln/water): Not applicable.

Boiling Point: 1740°C (3164°F)

Melting Point: 327.43°C (621.4°F)

Critical Temperature: Not available.

Specific Gravity: 11.3 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials, excess heat

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Can react vigorously with oxidizing materials. Incompatible with sodium carbide, chlorine trifluoride, trioxane + hydrogen peroxide, ammonium nitrate, sodium azide, disodium acetylide, sodium acetylide, hot concentrated nitric acid, hot concentrated hydrochloric acid, hot concentrated sulfuric acid, zirconium.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. May cause damage to the following organs: blood, kidneys, central nervous system (CNS).

Other Toxic Effects on Humans: Slightly hazardous in case of skin contact (irritant), of ingestion, of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans:
Acute Potential: Skin: Lead metal granules or dust: May cause skin irritation by mechanical action. Lead metal foil, shot or sheets: Not likely to cause skin irritation Eyes: Lead metal granules or dust: Can irritate eyes by mechanical action. Lead metal foil, shot or sheets: No hazard. Will not cause eye irritation. Inhalation: In an industrial setting, exposure to lead mainly occurs from inhalation of dust or fumes. Lead dust or fumes: Can irritate the upper respiratory tract (nose, throat) as well as the bronchi and lungsby mechanical action. Lead dust can be absorbed through the respiratory system. However, inhaled lead does not accumulate in the lungs. All of an inhaled dose is eventually abssorbed or transferred to the gastrointestinal tract. Inhalation effects of exposure to fumes or dust of inorganic lead may not develop quickly. Symptoms may include metallic taste, chest pain, decreased physical fitness, fatigue, sleep disturbance, headache, irritability, reduces memory, mood and personality changes, aching bones and muscles, constipation, abdominal pains, decreasing appetite. Inhalation of large amounts may lead to ataxia, deliriuim, convulsions/seizures, coma, and death. Lead metal foil, shot, or sheets: Not an inhalation hazard unless metal is heated. If metal is heated, fumes will be released. Inhalation of these fumes may cause "fume metal fever", which is characterized by flu-like symptoms. Symptoms may include metallic taste, fever, nausea, vomiting, chills, cough, weakness, chest pain, generalized muscle pain/aches, and increased white blood cell count. Ingestion: Lead metal granules or dust: The symptoms of lead poisoning include abdominal pain or cramps (lead cholic), spasms, nausea, vomiting, headache, muscle weakness, hallucinations, distorted perceptions, "lead line" on the gums, metallic taste, loss of appetite, insomnia, dizziness and other symptoms similar to that of inhalation. Acute poisoning may result in high lead levels in the blood and urine, shock, coma and death in extreme cases. Lead metal foil, shot or sheets: Not an ingestion hazard for usual industrial handling.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are less toxic than the product itself.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (female) which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (male) which would require a warning under the statute: Lead California prop. 65 (no significant risk level): Lead: 0.0005 mg/day (value) California prop. 65: This product contains the following ingredients for which the State of California has found to cause birth defects which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Lead Connecticut hazardous material survey.: Lead Illinois toxic substances disclosure to employee act: Lead Illinois chemical safety act: Lead New York release reporting list: Lead Rhode Island RTK hazardous substances: Lead Pennsylvania RTK: Lead

Other Regulations:
OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada): CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R20/22- Harmful by inhalation and if swallowed. R33- Danger of cumulative effects. R61- May cause harm to the unborn child. R62- Possible risk of impaired fertility. S36/37- Wear suitable protective clothing and gloves. S44- If you feel unwell, seek medical advice (show the label when possible). S53- Avoid exposure - obtain special instructions before use.

HMIS (U.S.A.):

Health Hazard: 1

Fire Hazard: 0

Reactivity: 0

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 1

Flammability: 0

Reactivity: 0

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Safety glasses.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

Appendix C

Chemical Information Directory

Included in HASP	*Chemical Name*	*Synonyms*
	Acetone	Dimethyl Ketone; Ketone propane; 2-Propanone
	Aldrin	HHDN; Octalene
	Aniline	Aminobenzene; Aniline Oil; Benzeneamine
X	Arsenic	Arsenic metal; Arsenia
	Barium	Barium metal
	Benzene	Benzol; Phenyl hydride
	Bis(2-ethylhexyl)phthalate	Di(2-ethylhexyl)phthalate
X	Cadmium	Cadmium metal
	Carbon disulfide	Carbon bisulfide
	Chlorobenzene	Benzene chloride; Chlorobenzyl; MCB; Phenyl chloride
	Chloroethane	Ethyl chloride
	Chloroform	Methane trichloride; Trichloromethane
	Chromic Acid	Chromic anhydride; Chromium trioxide
	Chromium	Chromium metal
	Cobalt	Cobalt metal dust, cobalt metal fume
	Copper	Copper metal dusts; Copper metal mists
	Cyanide	Cyanide
	Cyclohexane	Benzene Hexahydride; hexamethylene
	Dieldrin	Dieldrin
	DIPE	Diisopropyl ether
	Dioxin	Dioxin
	1,2-Dichlorobenzene	O-DCB; Orthodichlorobenzene
	1,1-Dichloroethane	Ethylidene chloride
	1,2-Dichloroethane	Ethylene dichloride; Glycol dichloride
	1,1-Dichloroethylene	1,1-Dichloroethene, vinylidene chloride
	1,2-Dichloroethylene	1,2-Dichloroethene; (cis, trans, or sym-) Acetylene dichloride
	1,2-Dichloropropane	Propylene dichloride; Dichloro-1,2-propane
	2,4-Dinitrotoluene	Dinitrotoluene; DNT; Methyldinitrobenzene
	1,4-Dioxane	Dioxane, Diethylene dioxide, Diethylene ether

Appendix C

Chemical Information Directory
(continued)

Included in HASP	*Chemical Name*	*Synonyms*
	Ethylbenzene	Ethylbenzol; Phenylethane
	ETBE	Ethyl tert-butyl ether
	Ethylene Dibromide	EDB; 1,2-Dibromoethane, Ethylene bromide, Glycol dibromide
	Formaldehyde	Methanal; Methyl aldehyde; Methylene oxide
X	Gasoline& Diesel	Motor fuel; Motor spirits; Natural gasoline; Petrol
	Motor oil	Motor oil
	Hexachloroethane	Carbon hexachloride; Ethane hexachloride; Perchloroethane
	Hydrochloric Acid	Anhydrous hydrogen chloride; Aqueous hydrogen chloride; Muriatic acid
	Hydrogen Sulfide	Hydrosulfuric acid; Sewer gas; Sulfuretted hydrogen
	Iron	Iron
	Isophorone	Isoacetophorone; 3,5,5-Trimethyl 2- cyclohexenone
	Isopropanol	Isopropyl alcohol; IPA; 2-Propanol
X	Lead (inorganic)	Lead metal
	Manganese	Manganese
	MTBE	Methyl Tert Butyl Ether
	Mercury	Colloidal mercury; Metallic mercury; Quicksilver
	Methane	Fire damp; March gas; Methyl hydride
	Methanol	Carbinol; Columbian spirits; Pyroligneous spirit; Wood alcohol; Wood naphtha; Wood spirit
	Methoxyclor	p,p-Dimethoxydiphenyl/trichlorethane; DMDY
	Methyl chloroform	1,1,1-Trichloroethane
	Methylcyclohexane	Cyclohexylmethane; Hexahydrotoluene
	Methylene chloride	Dichloromethane; Methylene Dichloride
	Naphthalene	Naphthalin; Tar Camphor; White Tar
	Nickel	Nickel catalyst

Appendix C

Chemical Information Directory
(continued)

Included in HASP	*Chemical Name*	*Synonyms*
	Nitrobenzene	Essence of mirbane; Nitrobenzol; Oil of mirbane
	PAHs	Poly Aromatic Hydrocarbons
	Pentachlorophenol	PCP; Penta; 2,3,4,5,6-Pentachlorophenol
	Phenol	Carbonic acid; Hydroxybenzene; Monohydroxybenzene; Phenol alcohol; Phenyl hydroxide
	Phosgene	Carbonyl chloride; Carbon oxychloride; Chloroformyl chloride
X	Polychlorinated biphenyls (54%)	PCBs; Chlorodiphenyl
	Sodium bisulfate	
	Synergist-D	Proprietary product
	Silver	Silver metal; Argentum
	TAME	Tertiary-amyl methyl ether
	TBA	Tert butyl alchol
	Tetrachloroethylene	Tetrachloroethylene; Perchlorethylene; Perk
	Toluene	Methyl benzene; Methyl benzol
	Toxaphene	Chlorinated camphene
	1,1,2-Trichloroethane	Ethane trichloride; B-Trichloroethane; Vinyl trichloride
	1,2,4-Trichlorobenzene	Trichlorobenzene; 1,2,4-Trichlorobenzel
	Trichloroethene	Trichloroethylene; TCE
	Trichlorofluoromethane	Fluorotrichloromethane; Freon II
	Trichlorotrifluoroethane	Freon 113; 1,1,2-Trichloro-1,2,2-trifluoroethane; CFC-113
	1,2,3-Trichloropropane	Allyl trichloride, Glycerol trichorohydrin, Glyceryl trichlorohydrin; Trichlorohydrin
	1,2,3-Trimethylbenzene	Hemellitol
	1,2,4-Trimethylbenzene	psi-Cumene; Pseudocumene
	1,3,5-Trimethylbenzene	Mesitylene; sym-Trimethylbenzene
	Vinyl chloride	Chloroethene; VC; VCM
	Xylene (Mixed Isomers)	o-xylene; p-xylene; m-xylene

Appendix D

* All members of the drilling crews shall be trained in the safety features and procedures to be utilized during operation, inspection, and maintenance of the equipment.
* Conduct a survey, prior to bringing drilling equipment to the job site, to identify overhead electrical hazards, potential subsurface hazards, and terrain hazard. Once on-site, before drilling equipment is moved, the travel route shall again be visually surveyed for overhead and terrain hazards.
* Use only drilling equipment equipped with two easily accessible emergency shutdown devices, one for the operator and one for the helper.
* Do not transport drilling equipment with the mast in the upward position.
* Set up equipment on stable ground. Cribbing (a system of timbers, arranged in a rectangular pattern, used to support and distribute the weight of the equipment) shall be used when necessary.
* Extend outriggers per the manufacturer's specifications.
* Monitor weather conditions. Operations shall cease during electrical storms or when electrical storms are imminent.
* Wearing of loose clothing or equipment is not permitted.
* Use auger guides on hard surfaces.
* Verbally alert employees and visually ensure employees are clear from dangerous parts of equipment prior to starting or engaging equipment.
* Channel the discharge of drilling fluids away from the work area to prevent the pooling of water.
* Use hoists only for their designed intent. Hoists shall not be loaded beyond their rated capacity. Steps shall be taken to prevent two-blocking of hoists (the condition when the lower load block or hook assembly comes in contact with the upper load block, or when the load block comes in contact with the boom tip).
* Follow the equipment manufacturer's procedures if ropes become caught in, or objects are pulled into a cathead.

* Do not run or rotate drill rods through rod slipping devices. No more than one foot of drill rod column shall be hoisted above the top of the drill mast. Drill rod tool joints shall not be made up, tightened, or loosened while the rod column is supported by a rod slipping device.
* Control dust using dust suppression techniques.
* Clean augers only when the rotating mechanism is in neutral and the auger is stopped. Tools such as long handled shovels shall be used to remove cuttings from the auger.
* Cap and flag open boreholes; open excavations shall be barricaded.
* Keep all hand tool used during drilling operations clean and in good working condition.
* Wear hard hats and steel-toed boots at all times when performing drilling operations.
* Wear hearing protection when required.

During Geoprobe drilling

- Pay close attention to acetate sampling sleeves; can cause minor cuts when they become jiggered
- Probes /rods can have pinch points; take care when removing or adjusting.
- There will be noise so use hearing protections

- Be aware of the potential hazards of the contents of drums or containers before handling.
- Inspect the integrity of the drum or container before moving. Any drum or container lacking integrity shall be over packed.
- Consider any unlabeled drum or container as containing a hazardous substance and leave alone until contents are properly identified and labeled.
- Organize site operations to minimize the amount of drum or container movement.
- Never stand on drums or containers.
- Know that bulging drums or containers are an indication of pressure build-up. Pressure can be relieved slowly by carefully loosening the bung. If the possibility of fire or explosion exists, protective shield and/or remote opening devices should be used.
- Utilize drum/container handling equipment whenever possible. The equipment utilized should have a sufficiently rated load capacity, and should be able to operate smoothly on the available surface.
- Use proper lifting and moving techniques to prevent back injuries, if handling equipment is not available.
- Have a clear view of the available pathway when moving drums. If needed, an additional person should be available to provide guidance.
- Set up drum/container staging areas to safely identify and classify contents for proper shipment. Staging areas shall be provided with adequate ingress and egress routes.
- Label and identify drums and containers as to their contents when moved to the staging areas.
- Cease all site operations immediately if site activities uncover buried drums or containers. The SSO must be notified. The SSO will evacuate the site. All unknown situations must be evaluated before site activities are resumed. The services of a specialized contractor trained in handling unknown contaminants may be needed. If, after evaluating the situation, only a portion of the site is affected, that
- Use only drums and containers that meet the appropriate DOT, OSHA, and EPA regulations.

- When scheduling or work conditions necessitate leaving excavations open overnight, security fencing will be erected to restrict access to the site or work zones. An exclusion zone, contamination reduction zone and support zone will be identified for each soil disturbance site, as described in Section 2.4.5.

- Underground Service Alert must be notified of subsurface work at a minimum of 48 hours prior to the commencement of field activities.

- As part of the on-site health and safety meeting, a Site walk with the operators will be conducted to identify work locations (locations shown on the work plan/site plan will be in areas free of utilities/subsurface structures). Mark outs of all utilities will be verified.

- If pea-gravel is encountered while excavating all work must stop and the SSO will be contacted for further instruction. Pea-gravel is a potential indication of underground storage tank(s) or utility bedding/backfilling material.

- If any utility/subsurface feature is hit or damaged the SSO will be IMMEDIATELY contacted for further instruction. If the SSO cannot be reached contact the Project Manager for further instruction.

* A minimum clearance of 12 feet (radius) will be maintained between heavy equipment (i.e., drill rig) and any overhead power lines, regardless of voltage.
* Before subsurface work, a utilities search for underground lines will occur and will be documented.
* Installation and maintenance of electrical facilities or equipment must only be performed by qualified and properly authorized personnel or electrical subcontractors. Apprentice personnel permitted to work on electrical equipment shall be under the surveillance of a fully qualified electrician.
* Electricians shall be familiar with the National Electrical Code; state and local electric codes; OSHA standards, including 29 CFR 1926, Subpart K; and applicable sections of the National Fire Protection Association Codes.
* When working on energized circuits of 440 volts or higher, at least one qualified electrician and one other employee shall be present.
* Do not wear rings, watches or metallic objects that could act as conductors when working with electrical circuits.
* Do not use metal ladders and un-insulated tools while working with electrical circuits and equipment.
* Follow the company Lock-out/Tag-out procedures when applicable. Electrical equipment and lines shall always be considered “energized” until proven “de-energized”. Before beginning work, each electrical circuit shall be inspected, tested, and where possible, isolated from the power source. Extreme care shall be exercised as wires designed to operate at ground potential may become energized by faulty or inadequate connections.
* Use only approved grounding equipment as a ground for electrical equipment. Metal frames on electricity powered equipment, electrical facilities, and transmission equipment shall be connected to the grounding system. Alternative grounding systems complying with applicable electrical codes may be used for temporary portable equipment.
* Protect electrical wires with suitable protective conduits or devices where they are exposed to possible damage.
* Connect grounding devices to a ground before contacting any conductor of a circuit. When grounding devices are removed, they shall be disconnected from the circuit before being disconnected from ground.
* Equip all portable extension cords with a non-conducting plug and/or another socket shell. All electrical cords shall be equipped with three-blade grounding type plugs.

* Use only heavy duty electrical cords that are not subjected to excessive bending, stretching, or kicking. All cords and wires shall be frequently inspected for signs of defects. Damaged or frayed electrical wires, cords, and plugs shall be immediately replaced by a qualified electrician or other properly trained personnel.
* Install adequate warning signs and barriers (in plain sight) in all areas where hazardous electrical facilities exist.
* Do not permit overloading of electrical circuits at any time. The replacement of fuses or circuit breakers with makeshift materials or over-capacity fuses is strictly prohibited.
* The type of circuit shall determine the type of protective equipment required. Rubber gloves, sleeves, blankets, mats, and insulated platforms shall be used as required. Questions regarding PPE should be directed to the SSO.
* Inspect all insulated protective equipment continuously for defects or damages. Any defective equipment shall be replaced before using.
* Establish and enforce testing schedules for insulation qualities for protective equipment. All users shall verify that equipment has been satisfactorily tested prior to use.

* Wear appropriate eye protection according to the task at hand (e.g., goggles if liquid splash could occur, welding lenses, etc.).

* Minimize the amount of vapor or particulate matter generated, if possible.

* Avoid touching the face and eyes.

* Flush eye with water for at least 15 minutes if chemicals do get into the eye.

* Be aware of “pinch points” when working with tools and heavy equipment.
* Use proper lifting techniques to avoid dropping heavy loads on hands and feet.
* Be aware of moving machinery and heavy equipment in the work area.
* Wear protective gloves as required in the Health and Safety Plan.
* Wear steel-toed boots as required in the Health and Safety Plan.

Fatal exposures to cold among workers have almost always resulted from accidental exposures involving failure to escape from low environmental air temperatures or from immersion in low temperature water. The single most important aspect of life-threatening hypothermia is the fall in the deep core temperature of the body. Workers should be protected from exposure to cold so that the deep core temperature does not fall below 96.8°F; lower body temperatures will very likely result in reduced mental alertness, reduction in rational decision making, or loss of consciousness with the threat of fatal consequences. Pain in the extremities may be the first early warning of danger to cold stress. During exposure to cold, maximum severe shivering develops when the body temperature has fallen to 95°F. This must be taken as a sign of danger to the workers and exposure to cold should be immediately terminated for any workers when severe shivering becomes evident. Since prolonged exposure to cold air, or to immersion in cold water, at temperatures well above freezing can lead to dangerous hypothermia, whole body protection must be provided.

Adequate insulating dry clothing to maintain core temperatures above 96.8°F must be provided to workers if work is performed in air temperatures below 40°F. Wind chill cooling rate must also be considered when determining protective clothing. The equivalent chill temperature should be used when estimating the combined cooling effect of wind and low air temperatures on exposed skin or when determining clothing insulation requirements to maintain the deep body core temperature.

Unless there are unusual or extenuating circumstances, cold injury to other than hands, feet, and head is not likely to occur without the development of the initial signs of hypothermia. Older workers or workers with circulatory problems require special precautionary protection against cold injury. The use of extra insulating clothing and/or a reduction in the duration of the exposure period are among the special precautions which should be considered.

Workers handling evaporative liquid (gasoline, alcohol, or cleaning fluids) at air temperatures below 39.2°F should take special precautions to avoid soaking of clothing or gloves with the liquids because of the added danger of cold injury due to evaporative cooling. Special note should be taken of the particularly acute effects of splashes of “cryogenic fluids” or those liquids and gases with a boiling point that is just above ambient temperature.

Heat stress is a medical condition where a worker exerts energy above his body's ability to adapt to the stress. Malfunctioning or overload of the body's temperature and sweat mechanisms results in heat stress. Poor adaptation to heat may lead to heat cramps, heat exhaustion, or heat stroke. There are three primary causes of heat stress: insufficient water intake; insufficient salt intake; and a deficiency in the production of sweat, the evaporation of which helps to cool the body naturally. Heat stress or heat exhaustion can result in a more life-threatening condition called heat stroke, which is an overexposure to extreme heat, where the body can no longer provide natural regulation of heat. The body overheats and core temperatures may reach 107F which can result in a coma and death

Field team members shall be observed for signs and symptoms of heat stress that include: confusion, dizziness, profuse sweating, skin color change, increased heart rate and vision problems. Personnel who exhibit any of these symptoms shall be removed from field work and requested to consume two to four pints of electrolyte fluid or cool water every hour while resting in a shaded area. The individual should not return to work until the symptoms are no longer recognizable. If symptoms appear critical, persist, or get worse, seek immediate medical attention.

To control the potential occurrence of heat stress, preventive measures will be evaluated and implemented on a daily basis. These measures may include:

- Frequent rest periods;
- Inducement of fluids (e.g., water, Gatorade, etc.) at a rate of one-half to one cup of cool (55ºF) water every 20 minutes of the workday; and
- Periodic cooling of personnel (e.g., via shaded areas, hose-downs with water, etc.).
- Sensitive personnel should wear sunscreen containing a minimum Sun Protection Factor of 15 when working outdoors in the sun. Sunscreen lotion should be applied prior to entering the work zones.

ainst heat, sun exposure, and other hazards. Employers and employees should know the potential hazards in their workplaces and how to manage them.

Sun

Sunlight contains ultraviolet (UV) radiation, which causes premature aging of the skin, wrinkles, cataracts, and skin cancer. There are no safe UV rays or safe suntans. Be especially careful in the sun if you burn easily, spend a lot of time outdoors, or have any of the following physical features: numerous, irregular, or large moles; freckles; fair skin; or blond, red, or light brown hair. Here's how to block those harmful rays:

- Cover up. Wear loose-fitting, long-sleeved shirts and long pants.
- Use sunscreen with a sun protection factor (SPF) of at least 30. Be sure to follow application directions on the bottle or tube.
- Wear a hat. A wide brim hat, not a baseball cap, works best because it protects the neck, ears, eyes, forehead, nose, and scalp.
- Wear UV-absorbent sunglasses (eye protection). Sunglasses don't have to be expensive, but they should block 99 to 100 percent of UVA and UVB radiation. Before you buy sunglasses, read the product tag or label.
- Limit exposure. UV rays are most intense between 10 a.m. and 4 p.m.

OSHA Card—Protecting Yourself in the Sun
www.osha.gov/Publications/osha3166.pdf

Heat

The combination of heat and humidity can be a serious health threat during the summer months. If you work outside (for example, at a beach resort, on a farm, at a construction site) or in a kitchen, laundry, or bakery you may be at increased risk for heat-related illness. So, take precautions. Here's how:

- Drink small amounts of water frequently.
- Wear light-colored, loose-fitting, breathable clothing—cotton is good.
- Take frequent short breaks in cool shade.
- Eat smaller meals before work activity.
- Avoid caffeine and alcohol or large amounts of sugar.
- Work in the shade.
- Find out from your health care provider if your medications and heat don't mix.
- Know that equipment such as respirators or work suits can increase heat stress.

There are three kinds of major heat-related disorders—heat cramps, heat exhaustion and heat stroke. You need to know how to recognize each one and what first aid treatment is necessary.

OSHA Heat Stress Fact Sheet:
www.osha.gov/OshDoc/data_Hurricane_Facts/heat_stress.pdf

OSHA Heat Stress Quick Card:
www.osha.gov/Publications/osha3154.pdf

Lyme Disease/Tick-Borne Diseases

These illnesses (i.e., Rocky Mountain spotted fever) are transmitted to people by bacteria from bites of infected deer (blacklegged) ticks. In the case of Lyme disease, most, but not all, victims will develop a "bulls-eye" rash. Other signs and symptoms may be non-specific and similar to flu-like symptoms such as fever, lymph node swelling, neck stiffness, generalized fatigue, headaches, migrating joint aches, or muscle aches. You are at increased risk if your work outdoors involves construction, landscaping, forestry, brush clearing, land surveying, farming, railroads, oil fields, utility lines, or park and wildlife management. Protect yourself with these precautions:

- Wear light-colored clothes to see ticks more easily.

- Wear long sleeves; tuck pant legs into socks or boots.
- Wear high boots or closed shoes that cover your feet completely.
- Wear a hat.
- Use tick repellants, but not on your face.
- Shower after work. Wash and dry your work clothes at high temperature.
- Examine your body for ticks after work. Remove any attached ticks promptly and carefully with fine-tipped tweezers by gripping the tick. Do not use petroleum jelly, a hot match, or nail polish to remove the tick.

OSHA Lyme Disease Fact Sheet: www.osha.gov/OshDoc/data_LymeFacts/lymefac.pdf

West Nile Virus

West Nile virus is transmitted by the bite of an infected mosquito. Mild symptoms include fever, headache, and body aches, occasionally with a skin rash on the trunk of the body and swollen lymph glands. Symptoms of severe infection include headache, high fever, neck stiffness, stupor, disorientation, coma, tremors, convulsions, muscle weakness, and paralysis. You can protect yourself from mosquito bites in these ways:

- Apply Picaridin or insect repellent with DEET to exposed skin.
- Spray clothing with repellents containing DEET or permethrin. (Note: Do not spray permethrin directly onto exposed skin.)
- Wear long sleeves, long pants, and socks.
- Be extra vigilant at dusk and dawn when mosquitoes are most active.
- Get rid of sources of standing water (used tires, buckets) to reduce or eliminate mosquito breeding areas.

OSHA West Nile Virus Fact Sheet: www.osha.gov/OshDoc/data_Hurricane_Facts/west_nile_virus.pdf

OSHA Safety and Health Information Bulletin: "Workplace Precautions Against West Nile Virus"

http://www.osha.gov/dts/shib/shib082903b.pdf

Poison Ivy-Related Plants

Poison ivy, poison oak and poison sumac have poisonous sap (urushiol) in their roots, stems, leaves and fruits. The urushiol may be deposited on the skin by direct contact with the plant or by contact with contaminated objects, such as clothing, shoes, tools, and animals.

Approximately 85 percent of the general population will develop an allergy if exposed to poison ivy, oak or sumac. Forestry workers and firefighters who battle forest fires have developed rashes or lung irritations from inhaling the smoke of burning plants.

- Wear long-sleeved shirts and long pants, tucked into boots. Wear cloth or leather gloves.
- Apply barrier creams to exposed skin.
- Educate workers on the identification of poison ivy, oak, and sumac plants.
- Educate workers on signs and symptoms of contact with poisonous ivy, oak, and sumac.
- Keep rubbing alcohol accessible. It removes the oily resin up to 30 minutes after exposure.

OSHA Web Page—Poisonous Plants: www.osha.gov/SLTC/etools/sawmills/poison.html

This is one in a series of informational fact sheets highlighting OSHA programs, policies or standards. It does not impose any new compliance requirements. For a comprehensive list of compliance requirements of OSHA standards or regulations, refer to Title 29 of the Code of Federal Regulations. This information will be made available to sensory impaired individuals upon request. The voice phone is (202) 693-1999; teletypewriter (TTY) number: (877) 889-5627.

www.osha.gov

(800) 321-OSHA

DSTM 9/2005

* Apply Hazard Mitigators for motor vehicles when utilizing heavy equipment (where applicable).

* Remember, heavy equipment has the right-of-way over regular vehicles. Yield to heavy equipment.

* Listen for warning signals on heavy equipment.

* Perform a visual inspection and walk around parked heavy equipment before moving to assure that equipment is in good condition and that there are no personnel on the ground that could be injured or objects that could be damaged by vehicle movement.

* Use hand rails and footholds when mounting and dismounting equipment,

* Follow appropriate equipment startup procedures. Brakes, steering, clutches and controls shall be tested.

* Pay attention to workers on the ground that may be in the path and provide warning prior to moving the equipment.

* Permit no one to ride on, or in, heavy equipment. This includes any portion of a backhoe, bulldozer, forklift or the back of a pickup truck, except in locations specifically designed for passenger use and approved by the SSO.

* Locate and flag underground utilities and buried cables, whenever possible, prior to intrusive activities (such as excavation and drilling).

* Keep haulage vehicles under positive control at all times while operating. Vehicles shall be kept in gear when descending grades.

* Do not use heavy equipment on slopes with steepness exceeding 3H:1V unless operations are consistent with manufacturer's recommendations (if the Owner's Manual is not with the equipment or does not specify slope operating procedures, see the SSO).

* Operate equipment with booms, blades, buckets, beds, etc., lowered or in a stable position while on slopes. Safety cables tethered to appropriate anchors shall be used for equipment working on steep slopes, where appropriate. The use of cables and anchors must be approved by the SSO.

* Use rollover protection and seat belts.

* Lower hydraulic systems (e.g., blades, rippers, etc.) to the ground, set brakes, and shut down equipment if malfunction occurs which impairs the ability to control a piece of equipment.

* Suspend in slings or support by hoists or jacks heavy equipment in need of repair. The equipment must also be blocked or cribbed before workers are permitted to work underneath. Working under heavy equipment can pose a crushing hazard.

* Shut off motors, do not allow smoking, and use proper dispensing equipment when refueling gasoline-operated equipment to prevent fire hazards.

* Wear hearing protection if required.

* Maintain eye contact with the heavy equipment operator when working near equipment.

* Be aware of changes in sound of equipment that may indicate a change in direction or activity.

* Know and practice proper lifting techniques.
* Limit continuous lifting of weights to 50 pounds or less. Lifts of heavier weights are permitted on an interim basis. Help shall be obtained for lifting of loads greater than 50 pounds. Mechanical equipment should be used on heavy materials when possible. If mechanical assistance is not available, adequate manpower to maintain the 50-pound limit per employee will be required.
* Do not lift more weight than can be handled comfortably, regardless of load weight. If necessary, help should be requested to lift a load so that the lifting is comfortable.
* Use drum dollies when moving drums or barrels.
* Inspect objects for grease or slippery substances before they are lifted to ensure that the object will not slip.
* Do not carry long, bulky or heavy objects without first verifying that the way is clear and that vision is unobstructed. This ensures that other persons or objects will not be struck by the load.
* Do not carry loads that cannot be seen over or around.
* Make sure workers are physically suited for the job before assigning jobs requiring heavy and/or frequent lifting. A person's lifting ability is not necessarily indicated by his height or weight.
* Before lifting an object, consideration should be given to how the object will be set down without pinching or crushing hands or fingers. For example, to place an object on a bench or table, the object should be set on the edge and pushed far enough onto the support so it will not fall. The object can then be released gradually as it is set down, and pushed in place with the hands and body from in front of the object.
* When two or more persons are handling the same object, one should "call the signals". All the persons on the lift should know who this person is and should warn him if anyone in the crew is about to relax his grip.
* Proper lifting includes:
  - *Feet* - Feet should be parted, with one foot alongside the object being lifted and one behind. Feet should be comfortably spread to give greater stability. The rear foot should be in position for the upward thrust of the lift.
  - *Back* - Use the sit-down position and keep the back straight, but remember that "straight" does not mean "vertical". A straight back keeps the spine, back muscles, and organs of the body in correct alignment. It minimizes the compression of the abdomen that can cause a hernia.
  - *Arms and Elbows* - The load should be drawn close, and the arms and elbows should be tucked into the side of the body. When the arms are held away from the body, they lose much of their strength and power. Keeping the arms tucked in also helps keep body

weight centered.

- *Palm* - The palm grip is one of the most important elements of lifting. The fingers and the hand are extended around the object to be lifted. Use the full palm; fingers alone have very little power.
- *Chin* - Tuck in the chin so the neck and head continue the straight back line. Keep the spine straight and firm.
- *Body Weight* - Position the body so its weight is centered over the feet. This provides a more powerful line of thrust and assures better balance. Start the lift with a thrust of the rear foot. Shift hand positions so the object can be boosted after knees are bent. Straighten knees as object is lifted or shifted to the shoulders. To change direction, lift the object to a carrying position, and turn the entire body, including the feet. Do not twist your body. In repetitive work, both the person and the material should be positioned so that the worker will not have to twist his body when moving the material. If the object is too heavy to be handled by one person, get help.

* Know the effects of noise, including:
  - Workers being startled, annoyed, or distracted.
  - Physical damage to the ear, pain, and temporary and/or permanent hearing loss.
  - Communication interference that may increase potential hazards due to the inability to warn of danger and proper safety precautions to be taken.
* Utilize feasible administrative or engineering controls if workers are subjected to noise exceeding an 8-hour, time-weighted average (TWA) sound level of 90 dBA (decibels on the A-weighted scale).
* Implement the company Hearing Conservation Program when noise exposures equal or exceed an 8-hour, TWA sound level of 85 dBA.
* Wear hearing protection where applicable.

* Route cords, hoses, and cables supplying power to portable power tools to prevent tripping hazards or contact with equipment or machinery.
* Avoid abusing the power supply lines of portable equipment. Excessive scraping, kicking, stretching, and exposure to grease and oils will damage lines or cause them to fail prematurely, and possibly injure the operator or fellow workers.
* Inspect cords, hoses, and cables for wear or deterioration prior to each use. Defective power supply lines shall not be used.
* Do not use electrically powered tools near flammable materials or explosive atmosphere, unless they are of the explosion-proof type meeting the National Electrical Code for explosive area. Employees operating the equipment should be aware of sparks and or metal fragments when using this equipment.
* Ground-check portable electric power tools with metal cases initially and quarterly. At no time will electrical power equipment be operated without proper grounding. All electrical cords and cables, including extension cords, shall include a third wire ground.
* Prohibit operations of electric tools in wet or damp areas except in unusual emergency circumstances. When operation is required in wet or damp conditions, extreme care will be exercised to ensure effective grounding of equipment and proper use of protective gear.
* Size cords adequately for length and the electrical demand of the tool. Otherwise, they may cause a fire hazard.
* Limit use of tools to the purpose for which the tool is intended (e.g., wrenches will not be used as hammers). Defective tools (e.g., with mushroomed heads or split or defective handles) shall not be used.
* Protect tools from corrosion damage.
* Keep tools free of accumulated dirt and unnecessary oil or grease. Moving and adjustable parts shall be lubricated frequently to prevent wear and misalignment.
* Replace or repair damaged or worn tools promptly. Temporary or makeshift repairs are prohibited. At the discretion of the supervisor, discard all tools that cannot be repaired safely. Supervisors shall decide when to discard a tool.
* Store tools in suitable boxes or containers. Loose tools shall not be stored on ledges or where they might fall. Tools shall be picked up when a job is completed and not be allowed to accumulate in the work area. Store all tools in a safe place.
* Do not use conducting (i.e., metal) tools around electrical facilities. Insulated tools, approved for electrical work, shall be tested frequently for proper insulation.

* Select the correct size and type of wrench for each job. Wrench handles shall not be extended with a pipe or cheater because the jaws will spread.
* Repair mushroomed punch, drift and chisel heads. Mushroomed heads represent crystallized metal that will break and fly off when struck.
* Wear eye protection at all times.

* Wear the proper footwear for the task at hand.
* Pay attention to the environment and use caution when moving about on site.
* Follow the easiest and safest path to the destination.
* Follow good housekeeping procedures.
* Remove objects that pose tripping hazards where practicable.
* Prevent water accumulation where practicable.

The following sections address the major workplace fire hazards and the procedures for controlling the hazards.

A. Electrical Fire Hazards

Electrical system failures and the misuse of electrical equipment are leading causes of workplace fires. Fires can result from loose ground connections, wiring with frayed insulation, or overloaded fuses, circuits, motors, or outlets.

To prevent electrical fires, employees shall:

1. Make sure that worn wires are replaced.
2. Use only appropriately rated fuses.
3. Never use extension cords as substitutes for wiring improvements.
4. Use only approved extension cords [i.e., those with the Underwriters Laboratory (UL) or Factory Mutual (FM) label].
5. Check wiring in hazardous locations where the risk of fire is especially high.
6. Check electrical equipment to ensure that it is either properly grounded or double insulated.
7. Ensure adequate spacing while performing maintenance.

B. Portable Heaters

All portable heaters shall be approved by **SSO**. Portable electric heaters shall have tip-over protection that automatically shuts off the unit when it is tipped over. There shall be adequate clearance between the heater and combustible furnishings or other materials at all times.

C. Office Fire Hazards

Fire risks are not limited to industrial facilities. Fires in offices have become more likely because of the increased use of electrical equipment, such as computers and fax machines. To prevent office fires, employees shall:

1. Avoid overloading circuits with office equipment.
2. Turn off nonessential electrical equipment at the end of each workday.
3. Keep storage areas clear of rubbish.
4. Ensure that extension cords are not placed under carpets.
5. Ensure that trash and paper set aside for recycling is not allowed to accumulate.

D. Cutting, Welding, and Open Flame Work

The **SSO**will ensure the following:

1. All necessary hot work permits have been obtained prior to work beginning.
2. Cutting and welding are done by authorized personnel in designated cutting and welding areas whenever possible.

3. Adequate ventilation is provided.
4. Torches, regulators, pressure-reducing valves, and manifolds are UL listed or FM approved.
5. Oxygen-fuel gas systems are equipped with listed and/or approved backflow valves and pressure-relief devices.
6. Cutters, welders, and helpers are wearing eye protection and protective clothing as appropriate.
7. Cutting or welding is prohibited in sprinklered areas while sprinkler protection is out of service.
8. Cutting or welding is prohibited in areas where explosive atmospheres of gases, vapors, or dusts could develop from residues or accumulations in confined spaces.
9. Cutting or welding is prohibited on metal walls, ceilings, or roofs built of combustible sandwich-type panel construction or having combustible covering.
10. Confined spaces such as tanks are tested to ensure that the atmosphere is not over ten percent of the lower flammable limit before cutting or welding in or on the tank.
11. Small tanks, piping, or containers that cannot be entered are cleaned, purged, and tested before cutting or welding on them begins.
12. Fire watch has been established.

E. Flammable and Combustible Materials

The **SSO** shall regularly evaluate the presence of combustible materials at.

Certain types of substances can ignite at relatively low temperatures or pose a risk of catastrophic explosion if ignited. Such substances obviously require special care and handling.

1. Class A combustibles.

These include common combustible materials (wood, paper, cloth, rubber, and plastics) that can act as fuel and are found in non-specialized areas such as offices.

To handle Class A combustibles safely:

a. Dispose of waste daily.
b. Keep trash in metal-lined receptacles with tight-fitting covers (metal wastebaskets that are emptied every day do not need to be covered).
c. Keep work areas clean and free of fuel paths that could allow a fire to spread.
d. Keep combustibles away from accidental ignition sources, such as hot plates, soldering irons, or other heat- or spark-producing devices.
e. Store paper stock in metal cabinets.
f. Store rags in metal bins with self-closing lids.
g. Do not order excessive amounts of combustibles.
h. Make frequent inspections to anticipate fires before they start.

Water, multi-purpose dry chemical (ABC), and halon 1211 are approved fire extinguishing agents for Class A combustibles.

2. Class B combustibles.

These include flammable and combustible liquids (oils, greases, tars, oil-based paints, and lacquers), flammable gases, and flammable aerosols.

To handle Class B combustibles safely:

a. Use only approved pumps, taking suction from the top, to dispense liquids from tanks, drums, barrels, or similar containers (or use approved self-closing valves or faucets).
b. Do not dispense Class B flammable liquids into containers unless the nozzle and container are electrically interconnected by contact or by a bonding wire. Either the tank or container must be grounded.
c. Store, handle, and use Class B combustibles only in approved locations where vapors are prevented from reaching ignition sources such as heating or electric equipment, open flames, or mechanical or electric sparks.
d. Do not use a flammable liquid as a cleaning agent inside a building (the only exception is in a closed machine approved for cleaning with flammable liquids).
e. Do not use, handle, or store Class B combustibles near exits, stairs, or any other areas normally used as exits.
f. Do not weld, cut, grind, or use unsafe electrical appliances or equipment near Class B combustibles.
g. Do not generate heat, allow an open flame, or smoke near Class B combustibles.
h. Know the location of and how to use the nearest portable fire extinguisher rated for Class B fire.

Water should not be used to extinguish Class B fires caused by flammable liquids. Water can cause the burning liquid to spread, making the fire worse. To extinguish a fire caused by flammable liquids, exclude the air around the burning liquid. The following fire-extinguishing agents are approved for Class B combustibles: carbon dioxide, multi-purpose dry chemical (ABC), halon 1301, and halon 1211. (**NOTE:** Halon has been determined to be an ozone-depleting substance and is no longer being manufactured. Existing systems using halon can be kept in place.)

F. Smoking

Smoking is prohibited at the facility.

–

- Be aware of chemicals of concern that can directly injure the skin or that can be absorbed into the bloodstream and subsequently transported to other organs.
- Know that skin absorption is enhanced by abrasions, cuts, heat, and moisture.
- Do not wear contact lenses in contaminated atmospheres (since they may trap chemicals against the eye surface). The eye is particularly vulnerable because airborne chemicals can dissolve in its moist surface and be carried to the rest of the body through the bloodstream (capillaries are very close to the surface of the eye).
- Keep hands away from face.
- Minimize contact with liquid and solid chemicals.

Wear protective clothing (e.g., suits and gloves) as required by the Health and Safety Plan

– .

* Adhere to the 0.05 mg/m^3 action level for dust

* Be aware that the lungs are extremely vulnerable to chemical agents. Even substances that do not directly affect the lungs may pass through lung tissue into the bloodstream, where they are transported to other vulnerable areas of the body.

* Know the odor and odor threshold of the chemicals of concern. Some toxic chemicals present in the atmosphere may not be detected by human senses (i.e., they may be odorless and colorless, and their toxic effects may not produce any immediate symptoms).

* Use engineering controls to reduce vapor concentrations (e.g., ventilation) or dusty atmospheres (e.g., dust suppression techniques).

* Wear respiratory protection as indicated by air monitoring results and/or as required by the Health and Safety Plan.

* Conduct work zone air monitoring as required by the Health and Safety Plan.

Appendix E

Personal Protective Equipment Per Task

Applies to Task: ☒ **1.Excavation, soil sampling, well installation, GW sampling and capping**

☒ *Modified Level D**		☐ *Level C**		☐ *Level B**

OSHA Onsite Training Documentation Form

After completion of the OSHA 40-hour training class, 29 CFR 1910.120 states that 3 days of onsite experience under the direct supervision of a trained, experienced supervisor are required to complete the OSHA HAZWOPER training requirements. This form is to be used to document this requirement, and shall be completed by a qualified supervisor (i.e., someone who has completed the 8-hour supervisory training class). Upon completion of this form, please submit it to the EarthCon project manager.

San Francisco, CA 94105-3901

SPACE ABOVE THIS LINE RESERVED FOR RECORDER'S USE

LAND USE COVENANT AND AGREEMENT
ENVIRONMENTAL RESTRICTIONS

County of Riverside, Assessor Parcel Number(s): 107-030-022-3
Clow Valve Company
(Department Site Code 600876-48)

This Land Use Covenant and Agreement ("Covenant") is made by and between Clow Valve Company (the "Covenantor"), the current owner of property located at 1375 Magnolia Avenue, Corona in the County of Riverside, State of California (the "Property"), and the Department of Toxic Substances Control (the "Department"). Pursuant to Civil Code section 1471, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined

in Health and Safety Code section 25260. The Covenantor and the Department hereby agree that, pursuant to Civil Code section 1471 and Health and Safety Code section 25202.5 the use of the Property be restricted as set forth in this Covenant and that the Covenant shall conform with the requirements of California Code of Regulations, title 22, section 67391.1. With respect to the Polychlorinated Biphenyls (PCBs) at the Property, the provisions of this Covenant shall be for the benefit of, and shall be enforceable by, the United States Environmental Protection Agency ("U.S. EPA"), as a third party beneficiary pursuant to general contract law, including but not limited to Civil Code section 1559.

ARTICLE I
STATEMENT OF FACTS

1.01. Property Location. The Property, located at 1375 Magnolia Avenue, Corona, County of Riverside, California, that is subject to this Covenant, totaling approximately 16 acres, is more particularly described in the attached Exhibit A, "Legal Description of the Property", and depicted in Exhibit B, "Plot Plan". The Property is located in the area generally bounded by Magnolia Avenue on the south, railroad tracks and El Camino Avenue on the west, and a storm water channel towards the north and east. The Property is also identified as County of Riverside, Assessor's Parcel Number 107-030-022-3.

(a) A limited portion of the Property is more particularly described in Exhibit C, "Legal Description of the Capped Property", and illustrated in Exhibit D, "Sketch", referred to as the "Capped Property". The "Capped Property", totaling approximately 9.964 acres of soil impacted by hazardous substances, is located on the northern portion of the Property now generally bounded by railroad and El Camino Avenue on the west, storm channel on the north and east. Its southern border runs parallel to Magnolia Avenue, approximately 195 feet north of Magnolia Avenue.

(b) A limited portion of the Property is more particularly described in Exhibit D as "Area 1" a Former Asphalt Dip Tank and as "Area2" a PCB Transformer area. Former Asphalt Dip Tank was previously located, approximately 620 feet north of Magnolia

Avenue, 510 feet east of El Camino Avenue, and 200 feet west of the storm channel western edge. The PCB Transformer area is located approximately 240 feet west of the storm channel western edge, 510 feet east of El Camino Avenue, and 600 feet north of Magnolia Avenue.

1.02. Hazardous Substances. Hazardous wastes, or constituents of hazardous waste, including Polychlorinated Biphenyl's (PCBs) (Total Aroclors up to a maximum of 2,220 milligrams per kilogram (mg/kg)), Total Petroleum Hydrocarbons (TPH) (up to a maximum of 9,300 mg/kg), arsenic (up to a maximum of 52.9 mg/kg), cadmium (up to a maximum of 43.9 mg/kg), hexavalent chromium (up to a maximum of 6.6 mg/kg), and lead (up to a maximum of 7,360 mg/kg) in soil, and volatile organic compounds, such as tetrachloroethylene (PCE) (up to a maximum of 3 microgram/liter (ug/l)), in the soil gas remain at the Property above levels acceptable for unrestricted land use.

As of February 25, 2021, PCB concentrations in the soil at the Former Asphalt Dip Tank Bottom and PCB Transformer exceed the level for unrestricted use and the USEPA's site-specific industrial risk-based threshold of 15 mg/kg. PCB concentrations present in soils of the PCB Transformer area exceed the California hazardous waste level of Total Threshold Limit Concentration (TTLC) of 50 mg/kg.

As of February 25, 2021, lead concentrations detected in the soil at the Capped Property exceeded 320 milligrams per kilogram, a level deemed safe by DTSC for the continued use of the Site for industrial use and the TTLC of 1,000 mg/kg. A Human Health Risk Assessment (HHRA) was performed to evaluate the potential health risks associated with direct exposure of workers at the Property to soil containing Chemicals of Potential Concern (COPCs). Based on the HHRA, potential health risk to a commercial or industrial worker is $1x10^{-5}$ and to a construction worker is $2x10^{-4}$. The estimated Hazard Index (HI) for a commercial/industrial worker at the Property is 1.9, primarily due to the potential exposure to PCBs and cadmium. The estimated HI for a construction worker at the Property is 458. U.S. EPA recommends an HI of 1 or below and health risk below $1x10^{-6}$. The calculated risks were primarily associated with direct exposure to impacted soil and associated soil ingestion or dermal exposure, both of which will be eliminated by installation and maintenance of the capping materials described herein.

1.03. Remediation of Property. This Property has been investigated and/or remediated under the Department's oversight. The Department approved a Corrective Measures Study, dated February 19, 2018, prepared by EarthCon Consultants CA, Inc, in accordance with Health and Safety Code, Division 20, Chapter 6.5. The remediation activities at the Property include:

a) Construction of an approximately 5,000 square foot, 6-inch thick concrete or 3-inch thick asphalt cap in two areas encompassing approximately one-half acre, identified as Areas of Concern (AOCs), AOC-1 and AOC-5 (see Exhibit B).
b) Repair and maintenance of the existing asphalt and/or concrete surface cover of the Capped Property;
c) Soil Management Plan and Operation and Maintenance Plan preapproval by the Department for all future construction work involving soil excavation at the Capped Property; and,
d) Land use restriction recorded with the Riverside County Assessor's Office to prohibit sensitive uses.

1.04. PCB Remediation overseen by U.S. EPA. In addition to the corrective action measures for the Property under the Department's oversight, U.S. EPA approved with conditions the Risk-Based Approval Application submitted by EarthCon Consultants, CA, Inc. on behalf of Clow Valve Company dated April 9, 2019 to remediate PCBs at the Property. PCBs are regulated by the U.S. EPA pursuant to the Toxic Substances Control Act (TSCA), 15 U.S.C. Section 2601 et seq., and the PCB regulations at 40 Code of Federal Regulations (CFR) Part 761. This document is available in Envirostor, an online document repository at https://www.envirostor.dtsc.ca.gov/public/deliverable_documents/1318022012/2019-04-23_EPA%20to%20Clow%20Valve_761.61%28c%29_SIGNED.pdf

1.05. Basis for Environmental Restrictions. As a result of the presence of Hazardous Wastes, PCBs, TPH, arsenic, cadmium, lead, and PCE, which are also hazardous materials as defined in Health and Safety Code section 25260, at the Property, the Department has concluded that it is reasonably necessary to restrict the

use of the Property in order to protect present or future human health or safety or the environment, and that this Covenant is required as part of the Department-approved remedy for the Property. The Department has also concluded that the Property, as remediated and when used in compliance with the Environmental Restrictions of this Covenant, does not present an unacceptable risk to present and future human health or safety or the environment.

1.06. Land Use Covenant. A land use covenant is necessary to preclude potential users' exposure to hazardous substances that remain at the Property and to complete the remedy selected in the Corrective Measures Study. U.S. EPA, with the concurrence of the Department, has concluded that the Property, remediated to the goals presented in the Corrective Measures Study, subject to the restrictions of this Covenant, and used in compliance with such restrictions, does not present an unacceptable threat to present or future human health or safety or the environment. Additional information about the Site, including the 2019 PCB risk analysis by U.S. EPA, is available at the Envirostor, an online repository listed in paragraph 1.04, above.

ARTICLE II
DEFINITIONS

2.01. Department. "Department" means the California Department of Toxic Substances Control and includes its successor agencies, if any.

2.02. Environmental Restrictions. "Environmental Restrictions" means all protective provisions, covenants, restrictions, requirements, prohibitions, and terms and conditions as set forth in this Covenant.

2.03. Improvements. "Improvements" includes, but is not limited to buildings, structures, roads, driveways, improved parking areas, wells, pipelines, or other utilities.

2.04. Lease. "Lease" means lease, rental agreement, or any other document that creates a right to use or occupy any portion of the Property.

2.05. Occupant. "Occupant" or "Occupants" means Owner and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.06. Owner. "Owner" or “Owners” means the Covenantor, and any successor in interest including any heir and assignee, who at any time holds title to all or any portion of the Property.

2.07. U.S. EPA. “U.S. EPA” means the United States Environmental Protection Agency, and includes its successor agencies, if any.

ARTICLE III
GENERAL PROVISIONS

3.01. Runs with the Land. This Covenant sets forth Environmental Restrictions that apply to and encumber the Property and every portion thereof no matter how it is improved, held, used, occupied, leased, sold, hypothecated, encumbered, or conveyed. This Covenant: (a) runs with the land pursuant to Civil Code section 1471 and Health and Safety Code section 25202.5; (b) inures to the benefit of and passes with each and every portion of the Property; (c) is for the benefit of, and is enforceable by the Department; and (d) is imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding upon Owners/Occupants. This Covenant: (a) binds all Owners of the Property, their heirs, successors, and assignees; and (b) the agents, employees, and lessees of the Owners and the Owners’ heirs, successors, and assignees. Pursuant to Civil Code section 1471, all successive Owners of the Property are expressly bound hereby for the benefit of the Department; this Covenant, however, is binding on all Owners and Occupants, and their respective successors and assignees, only during their respective periods of ownership or occupancy except that such Owners or Occupants shall continue to be liable for any violations of, or non-compliance with, the Environmental Restrictions of this Covenant or any acts or omissions during their ownership or occupancy.

3.03. Written Notice of the Presence of Hazardous Substances. Prior to the sale, lease, assignment, or other transfer of the Property, or any portion thereof, the Owner, lessor, or sublessor shall give the buyer, lessee, or sublessee written notice of the existence of this Covenant and its Environmental Restrictions.

3.04. Incorporation into Deeds and Leases. This Covenant shall be

incorporated by reference in each and every deed and Lease for any portion of the Property.

3.05. Conveyance of Property. The Owner and new Owner shall provide Notice to the Department and the U.S. EPA not later than 30 calendar days after any conveyance or receipt of any ownership interest in the Property (excluding Leases, and mortgages, liens, and other non-possessory encumbrances). The Notice shall include the name and mailing address of the new Owner of the Property and shall reference the site name and site code as listed on page one of this Covenant. The notice shall also include the Assessor's Parcel Number(s) noted on page one. If the new Owner's property has been assigned a different Assessor Parcel Number, each such Assessor Parcel Number that covers the Property must be provided. The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect proposed conveyance, except as otherwise provided by law or by administrative order.

3.06. Costs of Administering the Covenant to Be Paid by Owner. The Department has already incurred and will in the future incur costs associated with this Covenant. Therefore, the Covenantor hereby covenants for the Covenantor and for all subsequent Owners that, pursuant to California Code of Regulations, title 22, section 67391.1(h), the Owner agrees to pay the Department's costs in administering, implementing and enforcing this Covenant.

ARTICLE IV
RESTRICTIONS AND REQUIREMENTS

4.01. Prohibited Uses. The Property shall not be used for any of the following purposes without prior written approval by the Department pursuant to Health and Safety Code section 25227 and prior written notice to U.S. EPA :

(a) A residence, including single or multifamily housing, mobile homes, or factory-built housing constructed or installed for use as residential human habitation.

(b) A hospital for humans.

(c) A public or private school for persons under 18 years of age.

(d) A day care center or a playground for children.

4.02. Soil Management. Soil management activities at the Capped Property are subject to the following requirements in addition to any other applicable Environmental Restrictions:

(a) No activities that will disturb the soil at or below grade or below concrete (e.g., excavation, grading, removal, trenching, filling, earth movement, mining, or drilling) shall be allowed at the Property without a Soil Management Plan pre-approved by the Department and U.S. EPA in writing.

(b) Any soil brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law.

4.03. Prohibited Activities. The following activities shall not be conducted at the Property:

(a) Drilling for any water, oil, or gas without prior written approval by the Department.

(b) Extraction or removal of groundwater without a Groundwater Management Plan pre-approved by the Department in writing.

(c) Activity that may alter, interfere with, or otherwise affect the integrity or effectiveness of, or the access to, monitoring, operation or maintenance of the concrete cover at the Capped Property without prior written approval of the Department and U.S. EPA.

4.04. Written Notice of Covenant. Prior to any sale, lease, or rental of any portion of the Property, the Owner shall provide a copy of this Covenant to the buyer, lessee, or renter to ensure that the buyer, lessee, or renter is on notice of the restrictions and requirements of this Covenant. Prior to recordation of any easement on any portion of the Property, the Owner shall provide a copy of this Covenant to the easement holder to ensure that the easement holder is on notice of the restrictions and requirements of this Covenant. Covenantor shall also provide a copy of this Covenant to all existing Occupants and easement holders of record within 30 days of recording this Covenant.

4.05. Access for Department. The Department shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the Department in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect the Department's right of entry and access, or authority to take response actions, under any applicable State Law.

4.06. Access for U.S EPA. The U.S. EPA shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the U.S. EPA in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect U.S. EPA's right of entry and access, or U.S. EPA's authority to take actions, under any applicable law.

4.07. Access for Implementing Operation and Maintenance. The entity or person responsible for implementing the operation and maintenance activities, if any, shall have reasonable right of entry and access to the Property for the purpose of implementing such operation and maintenance activities until the Department determines that no further operation and maintenance activity is required.

4.08. Inspection and Reporting Requirements. The Owner shall conduct an annual inspection of the Property verifying compliance with this Covenant; shall submit an annual inspection report to the Department for its approval by January 15th of each year; and also send a copy to U.S. EPA. Attached as Exhibit F is a sample format for an annual inspection report. The annual inspection report must include the dates, times, and names of those who conducted the inspection and reviewed the annual inspection report. It also shall describe how the observations that were the basis for the statements and conclusions in the annual inspection report were performed (e.g., drive by, fly over, walk in, etc.). If any violation is noted, the annual inspection report must detail the steps taken to correct the violation and return to compliance. If the Owner identifies any violations of this Covenant during the annual inspection or at any other

time, the Owner must within 10 calendar days of identifying the violation: (a) determine the identity of the party in violation; (b) send a letter advising the party of the violation of the Covenant; and (c) demand that the violation cease immediately. Additionally, a copy of any correspondence related to the violation of this Covenant shall be sent to the Department and U.S. EPA within 10 calendar days of its original transmission.

4.09. Five-Year Review. In addition to the annual reviews noted above, after a period of five (5) years from January 15, 2021 and every five (5) years thereafter, Owner shall submit a Five-Year Review report documenting its review of the remedy implemented and its evaluation to determine if human health and the environment are being adequately protected by the remedy as implemented. The Owner shall submit this report to DTSC, and submit a copy to U.S. EPA. The report shall describe the results of all inspections, sampling analyses, tests and other data generated or received by Owner and evaluate the adequacy of the implemented remedy in protecting human health and the environment. As a result of any review work performed, Department may require Owner to perform additional review work or modify the review work previously performed by Owner.

4.10. Changes to Use or Condition of Property. Any changes to land use, movement of PCB contaminated soils, or discovery of new contamination requires notification to, and may require additional approval from, the U.S. EPA by the Owner and/or Occupant.

4.11. Access for Five-Year Reviews. The entity, person or persons responsible for Five-Year Reviews shall have reasonable right of entry and access to the Property for the purpose of implementing these activities. Such right of entry and access shall continue until such time as the U.S. EPA and DTSC both determine that no further Five-Year Review activities are required.

ARTICLE V
ENFORCEMENT

5.01. Enforcement. Failure of the Owner or Occupant to comply with this Covenant shall be grounds for the Department to require modification or removal of any Improvements constructed or placed upon any portion of the Property in violation of this

Covenant. Violation of this Covenant, such as failure to submit (including submission of any false statement) record or report to the Department, shall be grounds for the Department to pursue administrative, civil, or criminal actions, as provided by law.

5.02. Enforcement Rights of U.S. EPA as Third-Party Beneficiary. U.S. EPA, as a third-party beneficiary, has the right to enforce the Environmental Restrictions contained herein.

ARTICLE VI
VARIANCE, REMOVAL AND TERM

6.01. Variance from Environmental Restrictions. Any person may apply to the Department for a written variance from any of the Environmental Restrictions imposed by this Covenant. Such application shall be made in accordance with Health and Safety Code section 25223. A copy of the application shall be submitted to the U.S. EPA simultaneously with the application submitted to the Department. No variance may be granted under this paragraph without prior notice and opportunity to comment by U.S. EPA.

6.02 Termination, Modification, and/or Removal of Environmental Restrictions. Any person may apply to the Department to terminate, modify, and/or remove any or all of the Environmental Restrictions imposed by this Covenant or terminate the Covenant in its entirety. Such application shall be made in accordance with Health and Safety Code section 25224 and a copy of the application shall be submitted to U.S. EPA simultaneously with the application submitted to the Department. No termination may be granted under this paragraph without prior notice to and opportunity to comment by U.S. EPA.

6.03 Term. Unless ended in accordance with paragraph 6.02, by law, or by the Department in the exercise of its discretion, this Covenant, after providing notice to and an opportunity to comment by U.S. EPA, shall continue in effect in perpetuity.

ARTICLE VII
MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be

construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof, to the general public or anyone else for any purpose whatsoever.

7.02. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of Riverside within 10 calendar days of the Covenantor's receipt of a fully executed original. The Covenantor shall also provide copies showing the County Recorder's tracking information of its recording (i.e., document number or book and page number information) to the Department and U.S. EPA within ten (10) days of receiving it from the County Recorder's Office.

7.03. Notices. Whenever any person gives or serves any Notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (a) when delivered, if personally delivered to the person being served or to an officer of a corporate party being served; or (b) five calendar days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

To U.S. EPA:
U.S. Environmental Protection Agency
Region IX
Attention**:** PCB Coordinator (Land Chemicals and Redevelopment Division)
75 Hawthorne Street
San Francisco, CA 94105-3901

Any party may change its address or the individual to whose attention a Notice is to be

sent by giving advance written Notice in compliance with this paragraph.

7.04. Partial Invalidity. If this Covenant or any of its terms are determined by a court of competent jurisdiction to be invalid for any reason, the surviving portions of this Covenant shall remain in full force and effect as if such portion found invalid had not been included herein.

7.05. Statutory References. All statutory or regulatory references include successor provisions.

7.06. Incorporation of Exhibits. All exhibits and attachments to this Covenant are incorporated herein by reference.

IN WITNESS WHEREOF, the Covenantor and the Department hereby execute this Covenant.

LAND USE COVENANT
SAMPLE ANNUAL INSPECTION REPORT (2 Pages)

Site name:

Site address:

Current Site owner:

Date and times of inspection:

Name(s) of individual(s) who performed inspection:

How inspection observations were made (e.g. drive-by, fly-over, walking the Property):

1. Since the last annual inspection, has there been a change in the land use, such that there are now residences, a hospital for humans, a public or private school for persons under 21 years of age, or a day care center for children on the restricted Property?
   ☐ Yes ☐ No ☐ Not an applicable restriction

2. Since the last annual inspection, has the soil been disturbed on the restricted Property? Was evidence of soil disturbance observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

3. Since the last annual inspection, has there been any drilling on the restricted Property? Was evidence of drilling observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

Cap Condition

4. Since the last annual inspection, has there been any damage to, disturbance of, or modifications to the existing building foundation and/or surrounding pavement that serves as the cap over contaminated soil?
   ☐ Yes ☐ No

5. Has there been any damage to, disturbance of, or modifications to the asphalt/concrete Cap covering the restricted Property?
   ☐ Yes ☐ No

Land Use Covenant Compliance

6. Has there been a change in the land use of the property from commercial/industrial?
   ☐ Yes ☐ No

If the response to any of the above questions is yes, describe the circumstances.

Photos should be attached to this report that show the use of the Restricted Property at the time of the inspection and the condition of any Caps on the restricted Property. Photos showing any cracks in or damage to the Cap should also be included.

I certify under penalty of law that this document and all attachments were prepared by me or under my direction or supervision. With the exception of any areas of non-compliance noted above, all uses and activities on the restricted Property were found to be in compliance with the restrictions and requirements of the Land Use Covenant. Based on my personal knowledge or inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

SUBJECT: REVIEW OF THE FINANCIAL ASSURANCE OPERATION AND MAINTENANCE COST ESTIMATE FOR CLOW VALVE COMPANY, 1375 MAGNOLIA AVENUE, CORONA, RIVERSIDE COUNTY, CALIFORNIA (Site Code: DTSC600876)

DATE: May 28, 2021

Documents Reviewed

The result of this review is limited to the following documents, or sections thereof:

1. Operation and Maintenance Cost Estimate, part of Response to Comments, dated April 21, 2021, provided by EarthCon Consultants, CA.

COST ESTIMATE REVIEW

The Department of Toxic Substances Control's (DTSC's) Cost Estimating Work Group (CEWG) engineering staff reviewed the Operation and Maintenance Financial Assurance Cost Estimate for the Clow Valve Company in Corona, Riverside County, California to determine if the estimated dollar amount is sufficient for compliance with the financial assurance cost estimate requirements established for the site. This memorandum provides the findings of our review. CEWG provided a previous memorandum dated March 8, 2021 with review of the corrective action cost estimate. All comments in that memorandum have been adequately addressed.

BACKGROUND

The following information is taken from the Revised Corrective Measures Study (CMS) dated February 19, 2018.

The Site was originally developed for the production of iron pipes and connections by American Foundry in approximately 1950. In 1960, Rich Manufacturing of Los Angeles acquired the property and moved their iron pipe manufacturing business to the Corona location, adding additional structures in 1967 for the machine shop and brass foundry. Clow Valve, a manufacturer of wrought iron pipe and other foundry products as early as 1878, acquired Rich Manufacturing Company of Corona in 1972. This acquisition added the wet barrel fire hydrant to Clow Valve's product line of waterworks products. In 1985, McWane, Inc. purchased all Clow Corporation's stock and Clow became a wholly owned subsidiary and eventually operating division of McWane.

Current manufacturing processes include machining, testing, coating, and shipping wet barrel fire hydrants. Finished valves are also stored and distributed from this location. Anaco, Clow Valve's sister company, is also on-Site and is engaged in the manufacturing of rubber soil pipe couplings. Two other McWane Divisions, McWane Ductile-Utah and Tyler Union operate product distribution centers on the Site.

Site soils are comprised of Holocene Older and Younger alluvium and bedrock. The younger alluvium consists of unconsolidated sand, gravel, and silt. The older alluvium consists of semi-consolidated buff to dark brown sand, gravel, and silt. During previous site investigations, groundwater beneath the Site was encountered at approximately 47 ft bgs in coarse granular material composed of sand and gravel. The regional aquifer is reported to start at 124 ft bgs.

As a result of facility operations, site soils have been contaminated with lead, TPH and polychlorinated biphenyls (PCBs), and 1,1,2,2-tetrachloroethane has been found in soil gas. The CMS proposed a combined remedial approach including engineering controls (capping system – asphalt-concrete pavement), excavation with off-site disposal for soils

with high concentrations of PCBs (concentrations exceeding 100 mg/kg), and institutional controls (Soil Management Plan and Use Covenant). The remediation of PCB contamination is regulated by USEPA. Corrective Measures are ongoing.

The Scope of Work for the Operation and Maintenance activities at the site includes:

- Pavement inspection, maintenance, and repair.
- Land Use Covenant inspection and reporting.
- DTSC oversight

Based on my review of the above listed document, I have concluded that the Financial Assurance Cost Estimate for $1,559,685.16 in 2021-year dollars is valid and reasonably estimates the costs for a third party to perform the Scope of Work in the event the Owner or Operator will not.

The Cost Estimating Working Group (CEWG) review was based on the information available at the time the review was performed and does not constitute a guarantee of the accuracy of the assumptions used by the responsible party to develop their financial assurance cost estimate. The review of this financial assurance cost estimate is not intended to be all-inclusive as this review does not include a technical assessment and evaluation of the remedial design/controlling document or the accuracy and reliability of data used to support the assumptions.

The Financial Assurance Cost Estimate and supporting documentation was reviewed under the responsible charge of the following qualified Civil Engineer licensed in the State of California.

SUBJECT: RESPONSE TO COMMENTS

***FINANCIAL ASSURANCE COST ESTIMATE REVIEW* – CLOW VALVE COMPANY, 1375 MAGNOLIA AVENUE, CORONA. 22120-600876-48 WR:20039018**

Dear Ms. Edwards,

EarthCon Consultants CA, Inc. (EarthCon) on behalf of Clow Valve Company (Clow), is submitting this Response to Comments (RTC) letter addressing the DTSC comments provided on the *Financial Assurance Cost Estimate Review* letter dated March 8, 2021. Based on the comments provided, the RTCs associated with the requested information are provided below:

Comment 1: *The cost estimate should include a basis of estimate that describes the tasks involved and costs for each task. Line items should be included under each task. Cost data should include unit costs, materials, labor, and equipment and show adequate detail to allow CEWG to verify the cost estimate.*

Response: Line items for the individual tasks are provided in Appendix A. The general tasks include annual site inspections, cover operations and maintenance (O&M), and DTSC oversight. The costs associated with O&M of the asphalt cover utilize the City of Corona's Public Works form titled Quantity Estimate for Public Improvements (see Appendix B). This form includes materials, labor, and equipment in their cost estimate. In addition, when redevelopment activities occur the associated details will be utilized to prepare a revised O&M cost estimate.

Comment 2: *A figure showing the capped area of the site should be included with the cost estimate. The areal extent of the cap should be specified in the cost estimate. An engineering description of the cap should also be included in the basis of the estimate.*

Response: A copy of the grading plan is provided in Appendix B. The areal extent of the cap is identified on page one of the plans and is also utilized for the area calculations for the maintenance associated with AOC1/AOC5. Additionally, a description of the cap is included in the text portions of the grading plan documents.

Comment 3: *The asphalt pavement maintenance should include costs for crack repair, fog/slurry seal, and pavement resurfacing. CEWG recommends a resurfacing interval of 10 years.*

Response: As noted in Comment 1, line items for the individual tasks are provided in Appendix A. This includes minor crack repair, fog/slurry seal, and pavement resurfacing. As requested, the resurfacing interval of 10 years is included.

Comment 4: *DTSC oversight costs, including Land Use Covenant oversight, should be specified in the cost estimate.*

Response: As noted in Comment 1, the DTSC oversight costs are included. See Appendix A.

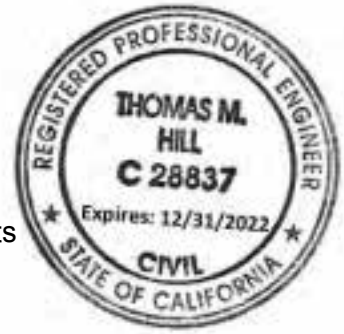
Comment 5: *A contingency should be included in the cost estimate. CEWG recommends at least a 15% contingency.*

Response: A 15% contingency is included. See Appendix A.

Comment 6: *The cost estimate should be prepared by a California licensed professional engineer because the operation and maintenance activities involve civil engineering. The cost estimate should be dated, signed, and stamped by the engineer in responsible charge who prepared the cost estimate.*

Response: The cost estimates have been approved and certified by a California licensed professional civil engineer. Please see the estimates provided in Appendix A.

If there are any questions regarding this letter, please contact one of the undesigned at 714-500-5400.



Respectfully submitted,

Rebecca Sundilson

CITY OF CORONA
PRECISE GRADING PLAN
1375 MAGNOLIA AVENUE

GRADING GENERAL NOTES

1. A GRADING PERMIT FROM THE PUBLIC WORKS DEPARTMENT IS REQUIRED. ALL GRADING SHALL COMPLY WITH THE REQUIREMENTS OF THE CITY OF CORONA GRADING REGULATIONS– CORONA MUNICIPAL CODE 15.36. THESE PLANS, SPECIAL INSTRUCTIONS ON THE PERMIT, AND THE GEOTECHNICAL INVESTIGATION AND LIQUEFACTION EVALUATION DATED SEPTEMBER 10, 2019 BY GEOTECHNICAL PROFESSIONALS INC., AND ALL SUBSEQUENT ADDENDA.
2. SOURCE OF TOPOGRAPHY IS BASED ON FIELD SURVEY DATED SEPTEMBER 23, 2018.
3. A PRE–GRADING MEETING AT THE SITE IS REQUIRED BETWEEN THE CITY INSPECTOR, THE CIVIL ENGINEER, THE GEOTECHNICAL ENGINEER AND THE GRADING CONTRACTOR. CALL THE PUBLIC WORKS DEPARTMENT INSPECTION DIVISION AT (951) 279–3511 TO SCHEDULE A PRE–GRADING MEETING AT LEAST 48 HOURS PRIOR TO START OF ANY WORK.
4. HOURS OF OPERATION ARE 7:00 A.M. TO 5:00 P.M. – MONDAY THROUGH FRIDAY EXCLUDING HOLIDAYS.
5. SEPARATE PERMITS SHALL BE REQUIRED FOR ANY IMPROVEMENT WORK IN THE PUBLIC RIGHT–OF–WAY.
6. CONSTRUCTION MATERIAL AND EQUIPMENT SHALL NOT OCCUPY ANY PORTION OF THE PUBLIC RIGHT–OF–WAY, SUCH AS STREET, ALLEY OR PUBLIC SIDEWALK AT ANY TIME. TEMPORARY USE OF PUBLIC RIGHT–OF–WAY, WHENEVER REQUESTED, MUST BE REVIEWED AND APPROVED BY THE PUBLIC WORKS DIRECTOR.
7. REPAIR OR REPLACE ALL EXISTING DAMAGED OR ALTERED PUBLIC IMPROVEMENTS AS REQUIRED BY THE PUBLIC WORKS DIRECTOR.
8. ALL SURVEY MONUMENTS SHALL BE PROTECTED AND PERPETUATED IN PLACE. ANY DISTURBED OR COVERED MONUMENTS SHALL BE RESET BY A QUALIFIED CIVIL ENGINEER OR A LICENSED LAND SURVEYOR.
9. PRIOR TO TAKING WATER FROM A CITY FIRE HYDRANT, THE CONTRACTOR SHALL MAKE ARRANGEMENTS WITH THE PUBLIC WORKS DEPARTMENT TO OBTAIN A FIRE HYDRANT WATER METER. METER LOCATION MAY NOT BE ALTERED WITHOUT DEPARTMENT OF WATER AND POWER APPROVAL.
10. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE LOCATION OF ALL UTILITIES OR STRUCTURES ABOVE OR BELOW GROUND, SHOWN OR NOT SHOWN ON THESE PLANS. THE CONTRACTOR WILL BE HELD RESPONSIBLE FOR ALL DAMAGE TO ANY UTILITIES OR STRUCTURES CAUSED BY HIS OPERATION.
11. STRICT ADHERENCE TO DUST CONTROL REQUIREMENTS SHALL BE ENFORCED. ADJACENT STREETS ARE TO BE CLEANED DAILY OF ALL DIRT AND DEBRIS RESULTING FROM THIS OPERATION.
12. SEPARATE PERMITS FROM THE BUILDING DIVISION SHALL BE REQUIRED FOR ALL WALLS.
13. AN APPROVED PRECISE GRADING PLAN WILL BE REQUIRED PRIOR TO A BUILDING PERMIT BEING ISSUED.
14. THE DESIGN CIVIL ENGINEER/GEOTECHNICAL ENGINEER/ENGINEERING GEOLOGIST OF RECORD SHALL EXERCISE SUFFICIENT CONTROL DURING GRADING AND CONSTRUCTION TO ENSURE COMPLIANCE WITH THE PLANS, SPECIFICATIONS, AND CODE REQUIREMENTS WITHIN THEIR PURVIEW. THE ENGINEERS SHALL SUBMIT "ACKNOWLEDGMENT CONCERNING EMPLOYMENT" FORM TO THE CITY PRIOR TO THE ISSUANCE OF A GRADING PERMIT.
15. REVISIONS TO THE PLANS ARE TO BE SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR REVIEW AND APPROVAL PRIOR TO CHANGING ORIGINAL MYLARS.
16. THE CIVIL ENGINEER SHALL SUBMIT WRITTEN CERTIFICATION OF COMPLETION OF ROUGH GRADING IN ACCORDANCE WITH THE APPROVED GRADING PLAN AND CERTIFICATION OF BUILDING PAD ELEVATION PRIOR TO ISSUANCE OF THE BUILDING PERMIT. PAD ELEVATION GRADING TOLERANCE SHALL NOT EXCEED ±0.10'.
17. AN "AS–BUILT" GRADING PLAN SHALL BE SUBMITTED AT THE COMPLETION OF WORK SHOWING ALL WATER QUALITY MANAGEMENT PLAN FACILITIES.
18. GRADING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE GEOTECHNICAL ENGINEER WHO SHALL CERTIFY THAT ALL FILL HAS BEEN PROPERLY PLACED AND SUBMIT A FINAL COMPACTION REPORT FOR ALL FILLS OVER 1' DEEP.
19. THE GEOTECHNICAL ENGINEER SHALL, AFTER CLEARING AND PRIOR TO THE PLACEMENT OF FILL IN CANYONS, INSPECT EACH CANYON FOR AREAS OF ADVERSE STABILITY AND TO DETERMINE THE PRESENCE OR ABSENCE OF SUBSURFACE WATER OR SPRING FLOW. IF NEEDED, DRAINS WILL BE DESIGNED AND CONSTRUCTED PRIOR TO THE PLACEMENT OF FILL IN EACH RESPECTIVE CANYON.
20. FILL AREAS SHALL BE CLEANED OF ALL VEGETATION AND DEBRIS, SCARIFIED TO A MINIMUM DEPTH OF 12 INCHES AND INSPECTED BY THE GEOTECHNICAL ENGINEER PRIOR TO THE PLACING OF FILL.
21. ALL DELETERIOUS MATERIALS, I.E., LUMBER, LOGS, BRUSH, OR ANY OTHER ORGANIC MATERIALS OR RUBBISH SHALL BE REMOVED FROM ALL AREAS TO RECEIVE COMPACTED FILL.
22. UNSUITABLE MATERIALS, SUCH AS TOPSOIL, WEATHERED BEDROCK, ETC., SHALL BE REMOVED AS REQUIRED BY GEOTECHNICAL ENGINEER (AND ENGINEERING GEOLOGIST, WHERE EMPLOYED) FROM ALL AREAS TO RECEIVE COMPACTED FILL OR DRAINAGE STRUCTURES.
23. FILLS SHALL BE BENCHED INTO COMPETENT MATERIAL.
24. WHEN CUT PADS ARE BROUGHT TO NEAR GRADE, THE GEOTECHNICAL ENGINEER SHALL DETERMINE IF THE BEDROCK IS EXTENSIVELY FRACTURED OR FAULTED AND WILL READILY TRANSMIT WATER. IF CONSIDERED NECESSARY BY THE GEOTECHNICAL ENGINEER, A COMPACTED FILL BLANKET WILL BE PLACED.
25. WHERE SUPPORT OR BUTTRESSING OF CUT AND NATURAL SLOPES IS DETERMINED TO BE NECESSARY BY THE GEOTECHNICAL ENGINEER, THE GEOTECHNICAL ENGINEER SHALL SUBMIT DESIGN, LOCATIONS AND CALCULATIONS TO THE PUBLIC WORKS DIRECTOR PRIOR TO CONSTRUCTION. THE GEOTECHNICAL ENGINEER WILL INSPECT AND CONTROL THE CONSTRUCTION OF THE BUTTRESSING AND CERTIFY TO THE STABILITY OF THE SLOPE AND ADJACENT STRUCTURES UPON COMPLETION.
26. ALL CUT SLOPES SHALL BE INVESTIGATED, BOTH DURING AND AFTER GRADING BY THE GEOTECHNICAL ENGINEER, TO DETERMINE IF ANY SLOPE HAS STABILITY PROBLEMS. SHOULD EXCAVATION DISCLOSE ANY GEOLOGICAL HAZARDS, THE GEOTECHNICAL ENGINEER SHALL RECOMMEND NECESSARY TREATMENT TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL. ALL APPROVALS TO BE GRANTED ON THE BASIS OF DETAILED GEOLOGICAL MAPPING AND WRITTEN RECOMMENDATION FROM THE GEOTECHNICAL ENGINEER.
27. MAXIMUM ALLOWABLE CUT AND FILL SLOPES ARE 2 TO 1 OR 30' IN HEIGHT WITHOUT APPROVAL OF THE PUBLIC WORKS DIRECTOR. IF PROPOSED CUT AND FILL SLOPES ARE STEEPER THAN 2:1 OR OVER 30' IN HEIGHT, STABILITY CALCULATIONS WITH A SAFETY FACTOR OF AT LEAST ONE AND FIVE TENTHS (1.5) SHALL BE SUBMITTED BY A GEOTECHNICAL ENGINEER FOR APPROVAL FROM THE PUBLIC WORKS DIRECTOR.
28. PROVIDE 4' WIDE BY 1' HIGH BERM OR EQUIVALENT ALONG THE TOP OF ALL FILL SLOPES OVER 5' HIGH, EXCEPT WHERE SHOWN OTHERWISE ON THE PLANS.
29. ALL SLOPES ADJACENT TO PUBLIC RIGHT–OF–WAY SHALL CONFORM TO SECTION 15.36.220 OF THE CORONA MUNICIPAL CODE.
30. ALL SLOPES 4' OR HIGHER SHALL BE PLANTED AND COMPLY WITH REQUIREMENTS OF CHAPTER 17 OF THE CORONA MUNICIPAL CODE.
31. TERRACE DRAINS, INTERCEPTOR DRAINS AND DOWN DRAINS SHALL BE CONSTRUCTED OF 4" P.C.C. (OR GUNITE) REINFORCED WITH 6"x6" –2 1.4x1.4 W.W.M. REBAR SHALL BE GRADE 60 BILLET STEEL CONFORMING TO ASTM A615.
32. ALL CONCRETE STRUCTURES THAT COME IN CONTACT WITH THE ON–SITE SOILS SHALL BE CONSTRUCTED WITH TYPE II OR V CEMENT AS DEEMED NECESSARY BY SOLUBLE SULFATE CONTENT TEST CONDUCTED BY THE GEOTECHNICAL ENGINEER. ALL CONCRETE SHALL BE CITY STANDARD 560–C–3250 (600–E 3250 FOR GUNITE) PER CITY STANDARD SPECIFICATIONS.
33. GROUND SHALL BE PRE–WETTED PRIOR TO THE PLACEMENT OF CONCRETE. MOISTURE LOSS RETARDANT SHALL BE USED WHEN REQUIRED BY THE GEOTECHNICAL ENGINEER OR PUBLIC WORKS DIRECTOR.
34. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND/OR OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL.

POST CONSTRUCTION BMP GENERAL NOTES:

1. THIS PLAN UTILIZES STRUCTURAL BEST MANAGEMENT PRACTICES (BMPS) FOR POST CONSTRUCTION STORM WATER TREATMENT.
2. CONSTRUCT THE STORM WATER TREATMENT FACILITIES AFTER ALL CONTRIBUTING DRAINAGE AREAS ARE STABILIZED AND TO THE SATISFACTION OF THE ENGINEER OF RECORD.
3. DO NOT USE THE DEVICES AS TEMPORARY SEDIMENT CONTROL FACILITIES DURING CONSTRUCTION.
4. THE FOLLOWING BMPS HAVE BEEN DESIGNED INTO THE PLANS. PLEASE REFER TO THE PROJECT'S APPROVED WATER QUALITY MANAGEMENT PLAN (WQMP) FOR ADDITIONAL BMP's AND OPERATION AND MAINTENANCE DETAILS:

   A. BIORETENTION FACILITY AND OR ON–SITE RETENTION

NOTE:

1. A SEWER BACKFLOW PREVENTOR IS NOT REQUIRED FOR THIS PROJECT
2. WATER PRESSURE REDUCING VALVES ARE REQUIRED FOR THIS PROJECT

NOTICE TO CONTRACTORS

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES, CONDUITS, OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF AVAILABLE RECORDS. TO THE BEST OF OUR KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT THOSE SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN ON THESE DRAWINGS. THE CONTRACTOR FURTHER ASSUMES ALL LIABILITY AND RESPONSIBILITY FOR THE UTILITY PIPES, CONDUITS OR STRUCTURES, SHOWN OR NOT SHOWN ON THESE PLANS

CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOBSITE CONDITIONS DURING THE COURSE OF CONSTRUCTION ON THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS OR PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE CITY, THE OWNER, AND THE ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT.

THE CONTRACTOR SHALL CALL IN A LOCATION REQUEST TO UNDERGROUND SERVICE ALERT (USA) PH. 811, TWO (2) WORKING DAYS PRIOR TO DIGGING. NO CONSTRUCTION PERMIT ISSUED BY THE PUBLIC WORKS DEPARTMENT SHALL BE VALID INVOLVING UNDERGROUND FACILITIES UNLESS THE APPLICANT HAS AN INQUIRY IDENTIFICATION NUMBER ISSUED BY U.S.A.

CARE SHOULD BE TAKEN TO PREVENT GRADED DITCHES AND SWALES FROM UNDERMINING STREET IMPROVEMENTS. UPON INSPECTION OF THE SITES, THE PUBLIC WORKS DIRECTOR MAY REQUIRE TEMPORARY GUNITE SWALES, ENTERING OR LEAVING IMPROVEMENTS.

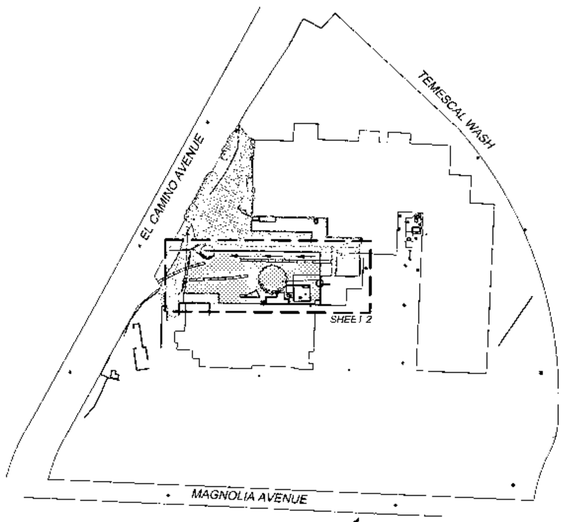
DECLARATION OF ENGINEER OF RECORD

I HEREBY DECLARE THAT THE DESIGN OF THE IMPROVEMENTS SHOWN ON THESE PLANS COMPLIES WITH ALL PROFESSIONAL ENGINEERING STANDARDS AND PRACTICES. AS THE ENGINEER OF RECORD FOR THE PLANS, I ASSUME FULL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. WITH RESPECT TO THE PLAN CHECK PERFORMED BY THE CITY OF CORONA, I UNDERSTAND AND ACKNOWLEDGE THE FOLLOWING: (1) THE PLAN CHECK IS A REVIEW FOR THE LIMITED PURPOSE OF ENSURING THE PLANS COMPLY WITH THE CITY'S STANDARDS, PROCEDURES, POLICIES, AND ORDINANCES, (2) THE PLAN CHECK IS NOT A DETERMINATION OF THE TECHNICAL ADEQUACY OF THE DESIGN OF THE IMPROVEMENTS, AND (3) THE PLAN CHECK DOES NOT RELIEVE ME OF MY LEGAL AND PROFESSIONAL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. AS THE ENGINEER OF RECORD, I AGREE TO DEFEND, INDEMNIFY, AND HOLD HARMLESS THE CITY, ITS ELECTED OFFICIALS, EMPLOYEES, AND AGENTS FROM ANY AND ALL ACTUAL OR ALLEGED CLAIMS, DEMANDS, CAUSES OF ACTION, LIABILITY, LOSS, DAMAGE, OR INJURY TO PROPERTY OR PERSONS, INCLUDING WRONGFUL DEATH, WHETHER IMPOSED BY A COURT OF LAW OR BY ADMINISTRATIVE ACTION OF ANY FEDERAL, STATE, OR LOCAL GOVERNMENTAL AGENCY, ARISING OUT OF OR INCIDENT TO ANY NEGLIGENT ACTS, OMISSIONS, OR ERRORS BY THE ENGINEER OF RECORD, ITS EMPLOYEES, CONSULTANTS, OR AGENTS.

WILLIAM D. BROOKS, RCE 53114 — EXPIRES 6/30/21 — 3/8/2021 DATE

ENGINEER OF RECORD

GEOTECHNICAL ENGINEER'S STATEMENT



THIS PLAN HAS BEEN REVIEWED BY GEOTECHNICAL PROFESSIONALS INC. AND APPEARS TO BE IN GENERAL CONFORMANCE WITH RECOMMENDATIONS IN OUR REPORT DATED SEPTEMBER 10, 2019–PROJECT NO. 2945.1. THIS PLAN HAS BEEN REVIEWED FOR GEOTECHNICAL ASPECTS ONLY. WE MAKE NO REPRESENTATION REGARDING ACCURACY OF DIMENSIONS, QUANTITIES, MEASUREMENTS, CALCULATIONS, OR ANY PORTION OF THE DESIGN. GEOTECHNICAL CONDITIONS AND RECOMMENDATIONS SHOULD BE CONFIRMED BY THE GEOTECHNICAL CONSULTANT IN THE FIELD AT TIME OF CONSTRUCTION.

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF CORONA, IN THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THAT PORTION OF THE NORTHWEST QUARTER OF SECTION 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, AS SHOWN BY SECTIONALIZED SURVEY OF THE RANCHO EL SOBRANTE DE SAN JACINTO AND OF LOT 13 IN BLOCK 63 OF THE LANDS OF THE RIVERSIDE LAND AND IRRIGATING COMPANY, AS SHOWN BY MAP ON FILE IN BOOK 1 PAGE 70 OF MAPS, SAN BERNARDINO COUNTY RECORDS, BOUNDED AS FOLLOWS: ON THE SOUTHEAST BY THE SOUTHWESTERLY EXTENSION OF THE NORTHWEST LINE OF MAGNOLIA AVENUE, AS SHOWN ON RECORD OF SURVEY ENTITLED "RECORD OF SURVEY OF A PORTION OF LOTS 11, 12, 13, 14, 15, IN BLOCK 63 OF RIVERSIDE LAND AND IRRIGATING COMPANY AND A PORTION OF SECTIONS 29 AND 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, SAN BERNARDINO BASE AND MERIDIAN" ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS, ON THE WEST BY THE EASTERLY LINE OF THE PROPERTY SPUR OF THE ATCHINSON, TOPEKA, AND SANTA FE RAILWAY COMPANY; AND ON THE NORTHEAST BY THE SOUTHERLY AND SOUTHWESTERLY LINE OF PARCELS 5 TO 11, INCLUSIVE, OF SAID RECORD OF SURVEY ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS.

EXCEPTING THEREFROM THAT PORTION GRANTED TO THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER DISTRICT CONSERVATION DISTRICT BY DEED RECORDED OCTOBER 22, 1984 AS INSTRUMENT NO. 84–227387 AND RE–RECORDED FEBRUARY 11, 1985 AS INSTRUMENT NO. 85–028214 BOTH OF OFFICIAL RECORDS.

EARTHWORK QUANTITIES

NOTE: THE CONSTRUCTION QUANTITIES SHOWN ON THESE PLANS ARE FOR CITY FEE PURPOSES ONLY.
IT IS THE CONTRACTOR'S RESPONSIBILITY TO PERFORM INDIVIDUAL TAKEOFFS FOR BIDDING PURPOSES.

(PRELIMINARY QUANTITIES DO NOT INCLUDE SHRINKAGE FACTOR AND OVEREXCAVATION OVER THE SITE)

RAW CUT	582 CU. YDS.
RAW FILL	0 CU. YDS.
NET EXPORT	–582 CU. YDS.

SITE AREA

TOTAL AREA – 16.9 ACRES
DISTURBED AREA – 0.7 ACRES

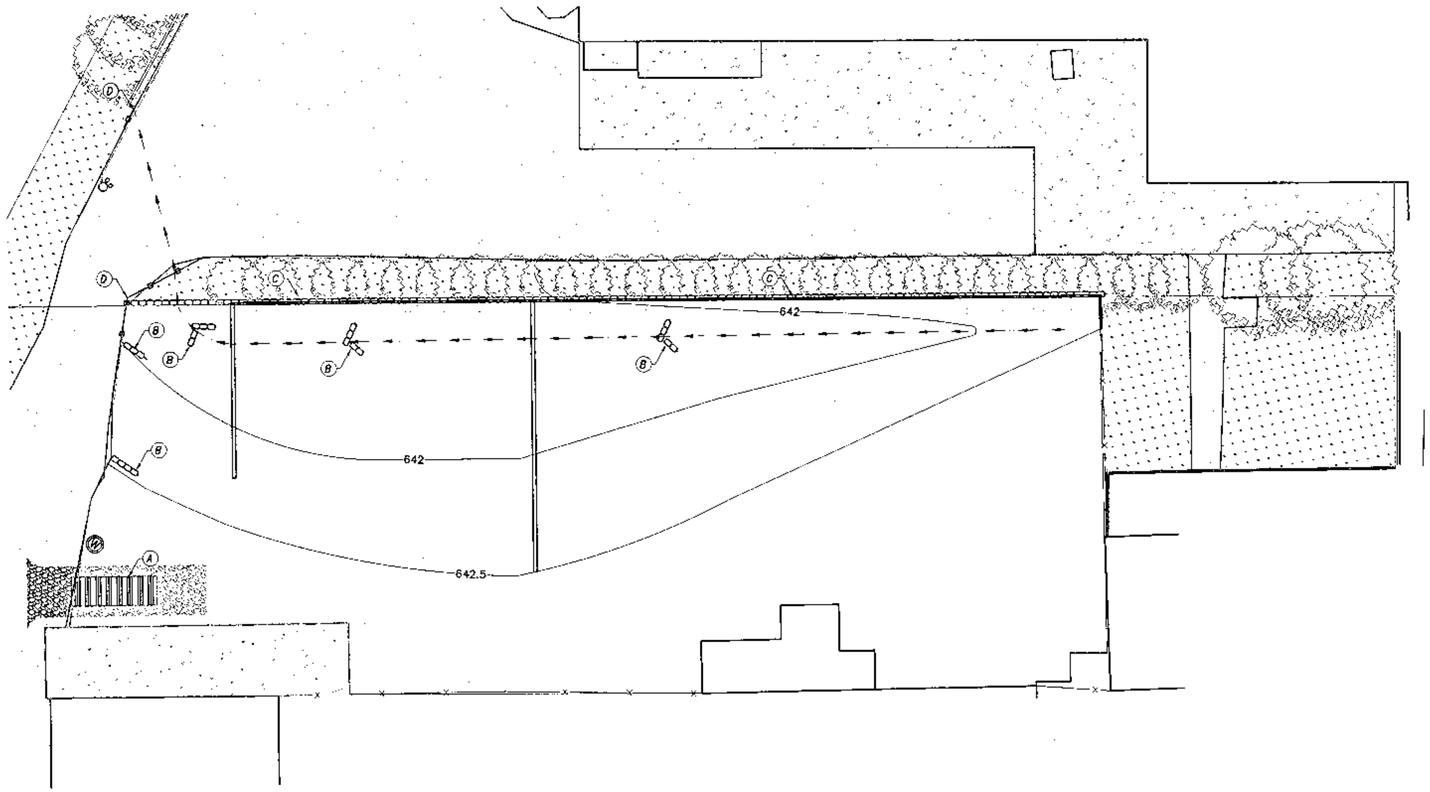
GRADING PLANS



Drawing No. 20-026P
Sh 3 of 4

24" x 36"

EROSION CONTROL GENERAL NOTES:

1. EROSION CONTROL IS REQUIRED FOR GRADING OPERATIONS ON A YEAR ROUND BASIS. APPROVED PLANS ARE REQUIRED FOR ALL WORK REQUIRING A GRADING PERMIT.
2. IN CASE OF EMERGENCY CALL TIFFANY SMITH OF CLOW VALVE MANUFACTURING AT 317-364-0898.
3. THE ENGINEER OF RECORD WILL SUPERVISE EROSION CONTROL WORK AND INSURE THAT WORK IS IN ACCORDANCE WITH APPROVED PLANS.
4. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL
5. THE PUBLIC WORKS DIRECTOR RESERVES THE RIGHT TO MAKE CHANGES OR MODIFICATIONS TO THIS PLAN AS DEEMED NECESSARY.
6. STANDBY CREW FOR EMERGENCY WORK SHALL BE MADE AVAILABLE AT ALL TIMES. NECESSARY MATERIALS SHALL BE AVAILABLE ON SITE AND STOCKPILED AT CONVENIENT LOCATIONS TO FACILITATE RAPID CONSTRUCTION OF TEMPORARY EROSION AND SEDIMENT CONTROL BEST MANAGEMENT PRACTICES (BMPS) OR TO REPAIR ANY DAMAGED BMP's WHEN RAIN IS IMMINENT.
7. AN EFFECTIVE COMBINATION OF EROSION AND SEDIMENT CONTROL BMPS SHALL BE IMPLEMENTED AND MAINTAINED TO PREVENT AND/OR MINIMIZE THE TRANSPORT OF SOIL IN RUNOFF FROM DISTURBED SOIL AREAS ON THE CONSTRUCTION SITE AT ALL TIMES. IN ADDITION, BMPS SHALL BE INSPECTED PRIOR TO PREDICTED STORM EVENTS AND FOLLOWING STORM EVENTS. BMPS SHALL NOT BE MOVED OR MODIFIED WITHOUT THE APPROVAL OF THE CITY INSPECTOR.
8. ALL REMOVABLE PROTECTIVE DEVICES SHOWN SHALL BE IN PLACE AT THE END OF EACH WORKING DAY WHEN THE FIVE-DAY RAIN PROBABILITY FORECAST EXCEEDS 40 PERCENT, AS FORECASTED BY THE NATIONAL WEATHER SERVICE.
9. AFTER A RAIN EVENT EXCEEDING ONE-QUARTER INCH IN ANY 12 HOUR PERIOD, OR UPON DIRECTION OF THE PUBLIC WORKS DIRECTOR, ALL SILT AND DEBRIS SHALL BE REMOVED FROM CHECK DAMS, SILT FENCES, AND DESILTING BASINS; AND THE BASINS SHALL BE PUMPED DRY AND RESTORED TO ORIGINAL DESIGN CONDITION. ANY EROSION CONTROL MEASURES DAMAGED DURING A RAIN EVENT SHALL ALSO BE IMMEDIATELY REPAIRED.
10. DESILTING BASINS ARE TO BE CONSTRUCTED AS GRADING OF INDIVIDUAL GRADING AREAS ARE COMPLETE PER ROUGH GRADING PLANS.
11. THE CONTRACTOR SHALL BE RESPONSIBLE AND SHALL TAKE NECESSARY PRECAUTIONS TO PREVENT PUBLIC TRESPASS ONTO AREAS WHERE IMPOUNDED WATER CREATES A HAZARDOUS CONDITION.
12. AREAS SHALL BE MAINTAINED IN SUCH A STATE THAT FIRE ACCESS SHALL BE MAINTAINED AT ALL TIMES (INCLUDING ACCESS TO NEIGHBORING PROPERTIES).
13. GRADED AREAS AROUND THE SITE PERIMETER MUST DRAIN AWAY FROM THE FACE OF SLOPE AT THE CONCLUSION OF EACH WORKING DAY.
14. TEMPORARY EROSION PROTECTION IS REQUIRED FOR MANUFACTURED SLOPES PRIOR TO PERMANENT PLANTING.
15. ALL DISTURBED SLOPES SHALL BE PLANTED AND PROTECTED WITHIN 45 DAYS OF THE COMPLETION OF EACH STAGE OF GRADING. SUITABLE MEASURES TO PREVENT SLOPE EROSION INCLUDING, BUT NOT LIMITED TO, RAPID GROWTH VEGETATION SUFFICIENT TO STABILIZE THE SOIL, SHALL BE INSTALLED ON ALL DISTURBED AREAS UNTIL SUCH TIME AS THE PERMANENT VEGETATIVE COVER SUFFICIENTLY MATURES TO PROVIDE PERMANENT STABILITY.
16. NO OBSTRUCTION OR DISTURBANCE OF NATURAL DRAINAGE COURSES OR EXISTING STORM DRAIN INLETS SHALL OCCUR DURING GRADING OPERATIONS, UNLESS ADEQUATE TEMPORARY/PERMANENT DRAINAGE FACILITIES HAVE BEEN APPROVED AND INSTALLED TO CARRY SURFACE WATER TO THE NEAREST PRACTICAL STREET, STORM DRAIN OR NATURAL WATER COURSE. ALL EXISTING DRAINAGE COURSES ON THE PROJECT SITE MUST BE MAINTAINED IN A STATE TO ALLOW FOR CONTINUOUS FUNCTION.
17. THE CONTRACTOR SHALL CONDUCT HIS OPERATIONS IN SUCH A MANNER THAT STORM RUNOFF WILL BE CONTAINED WITHIN THE PROJECT OR CHANNELED INTO THE STORM DRAIN SYSTEM WHICH SERVES THE RUNOFF AREA. STORM RUNOFF FROM ONE AREA SHALL NOT BE ALLOWED TO DIVERT TO ANOTHER RUNOFF AREA.
18. CONFORMANCE WITH THE REQUIREMENTS OF THESE PLANS SHALL IN NO WAY RELIEVE THE CONTRACTOR FROM HIS RESPONSIBILITIES TO THIS SITE AND ADJACENT PROPERTIES. DURING GRADING OPERATIONS, TEMPORARY DRAINAGE CONTROL SHALL BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES. TEMPORARY DRAINAGE CONTROL SHALL CONSIST OF, BUT NOT BE LIMITED TO, CONSTRUCTING SUCH FACILITIES AND TAKING SUCH MEASURES AS ARE NECESSARY TO PREVENT, CONTROL AND ABATE WATER, MUD AND EROSION DAMAGE TO PUBLIC AND PRIVATE PROPERTY AS A RESULT OF THE CONSTRUCTION OF THIS PROJECT.
19. FILL AREAS WHILE BEING BROUGHT UP TO GRADE AND DURING PERIODS OF COMPLETION PRIOR TO FINAL GRADE, SHALL BE PROTECTED BY VARIOUS MEASURES TO ELIMINATE EROSION AND THE SILTATION OF DOWNSTREAM FACILITIES AND ADJACENT AREAS. THESE MEASURES MAY INCLUDE, BUT SHALL NOT BE LIMITED TO: TEMPORARY DOWN DRAINS, EITHER IN THE FORM OF PIPES OR PAVED DITCHES TO DESILT RUNOFF; PROTECTION SUCH AS SAND BAGS AROUND INLETS WHICH HAVE NOT BEEN BROUGHT UP TO GRADE; AND EARTH BERMS AND APPROPRIATE GRADING TO DIRECT DRAINAGE AWAY FROM THE EDGE OF THE TOP OF SLOPES SHALL BE CONSTRUCTED AND MAINTAINED ON THOSE FILL AREAS WHERE EARTHWORK OPERATIONS ARE NOT IN PROGRESS.
20. CLEARING AND GRUBBING SHOULD BE LIMITED TO AREAS THAT WILL RECEIVE IMMEDIATE GRADING. EROSION CONTROL MEASURES WILL BE REQUIRED TO PROTECT AREAS WHICH HAVE BEEN CLEARED AND GRUBBED PRIOR TO GRADING OPERATION, AND WHICH ARE SUBJECT TO RUNOFF DURING A RAIN EVENT. THESE MEASURES MAY INCLUDE BUT SHALL NOT BE LIMITED TO: GRADED DITCHES; BRUSH BARRIERS AND SILT FENCES. CARE SHALL BE EXERCISED TO PRESERVE VEGETATION BEYOND LIMITS OF GRADING.
21. CONSTRUCTION SITES SHALL BE MANAGED TO MINIMIZE THE EXPOSURE TIME OF DISTURBED SOIL AREAS THROUGH PHASING AND SCHEDULING OF GRADING TO THE EXTENT FEASIBLE AND THE USE OF TEMPORARY AND PERMANENT SOIL STABILIZATION.
22. STOCKPILES OF SOIL SHALL BE PROPERLY CONTAINED TO ELIMINATE OR REDUCE SEDIMENT TRANSPORT FROM THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJACENT PROPERTIES VIA RUNOFF, VEHICLE TRACKING, OR WIND.
23. CONSTRUCTION SITES SHALL BE MAINTAINED IN SUCH A CONDITION THAT WIND OR RUNOFF DOES NOT CARRY WASTES OR POLLUTANTS OFF THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJORNING PROPERTIES.
24. DISCHARGES OTHER THAN STORM WATER (NON-STORM WATER DISCHARGES) ARE PROHIBITED, EXCEPT AS AUTHORIZED BY AN INDIVIDUAL NPDES PERMIT, THE STATEWIDE GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY, OR OTHER APPLICABLE GENERAL NPDES PERMIT. POTENTIAL POLLUTANTS INCLUDE BUT ARE NOT LIMITED TO: SOLID OR LIQUID CHEMICAL SPILLS; WASTES FROM PAINTS, STAINS, SEALANTS, SOLVENTS, DETERGENTS, GLUES, LIME, PESTICIDES, HERBICIDES, FERTILIZERS, WOOD PRESERVATIVES, AND ASBESTOS FIBERS, PAINT FLAKES OR STUCCO FRAGMENTS; FUELS, OILS, LUBRICANTS, AND HYDRAULIC, RADIATOR OR BATTERY FLUIDS; CONCRETE AND RELATED CUTTING OR CURING RESIDUES; FLOATABLE WASTES; WASTES FROM STREET CLEANING; SUPER-CHLORINATED POTABLE WATER FROM LINE FLUSHING AND TESTING, AND RUNOFF FROM EQUIPMENT AND VEHICLE WASHING. DURING CONSTRUCTION, DISPOSAL OF SUCH MATERIALS SHOULD OCCUR IN A SPECIFIED AND CONTROLLED TEMPORARY AREA ONSITE PHYSICALLY SEPARATED FROM POTENTIAL STORM WATER RUNOFF, WITH ULTIMATE DISPOSAL IN ACCORDANCE WITH LOCAL, STATE AND FEDERAL REQUIREMENTS.
25. AT THE END OF EACH DAY OF CONSTRUCTION ACTIVITY ALL CONSTRUCTION DEBRIS AND WASTE MATERIALS SHALL BE COLLECTED AND PROPERLY DISPOSED IN TRASH OR RECYCLE BINS
26. PAVED STREETS, SIDEWALKS AND OTHER IMPROVEMENTS SHALL BE MAINTAINED IN A NEAT CLEAN CONDITION, FREE OF LOSE SOIL, CONSTRUCTION DEBRIS AND TRASH. STREET SWEEPING OR OTHER EQUALLY EFFECTIVE MEANS SHALL BE USED ON A REGULAR BASIS TO CONTROL SILT THAT HAS BEEN DEPOSITED ON STREETS OR SIDEWALKS. WATERING SHALL NOT USED TO CLEAN STREETS.
27. DISCHARGING CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING GROUNDWATER THAT HAS INFILTRATED INTO THE CONSTRUCTION SITE IS PROHIBITED. DISCHARGING OF CONTAMINATED SOILS VIA SURFACE EROSION IS ALSO PROHIBITED. DISCHARGING NON-CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING ACTIVITIES MAY REQUIRE A NPDES PERMIT FROM THE SANTA ANA REGIONAL BOARD.
28. ALL CONSTRUCTION CONTRACTOR AND SUBCONTRACTOR PERSONNEL ARE TO BE MADE AWARE OF THE REQUIRED BEST MANAGEMENT PRACTICES AND GOOD HOUSEKEEPING MEASURES FOR THE PROJECT SITE AND ANY ASSOCIATED CONSTRUCTION STAGING AREAS.

Re: Amendment 1 to TSCA PCB Cleanup Plan for Clow Valve Company, 1375 Magnolia Avenue, Corona, California–CATSCA102301

Dear Mark Willett and Britton Winterer:

Thank you for working with the U.S. Environmental Protection Agency, Region 9 ("USEPA") to address the disposal of polychlorinated biphenyls ("PCBs") found at Clow Valve Company ("Clow") located at 1375 Magnolia Avenue in Corona, California (the "Site"). USEPA has reviewed the *Risk-Based Approval Modification Application 40 CFR 761.61 (c)(1)* ("Amendment 1") dated April 25, 2022 prepared by WSP USA ("WSP") on behalf of Clow and the current owner of the property, B9 Magnolia Owner, LLC ("B9 Magnolia").

The original *Risk-Based Approval Application* (the "Application") dated April 9, 2019 approved leaving soils containing PCBs in place, in some cases under existing concrete caps. A land use covenant for the Site was recorded in November 2021, and there is a soil management plan and operation and maintenance plan addressing maintenance of the caps.

During implementation of the Application workplan, additional PCB-impacted soil was discovered. Amendment 1 proposes to excavate soil from two areas with elevated PCB levels surrounding sample locations AOC7-B1 and S-60, and to cap all remaining locations with total PCB levels above the approved cleanup level of 15 ppm.

Sample locations AOC7-B1 (within the cap area) and S-60 (outside the cap area) have total PCB levels of approximately 2,200 ppm and 37 ppm respectively. Material from these areas will be removed prior to implementation of grading activities, and confirmation sampling will ensure that the cleanup level of 15 ppm has been reached. Excavations will be backfilled in accordance with the 2001 *DTSC Information Advisory Clean Imported Fill Material Fact Sheet*.

The Site is being redeveloped into a warehouse and distribution center following remediation. The cap will consist of a mix of 6-inch concrete, building footprint, and 10-inch compacted soil. The maximum PCB level to be left in place under the cap is 290 ppm. The maximum level to be left uncapped is approximately 3 ppm.

Redevelopment of the Site will require Site-wide grading. Soil from within the capped area will not be moved outside the capped area. This will ensure that soil from the capped area, which has relatively high levels of PCBs, does not contaminate the rest of the Site. Additionally, any soil that is excavated from the capped area and disposed off-site will be disposed as if it has at or above 50 ppm PCBs.

USEPA is approving Amendment 1 with conditions pursuant to 40 C.F.R. § 761.61(c) (i.e., risk-based disposal standards of TSCA). USEPA finds that the methods described in Amendment 1, as modified by the conditions in this approval, will not pose an unreasonable risk of injury to health or the environment. Clow and B9 Magnolia shall implement Amendment 1 as modified by the conditions listed below.

USEPA Conditions of Approval and Additional Comments:

1. **Off-Site Applications:** Initial sample results indicate PCB contamination from the Site has spread to an adjacent property to the east owned by Riverside County. Sample results from near the western fence line of the Site indicate contamination may have spread to a property owned by BSNF Railroad. Clow and B9 Magnolia shall submit an application(s) for the Riverside County and BSNF Railroad properties within one (1) year of the date of this letter, unless USEPA agrees in writing that characterization sampling data for these area(s) indicate an application(s) is not needed under TSCA. Any characterization sampling shall be completed within nine (9) months of the date of this letter.

2. **Soil Management Plan and O&M Plan Amendment:** The existing soil management plan ("SMP") and operation and maintenance plan ("O&M plan") shall be amended to include updated figure(s) showing the known PCB levels left in place and the TSCA cap area(s), address maintenance of concrete and soil caps, and to specify that any soil removed from the footprint of the cap must be disposed as if it has at or above 50 ppm PCBs. The amended SMP and O&M plan shall also state that any changes to land use or modification or removal of the TSCA cap requires notification by the owner and/or occupant to, and additional approval from, USEPA. Updated versions of these documents shall be submitted for USEPA approval within 30 days of submittal of the cleanup completion report.

3. **Land Use Control Amendment:** The applicant shall revise the existing Land Use Covenant ("LUC") with the California Department of Toxic Substances Control ("DTSC") and submit a draft to USEPA for review and approval no later than 90 days after submittal of the cleanup completion report. The revised LUC shall reference Amendment 1, include updated figure(s) showing the known PCB levels left in place and the TSCA cap area(s), require that any soil removed from the footprint of the TSCA cap be disposed as PCB remediation waste disposed as if it has at or above 50 ppm PCBs, and require that any changes to land use or modification or removal of the TSCA cap requires notification by the owner and/or occupant to, and additional approval from, USEPA. The revised LUC shall also document the following: (1) the PCB levels left in place following the work approved in Amendment 1, (2) the updated TSCA cap area, and (3) cap maintenance and soil removal activities that must be performed as required by this approval and as specified in the revised and USEPA-approved soil management plan and O&M plan. The applicant shall record the USEPA-approved revised LUC in accordance with California state law.

4. **Stockpiling of Soil:** Clow and B9 Magnolia shall comply with the provisions of 40 C.F.R. § 761.65(c)(9) if stockpiling soils for off-Site disposal.

5. **Disposal of PCBs:** Clow and B9 Magnolia shall dispose of all PCB waste that it generates during the PCB cleanup in accordance with the TSCA PCB regulations and other applicable federal, state, and local regulations. In determining the disposal method for the waste, Clow and B9 Magnolia must comply with the anti-dilution requirements in 40 C.F.R. § 761.1(b). All bulk PCB remediation waste (i.e., soil) must be

disposed of in accordance with the requirements in 40 C.F.R. § 761.61(a)(5). Clow and B9 Magnolia must select appropriate disposal facilities based on the in-situ PCB concentrations of the waste.

6. **PCB Cleanup Waste Disposal:** Cleanup waste (e.g., personal protective equipment, rags, gloves, booties) shall be disposed of in accordance with 40 C.F.R. § 761.61(a)(5)(v). Disposal of all waste shall be in accordance with all federal, state, and local regulations.

7. **Equipment Decontamination:** Clow and B9 Magnolia shall decontaminate non-disposable sampling tools and equipment, as well as movable equipment used during cleanup and/or additional sampling in accordance with 40 C.F.R. § 761.79(c)(2). Decontamination residues must be disposed of at their original concentrations in accordance with the requirements in 40 C.F.R. § 761.79(g). Recordkeeping of the decontamination events must be maintained in accordance with the requirements in 40 C.F.R. § 761.79(f)(2). These procedures must be implemented in a manner that is protective of human health and the environment consistent with the requirements in 40 C.F.R. § 761.79(e).

8. **PCB Cleanup Report:** Clow and B9 Magnolia shall submit a PCB cleanup report to USEPA, to include all relevant data and justification demonstrating that the work completed is consistent with this approval. Clow and B9 Magnolia must address at a minimum all the reporting requirements set forth at 40 C.F.R. § 761.61(a)(9) and 40 C.F.R. § 761.125(c)(5). Clow and B9 Magnolia shall also include figures, surveys, or GPS coordinates depicting the location and results for all site characterization samples and verification samples.

9. **Procedures to Submit Reports, Documentation, and Correspondence to USEPA:** The cleanup party (i.e., Clow and B9 Magnolia) should follow the below procedures to submit reports and documentation required in this approval to USEPA and to send correspondence to USEPA related to this approval.
    a. The title of the report or the subject line on documentation and correspondence (inclusive of emails) shall include the PCB cleanup site identification number ("PCB SITE ID") assigned by USEPA and the PCB site name ("PCB Site"). Specific to USEPA's approval of the cleanup party's initial application: the PCB SITE ID is CATSCA102301, the PCB Site is CLOW VALVE, and the USEPA project manager is Sara Ziff (ziff.sara@epa.gov).
    b. If no claim of confidentiality accompanies the submitted information, then such information may be made available to the public by USEPA without further notice to you [15 U.S.C. 2613; 82 FR 6522 (January 19, 2017); 40 C.F.R. § 2.203(a)].
    c. The cleanup party must contact USEPA about submission procedures, if the cleanup party intends to submit information to USEPA with an assertion of business confidentiality.
    d. Except as otherwise specified in these instructions, all documentation (e.g., reports), correspondence, and other written communications shall be submitted to USEPA electronically via email to the USEPA project manager (ziff.sara@epa.gov) with a courtesy electronic copy via email to R9LandSubmit@EPA.gov. Please include the PCB SITE ID (i.e., CATSCA102301) and PCB Site name (i.e., CLOW VALVE) in the email's subject line.

10. **Future Proposed Modifications to Cleanup Plan:** Clow and B9 Magnolia shall request any changes to the approved cleanup plan via email to USEPA, and USEPA will provide any response to the request via email.

This approval does not relieve Clow and B9 Magnolia from complying with all applicable TSCA requirements and federal, state, and local law, regulations and permits. Departure from the conditions of the approval without prior written permission from USEPA may result in revocation of this approval, and/or commencement of an enforcement action. Nothing in this approval bars USEPA from imposing penalties for violations of this approval or for violations of other applicable TSCA PCB requirements or for activities not covered under this approval.

This approval only applies to the Site. USEPA reserves the right to require additional characterization and/or cleanup of PCBs at the Site based on new information acquired during additional site characterization, cleanup verification, and/or during future post-cleanup activities (e.g. redevelopment or post-redevelopment) at the Site. In addition, USEPA may require cleanup of areas immediately adjacent to the Site if those areas are found to be impacted by PCBs from the Site. If additional information demonstrates that USEPA cannot sustain the no unreasonable risk determination, USEPA will modify or revoke this approval. In case of conflict between the Application and applicable requirements in 40 C.F.R. Part 761, the applicable requirements in 40 C.F.R. Part 761 take precedent.

USEPA appreciates the opportunity to assist Clow and B9 Magnolia with this PCB cleanup. If you have any questions regarding this approval, please contact Sara Ziff at (415) 972-3536. Thank you for your cooperation.

Sincerely,

Jeff Scott, Director
Land, Chemicals and Redevelopment Division

1 EXECUTIVE SUMMARY, INTRODUCTION, AND CERTIFICATION

WSP USA (WSP), formerly EarthCon Consultants CA, Inc (EarthCon), has prepared this *Risk-Based Approval Application 40 CFR 761.61 (c)(1)* (Application) for the Clow Valve Company (Clow), a McWane, Inc company, property located at 1375 Magnolia Avenue, Corona, CA (Site) (see Figures 1 and 2). This application was previously submitted by EarthCon on April 9, 2019 and subsequently conditionally approved by the United States Environmental Protection Agency (U.S. EPA) in a letter dated April 23, 2019. However, additional contamination was discovered requiring a modification of the approved remedy. Also, the Site is scheduled for redevelopment and was recently purchased by B9 Magnolia Owner, LLC. Therefore, the previous Application required revisions as provided in the following sections.

1.1 EXECUTIVE SUMMARY

U.S. EPA Site ID: CATSCA102301

Site Address: 1375 Magnolia Avenue in Corona, California (Site)

Owner Name and Contact Information:

- Project Facilitator & Previous Owner: Clow Valve Company (Clow), a Division of McWane. Larry Bowers, Corporate Environmental Compliance Director (256-388-0001)
- Current Owner: B9 Magnolia Owner, LLC., Britton T. Winterer, Vice President (Signatory)/Gary Edwards, Principal of Western Realco (949-720-3788) (Point of Contact)

Consultant Name and Contact Information: WSP – Jeff Bennett, Sr. Lead Consultant, Geologist (714-743-0482).

1.2 INTRODUCTION

Brief Summary of PCB Impacts: Concrete (maximum 1.1 mg/kg – See Figure 4) and soil (maximum 2,220 mg/kg – See Figure 5). Site-wide evidence of PCB impacted material is illustrated in Figure 8.

Description of Proposed Clean-up Option: A combined remedial approach that includes engineering control (capping system), isolated hot spot excavations at former sample locations AOC7-B1 and S-60, and institutional controls (land use covenant (LUC), soil management plan (SMP), and Operations and Maintenance Plan (O&M Plan)) for potential future re-development and/or soil disturbing activities. The highest concentrations of PCBs to be left on-Site outside the capping system and underneath the capping system are 3 mg/kg and 290 mg/kg, respectively.

Proposed Schedule: Implementation of the capping system and isolated hot spot excavation will not commence until approval of the application has been received. Based on the proposed redevelopment schedule, activities at the Site are estimated to

begin Summer of 2023, with the understanding that the hot spots at AOC7-B1 and S-60 (see Section 5.2) will be removed earlier.

Brief Description of Agency Interest in Project: Initially, Clow prepared a Corrective Measures Study (CMS) to be implemented at the Site under the supervision of the Department of Toxic Substances Control (DTSC). However, due to the presence of polychlorinated biphenyls (PCBs) at AOC3, AOC6, and AOC7, additional Site assessment activities were conducted in July 2018, October 2018, and January 2019 under the oversight of the U.S. EPA (see Section 5). The results were initially summarized in the initial Application (EarthCon, 2019). Upon receipt of the approval letter from the U.S. EPA, the DTSC approved the CMS in a letter dated May 16, 2019. Therefore, the *Corrective Measures Implementation Workplan* (Workplan) identifying the installation of a capping system at AOC1/AOC5 and institutional controls was implemented in the Summer of 2021. During implementation of the Workplan, additional PCB impacts were identified, requiring additional soil investigation activities under the oversight of the U.S. EPA. Based on the results from the additional investigations (See Section 5) and the proposed future redevelopment activities, a revision to the previous Application was required.

2 SITE DESCRIPTION

2.1 SURROUNDING LAND USES

The Site is located in an area zoned as mixed use, commercial, and industrial (City of Corona Zoning and Specific Plans, August 2014).

2.2 CURRENT LAND USES/ON-SITE BUILDINGS

The Site is located to the northeast of the intersection of Magnolia Avenue and El Camino Avenue, at 1375 Magnolia Avenue in Corona, California. The Site is identified as Riverside County Assessor Parcel Number 107-030-022-3 and covers approximately 16 acres. Approximately 60% of the property is designed to be used for machining, product finishing and testing, and product storage. The remaining 40% includes asphalt-paved parking areas and unpaved areas. Unused foundry buildings, small offices and open areas were formerly leased to other tenants (two other McWane Divisions, McWane Ductile-Utah and Tyler Union). As of the writing of this report, only the Anaco Division of McWane has current operations at the Site.

The Site was originally developed for the production of iron pipes and connections by American Foundry in approximately 1950 (AESI, 2002). In 1960, Rich Manufacturing of Los Angeles acquired the property and moved their iron pipe manufacturing business to the Corona location, adding additional structures in 1967 for the machine shop and brass foundry (AESI, 2002). Clow Valve, a jobber of wrought iron pipe and other foundry products as early as 1878, acquired Rich Manufacturing Company of Corona in 1972. This acquisition added the wet barrel fire hydrant to Clow Valve's product line of waterworks products. In 1985, McWane, Inc. purchased all of Clow Corporation's stock and Clow became a wholly owned subsidiary and eventually operating division of McWane[1].

2.3 PROPOSED FUTURE LAND USES

Once the Site has been officially vacated and the appropriate permits have been obtained by B9 Magnolia Owner, LLC., demolition of the current on-Site buildings/structures will occur. The Site will be developed, in accordance with City of Corona approved plans, with the majority of the Site capped with concrete (6-inches thick or greater) and/or with concrete tilt-up buildings that also have a concrete footprint (6-inches thick or greater) and perimeter landscaping. Any landscaping within the proposed cap area will be underlaid by a 10-inches of compacted soil. The intended use of the property is for warehouse and distribution.

2.4 HYDROLOGY & DEPTH TO GROUNDWATER

The hydrogeology was identified in the report titled A*ddendum to Preliminary Endangerment Assessment and Facility Investigation* (Environmental Support Technologies, July 24, 2003) and excerpts are provided below:

Groundwater depths in the vicinity of the Site have been reported to range from 23-28 ft bgs and from 42-47 ft bgs (AESI, 2002), presumably as perched layers related to clay layers. The regional aquifer is reported to start at 124 ft bgs. Recovery

1 http://www.clowvalve.com/about-us/company-history

depths of groundwater in Corona municipal wells in the early 2000's were approximately 190-193 ft bgs. In addition, a westerly gradient was observed following the overall direction of discharge from the Temescal River to the Santa Ana River. Groundwater was also estimated to be approximately 45 ft bgs traveling into the gravely Temescal Wash downgradient of the Site. Groundwater beneath the Site was encountered at approximately 47 ft bgs in coarse granular material composed of sand and gravel.

In addition, the groundwater beneath the Site is identified as Temescal Hydrologic Sub Area within the Middle Santa Ana River Basin with beneficial use designations including municipal and domestic supply (MUN), agricultural supply (AGR), industrial service supply (IND), and industrial process supply (PROC)2.

2.5 PROXIMITY TO SURFACE WATER & STORMWATER RUNOFF

The active channel for the Temescal Wash bounds the northeast portion of the Site and flows to the west as a cemented Riverside County Flood Control channel. The Site stormwater runoff generally flows to the west and north boundaries of the Site. Stormwater discharging from the Site is managed in accordance with the *Storm Water Pollution Prevention Plan*.

2.6 TYPICAL WEATHER PATTERNS & CLIMATE

The City of Corona typically has a warm climate with mild winters and hot summers.

2.7 SITE GEOLOGY

2.7.1 REGIONAL GEOLOGY

The Site is located in Riverside County within the Corona-Elsinore Trough, a graben-like-valley that extends from Corona to Elsinore. The Corona-Elsinore Trough is located within the Peninsular Ranges geomorphic province. The Santa Ana Mountains and the Elsinore Fault Zone bound the Corona-Elsinore Trough on the southwest. The Gavilan Hills, part of the Perris Block, bounds the Corona-Elsinore Trough on the northeast. The Site is situated on the northeast edge of the alluvial fan surface that slopes gently from the Santa Ana Mountains, extending northeasterly through Corona toward Temescal Wash. Temescal Wash bounds the northeast portion of the Site.

2.7.2 LOCAL AND SITE GEOLOGY

Surficial materials in the vicinity of the Site are comprised of Holocene Older and Younger alluvium and bedrock. The younger alluvium consists of unconsolidated sand, gravel, and silt associated with the intermittent Temescal Wash. The active channel for the Temescal wash bounds the northeast portion of the Site and flows to the west in a cemented flood channel. The older alluvium consists of semi-consolidated buff to dark brown, sand, gravel, and silt associated with the alluvial deposits upgradient (south) of the Site. The bedrock consists of siltstone units possibly associated with the Miocene-Puente formation

2 http://waterboards.ca.gov/santaana/water_issues/programs/basin_plan/docs/2016/Chapter_3_Feb_2016.pdf

and weathered, hydrothermally altered volcanic and intrusive rocks associated with the Santiago Peak Volcanics. The siltstone is exposed in the hills located immediately south of the Site at 880 feet above mean sea level (msl). Crystalline bedrock mapped as the monzogranite of Cajalco pluton crops out in the foothills approximately 2 miles southeast of the Site.

Previous consultants investigating surrounding properties identified layers of gravelly sand (1-5 feet below ground surface [ft bgs]), sand and silty clay (20-30 ft bgs), gravelly sand (25-40 ft bgs) and clay 55-60 ft bgs). Drilling refusal has occurred several times at approximately 20 ft bgs indicating the presence of dense consolidated silty clay and gravelly material at that depth. Multiple dense, laterally discontinuous clay lenses have been reported to occur between 40-50 ft bgs, 62-81 ft bgs, and 90-103 ft bgs (AESI, 2002). Investigations conducted on-Site encountered sand and gravel mixtures with refusal on cobbles occurring commonly (EST, 2006; Fero, 2006b).

2.8 SOURCES OF PCBS & HISTORIC OPERATIONS

Sources of PCBs were identified from a slight transformer oil leak observed in 1994, which resulted in repair of the transformer and a portion of the concrete pad (approximately 8 ft by 2 ft) being removed. Subsequently two drums of soil were excavated and disposed of off-Site. In 1997, the transformers were replaced with new transformers to accommodate the upgraded high voltage distribution system. Oil containing PCBs was removed from the transformer casings and incinerated off-Site, the steel casings were landfilled. This area was identified as AOC7.

Subsequent Site investigations under U.S. EPA oversight identified PCB contamination at AOC6 related to the operations associated with the former asphalt dip tank. In addition, PCB soil contamination was also identified throughout a majority of the northern portion of the Site and is assumed to be associated with historic fill operations of waste foundry sand and other foundry related materials contaminated with oil containing PCBs.

See Figures 3 through 8 and Section 5 for further details.

2.9 OTHER CONTAMINANTS ON-SITE

In addition to PCBs, other contaminants identified in the shallow subsurface on-Site mainly include metals with some isolated areas reporting TPH.

See Figures 3 through 8 and Section 5 for further information on Site characterization.

2.10 OTHER SITE CONDITIONS

Due to responses on the Community Survey from local Tribal groups, the DTSC required that a records search be conducted through the California Historical Resources Information System (CHRIS). After submitting the request on October 11, 2017, the CHRIS Information Officer stated that two cultural resource properties have been recorded within the boundaries of the project area in a letter dated October 17, 2017. Given the ambiguity of many cultural resource records, Clow had opted to have ground disturbing activities conducted during implementation of the CMS monitored by a cultural resources professional in lieu of conducting a constraints analysis prior to those activities. However, as part of the redevelopment permitting process, the new owner was required to do a cultural resources evaluation of the Site. This review identified the records in question to be historical structures associated with a railroad. A cultural resources review in 2011 verified that the structures were no longer in existence so no further action is required. See Appendix A.

2.11 SENSTIVE ENVIRONMENTS & RECEPTORS

The closest residential land use consists of a mobile home park located beyond Temescal Wash approximately 0.1 miles north of the project area on-Site.

2.12 BRIEF SUMMARY OF SITE CONCEPTUAL MODEL

The historic transformer leak and historic Site fill operations (presence of waste foundry sand and other foundry related materials contaminated with PCB oil) were identified as the sources of the PCB impacted materials. Migration pathways evaluated included soil and wind erosion with potential exposure pathways including inhalation, dermal, and/or ingestion.

3 DESCRIPTION OF PCB "CLEAN-UP SITE"

Under oversight of the U.S. EPA, additional field investigation conducted in 2018, 2019, and 2021 determined the PCB "Clean-up Site" as the following:

- AOC3 – Water Pressure Test Area
- AOC6 – Former Asphalt Dip Tank
- AOC7 – Transformer Area 1
- AOC9 –Former Test-Pond (filled)
- Northern portion of the Site

Further details on the Site characterization and determination of the AOCs and northern portion of the Site associated with the PCB "Clean-up Site" are provided in Section 5. These locations and the associated PCB results are illustrated on Figures 3 through 8.

In addition to the above onsite efforts, U.S. EPA directed McWane to investigate potential off-site PCB migration onto property to the east and west of the Site owned by Riverside County and BSNF Railroad, respectively. Initial sampling under U.S. EPA's direction has indicated PCB contamination at low levels on the Riverside County Flood control property. Work on this property is currently paused to allow all parties to focus on the on-site work. As discussed with its U.S. EPA Project Manager, McWane will schedule a conference call with U.S. EPA to develop a path forward on the Riverside County property within 30 days of approval of this application and McWane will work expeditiously to bring this issue to closure. Given the involvement of the Riverside County Flood Control as the property owner, an exact timeline for resolution of this issue is not possible.

On the BNSF Railroad property, U.S. EPA has approved a sampling plan and McWane is working through BNSF Railroad's access agreement process to allow sampling on their property. Upon gaining access approval from BNSF Railroad, McWane will complete the sampling and report the results to U.S. EPA within 45 days.

Given the involvement of the Riverside County Flood Control and BNSF Railroad, establishing a defined timeline for resolution of the off-site issues is problematic but, barring protracted legal issues, McWane expects to be able to bring these issues to resolution within one year.

4 PROPOSED RISK-BASED PCB CLEAN-UP LEVELS

As noted in the U.S. EPA conditional approval of the previous Application in 2019, the clean-up level for the 1375 Magnolia [on-property] areas of the Site is 15 mg/kg. This applies to the PCBs left in place, which will not be covered by the proposed TSCA cap. As discussed in a conference call with the U.S. EPA and subsequent email dated January 7, 2021, the revision to the original Application and associated clean-up efforts were identified as a modification to the design plans to increase the area of the TSCA cap and hot spot removals for two isolated exceedances at AOC7-B1 (inside the footprint of the cap) and S-60 (outside the footprint of the cap) (minimum of 10 ft x10 ft x 1 ft deep) outside of the proposed TSCA cap footprint. See Section 5 for further detail of the hot spot exceedances.

5 SITE CHARACTERIZATION

In July 2018, the initial soil and concrete sampling investigation was conducted to assess the potential presence of PCB impacted materials at various areas of concern throughout the Site including AOC3, AOC5, AOC6, AOC7, AOC8, and AOC9. Results from the initial investigation were summarized in the report titled *PCB Investigation* (EarthCon, August 24, 2018). AOC5, AOC-8, and AOC9 did not report PCB concentrations above the associated laboratory reporting limits, with the exception of on sample at AOC-8 with total PCB concentrations reported at 0.161 mg/kg. Therefore, upon review of this data the U.S. EPA determined that further investigation was only necessary at AOC3 and AOC6 within the shallow subsurface. In addition, the U.S. EPA required further investigation at AOC7 to assess potential PCB impacted soil at a greater depth. Therefore, additional soil and concrete investigations were conducted in October 2018, January 2019, and February 2019. As noted previously, during the implementation of the Workplan, PCB concentrations were reported in the shallow subsurface in the northern portion of the Site. In support of future Site redevelopment, further soil investigation activities were conducted under the oversight of the U.S. EPA in October 2021 and December 2021. Further details are provided in the following sections.

5.1 SAMPLING & ANALYSIS RATIONALE

The scope of work associated with the October 2018 soil sampling investigation was approved in an email from the U.S. EPA on October 10, 2018 and is summarized below:

- AOC3 – Three (3) additional soil samples (AOC3-B4, AOC3-B5, and AOC3-B6) were collected around the previous AOC3-B1 sample at 0.5 feet below ground surface (ft bgs).
- AOC6 - Three (3) additional soil samples (AOC6-B2, AOC6-B3, and AOC6-B4) were located near the former asphalt dip tank perimeter at 0.5 ft bgs.
- AOC7 – Former soil sample location AOC7-B1 reported elevated levels of PCBs and the samples were only collected to 5 ft bgs due to reported accessibility issues and subsurface utilities. EarthCon collected a sample 6.5 ft bgs. Due to refusal a sample could not be collected at the proposed total depth of 15 ft bgs.

Results were discussed with the U.S. EPA during a conference call on December 3, 2018

Based on the analytical results, it was determined that further investigation was necessary at AOC6. A 10 ft grid was proposed around the initial 4 sample locations surrounding the former asphalt dip tank, with the first step out samples analyzed for PCBs and the subsequent row of samples archived pending analytical results. This scope was approved by U.S. EPA in an email dated December 6, 2018 stating that the archived soil samples should be analyzed if the first row of grid samples reported PCB concentrations at or above 2 ppm.

Soil sample locations required concrete coring in order to obtain access to the subsurface soil. A hand auger was advanced to the proposed depths to collect each soil sample.

The grid sampling investigation at AOC6 was conducted on January 8 and 9, 2019. A total of 16 soil samples (AOC6-B5 through AOC6-B20) were collected. On February 19, 2019, concrete samples were subsequently collected from five of the grid sample locations.

Concrete samples were collected in accordance with the U.S. EPA Region 1 guidance document titled *Standard Operating Procedure for Sampling Porous Surfaces for Polychlorinated Biphenyls* (2011). Both soil and concrete samples were analyzed for the following:

- Moisture content in accordance with ASTM D-2216 (M)
- PCBs in accordance with U.S. EPA Method 8082A/3540C (soxhlet extraction)

Supplemental soil sampling investigations in October and December 2021 included an additional sixty (60) soil sample locations (S-1 through S-60) across the Site. Hand-augers were used to initially advance the borings to a maximum depth of 3ft or 5ft. Instances where further delineation of the foundry sand and/or reported PCB concentrations was needed, an air knife and/or direct push rig was utilized to collect samples at further depths. Initial results from the October 2021 investigation (Samples S-1 through S-36) were provided to the U.S. EPA in a document titled *PCB Investigation Report* (EarthCon, 2021). Based on the future Site redevelopment and the proposed extension of the capped area, additional samples (S-37 through S-60) were advanced along the southern and southeastern portions of the Site.

Samples were collected under a strict chain of custody protocol and were submitted to a California-State Certified Laboratory, on a normal turn-around time.

Sampling equipment was decontaminated in accordance with the guidance using a 2 rinse system followed by a hexane wipe. The rinseate was subsequently stored in a 55-gallon steel drum on-Site pending off-Site disposal.

5.2 ANALYTICAL RESULTS

October 2018 Sampling Investigation

Soil samples detected concentrations of Aroclor 1260 in samples from AOC3 and Aroclors 1248 and 1260 in samples from AOC6 and AOC7. The remaining Aroclors were not detected at concentrations above the associated laboratory reporting limits. Detected total PCB concentrations ranged as follows: 0.092 mg/kg to 1.3 mg/kg in AOC3, 8.0 mg/kg to 48 mg/kg in AOC6, and 16 mg/kg in AOC7. The majority of the samples from AOC6 were below 10 mg/kg with 48 mg/kg as an outlier. For risk purposes, the U.S. EPA had previously discussed that concentrations at or above 15 ppm would be a concern. AOC3 reported concentrations were significantly below this criterion. In addition, due to the fact that the depth to water is approximately 40 ft bgs at the Site and co-solvents were not present, the 16 mg/kg concentration reported in AOC7 at 6.5 ft bgs shows that significant vertical migration is not present. Upon review of the analytical results, the U.S. EPA agreed that further evaluation at AOC3 and AOC7 was not warranted; however, further evaluation in AOC6 was required.

January 2019 Sampling Investigation

The first row of grid soil samples surrounding the former asphalt dip tank at AOC6 reported total PCB concentrations ranging from 3.3 mg/kg to 16 mg/kg. At the direction of U.S. EPA the second row of grid samples were analyzed since concentrations were above 2 ppm. The second row of grid samples reported total PCB concentrations ranging from 1.3 mg/kg to 9.0 mg/kg. As illustrated on Figure 3, the highest total PCB concentrations were reported in sample locations extending northeast from the original elevated concentration of 48 mg/kg in AOC6-B3. In a northeast trajectory, total PCB concentrations decrease to 16 mg/kg in AOC6-B10 and further decrease to 9.0 mg/kg in AOC6-B17. Once the U.S. EPA had returned from furlough, this data was provided in a summary email on February 5, 2019. A total of 5 locations were also identified for potential concrete sampling pending discussion of results. On February 13, 2019, the U.S. EPA responded via email stating that the soil results were evaluated using ProUCL and the 95% UCL of the mean was approximately 13 ppm. This value is below the U.S. EPA's threshold for industrial workers (15 ppm) and is covered by concrete. The U.S. EPA agreed that the concrete results would help determine whether or not the concrete could be left in place as a cap in conjunction with a future deed restriction.

February 2019 Sampling Investigation

A total of 5 concrete samples (AOC6-B3, AOC6-B5, AOC6-B10, AOC6-B13, and AOC6-B20) were collected. The majority of samples reported concentrations of Aroclor 1248, Aroclor 1254, and Aroclor 1260. Total PCB concentrations ranged from 0.25 mg/kg to 1.1 mg/kg.

October 2021 and December 2021

Generally, the aroclors reported include Aroclor-1248, Aroclor-1254, Aroclor-1260 with a few occurrences of Aroclor-1016. The highest total PCB concentrations were reported in the 1 ft bgs samples with the maximum concentration reported at 290 mg/kg. A total of 10 locations exceeded the Site clean-up criteria of 15 mg/kg; however, the majority of those exceedances are located beneath the area identified to be capped during the redevelopment, with the exception of one isolated concentration reported at the southeast corner of the property at 37 mg/kg (S-60). Details of the December 2021 event were discussed in and subsequently provided to the U.S.EPA via email on January 7, 2021. The U.S. EPA then recommended an update to the Application to include the 2021 analytical results and an update of the project scope to include expansion of the capped area and a limited excavation at the isolated hot spot excavation in the vicinity of S-60.

The analytical results are summarized in Table 1, Table 2, and Figures 3 through 8. Laboratory reports for the 2021 sampling investigations are provided in Appendix B.

5.3 VERTICAL & HORIZONTAL EXTENT OF CONTAMINATION

The majority of the PCB impacted materials are located in the northern portion of the Site with an isolated location reported along the southern property boundary. The highest concentrations are typically at surface-1 ft bgs, with concentrations decreasing with depth. PCB concentrations are generally consistent with the presence of foundry sand, particularly within the northern portion of the Site extending as deep as 7 ft bgs.

See Figures 4 through 8.

5.4 DATA GAPS

As mentioned previously, Clow worked with the U.S. EPA to address concerns regarding potential data gaps. Therefore, Clow implemented additional Site investigations to further delineate the potential presence of PCBs at the Site. As noted in Section 5.1, these subsequent investigations were conducted in July 2018, October 2018, January 2019, February 2019, October 2021, and December 2021.

6 APPLICATION & CLEAN-UP PLAN

Section 1.2 discusses the combined remedial approach that includes engineering control (capping system), isolated hot spot excavations at former sample locations AOC7-B1 and S-60, and institutional controls (LUC, SMP, and O&M Plan) for potential future re-development and/or soil disturbing activities.

6.1 CAPPING SYSTEM

As noted previously, future redevelopment activities will result in a majority of the Site being covered by concrete pavement (minimum 6-inches) and/or building footprint which will also have a minimum of 6-inches of concrete and perimeter landscaping with a minimum of 10-inches of compacted soil within the designated cap area. This will serve as a TSCA cap covering PCB concentrations ranging up to 290 mg/kg (S-31) after the removal of the 2,200 mg/kg hot spot (AOC7-B1) and will protect industrial workers at the Site from exposure to PCB concentrations in the underlying soil. The TSCA cap is identified as the concrete and/or building footprints within dashed line as illustrated in the design plans provided in Appendix C.

The installation of the TSCA cap and associated redevelopment will require Site wide grading. To ensure that PCB contaminated soils are not graded or otherwise placed outside the proposed cap area, the grading plans will clearly indicate the boundaries of the cap and note that soil within this area will only be graded or otherwise managed within in the proposed cap area. The grading plans will also note that any temporary stockpile of soil from the cap area will remain within the cap area and will only be maintained for the duration necessary to allow for efficient grading. The applicants will take appropriate measures, during planning and construction, to ensure that these conditions are adhered to. Such measures will include preconstruction briefings with all contractors involved in grading and regularly scheduled inspections by the design engineer or owner's representative during grading activities. Following completion of the Site wide grading program, any soil that is removed from within the perimeter of the designated TSCA cap during future Site activities will be managed and disposed under the assumption that it contains PCBs at a concentration at or above 50 ppm, in accordance with the associated requirements discussed in Section 8.

6.2 HOT-SPOT EXCAVATIONS

Historical soil sampling investigations identified PCB concentrations at approximately 2,200 mg/kg at sample location AOC7-B1 within the area of the proposed capping system. However, through conversations with the U.S. EPA, it was determined that during future construction related activities it would be impractical to isolate and leave this material in-place. Therefore, material from this area will be removed prior to implementation of grading activities. Additionally, a second hot-spot excavation will be conducted from an isolated area outside of the cap identified as sample location S-60. Therefore, the associated scope of work is described in the following subsections.

6.2.1 PRE-FIELD ACTIVITIES

The General Contractor will coordinate with the utility company, vendors, and the tenant to facilitate the disconnection of the Site electrical supply source. In addition, a geophysical survey will be conducted to ensure that the underground utilities in the work areas have been identified and proper clearances have been completed. The locations proposed for subsurface work will be identified using white paint, and Underground Service Alert (USA) will be subsequently notified at least 72-hours prior to initiation of field activities.

In accordance with the Site SMP, the DTSC is required to be notified a minimum of 30 days prior to any soil disturbing activities. WSP will also notify the U.S. EPA a minimum of 30 days before excavation of PCB impacted soil.

Excavation activities will be conducted in accordance with the Site Health and Safety Plan (HASP). The scope of work and elements of the HASP will be discussed daily during the tail-gate safety meetings.

6.2.2 FIELD ACTIVITIES

The hot-spot excavation areas will be marked in the field and identified by a 10 ft by 10 ft grid centered on the original sample location. Based on the initial sample results, the approximate total depth of the excavations will be advanced to 6.5 ft bgs and 1.5 ft bgs at AOC7-B1 and S-60, respectively. The excavated material from each excavation will then be placed in separate containers (eg. covered roll-off bins) awaiting transport off-Site (see Section 8).

Once the material has been removed from the hot-spot excavation, subsequent confirmation samples will be collected every 10 linear feet along the sidewall and one floor sample at the center of the 10 ft by 10 ft grid. Additionally, the sidewall samples will be collected vertically, one per every 5 ft bgs. Therefore, the number of confirmation samples to be collected are as follows:

Hot Spot Excavation	Total Depth (bgs)	Sidewall Samples	Floor Samples	Total Samples
AOC7-B1	6.5	8	1	9
S-60	2	4	1	5

Confirmation soil samples will be analyzed for the following:

- PCBs in accordance with U.S. EPA Method 8082A/3540C (soxhlet extraction)
- Moisture content in accordance with ASTM D-2216(M)

Should initial results report PCB concentrations of 15 mg/kg or greater, additional soil will be excavated, and subsequent confirmation samples will be collected.

Sampling equipment will be decontaminated in between each sample collection in accordance with the U.S. EPA Guidance using a 2 rinse system followed by a hexane wipe. The rinseate will be stored in a 55-gallon steel drum on-Site pending disposal.

Each container of excavated soil and drums of decon rinseate will each be sampled with the appropriate number of samples per each container volume using U.S. EPA SW-846 Chapter Nine. Each sample will be analyzed as follows:

- PCBs in accordance with U.S. EPA Method 8082A/3540C (soxhlet extraction)
- Moisture content in accordance with ASTM D-2216(M), as applicable
- Title 22 CAM 17 Metals in accordance with U.S. EPA Methods 6010B/7471A
- Total Petroleum Hydrocarbons in accordance with U.S. EPA Method 8015B
- Volatile Organic Compounds (VOCs) in accordance with U.S. EPA Method 8260/5035

- Semi-VOCs in accordance with U.S. EPA Method 8270C

Each sample container will be labeled with the following information, as appropriate, at the time of sampling:

- Sample Number
- Sample Date
- Container Designation
- Sample Location
- Time of Sampling
- Preservatives, if any
- Sample Type
- Handling Precautions
- Requested Analyses
- Laboratory Name
- Initials of Sampling Personnel

Samples will be managed under a strict chain of custody protocol and will be submitted to a California-State Certified laboratory.

6.2.3 WASTE MANAGEMENT

The disposal of PCBs at concentrations of 50 ppm or greater, if encountered, will be conducted in accordance with 40 CFR 761 subpart D. Depending on the characterization of PCB-impacted materials, subsequent transportation will likely be to a RCRA hazardous waste landfill with U.S. EPA TSCA approval disposal facility (or to a TSCA landfill), as discussed below in Section 8.

6.2.4 BACKFILL

After confirmation samples have determined that the hot-spot material has been removed, the excavations will be backfilled in accordance with the DTSC document entitled Information Advisory Clean Imported Fill Material (DTSC, 2001). Soil removal activities within the cap area will require 30-day notification to the DTSC. Therefore, an approval letter from the U.S. EPA for the revised Application will be provided to the DTSC at that time. Additionally, the soil removal activities associated with the hot-spot excavation will be conducted in accordance with the Site's current SMP.

6.3 INSTITUTIONAL CONTROLS

In addition to the cap, current and future receptors at the Site will be protected in accordance with the future land use restrictions as discussed further in Section 10.0.

7 DECONTAMINATION OF TOOLS, EQUIPMENT, & MOVABLE EQUIPMENT

Best management practices associated with erosion and sediment control will be implemented in accordance with the City of Corona approved grading plans for the Site. This will include, but will not be limited to, vehicle cleaning and/or stabilized entrance/exits. In addition, soil disturbing activities will also be in accordance with the SMP.

8 WASTE DISPOSAL

It is the goal of the applicant to maximize on-Site re-use of soil for grading purposes. However, in the event deleterious materials that are unsuitable for use in redevelopment activities are encountered, such materials will be managed appropriately.

Should future redevelopment activities require disposal of the PCB impacted soil or other materials, the materials will be managed in accordance with the SMP and 40 CFR 761.61. Excavated PCB-impacted materials will be loaded directly into labeled containers and securely covered pending transportation. Should stockpiles be warranted, they will be stored on-site (while covered) for the minimum time frame required to facilitate the appropriate off-Site disposal. Materials characterized with PCB concentrations at or above 50 ppm will be transported off-Site for disposal at a RCRA hazardous waste landfill with U.S. EPA TSCA approval (or to a TSCA landfill). Materials characterized with PCB concentrations below 50 ppm will be managed and transported to either the Soil Safe facility in Adelanto, CA, the Waste Management facility in Kettleman Hills, CA, or another appropriate facility in accordance with 40 CFR 761.50(a)(6) and applicable federal, state, and local laws.

9 CLEAN-UP REPORT

The previously submitted CMI Report was also submitted to the U.S. EPA to satisfy the requirement of the PCB Clean-up Report associated with the PCBs remaining under the cap in AOC6 and AOC7. However, the U.S. EPA has requested that the results from the soil sampling investigations conducted in 2021 be combined with the implementation of the revised Application. Therefore, the 2021 soil investigation results, the hot-spot excavations, and activities associated with the extension of the TSCA cap will be provided in a subsequent *PCB Clean-up Report* upon completion of activities. The *PCB Clean-up Report* may include, but is not limited to, the following:

- Introduction
- Site Background
- Summary of Previous Investigations
- Nature and Extent of Contamination
- Clean-up Level Determination
- Summary of grading and capping activities
- Land use restrictions (Land Use Covenant, Soil Management Plan, and Operations and Maintenance Plan)
- Conclusion
- References

10 LAND USE RESTRICTIONS

The current LUC was recorded to restrict the future use of the entire Site to commercial/industrial uses appropriate for the human health risk hazard and to prohibit Site development for residential and sensitive receptor uses. The current LUC was recorded on November 18, 2021, and was based on the initial application; however, upon completion of redevelopment activities the LUC will be amended to incorporate the details associated with the new TSCA cap and any other requirements imposed by the USEPA.

As identified in the CMIWP, the SMP (EarthCon, 2021) will provide guidance for management of soils in the event excavation or soil disturbance is required during future on-Site activities such as building construction, utility installation, etc. The SMP will facilitate effective future project implementation and compliance with applicable laws. The SMP includes procedures for health and safety; engineering controls; stockpile management; and characterization and disposal of excess soil, if necessary. Once redevelopment activities have been completed, the SMP will be updated to summarize the redevelopment activities, reflect the current Site layout with the concrete cap and buildings, and identify the new property owners and contact information. In addition, poste re-development soil disturbance within the footprint of the cap will be handled as greater than 50 ppm PCB in accordance with TSCA requirements.

The O&M Plan (EarthCon, 2021) was prepared to establish a set of procedures for LUC-required inspection of the Site and an annual inspection and maintenance of the asphalt cover (cap). Additionally, the O&M Plan was prepared in order to maintain compliance with the LUC and applicable State and Federal Hazardous Waste Control laws and regulations. The goal of the O&M Plan is to prevent contact with contaminated soil, reduce water infiltration, erosion, and dispersion of soil contaminated with constituents of concern. In addition, the O&M Plan will be utilized to protect on-Site personnel, contractors, personnel conducting O&M activities, and/or visitors. Similar to the LUC, the O&M Plan was prepared in accordance with requirements of the CMI Workplan and associated implementation activities. However, upon completion of redevelopment activities, the O&M Plan will be amended to similar to the SMP summarizing the redevelopment activities, identifying the current Site layout with the concrete cap and buildings, identifying the new property owners and contact information. In addition, the routine inspections will be revised to incorporate the details associated with operations and maintenance requirements associated with the concrete cap as opposed to the existing asphalt cap.

The current LUC, SMP, and O&M Plan are provided in Appendix D, Appendix E, and Appendix F, accordingly.

A CULTURAL RESOURCES RECORDS SEARCH

February 11, 2022

Kimberly Thienes
T&B Planning, Inc.
3200 El Camino Real, Suite 100
Irvine, California 92602

RE: Cultural Resources Records Search Results for the Corona Magnolia Project, Corona, California

Dear Ms. Theines:

An archaeological records search has been completed for the Corona Magnolia Project located northeast of the intersection of Magnolia and El Camino avenues (Assessor's Parcel Number [APN] 107-030-022), within the city of Corona, Riverside County, California. As part of the environmental review process, Brian F. Smith and Associates, Inc. (BFSA) reviewed the results of the records search compiled from data acquired from the Eastern Information Center (EIC) located at the University of California Riverside (UCR). The records search, which was completed on February 10, 2022, encompassed an area of one-half mile surrounding the subject property.

Based upon the records search results, 13 previous cultural resources studies conducted within one-half-mile of the Corona Magnolia Project are on-file with the EIC; however, none include the subject property. Further, the search data identified 10 resources, all associated with the historic built environment, recorded within one-half mile of the project. One of the previously recorded resources (Site P-33-020202) includes the entirety of the subject property, APN 107-030-022. Site P-33-020202 is characterized as a circa 1955 to circa 1960 six-building industrial-commercial complex which includes the addresses 1375 Magnolia Avenue and 1001 East El Camino Avenue. The resource was recorded, along with the majority of resources identified in the search radius, in 2011 by Tim Yates of ICF International as part of a proposed electrical substation and transmission line corridor identified as the "Circle City Substation Project."[1] Although the study associated with the Circle City Substation Project did not appear within the EIC holdings, based on the site record, Site P-33-020202 was recorded at the reconnaissance level and was not evaluated for inclusion within the California Register of Historic Resources. A search of the resource addresses failed to identify the property listed on the National Register of Historic

[1] Tim Yates, Site Record Form for P-33-020202, on file at the Eastern Information Center at the University of California at Riverside, Riverside, California, 2011.

Places Index, the California Register of Historic Resources, or the Office of Historic Places, Built Environment Resources Directory. BFSA also reviewed the Final Environmental Impact Report (FEIR) for the "Circle City 66 kV Subtransmission Line Project," available online from the City of Corona, for additional information about the resource.[2] Although the FEIR does not discuss Site P-33-020202 in detail, it does state that "[a]n additional 106 architectural resources were documented in the Architectural Study Area; however, they were not evaluated for California Register-eligibility because the resources themselves, as opposed to the parcels on which they are located, are all outside the Project Area and would not be directly impacted by the Project."[3]

The full results of the completed records search are attached to this letter report (Attachment A). Please contact us should you have any questions or require additional study for this project.

Regards,

Brian F. Smith

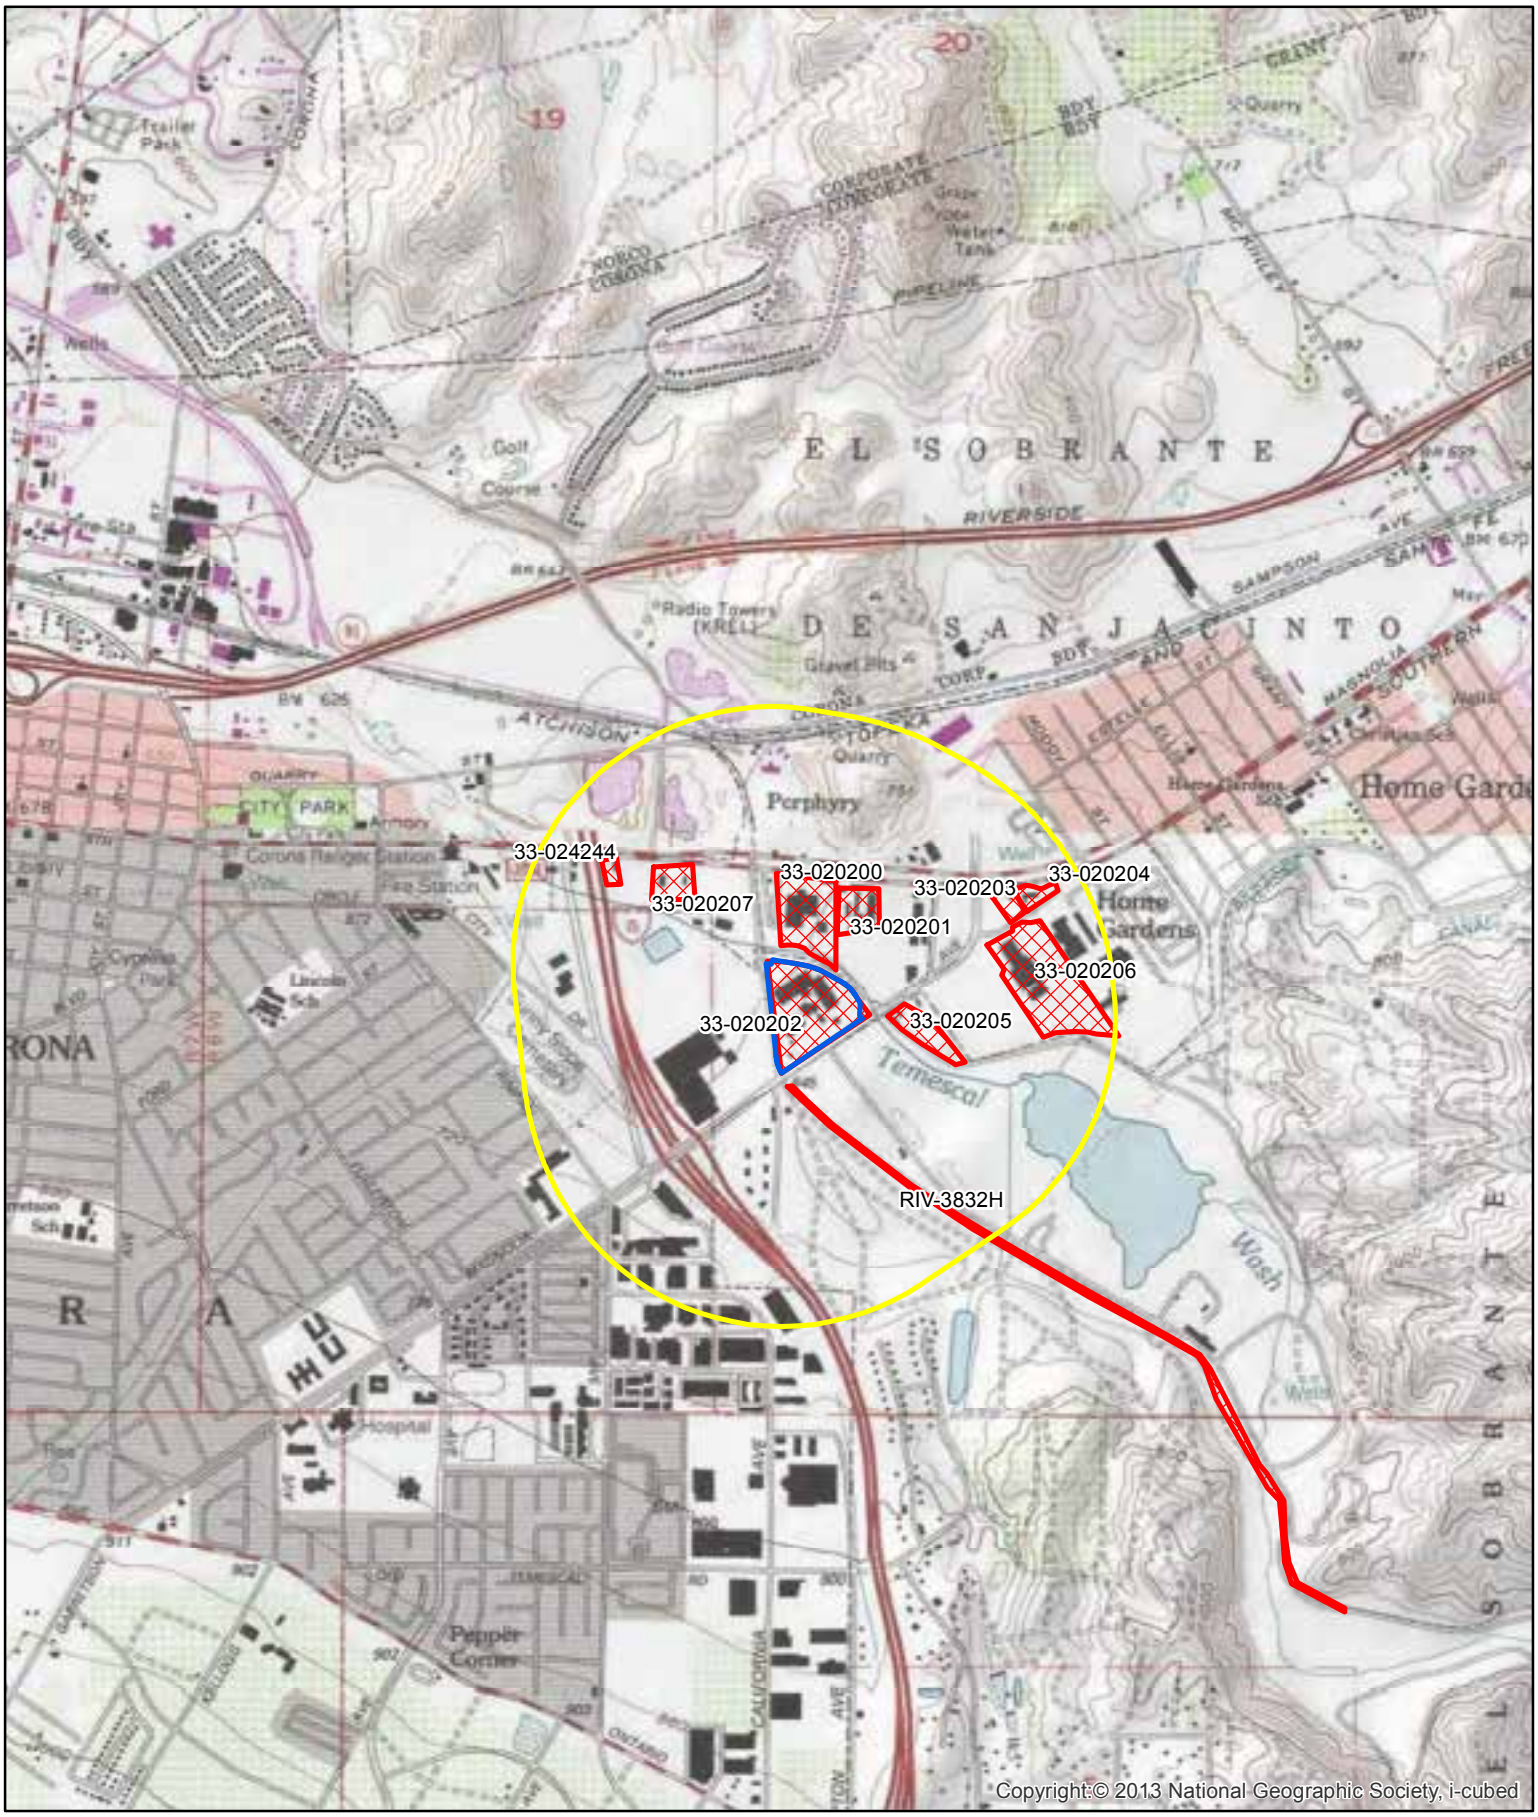
CALIFORNIA HISTORICAL RESOURCES INFORMATION SYSTEMS

RECORDS SEARCH

Company:	Brian F. Smith and Associates
Processed By:	Andrew Garrison
Date Processed:	February 10, 2022
Project Identification:	Corona Magnolia (22-028)
Information Center:	Eastern Information Center
Search Radius:	0.5 Mile

Historical Resources:



Trinomial and Primary site maps have been reviewed. All sites within the project boundaries and the specified radius of the project area have been reviewed. Copies of the site record forms have been reviewed for all recorded sites.

There are 10 resources recorded within one-half mile of the current project area, one of which (P-33-020202) is located within the subject property.

Previous Survey Report Boundaries:

Project boundary maps have been reviewed. National Archaeological Database (NADB) citations for reports within the project boundaries and within the specified radius of the project area have been reviewed.

There are13 reports within one-half mile of the current project, none of which include the subject property.

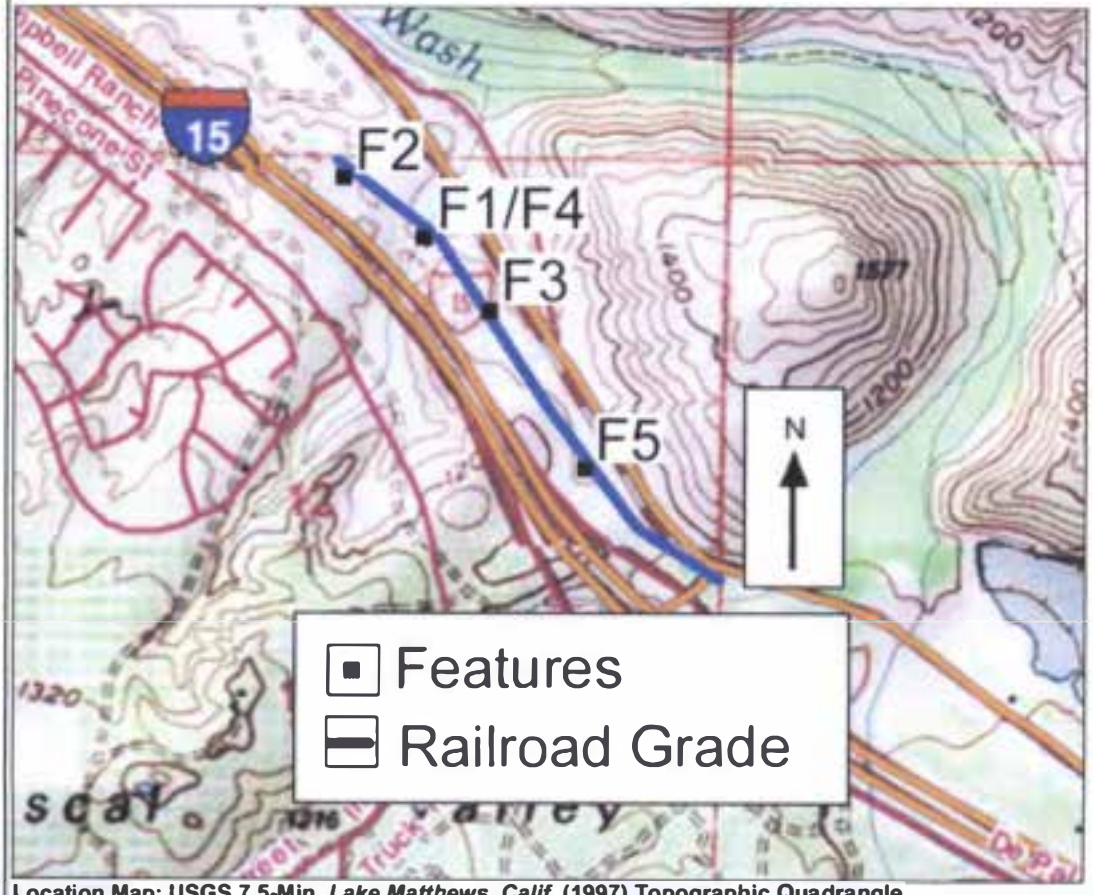
 *Resource Name or # (Assigned by recorder) The Old Santa Fe Railroad Grade through the Temescal Valley

*Recorded by: Daniel Leonard *Date: May 1, 2014 ☐ Continuation ☑ Update



This resource has been recorded numerous times (Goodman et al. 2006, Love and Tang 1996, Goodwin 2001, Swope 1991, McCarthy 1990) as an abandoned historic-period railroad grade. Love and Tang's 1996 study represents a comprehensive identification and evaluation of the entire alignment, and the others assessed smaller segments. Although these recordings indicate that the grade remained visible in places, and some features are sporadically recognizable, all studies have conferred the resource with poor condition and a lack of integrity due to its 1970s dismantling. BCR Consulting visited the portion of the railroad grade that crosses the NE ¼ of Section 12, Township 5 South, Range 6 West (SBBM) on May 1, 2014. Current field observations were basically consistent with Love and Tang's 1996 study. Field crew noted an intermittently-visible and highly disturbed railroad grade accompanied by the following features (plotted within the study area below):

Feature 1: a 33-foot section of displaced track (NAD 83 UTMs 457697mE/3435081mN)
Feature 2: a concrete culvert stamped "1926" (NAD 83 UTMs 457515mE/3735210mN, at SW)
Feature 3: a second concrete culvert stamped "1926" (NAD 83 UTMs 457817mE/3734976mN)
Feature 4: a partial culvert similar to F2 and F3 but lacking date stamp (NAD 83 UTMs 457693mE/3735108mN)
Feature 5: a second partial culvert pipe, no date stamp (NAD 83 UTMs 457998mE/3734688)

Significant disturbances related to mechanical dismantling of the system during the 1970s (see Additional Research above) have conferred a poor condition, and diminished integrity.

The portion of CA-RIV-3832H indicated by the the 1996 site record to be within the Project area and still identifiable consists of a small segment on the W side of Sherborn Street, S of Magnolia Avenue, in the city of Corona. Upon inspection during the survey, however, no evidence of this portion of the alignment was observed. It appears that the modern railroad and adjacent construction activities have destroyed this portion of the alignment, leaving no identifiable features.

Page 1 of 1 ***Resource Name or #:** CA-RIV-3832H **UPDATE**

*Recorded by: J. D. Goodman Date: May 26, 2006

The Site CA-RIV)-3832H is the At & SF Railroad branch that went through Temescal Valley (see old site form for dates). In the western end of the study area we came across a burnt railroad bridge/trellis and railroad grade (recorded as SRI 134 at the time), and later realized that these features are all components/features of RIV-3832H. Only burnt upright posts remain of this bridge and some long rod bolts, nuts, and cast-iron washers with embossed dates of 1902. Also, on either sides of the bridge and drainage are concrete retaining walls to support the sides of the upper bank. Continuing on both sides of the burnt bridge and retaining walls are the east and west remnants of the raised railroad grade.

e. Other Locational Data: (e.g., parcel #, directions to resource, elevation, etc., as appropriate). A burned historical railroad truss/bridge associated with the previously recorded Atchison Topica and Santa Fe Railroad (CA-RIV-3852H) was found in the portion of rail line that passes through a tributary of northwestern Temescal Wash in the Temescal Valley. The bridge is approximately 20m southwest of I- 15.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries). This truss/bridge was constructed of large upright support posts, and both sides of the bank of the wash for the bridge were secured with large formed-and-poured concrete retaining " pads." The raised railroad grade on both sides of the burnt bridge has a height of approximately 10', and the grade cuts through several small hills in this area.

***A3. Human Remains:** ☐ Present ☐ Absent ☐ Possible ☐ Unknown (Explain):

***A4. Features** (Number, briefly describe, indicate size, list associated cultural constituents, and show location of each feature on sketch map): Constructed within a drainage that has a width of approximately 43', the remains of the bridge consists of a series of six large (burnt) support posts or beams aligned in an east-west direction, and each of the post series/rows has six posts; a total of 36 posts were used for the support posts. Some of the bottoms of the burnt post are covered in (flooding) soil. The post are similar to, or the same as, treated Douglass Fir telephone posts. The average spacing between the post rows is 14', and the individual posts are spaced at an average distance of about 4'. Many of the posts have a diameter of from 12" to 14". The row of outer posts (on both sides)lean inward towards the other vertically set posts at an angle of approximately 60 degrees. Some bent sheet-metal brackets to secure the posts and associated lumber have a length of 38", a width of 3", and a thickness of 1/4". Attached to some of the posts are 40"-long rod bolts with a diameter of 1", many have square nuts that measure 1' on a side, and on some of these rod bolts are large cast-iron washers with a diameter of 4" and they are embossed with "LEABLE / 33/4 x 4-1/2 / PAT / May / 10 / 04" (1904). These washers have a raised central area and raised radiating "spokes" as a design element. Some of the posts also have large wood screws with a length of 4" and a proximal diameter of 1". The larger concrete pad on the west bank of the wash was constructed on the first river terrace, and this pad has a length of 70' and a width of 15'. The smaller pad on the eastern bank, constructed on the second river terrace, has a length of 50' and a width of 10'. The walls of the pads facing the wash and bridge slant downward towards the wash at an angle of about 30 degrees. No rails, ties, spikes, or fishplates to secure the rails occur on the raised grade. In this area on both sides of the burnt bridge the rail bed has a width of 8', and the raised grade of imported gravel (rhyolitic gravel?) Have a length of 12' and a height of 10'. A modern concrete pad that is cracked and broken from soil washout during flooding is directly north of the bridge. The modern pad was constructed to help shore the road that is directly north of the bridge. An alignment of east-west burnt fence posts are to the south of the bridge.

***A6. Were Specimens Collected?** ■ No ☐ Yes (If yes, attach Artifact Record or catalog and identify where specimens are curated.)

***A7. Site Condition:** ☐ Good ■ Fair ☐ Poor (Describe disturbances.):

***A8. Nearest Water** (Type, distance and direction): The bridge is a tributary of Temescal Wash, which is approximately 300 m to the northeast. .

***A9. Elevation:** 1,120 feet AMSL

A10. Environmental Setting (Describe culturally relevant variables such as vegetation, fauna, soils, geology, land form, slope, aspect, exposure, etc.): As mentioned above, the bridge was constructed over a tributary of Temescal Wash. A riparian corridor of Cottonwood, Sycamore, and Willow trees flanks the wash. Modern I-10 is close by to the north, and a modern "bone yard" with pipes and other building supplies is directly to the northeast. In this area the general northwest-southeast-trending railroad grade curves to the north.

A11. Historical Information: This section of the AT & SF Railroad, constructed between Lake Elsinore and Corona, was in initially constructed in 1896 to serve the coal and clay mines of the area. The washers on the rod bolts attached to some of the posts have a manufacture date of 1902, therefore this bridge may date to around this period, or perhaps the older bridge was secured with washers and bolts in about 1902 or shortly after.

***A12. Age:** ☐ Prehistoric ☐ Protohistoric ☐ 1542–1769 ☐ 1769–1848 ☐ 1848–1880 ■ 1880–1914 ☐ 1914–1945 ☐ Post-1945 ☐ Undetermined **(Describe position in regional prehistoric chronology or factual historic dates if known):**

A13. Interpretations: (Discuss data potential, function(s), ethnic affiliation, and other interpretations): The remains of the bridge are fairly primitive, and the use of posts rather than square beams suggests that relatively minimal energy and expenditure was implemented on this rustic bridge.

A14. Remarks: The bridge appears to have burned in a fire that at some time swept across the entire area.

A15. References: (Documents, informants, maps, and other references):

A16. Photographs: (List subjects, direction of view, and accession numbers or attach a Photograph Record.): Photo # DSC00458 on the Primary Record is a west-facing view of bridge. Many additional photographs were taken of the bridge and the associated hardware and railroad grade.

Other Identifier: The Santa Fe Railroad grade through the Temescal Valley

***Recorded by** Kristie R. Blevins/Anna M. Hoover ***Date** 05-01-05 [ ] Continuation [X] Update

There was no indication of change on the portion of the Santa Fe Rail observed during the current project. The portion is located to the immediate south of Temescal Canyon Road where it crosses under Interstate 15 and extends to the south, directly southwest of El Hermano Road. Portions of the wooden rail ties were noted as well as broken aqua-colored transformer glass.

The rail line was previously deemed non-significant and is slated for destruction.

***P3a.** Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

This site consists of the remains of the Atchison, Topeka, and Santa Fe railroad between Lake Elsinore and Corona. Initial sections were built in 1896 to serve coal and clay mines. Only the segment within the project area was surveyed. All the railroad features have been removed (i.e., the tracks, ties, signal system) and the roadbed has been severely disturbed in the eastern portion and obliterated in the western portion of the project area by earth moving activities and erosion.

*Resource Name or # (Assigned by recorder)_____

A1. Dimensions: a. Length 22 (miles) b. Width 30 (ft)
Method of Measurement: ____Paced ____Taped √ Visual estimate √ Other: Map measurement
Method of Determination (Check any that apply.): ____Artifacts √ Features ____Soil ____Vegetation ____Topography ____Cut bank ____Animal burrow ____Excavation ____Property boundary ____Other (Explain): ____
Reliability of Determination: √ High ____Low ____Explain: _____
Limitations (Check any that apply): ____Restricted access ____Paved/built over ____Site limits incompletely defined ____Disturbances ____Vegetation ____Other (Explain): _____

A2. Depth: _____ ____None √ Unknown Method of Determination: _____

***A3. Human Remains:** ___Present √ Absent ___Possible ___Unknown (Explain): _____

***A4. Features:** (Number, briefly describe, indicate size, list associated cultural constituents, and show location of each feature on sketch map.) This 22-mile-long site contains numerous historic features associated with railroad construction, most of which have not been surveyed and/or recorded.

***A5. Cultural Constituents:** (Describe and quantify artifacts, ecofacts, cultural residues, etc., not associated with features.) Numerous kinds, e.g., railroad bed gravel, pieces of old ties, etc.

***A6. Were Specimens Collected?** √ No ____Yes (If yes, attach Artifact Record or catalog and identify where specimens are curated.)

***A7. Site Condition:** ____Good √ Fair ____Poor (Describe disturbances.): Construction activities; public road works; vandalism; other earth-moving activities along the route; erosion

***A8. Nearest Water** (Type, distance, and direction.): Temescal Wash along the route at various distances

***A9. Elevation:** Ca. 650-1,400 ft at various points

A10. Environmental Setting: (Describe vegetation, fauna, soils, geology, landform, slope, aspect, exposure, etc.): The railroad follows the Temescal Valley which is a fault-produced valley with multiple sag ponds, springs, and wetlands. The native vegetation is chaparral and some riparian, disturbed in many places by modern constructions of residential and transportation features. Climate is Mediterranean with hot dry summers and cool wet winters. Soils are sandy loams, clays, and decomposed granites.

A11. Historical Information: The southern end of the railroad line, between Lake Elsinore and Alberhill, was built in 1896 by the California Southern Railroad, a Santa Fe subsidiary, initially as a spur line to serve the coal and clay enterprises around Alberhill (Gunther 1984:541; USGS 1901). In 1927, when the Santa Fe Railroad removed its tracks through the troublesome Railroad Canyon, where the Temescal Water Company was preparing to build a dam, this spur line was extended through the Temescal Valley to reconstruct the Santa Fe's connection between Temecula and Riverside (Hudson 1978:68-69; Brown 1985:90). The Temescal Valley route served in this capacity for only a few years, however. In 1935, the Santa Fe Railroad permanently discontinued its service between Elsinore and Temecula and removed its tracks there (Hudson 1978:85). Nevertheless, the railroad between Corona and Lake Elsinore remained in the Santa Fe system until the mid or late 1970s, when it, too, was abandoned (USGS 1953; 1954; 1973; 1982).

***A12. Age:** ___Prehistoric ___Protohistoric ___1542-1769 ___1769-1848 ___1848-1880 √ 1880-1914 ___1914-1945 ___Post 1945 ___Undetermined **Describe position in regional prehistoric chronology or factual historic dates if knows:** See Item A11, above, for detailed discussion of factual historic dates.

A13. Interpretations: (Discuss data potential, function[s], ethnic affiliation, and other interpretations.) The site has been determined not to be eligible for listing in the National Register of Historic Places due to the loss of historical integrity through removal of tracks, ties, signal system, and other features of railroad operations (Love and Tang 1995).

A14. Remarks: A portion of the site between Alberhill and Lake Elsinore received intensive survey during the Temescal Valley Intertie Pipeline Project in 1995 (Love and Tang 1995).

A15. References: (Documents, informants, maps, and other references.): Brown, James T. (1985): *Harvest of the Sun: An Illustrated History of Riverside County*; Windsor Publications, Northridge. 1. **County:** Riverside
2. **USGS Quadrangle:** Lake Mathews dated 1967, photorevised 1988
3. **UTM Coordinates:** Zone 11: 457050 mE 3735620 mN
   (UTMs applies only to newly recorded feature)
4. Twp. 5 S Rng. 6 W; SBBM, N 1/2; SE 1/4; NW 1/4; SW 1/4 of Section 1
   (locational information applies only to newly recorded feature)

5. **Map Coordinates:** 522 mmS 138 mmE 6. **Elevation:** 1040 ft. (317 m.)
7. **Location:** Railroad construction road sweeps up hillside from just south of Temescal Canyon Road southwest to subroad bed. Above subroad bed is a dead grove of trees on a flat-topped hill.

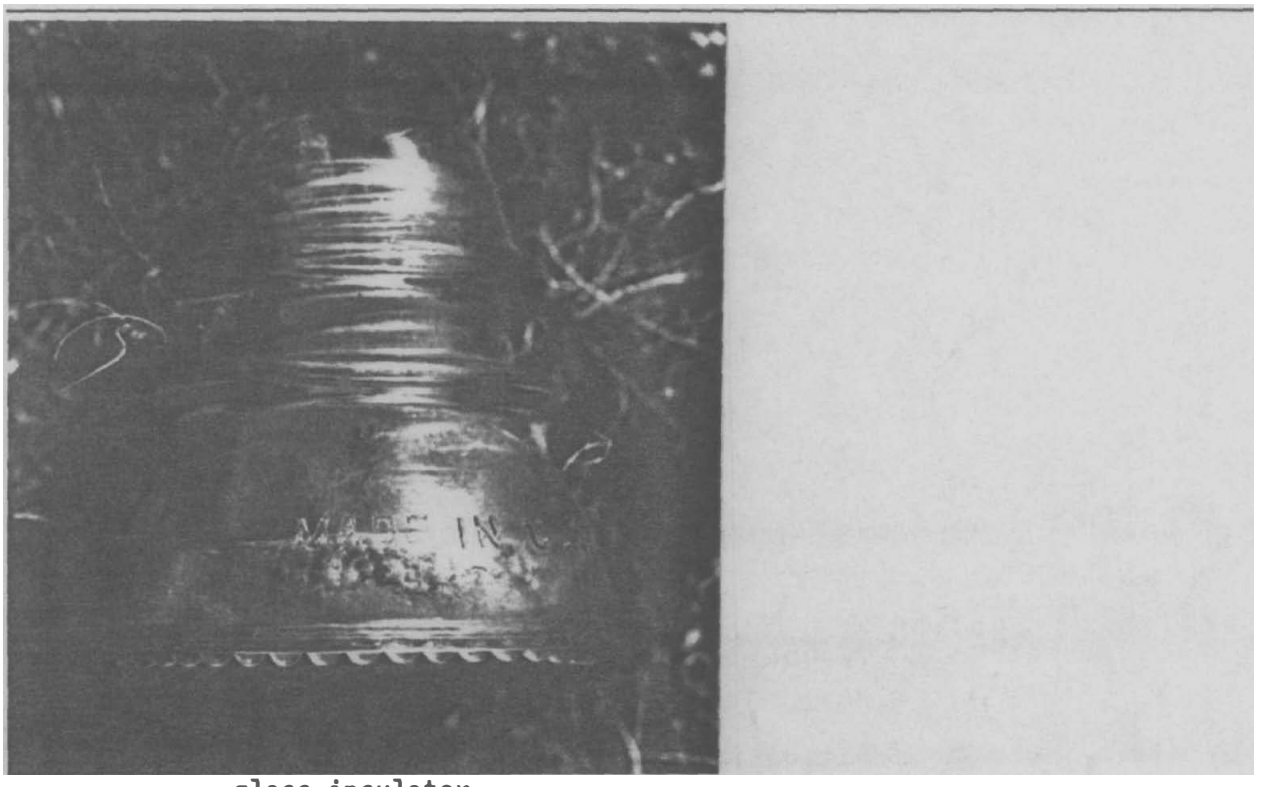
8. **Temporal Period:** Constructed 1927, dismantled during mid 1980s.
9. **Site Activity:** Town ___ Camp ___ Homestead ___ Road _X_ Trail ___ Mines ___ Railroad _X_ Grave Yard ___ Trash Dump ___ Military ___ Other ___ Explain: The Santa Fe Railway built this branch line through Temescal Valley from Corona to Alberhill, connecting with the line at Elsinore.

10. **Area:** ca. 100 m NE/SW x 3 m NW/SE (328 x 10 ft.)
    Method of Determination: estimation
11. **Depth:** none; **Method of Determination:** estimation
12. **Features:** Structure ____ Dugout ____ Fire Hearth ____ Cairn ____ Rock Alignment ___ Trash Dump ___ Irrigation ___ Trail ___ Road _X_ Corral __ Burial ___ Well ___ Spring ___ R&R Grade (berm) _X_ Tram (road/way) ___ Tailings ____ Other ___ Explain: Newly recorded feature of the site is a truck/wagon road used in railroad construction.

13. **Artifacts:** Wood (size/type) ___ Glass _X_ Metal _X_ Bone ___ Ceramic (color) ___ Adobe (condition) ___ Nails (size/type) ___ Cans (size/type) __ Ordnance ___ Other ___ Explain: Aqua glass insulator on flat-topped hill just above railroad subroad bed. Insulator has a beaded edge, interior threads, and is embossed "HEMINGRAY-42/MADE IN U.S.A./7", railroad spike.

14. **Disturbance:** Animal ___ Burning Vandalism ORV Other _X_ Explain: Erosion in wheel ruts.

15. **Date Recorded:** 11 December 1990 16. **Recorders:** K. Swope, D. Peirce
17. **Affiliation and Address:** Archaeological Research Unit, U C Riverside
18. **Present Condition:** Good ___ Fair _X_ Poor ___ Explain: Some erosion has altered the appearance of the road. The subroad bed of the railroad alignment has been cut or graded in places. Wooded trestles remain intact.
19. **Name and Type of Investigation:** Cultural Resources Assessment; UCRARU #1111



20. **Nearest Water:** Temescal Wash ca. 100 m. (328 ft.) north.
21. **Vegetation Community (site vicinity):** Coastal Sage Scrub

RECEIVED IN
JAN 25 1991
EIC

22. **Vegetation (on site):** California Buckwheat (Eriogonum fasciculatum), oak tree nearby, grasses.
23. **Soil:** decomposed granite
24. **Surrounding Soil:** decomposed granite
25. **Geology:** valley
26. **Landform:** slopes above wash
27. **Slope:** ca. 5%
28. **Exposure:** open
29. **Landowner and Address:** private
30. **Remarks:** The railroad alignment was fenced with railroad ties and barbed wire on both sides. The grove of trees is living on southwest side of I-15. In addition to this newly recorded feature of the site, a railroad spur was found from the main Santa Fe line to the Owens-Illinois Glass Plant, site (CA-Riv-4112-H). This spur is discussed in that site record.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The subject property is located at 1428 E. 6th Street in east Corona, south of SR 91 and east of I-15. The area surrounding the 9.4-acre parcel is characterized by a mix of mid-twentieth-century and more recent office and commercial buildings, warehouses, and industrial buildings and lots. Blacktopped except for a small portion of grass and trees along E. 6th Street, and surrounded by steel fences and concrete-block walls, the property has four buildings, three of which are 45 years of age or older.

Set back approximately 125 feet from E. 6th Street, the main and largest building on the property consists of a utilitarian central mass with a flat-roofed, single-story office clad in stucco and concrete blocks. International-style elements on the office include the flat roof, clerestory windows, an aluminum-frame glass entryway door with fixed-pane sidelights and a transom, and concrete-block walls projecting perpendicularly from the façade. The central mass of the building consists of a composition- and corrugated-metal-sided wall and parapet at the north elevation, which fronts three (see continuation sheet)

Required information is bold

P3a. Description (continued)**:**

parallel gable-roof masses, with the two westerly masses extending further to the south than the easterly mass. The three gable-roof masses are sided and roofed in corrugated metal, with large steel-frame multi-light windows on the north, west, east elevations, and large warehouse doors at the south side of the building.

Located along E. 6th Street at the northeast corner of the property is a rectangular-plan utilitarian building topped by a low-pitch side-gable roof. The roof is covered with corrugated metal and elevation walls are clad in stucco. Fenestration consists of pairs of large steel-frame six-over-three pane windows at the upper portion of the north elevation, several lower steel-frame awning windows, and both a wood entryway door and a roll-up warehouse door at the south elevation, which is sheltered by a series of shed-roof covers.

An additional utilitarian building is located immediately southeast of the property's main building. Sided and roofed with corrugated metal, this building is comprised of three parallel front-gabled masses, each with a commercial-grade entryway door and a warehouse door at the west elevation.

e. Other Locational Data: (e.g., parcel #, directions to resource, etc., as appropriate) APN 107-030-003 is situated near the southwest corner of E. 6th Street and Magnolia Avenue near the eastern edge of the City of Corona, approximately 1.25 mile east of the historical downtown core of the city.

P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries) This property was first recorded and included into the California Historical Resources Inventory in 2011 by Tim Yates as part of a reconnaissance-level built-environment survey for a proposed electrical transmission line corridor project (Yates 2011). The commercial building, concrete foundations, and asphalt pavement found on this parcel appear much the same as they did when it was first recorded by Yates in September, 2011. The building is one-story, wood-framed, and rectangular in plan, with a false mansard roof covered with wood shingles. The exterior walls are covered with stucco and fenestration includes aluminum-frame glass storefront windows and glass panel aluminum doors. The concrete slab foundations and asphalt pavement found on the parcel also appear to be in the same condition as when previously recorded. No other resources were encountered in this area of the Project during the field survey. See attached sketch map (Figure 1) for the configuration of the parcel and the locations of the commercial building, concrete foundations, and asphalt pavement.

BUILDING, STRUCTURE, AND OBJECT RECORD

NRHP Status Code 6Z
Resource Name or # (Assigned by recorder) APN 107-030-003

B1. Historic Name: None
B2. Common Name: None
B3. Original Use: Commercial **B4. Present Use:** Vacant

B5. Architectural Style: vernacular wood-frame stucco commercial building

B6. Construction History: (Construction date, alterations, and date of alterations) The commercial building, concrete slab foundations, and asphalt pavement found at this location were constructed sometime between 1962 and 1966 (USDA 1961; USGS 1967). Their design and overall appearance are consistent with the design and construction of commercial buildings and foundations across the U.S. during that time. The last occupants in the building operated a custom furniture, art, and framing business called "Designed Furnishings."

B7. Moved? ☒ No □ Yes □ Unknown **Date:** **Original Location**:

B8. Related Features:

B9a. Architect: Unknown **b. Builder:** Unknown

B10. Significance: **Theme** Mid-twentieth century commercial development
Area Eastern Corona city limits **Period of Significance** 1945–1970
Property Type Commercial building **Applicable Criteria** None apply
(Discuss importance in terms of historical or architectural context as defined by theme, period, and geographic scope. Also address integrity.) This resource is not eligible for the CRHR and is not a historical resource under CEQA. The one-story wood-frame and stucco commercial building located on this parcel was constructed around 1962–1966. Its design was commonly employed for commercial buildings and strip-malls constructed across the U.S. during the post-WWII era. It is plain and modest in appearance and vernacular in design (Figure 2). It exhibits no distinctive characteristics or any particularly interesting architectural detailing that would stand it apart from the numerous other wood-frame and stucco commercial buildings constructed during the era.

The building dates to a relatively late period in the history of the town of Corona. Amidst the post-WWII era development boom, the city limits expanded in all directions from the central core of the town, and former agricultural lands were rezoned for construction and expansion of residential, commercial, and industrial development. While this building is loosely associated with an important trend of events in the history of the town—post-WWII expansion— it is merely the product of that time period, and it is not directly associated with any historically important aspects of that event.

This building does not date to the early settlement and development of the town, nor does it stand out as a distinctive building of the post-WWII era boom period in the town of Corona. Therefore, its association is not directly linked with any important historical events in the town's history (Criterion A/1). There is no indication that this building is directly associated with any prominent historical figures, or with any important architects or designers of the era (Criterion B/2).

In addition, being of standard design and construction for small wood-frame commercial buildings of the post-WWII era, this building does not exhibit any architectural merits that would suggest it is eligible for the NRHP under Criterion C, or the CRHR under Criterion 3. Under Criterion D of the NRHP, and Criterion 4 of the CRHR, this building is unlikely to provide any important information about post-WWII-era architecture, or the construction of commercial buildings at that time that are not already known, or that cannot be obtained through other avenues of research.

While the remnant concrete slab-type foundations and asphalt paving at 33-020201 are historic in age (i.e., 50 years old), or approaching historic age (i.e., 45 years of age), with no building on them and no important information value, features such as these have no architectural or archaeological value and have no potential for historical significance (Figure 3).

B11. Additional Resource Attributes: (List attributes and codes) None.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The subject property, 14282 E. 6th Street, consists of a commercial building sited on a 5.2-acre parcel situated south of SR 91 and east of I-15. The area surrounding the property is characterized by a mix of mid-twentieth-century and more recent office and commercial buildings, warehouses, and industrial buildings and lots. 14282 E. 6th Street is a single-story rectangular-plan building with a north-facing primary façade, stucco wall cladding, and a false mansard roof covered in wood shingles, which surrounds the building's predominantly flat roof. The false mansard projects slightly from the building's east elevation over a pattern of exposed beams and rectangular clerestory windows. Additional fenestration consists of fixed aluminum-frame storefront windows, sliding aluminum-frame windows and glass doors, and aluminum-frame single-leaf glass commercial doors. The building is setback from E. 6th Street behind a blacktopped parking lot. Several large concrete slabs cover portions of the parcel to the south.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The subject industrial-commercial complex includes the addresses 1375 Magnolia Avenue and 1001 E. El Camino Avenue, and is located on an approximately 17-acre parcel bordered by a concrete-lined portion of Temescal Creek to the north and northeast, El Camino Avenue to the west, and Magnolia Avenue to the southeast. The surrounding area is characterized by a mix of mid-twentieth-century and more recent office buildings, warehouses, and industrial buildings and lots. Entrances at El Camino Avenue and Magnolia Avenue provide access to the property. Multiple businesses operate on the property, sharing addresses and making use of the same buildings, all six of which are 45 years of age or older.

The largest is a roughly L-shaped industrial building occupying the northern half of the property. The main entrance is on the building's northwest side. Both of the building's main wings have gabled roofs of corrugated (see continuation sheet)

P3a. Description (continued)**:**

metal. The west wing has a section of roof that projects higher than the rest of the roof and is topped by a monitor-like mass lined with vents. Most walls consist of corrugated metal. Walls also display aluminum- and steel-frame multi-light windows, some with awnings, as well as large warehouse doors and numerous shed-roof projections, some with brick and stucco siding that contain office space, particularly at the northwest elevation. Projecting from the southeast elevation of the building's western wing is a prominent rectangular bay with a flat roof and an open-sided southeast elevation.

Immediately south of the L-shaped building's open-sided bay is a smaller utilitarian building that could not be photographed closely during the survey. Roofed and sided in corrugated metal, the building has a northeast-facing entrance and a front-gabled roof, with a shed extension of the roof sheltering loading areas at the southeast elevation. A bay projecting at the north side of the northeast elevation also forms a larger loading space.

South of the above two buildings near El Camino Avenue stands the second largest building on the property. This rectangular-plan utilitarian industrial building has a southwest-facing main entrance, corrugated metal and composite siding, and corrugated metal roof sections of varying shape. Most of the building is topped by a sawtooth roof with clerestory windows on the vertical surfaces below ridges, some of which are boarded over. The eastern portion of the building has a saltbox roof. The southwest side of the building has a gable roof and a largely open-sided southwest elevation. A square-shaped mass rises from the northeast corner of the building and a gable-roof mass rises from the southwestern shed roof. The shed roof projections on the southwest side of the building accommodate the entrance and what appear to be offices.

Smaller buildings occupy the southern portion of the property. Located southeast of the L-shaped building, at the property's southeast entrance along Magnolia Avenue, is a single-story, irregular-plan office building with a low-pitch hip roof clad in composition shingles and forming wide eave overhangs. The building's stucco-clad walls have sliding aluminum windows. Concrete-block walls and planters screen the southeast side of the building, presumably its façade entrance, from view at Magnolia Avenue.

A modest-sized utilitarian building with warehouse doors at its northeast-facing entrance is also located at the property's southwest corner, near the intersection of El Camino and Magnolia Avenues. Clad entirely in corrugated metal, the rectangular-plan building has a side-gable roof and a shed projection with a warehouse at the southeast corner (see continuation sheet).

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The subject property is a utilitarian building surrounded by a parking lot with the address 1640 E. 6th Street. The building is sited on an approximately one-acre parcel situated south of SR 91 and east of I-15, in an area characterized by a mix of mid-twentieth-century and more recent office and commercial buildings, warehouses, and industrial buildings and lots. The rectangular-plan building has a north-facing façade, concrete-block walls, and a side-gable roof covered in composition shingles with minimal eave overhangs. The gable ends are sided in scalloped vertical boards. Façade fenestration consists of a centered entryway with a wood door and security screen, and two flanking windows fronted by security bars. All other window openings are boarded. The rear south elevation has a shed-roof addition with vertical-board siding and a secondary access door fronted by a security screen. The western half of the façade has a planter lined with shrubs.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The subject property, 1650 E. 6th Street, is a commercial building sited on a 1.6-acre parcel with a large parking lot and multiple palm trees. The property is located in eastern Corona south of SR 91 and east of I-15. The surrounding area consists of a mix of mid-twentieth-century and more recent office and commercial buildings, warehouses, and industrial buildings and lots. 1650 E. 6th Street is a rectangular-plan building with a north-facing façade and projections from the west side of the rear south elevation. The façade and the west and east elevations feature false mansard roofs covered in wood shingles; the majority of the building's main mass is flat-roofed. The façade also has three gables, with the northeast and northwest gables projecting outward to form entry shelters with supporting wood posts. The west elevation features a single gablet and a parapet, both sided with vertical boards. Wall surfaces include signage, board and batten at the east elevation, and concrete blocks at the north and west elevations (see continuation sheet).

*P3a. Description: (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)
Originally developed as a ceramic tile manufacturer, the subject industrial property is located at 1620 Magnolia Avenue on two parcels, which encompasses approximately 20 acres in eastern Corona south of SR 91 and east of I-15. The area around the property consists of a mix of mid-twentieth-century and more recent office buildings, warehouses, and industrial buildings and empty lots. Two buildings stand on the property.

The smaller of the two buildings is situated at the front of the property along Magnolia Avenue and appears to have originally served as a gate house or security check point (photograph 2). The asymmetrically arranged, rectangular-plan building has an offset northwest-facing entry and a low-pitched side-gable roof. Covered in Spanish tile, the roof forms wide eave overhangs with prominently exposed ceiling beams and rafter tails. The projecting roof line forms a shelter running the length of the north elevation and a car port at the west side of the plan. Square brick-clad columns support the shelter and carport (see continuation sheet 4).

Historic Background

Riverside County

In 1776 and again in 1778, Spanish army Captain Juan Bautista de Anza led an overland expedition through the region on a 1200 mile route from Nogales, Arizona to San Francisco, California. He traversed Riverside County along the historic route now designated the Juan Bautista de Anza Historic Trail. During the late 18th century, the Spanish mission fathers of San Gabriel Arcángel, San Juan Capistrano, and San Luis Rey missions began colonizing the lands of the Native Americans, utilizing the interior valley of Western Riverside County for raising grain and cattle. San Gabriel Arcángel Mission claimed lands in present-day Jurupa, Riverside, San Jacinto, and the San Gorgonio Pass, while San Luis Rey mission claimed land around present day Lake Elsinore, Temecula, and Murrieta. These lands were used for grazing large herds of mission-owned cattle and sheep transported to market along mission trails. After the secularization of the missions, sixteen ranchos were granted in Riverside County; Juan Bandini received the first of these in 1838 (Brown and Boyd 1922: 15, 26, 91; Hoover et al. 2002: 292-93, 295.) (see continuation sheet 4).

***P3a. Description (cont.):**

The building's walls are also clad in brick. Fenestration consists of horizontal aluminum-slider windows, an aluminum-frame single-leaf glass entry door, and two small jalousie windows at the southeast elevation.

Southeast of the smaller building is a sprawling, irregular-plan utilitarian building measuring approximately 700 feet in length. The northern front of the building resembles a modern pole barn and has a large northwest-facing opening, a low-pitch front-gabled metal roof, metal siding, and a large rectangular space cut out of the roof (photograph 3). To the southeast, the building varies in width and height and has low-pitched gable roofs with metal cladding. A monitor runs the length of the roof ridge at the central portion of the building. The building's walls are clad in metal south of the pole-barn-like front mass as well. Along the northeast elevation south of the pole-barn-like front mass, the building has horizontal aluminum-frame windows at what appear to be several office areas (photograph 4). This portion of the building includes a shed-roofed projection with numerous aluminum-frame windows, and is accessed by a wood entry door with a small cantilevered shelter, and a two-leaf aluminum-frame and glass entry door with a small gabled shelter. Aerial views indicate that a concrete ramp descends to a loading dock at the southwest elevation opposite the northeast elevation's projecting shed-roofed mass (the southwest side of the building could not be accessed during the survey). The building's metal-clad, south-central and southern portion has several warehouse entries, one of which retains dual doors that slide horizontally on a track, as well as multiple louvered vents, wood entry doors, several horizontal aluminum-slider windows, and several attached canopies with metal support poles (photographs 5 and 6). The south end of the building is comprised of an L-shaped metal-clad projection with gable roofs (photograph 6). This southern mass is largely open-sided and, like the building's front mass, resembles a modern pole barn.

The building is surrounded by asphalt paving and unpaved areas strewn with clay tile shards. A chain link and steel-pole fence surrounds the property, which is accessed through a chain-link and steel-pole gate at Leeson Lane along the northwest side of property.

***B10. Significance (cont.):**

Shortly after the founding of Riverside in 1870, a prosperous citrus industry began to take foot in the region. By the early 1870s, two simple canals had been constructed by diverting water from the Santa Ana River to Riverside agricultural land, thus making large-scale crop production possible for the first time. This basic irrigation served as a catalyst for crop experimentation in Riverside's arid climate. The citrus industry in Riverside is often said to have began in 1873 when resident Eliza Tibbets planted two Brazilian naval orange trees on her property. The trees thrived and caught the attention of many local agricultural producers. Not only did the newly introduced navel oranges have superior taste, appearance, and size compared to other varieties of oranges of the day, they were also seedless. Following a tasting party in 1878 and the first formal Citrus Fair in Riverside in 1879, Riverside's navel oranges gained widespread notoriety. The success of the local citrus industry in the following decade spurred an expansion of the irrigation system with the construction of the Gage Canal in 1887. Named after its builder, Matthew Gage, the canal transported water from the eastern San Bernardino Valley and became the main channel of the irrigation system. This newer canal facilitated an even more aggressive expansion of the Riverside citrus industry and played a critical role in supporting the city's growing economic activity around the turn of the century. Riverside grew rapidly during the 1880s thanks to the economic engine of citrus cultivation. (Brown and Boyd 1922: 59, 409-416, 426-27.)

The city of Riverside was formally incorporated in 1883. The County of Riverside was created a decade later out of portions of San Bernardino and San Diego Counties, with the City of Riverside as the county seat. By then, Riverside citizens had amassed increasing wealth through citrus enterprise. The arrival of the California Southern (later the Santa Fe) and Southern Pacific Railroads, along with the development of the refrigerated railroad car, allowed local growers to ship fruit to East Coast markets. Local fruit growers joined together to pick and sell fruit under a single brand name and fruit-grading system. The plan expanded, and by 1893 growers had formed the Southern California Fruit Exchange to market their products. By then, the Citrus industry had also spread to South Riverside, a growing area that would soon become the city of Corona. (Brown and Boyd 1922: 55, 94-99, 444-447, 497-49, 541; Hoover et al. 2002: 296-97, 565.) (see continuation sheet 5)

***B10. Significance (cont.):**

Corona

In 1886, at the encouragement of developer Robert B. Taylor, considered the "Father of Corona," a partnership headed by Adolph Rimpau of Anaheim formed the South Riverside Land and Water Company and purchased approximately 12,000 acres of quality agricultural land for $110,000 to establish South Riverside. The same year, civil engineer and surveyor Hiram Clay (H.C.) Kellogg, well-known in Southern California as the surveyor for wineries, laid out the city, including "Grand Boulevard," a broad circular street with a three-mile circumference at the city's center. In 1896, South Riverside's citizens moved to formally incorporate the town. The new city was renamed Corona in honor of its circular Grand Boulevard. During subsequent decades, residents made a practice of parading their fancy buggies on the circular boulevard enclosing the community's core, which encompassed schools, churches, residences and stores. In July 2011, Grand Boulevard roadway and its contributing streetscape features—trees, parkways, and streetlights—were listed on the National Register of Historic Places as a historic district (Brown and Boyd 1922: 553, 555, 558, Director of the National Park Service 2011; Mermilliod, 2011: 10-15).

Agriculture propelled Corona's growth and sustained its economy for almost a century after the community's establishment at the height of the Southern California citrus boom. The first lemon processing plant in the country was built in Corona in 1915. The surrounding area is known for its abundant natural resources, which include the Temescal Tin Mines, some of the best clay and mineral deposits in the United States, and ideal land and climate conditions for citrus production. The area north of the city's core also supported large ranches and dairy farms, which in turn helped support one of the largest cheese factories in the country. During the early twentieth century, the area's clay deposits supported a thriving new industry of brick and tile production that included companies such as Alberhill Coal and Clay Company, Pacific Clay Products Company, the Karl Martin Company, and Los Angeles Pressed Brick Company. Corona's status as a way station for travelers between Los Angeles and the outlying desert communities was dramatically altered in the mid-1910s when it became an internationally recognized road-racing draw. The popularity of racing in the city was based on Grand Boulevard, the one-mile diameter circular street that defined the city's central core. (Brown and Boyd 1922: 75, 165-67, 441-42, 459-463, 558-63; Mermilliod 2011: 12, 14.)

The growth of the Corona-area citrus industry propelled the development of the city's early industrial center along the railroad line that crosses the northern portion of Grand Boulevard. After the failure of the California Southern Railroad due to repeated floods in Temecula Canyon to the south, the Santa Fe took over the California Southern and rebuilt the regional line, which began serving Corona (then South Riverside) in 1887. Beginning in the late nineteenth century, citrus growers developed fruit and other food processing and shipping facilities (the Borden Milk Company facilities, for example) along the Santa Fe line that cuts through northern portion of the Grand Boulevard circle.

These facilities included the Corona Citrus Association packinghouse and the Corona Foothill Lemon Company (originally the Corona Lemon Company) complex. (Brown and Boyd 1922: 94-99; 556-57, Lancaster and Messecar 2006). Today, most of the citrus groves and mining operations have given way to housing, commercial, and light-industrial development, although the areas of Corona retain a rural feel.

Evaluation

Due to insufficient historic and architectural significance, the San Vallé Tile Kilns, Inc. facility at 1620 Magnolia Avenue does not appear to meet the criteria for listing on the California Register of Historical Resources (CRHR). The period of potential significance is 1965-66, the years during which the building was constructed.

Documents on file at the Building Department of the City of Corona indicate that the buildings on the subject property were constructed in 1965-66 at 13950 Magnolia Avenue for the San Vallé Tile Kilns, Inc., headed by Sam Greenbaum. The address of the property was later changed to 1620 Magnolia Avenue. (City of Corona Building Department 1965, 1966; City of Corona 1968.) (see continuation sheet 6)

***B10. Significance (cont.):**

Additional Building Department documentation and historic aerial images indicate that the southeast half of the larger building's southern L-shaped mass was added in the late 1970s (Donovan 1973; HistoricAerials.com 1948, 1967, 1980.) The property remained in the Greenbaum family into the 1980s. In 1988, Princeland Development Company acquired the property from Sam, Katherine, and Steven E. Greenbaum. (Riverside County Assessor 1988: Doc. No. 1988-181802.)

The San Vallé Tile Kilns, Inc. property is associated with clay extraction and tile and brick fabrication, which are important themes in the economic history of the Riverside County and the Corona area. However, the San Vallé Tile Kilns, Inc. facility at1620 Magnolia Avenue was developed decades after these industries were established in the region, and over a half century after tile became an important feature in twentieth-century southern California architecture with the rise of the Spanish Colonial Revival style. (Brown and Boyd 1922: 459-463; Gebhard 1967.) The property does not appear to be associated with important events in the history of Corona, Riverside County, the State of California, or the United States. It does not, therefore, appear to meet Criterion 1 for listing in the CRHR. Research revealed no evidence that Sam Greenbaum, members of his family, or any other individuals affiliated with San Vallé Tile Kilns, Inc. are important to local, state, or national history. The subject property does not, therefore, appear to meet Criterion 2 for listing in the CRHR.

The property's smaller brick-clad building and its larger metal-clad industrial building do not appear to have architectural significance. Research revealed no associations between these buildings and master architects or builders. Neither of the property's buildings embodies the distinctive characteristics of a type, period, or method of construction. Although the smaller building's exposed beams and rafters are representative of mid-century modern architecture, this building is a commonplace example of such architecture. The larger utilitarian industrial building is also a commonplace example of a large mid-to-late-twentieth-century industrial building. Neither of the property's buildings have high artistic value. The property as a whole does not, therefore, appear to be eligible for the CRHR under Criterion 3.

The buildings on this property do not appear to be significant as sources of important information regarding history. They do not appear to have any likelihood of yielding important information about historic construction materials or technologies. Therefore this property does not appear to be eligible for the CRHR under Criterion 4.

In summary, the former San Vallé Tile Kilns, Inc. property does not appear to meet the Criteria for listing on the CRHR. The property was evaluated in accordance with Section 15064.5(a) (2)-(3) of the CEQA Guidelines, using the criteria outlined in Section 5024.1 of the Public Resources Code, and determined not to be a historical resource for the purposes of CEQA (see continuation sheet 7)

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The subject property, which encompasses the addresses 1340-1350 E. 6th Street, is a three-acre parcel in eastern Corona, south of SR 91 and east of I-15. The area surrounding the property consists of a mix of mid-twentieth-century and more recent office and commercial buildings, warehouses, and industrial buildings and lots. Five buildings 45 years old or older stand on the property. One of these, a building located at the southeast corner of the parcel and associated with 1350 E. 6th Street, an equipment lot occupying the eastern portion of the property, could not be photographed. Four of the five building are located on the west side of the parcel amid blacktopped parking areas.

Located at the northwest corner of the property, 1340 E. 6th Street is a rectangular-plan, flat-roofed restaurant with brick-sided and concrete-block walls. The building's fenestration consists of fixed aluminum-frame windows and commercial-grade glass doors. A long patio cover projecting from the roof of the east-facing primary façade extends south of the building supported by metal posts. Steel railing outlines the patio area. A shed addition from the building's south elevation contains bathrooms (see continuation sheet).

Required information is bold

P3a. Description (continued)**:**

The three buildings south of the restaurant appear to share the address 1342 E. 6th Street. Situated immediately south of the restaurant is a single-story rectangular-plan office. The building's horizontality, asymmetrically arranged east-facing façade, and variegated siding reflect the influence of the Ranch style. The building is topped by a low-pitch cross-gable roof with composition shingles and wide eave overhangs. The gable end features exposed beams over clerestory windows and full-length façade windows. Decorative concrete-block walls screen portions of the façade and north elevation. Siding includes brick, fieldstone, and stucco. A carport projects to the east from the south end of the façade.

Two more buildings are located at the property's southwest corner. The westernmost of these is a square-plan utilitarian repair garage with concrete-block elevation walls, a side-gable roof, and a north-facing facade. The roof is covered in composition shingles. A shed addition projects from the west elevation. A steel-pole and corrugated-metal-roofed car port separates this building from another building to the east that appears to be an office or residence. The eastern of the two buildings has an extremely low-pitch (nearly flat) side-gable roof with minimal eave overhangs, and walls formed of concrete-blocks. Fenestration consists of aluminum- and wood-frame windows, and a centrally positioned wood entryway door. A shed addition extends from the west elevation.

Aerial views indicate that the building that could not be accessed is a shed-roofed utilitarian building with a large warehouse door at the north elevation and projecting shelter at the west elevation.

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

Located on the north side of the lot at E. 6th Street, the complex's animal hospital is a square-plan modern vernacular commercial building with concrete-block walls, a flat roof, and variegated finish on the north-facing façade (photograph 1). The east end of the main façade is formed of concrete-blocks and features a pattern of projecting and recessed blocks. To the west, under a flat shelter supported by deeply projecting roof beams, the façade finish incorporates stucco and spaced narrow vertical boards. Fenestration includes two fixed aluminum-frame windows fronted by spaced horizontal boards and a large four-pane fixed aluminum frame window at the west end, adjacent to what appears to be a solid veneered entry door under a matching veneered panel. A concrete-block wall topped with ironwork and featuring several steel lights with globe lamps separates the façade from the property's asphalt drive. A secondary entry with a solid veneered door and security screen is sheltered by a vinyl awning and flanked by small concrete-block walls at the center of the west elevation. The rear (south) elevation has several small windows covered by security bars and a centrally positioned commercial-grade entry door (see continuation sheet).

***P3a. Description (cont.):**

Southwest of the main building is a rectangular-plan Ranch style building with a north-facing façade and Storybook style elements such as overlapping vertical-board wall cladding, wood-frame windows with diamond-shaped grids, and a cross-gable roof covered in wood shingles and forming broadly overhanging eaves with exposed rafter tails (photograph 2). More Storybook features include scalloped bargeboard and scalloped horizontal cornice boards on the enclosed east-facing gable and the small window pediment gables projecting from the main façade, as well as scalloped window-sill decoration and faux two-leaf doors with louvers on each side of the building's centered commercial-grade solid entry door. The property's southernmost building, a pet motel, has a cross-shaped plan, a cross-gabled roof covered in composition material, and stucco wall cladding (photograph 3). The west-facing entrance consists of a solid door fronted by a security screen and flanked by aluminum-frame windows with faux shutters and security bars. Two waist-high stucco-clad walls project outward from each side of the entry. Stucco-clad perimeter walls surround the building. Slightly angled, corrugated-metal covers extend from the west and east perimeter walls toward the building to shelter rows of kennels.

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 451402 Project No: CLOW Location: Clow - 1375 Magnolia Ave Date Received: 10/04/21

This data package contains sample and QC results for sixteen soil samples, requested for the above referenced project on 10/04/21. The samples were received cold and intact.

PCBs (EPA 8082):

High surrogate recoveries were observed for decachlorobiphenyl (PCB surrogate) in many samples. S-3-1 (lab # 451402-007) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

Case Narrative

EarthCon Consultants CA, Inc.
1100 W. Town and Country Rd
Suite 200
Orange, CA 92868
Becky Sundilson

Lab Job Number: 451564
Project No: CLOW
Location: CLOW - EAR051921
Date Received: 10/06/21

This data package contains sample and QC results for fourteen soil samples, requested for the above referenced project on 10/06/21. The samples were received cold and intact.

PCBs (EPA 8082):

S-12-1 (lab # 451564-012) was diluted due to the color of the sample extract. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: Clow

Date Received: 10/06/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 3) Sample Temp (°C, No Cooler):

Sample Temp (°C), One from each cooler: #1: 5.0 #2: #3: #4:

(Acceptance range is 0°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information:

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other

Cooler Temp (°C): #1: 2.9 #2: #3: #4:

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Water seen in Sample jars: 2,8,6,11,12. Time on the jar for sample 10 is 14:40.

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal (Initials: Date/Time:) ☑ Email ("e-mail" sent to/on): PAM / 10/6/21

Project Manager's response:

Completed By: Date: 10/06/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 451567 Project No: CLOW Location: CLOW - EAR051921 Date Received: 10/06/21

This data package contains sample and QC results for six soil samples, requested for the above referenced project on 10/06/21. The samples were received cold and intact.

PCBs (EPA 8082):

A number of samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: CLOW

Date Received: 10/6/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip to section 3) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 5.9 #2: _____ #3: _____ #4: _____

Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is > 0°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 3.4 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓	✓	
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Sample 004 had water in it.

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time: _____

☑ Email (email sent to/on): EAM / 10/6/21

Project Manager's response:

Completed By: Yolanda Sylvestre Date: 10/6/21

ENTHALPY ANALYTICAL

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 451659 Project No: CLOW Location: Clow - 1375 Magnolia Ave Date Received: 10/07/21

This data package contains sample and QC results for fourteen soil samples, requested for the above referenced project on 10/07/21. The samples were received cold and intact.

PCBs (EPA 8082):

Low internal standard responses were observed for 1-bromo-2-nitrobenzene (PCB) in S-19-1 (lab # 451659-006) and S-21-3 (lab # 451659-011); affected data was qualified with "b". High internal standard responses were observed for 1-bromo-2-nitrobenzene (1248) in S-20-3 (lab # 451659-009) and S-22-1 (lab # 451659-012); the affected analyte was not detected at or above the RL in the associated samples, and affected data was qualified with "b". Response exceeding the instrument's linear range was observed for decachlorobiphenyl (PCB surrogate) in S-21-3 (lab # 451659-011); affected data was qualified with "E". High surrogate recoveries were observed for decachlorobiphenyl (PCB surrogate) in S-19-1 (lab # 451659-006) and S-21-3 (lab # 451659-011); no target analytes were detected in these samples. S-17-1 (lab # 451659-001) was diluted due to the dark color of the sample extract. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Ennhcon Consultants Project: Clow

Date Received: 10/07/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) [No Cooler]: ____

Sample Temp (°C), One from each cooler: #1: 3.2 #2: ____ #3: ____ #4: ____

(Acceptance range is <6°C but not frozen (for Microbiology samples, acceptance range is <10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: ____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other ____

Cooler Temp (°C): #1: 0.7 #2: ____ #3: ____ #4: ____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-5 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal (Initials: ____ Date/Time: ____ ____) ☐ Email (email sent on/or): ____ / ____

Project Manager's response:

Completed By: [signature] Date: 10/7/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 451711 Project No: CLOW Location: CLOW Date Received: 10/08/21

This data package contains sample and QC results for five soil samples, requested for the above referenced project on 10/08/21. The samples were received cold and intact.

PCBs (EPA 8082):

Low recoveries were observed for Aroclor-1260 in the MS/MSD of S-10-3 (lab # 451711-001); the LCS was within limits. High RPD was observed for Aroclor-1016 and Aroclor-1260. S-23-1 (lab # 451711-002), S-23-3 (lab # 451711-003), and S-24-1 (lab # 451711-004) were diluted due to the color of the sample extracts. S-10-5 (lab # 451711-005) was diluted due to the dark color of the sample extract. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: Clow

Date Received: 10/8/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (see section 3) Sample Temp (°C) [No Cooler]: _____

Sample Temp (°C), One from each cooler. #1: 5.6 #2: _____ #3: _____ #4: _____

(Acceptance range is 0 to 6°C but not frozen for Microbiology samples, acceptance range is > 0°C but not frozen). If unacceptable for samples collected the same day, client notified to leave at higher temperature or temperature evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other: _____

Cooler Temp (°C): #1: 5.0 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✔		
Are sample IDs present?	✔		
Are sampling dates & times present?	✔		
Is a relinquished signature present?	✔		
Are the tests required clearly indicated on the COC?	✔		
Are custody seals present?		✔	
If custody seals are present, were they intact?			✔
Are all samples sealed in plastic bags? [Recommended for Microbiology samples]	✔		
Did all samples arrive intact? If no, indicate in Section 4 below	✔		
Did all bottle labels agree with COC? (ID, dates and times)	✔		
Were the samples collected in the correct containers for the required tests?	✔		
Are the containers labeled with the correct preservatives?			✔
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✔
Was a sufficient amount of sample submitted for the requested tests?	✔		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal Initials _____ Date/Time _____

☐ Email Email sent to/on: _____ / _____

Project Manager's response.

Completed By: _____ Date: 10/8/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 451879 Project No: CLOW Location: Corona - Clow Date Received: 10/12/21

This data package contains sample and QC results for sixteen soil samples, requested for the above referenced project on 10/12/21. The samples were received cold and intact.

PCBs (EPA 8082):

High recoveries were observed for Aroclor-1016 and Aroclor-1260 in the MS/MSD of S-25-1 (lab # 451879-001); the LCS was within limits. High RPD was also observed for Aroclor-1016 and Aroclor-1260. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants — Project: Corona-CLOW

Date Received: 10/12/21 — Sample's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 3) — Sample Temp (°C) (No Cooler): _____

Sample Temp (°C) One from each cooler: #1 5.4 #2 _____ #3: _____ #4: _____

(Note: for chilled (4°C but not frozen) microbiology samples, acceptance range is 2-10°C but not frozen) It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 2.0 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✔		
Are sample IDs present?	✔		
Are sampling dates & times present?	✔		
Is a relinquished signature present?	✔		
Are the tests required clearly indicated on the COC?	✔		
Are custody seal's present?		✔	
If custody seals are present, were they intact?			✔
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✔		
Did all samples arrive intact? If no, indicate in Section 4 below	✔		
Did all bottle labels agree with COC? (ID, dates and times)	✔		
Were the samples collected in the correct containers for the required tests?	✔		
Are the containers labeled with the correct preservatives?			✔
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✔
Was a sufficient amount of sample submitted for the requested tests?	✔		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal (Initials: _____ Date/Time: _____) ☐ Email (email sent to/on): _____ / _____

Project Manager's response

Completed By: _____ Date: 10/12/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 452005 Project No: CLOW Location: Corona CLOW Date Received: 10/14/21

This data package contains sample and QC results for twelve soil samples, requested for the above referenced project on 10/14/21. The samples were received cold and intact.

PCBs (EPA 8082):

High recoveries were observed for Aroclor-1016 and Aroclor-1260 in the MS/MSD of S-30-6 (lab # 452005-004); the LCS was within limits. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: CLCW

Date Received: 10/14/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip to Section 3) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 7.8 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 7.2 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time: _____ ☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: Elena Sylvester Date: 10/18/21 14:05

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: Corona-Clow

Date Received: 10/15/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 5.0 #2: _____ #3: _____ #4: _____

(Acceptance range is 0-6°C but not frozen for Microbiology samples. Exception: if temp is <0°C but not frozen, it is acceptable for samples received the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 5.0 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✔		
Are sample IDs present?	✔		
Are sampling dates & times present?	✔		
Is a relinquished signature present?	✔		
Are the tests required clearly indicated on the COC?	✔		
Are custody seals present?		✔	
If custody seals are present, were they intact?			✔
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✔		
Did all samples arrive intact? If no, indicate in Section 4 below.	✔		
Did all bottle labels agree with COC? (ID, dates and times)	✔		
Were the samples collected in the correct containers for the required tests?	✔		
Are the containers labeled with the correct preservatives?			✔
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✔
Was a sufficient amount of sample submitted for the requested tests?	✔		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time: _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 10/15/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 452232 Project No: CLOW Location: Corona- CLOW Date Received: 10/19/21

This data package contains sample and QC results for thirteen soil samples, requested for the above referenced project on 10/19/21. The samples were received cold and intact.

PCBs (EPA 8082):

No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: Corona - CLOW

Date Received: 10/19/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 6.9 #2: _____ #3: _____ #4: _____

(Acceptance range is 0°C to 6°C but not frozen (for Microbiology samples, acceptance range is <10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 2.3 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 10/19/21

ENTHALPY ANALYTICAL

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 455032 Project No: CLOW Location: CLOW Date Received: 12/13/21

This data package contains sample and QC results for seventy three soil samples, requested for the above referenced project on 12/13/21. The samples were received cold and intact.

PCBs (EPA 8082):

High recoveries were observed for Aroclor-1016 in the MS/MSD of P-6-0 (lab # 455032-001); the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated samples. High recoveries were observed for Aroclor-1016 in the MS/MSD of P-2-3 (lab # 455032-041); the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated samples. High recoveries were observed for Aroclor-1016 and Aroclor-1260 in the MS/MSD of S-43-1 (lab # 455032-061); the LCS was within limits, and the associated RPDs were within limits. High surrogate recovery was observed for decachlorobiphenyl (PCB) in P-5-0 (lab # 455032-043). No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: EarthCon Consultants CA, Inc. Project: CLOW

Date Received: 12/13/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 3 ☐ No (see section 3) Sample Temp (°C) (No Cooler):

Sample Temp (°C), One from each cooler: #1: 5.7 #2: 5.6 #3: 5.1 #4:

Acceptance range is 0-6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.

Shipping Information:

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other

Cooler Temp (°C): #1: 1.0 #2: 1.4 #3: 1.3 #4:

Section 4	YES	NO	N/A
Was a COC received?	✔		
Are sample IDs present?	✔		
Are sampling dates & times present?	✔		
Is a relinquished signature present?	✔		
Are the tests required clearly indicated on the COC?	✔		
Are custody seals present?		✔	
If custody seals are present, were they intact?			✔
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✔
Did all samples arrive intact? If no, indicate in Section 4 below.	✔		
Did all bottle labels agree with COC? (ID, dates and times)		✔	
Were the samples collected in the correct containers for the required tests?	✔		
Are the containers labeled with the correct preservatives?			✔
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✔
Was a sufficient amount of sample submitted for the requested tests?	✔		

Section 5 Explanations/Comments

Sample 68,70, on Jars dont match COC

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: Date/Time:

☐ Email Email sent to/on: /

Project Manager's response:

Completed By: Date: 12/13/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 455090 Project No: CLOW Location: CLOW Valve, 04.20150013.19 task 8 Date Received: 12/14/21

This data package contains sample and QC results for eight soil samples, requested for the above referenced project on 12/14/21. The samples were received cold and intact.

PCBs (EPA 8082):

S-54-1 (lab # 455090-001) was diluted due to the color of the sample extract. S-58-1 (lab # 455090-007) was diluted due to the dark color of the sample extract. No other analytical problems were encountered.

Metals (EPA 6010B):

No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: EarthCon — Project: CL OW Valve

Date Received: 12/14/21 — Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) — Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 4.2 #2: _____ #3: _____ #4: _____

(Acceptance range is <6°C but not frozen (for Microbiology samples, acceptance range is >0°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 2.1 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time _____ ☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: Heena Ghretti Date: 12/14/21

C DESIGN PLAN

DPR 2022-XXXX

MAGNOLIA AVENUE BUSINESS CENTER
TENTATIVE PARCEL MAP NO. XXXXX
PRECISE PLAN

IN THE CITY OF CORONA, COUNTY OF RIVERSIDE
FEBRUARY 2022

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF CORONA, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THAT PORTION OF THE NORTHWEST QUARTER OF SECTION 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, AS SHOWN BY SECTIONALIZED SURVEY OF THE RANCHO EX SOBRANTE DE SAN JACINTO, AND OF LOT 13 IN BLOCK 63 OF THE LANDS OF THE RIVERSIDE LAND AND IRRIGATING COMPANY, AS SHOWN BY MAP ON FILE IN BOOK 1 PAGE 70 OF MAPS, SAN BERNARDINO COUNTY RECORDS, BOUNDED AS FOLLOWS: ON THE SOUTHEAST BY THE SOUTHWESTERLY EXTENSION OF THE NORTHWEST LINE OF MAGNOLIA AVENUE, AS SHOWN ON RECORD OF SURVEY ENTITLED "RECORD OF SURVEY OF A PORTION OF LOTS 11, 12, 13, 14, 15, IN BLOCK 63 OF RIVERSIDE LAND AND IRRIGATING COMPANY AND A PORTION OF SECTIONS 29 AND 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, SAN BERNARDINO BASE AND MERIDIAN" ON FILE IN BOOK 20, PAGE 3 OF RECORD OF SURVEY, RIVERSIDE COUNTY RECORDS; ON THE WEST BY THE EASTERLY LINE OF THE PROPERTY SPUR OF THE ATCHISON, TOPEKA, AND SANTA FE RAILWAY COMPANY; AND ON THE NORTHEAST BY THE SOUTHERLY AND SOUTHWESTERLY LINE OF PARCELS 5 TO 11, INCLUSIVE, OF SAID RECORD OF SURVEY ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS.

EXCEPTING THEREFROM THAT PORTION GRANTED TO THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER DISTRICT CONSERVATION DISTRICT, BY DEED RECORDED OCTOBER 22, 1984 AS INSTRUMENT NO. 84-227367 AND RE-RECORDED FEBRUARY 11, 1985 AS INSTRUMENT NO. 85-028214 BOTH OF OFFICIAL RECORDS.

APN: 107-030-022-3

EASEMENTS:

ITEMS SHOWN HEREON WERE PLOTTED FROM RECORD DATA BASED ON DOCUMENTS FROM THE TICOR TITLE, REPORT ORDER NO. 00852012-021-DN1, DATED AUGUST 31, 2021.

PLOTTABLE EASEMENTS ARE INDICATED BY A " ⬡ ", NON-PLOTTABLE EASEMENTS ARE INDICATED BY " □ " ALL WITHIN THE "EXCEPTION" ITEMS OF THE TITLE REPORT.

6 AN EASEMENT FOR PIPELINES, DITCHES AND FLUMES, AS RESERVED IN FAVOR OF JOHN FLETCHER MOULTON AND HERBERT BULKLEY PRAED, RECORDED APRIL 4, 1906 IN BOOK 216, PAGE 171, OF DEEDS.
AFFECTS PARCEL: EASEMENT CANNOT BE LOCATED PER RECORD.

7 AN EASEMENT FOR ROADS, PIPE LINES, WATER CONDUITS, POWER LINES, TELEPHONE AND TELEGRAPH LINES, AS RESERVED IN FAVOR OF JOHN FLETCHER MOULTON AND HERBERT BULKLEY PRAED, RECORDED FEBRUARY 7, 1911 IN BOOK 324, PAGE 389, OF DEEDS.
AFFECTS PARCEL: EASEMENT CANNOT BE LOCATED PER RECORD.

8 AN EASEMENT FOR PIPELINE AND MAINTENANCE PURPOSES, IN FAVOR OF CYNTHIA L MORGAN, PER DEED RESERVATION RECORDED JANUARY 16, 1947, IN BOOK 760, PAGE 380, OFFICIAL RECORDS.
AFFECTS PARCEL: EASEMENT CANNOT BE LOCATED PER RECORD.

10 AN EASEMENT FOR POLE PURPOSES, IN FAVOR OF CALIFORNIA ELECTRIC POWER COMPANY, RECORDED OCTOBER 21, 1954 IN BOOK 1643, PAGE 576, OF OFFICIAL RECORDS.
AFFECTS PARCEL: C/L OF EASEMENT PLOTTED HEREON.

11 AN EASEMENT FOR POLE PURPOSES, IN FAVOR OF CALIFORNIA ELECTRIC POWER COMPANY, RECORDED APRIL 6, 1956 IN BOOK 1892, PAGE 488, OF OFFICIAL RECORDS.
AFFECTS PARCEL: C/L OF EASEMENT PLOTTED HEREON.

12 AN EASEMENT FOR POLE LINES AND CONDUITS PURPOSES, IN FAVOR OF SOUTHERN CALIFORNIA EDISON COMPANY, RECORDED JUNE 27, 1966 AS INSTRUMENT NO. 66163, OF OFFICIAL RECORDS.
AFFECTS PARCEL: PLOTTED HEREON.

13 AN EASEMENT FOR UNDERGROUND ELECTRICAL SUPPLY SYSTEMS AND COMMUNICATION SYSTEMS, IN FAVOR OF SOUTHERN CALIFORNIA EDISON COMPANY, RECORDED OCTOBER 22, 2003 AS INSTRUMENT NO. 2003-839024, OF OFFICIAL RECORDS.
AFFECTS PARCEL: PLOTTED HEREON.

BASIS OF BEARINGS:

THE BASIS OF BEARINGS AND COORDINATES FOR THIS SURVEY IS THE CALIFORNIA STATE PLANE COORDINATE SYSTEM NORTH AMERICAN DATUM 1983 (NAD 83), ZONE 6 (EPOCH 2010.00) BASED LOCALLY ON CONTROL STATIONS CNPP, LORS, AND NOCO AS SHOWN ON THE CONTROL GROUND FILE. ALL DISTANCES SHOWN ARE GROUND DISTANCES, UNLESS SPECIFIED OTHERWISE. GRID DISTANCES MAY BE OBTAINED BY MULTIPLYING THE GROUND DISTANCES BY AN AVERAGE COMBINATION FACTOR OF 0.999971525.

BENCHMARK:

BENCH MARK NO. C-114; ELEVATION: 645.350; VERTICAL DATUM: NGVD 29. A 2-1/2" BRASS DISK STAMPED "C-114" SET IN THE TOP OF CURB, LOCATED 5' WEST OF THE B.C.R. OF THE SOUTHWESTERLY CURB RETURN OF THE INTERSECTION OF SIXTH STREET AND MAGNOLIA AVENUE.

SHEET 3.....UTILITY PLAN
SHEET 4.....SECTION DETAILS

GENERAL NOTES:

PREPARED: FEBRUARY 2022

1. TOTAL PROJECT GROSS ACREAGE IS 16.576 ACRES
2. PROPOSED NO. OF LOTS: 2 LOTS
3. EXISTING GENERAL PLAN LAND USE: MIXED USE – INDUSTRIAL/COMMERCIAL (MU 2)
4. PROPOSED GENERAL PLAN LAND USE: NO CHANGE
5. EXISTING ZONING: MIXED USE (MU) WITH A CORONA MAGNOLIA SPECIFIC PLAN OVERLAY (SP-01-2 AS PLANNING AREA 5 – BUSINESS PARK)
6. PROPOSED ZONING: NO CHANGE
7. ADJACENT LAND USE:

NORTH:
84' WIDE RECTANGULAR CHANNEL WITH 28' WIDE ACCESS ROAD BETWEEN PROPERTY LINE AND THE CHANNEL

EAST:
84' WIDE RECTANGULAR CHANNEL WITH 28' WIDE ACCESS ROAD BETWEEN PROPERTY LINE AND THE CHANNEL

SOUTH:
MAGNOLIA AVENUE (104' ROW)

WEST:
ATCHISON, TOPEKA AND SANTA FE RAILWAY (50' ROW)

11. SOURCE OF TOPOGRAPHY IS AERIAL TOPOGRAPHY FLOWN ON DECEMBER 02, 2019 BY KWC ENGINEERS.
12. ALL EXISTING EASEMENTS AND IRREVOCABLE OFFERS OF DEDICATION THAT AFFECT THE PROPERTY ARE SHOWN ON THIS PARCEL MAP.
13. ALL EXISTING EASEMENTS ARE TO REMAIN IN THEIR DESIGNATED LOCATIONS UNLESS NOTED OTHERWISE.
14. ALL CONC. GUTTERS AND SWALES SHALL HAVE A MINIMUM GRADE OF: 0.5%
15. ALL A.C. PAVING SHALL HAVE A MINIMUM GRADE OF: 1.0%
16. CONCRETE PAVEMENT SHALL BE PROVIDED FOR ALL ROADWAYS THAT HAVE STREET GRADES EXCEEDING 10% OR AS APPROVED BY THE CITY OF CORONA.
17. ALL SLOPES ADJACENT TO STREET R.O.W. TO BE MAINTAINED BY P.O.A.
18. ALL SLOPES SHOWN HEREON ARE 3:1 MAXIMUM UNLESS OTHERWISE NOTED.
19. ALL MAJOR SLOPES OR COMMON AREAS, OPEN SPACE, PRIVATE DRAINAGE FACILITIES, FUEL MODIFICATION, ROAD ACCESS EASEMENTS, AND ANY OTHER COMMON AMENITIES SHALL BE MAINTAINED BY A PROPERTY OWNER ASSOCIATION OR ESTABLISHED SUBJECT TO CURRENT STATE LAWS AND BE SUBJECT TO THE APPROVAL OF THE CITY OF CORONA WHO SHALL REVIEW ALL CC&R'S AND RULES FOR THEIR CC&R'S, PROPERTY OWNER ASSOCIATION DOCUMENTS AND ALL DOCUMENTS TO CONVEY TITLE TO THE PROPERTY OWNER ASSOCIATION.
20. FENCING SHALL BE INSTALLED ON SITE AS NECESSARY TO RESTRICT PUBLIC ACCESS TO PROPOSED OPEN SPACE AREAS. REFER TO WALL AND FENCE PLAN FOR LOCATIONS.
21. THERE ARE NO KNOWN ACTIVE EARTHQUAKE FAULTS IMPACTING THE PROJECT SITE. REFER TO SOILS REPORT FOR ADDITIONAL INFORMATION.
22. PROPOSED WATER TO HAVE TWO POINTS OF CONNECTION TO EXISTING WATER SYSTEM.
23. DRAINAGE SYSTEM WILL BE DEVELOPED IN ACCORDANCE WITH THE CITY OF CORONA AND RIVERSIDE COUNTY FLOOD CONTROL & WATER CONSERVATION DISTRICT STANDARDS AND SPECIFICATIONS. DRAINAGE ON THIS SITE WILL BE CONVEYED BY MEANS OF A STORM DRAIN SYSTEM CONSISTING OF VARYING SIZES OF STORM DRAIN PIPES. STORM FLOWS TRIBUTARY TO THE SITE SHALL BE INTERCEPTED AND CONVEYED AROUND THE SITE VIA THE STORM DRAIN SYSTEMS SHOWN HEREON. ALL STORM DRAIN SHOWN HEREON ARE PRELIMINARY.
24. PROPOSED WATER QUALITY FACILITIES MAY BE MAINTAINED BY FUTURE POA FORMED SPECIFICALLY FOR DEVELOPMENT. THE MAINLINE STORM DRAIN, INLETS, AND OUTLET STRUCTURES SHALL BE PRIVATELY MAINTAINED.
25. RECIPROCAL EASEMENTS FOR PRIVATE LOOPED WATER SYSTEM, SHARED FACILITIES, AND DRAINAGE SHALL BE GRANTED TO AND ADMINISTERED BY THE POA THROUGH THE CC&Rs.
26. THE SUBJECT PROPERTY IS WITHIN A FLOOD ZONE X – 0.2 PERCENT ANNUAL CHANCE OF FLOOD HAZARD PER FIRM PANEL NO. 06065C1356G EFFECTIVE DATE OF AUGUST 28, 2008.
27. THE SUBJECT PROPERTY IS WITHIN A SANTA ANA RIVER WATERSHED.

LAND USE COVENANT AND AGREEMENT
ENVIRONMENTAL RESTRICTIONS

County of Riverside, Assessor Parcel Number(s): 107-030-022-3
Clow Valve Company
(Department Site Code 600876-48)

This Land Use Covenant and Agreement ("Covenant") is made by and between Clow Valve Company (the "Covenantor"), the current owner of property located at 1375 Magnolia Avenue, Corona in the County of Riverside, State of California (the "Property"), and the Department of Toxic Substances Control (the "Department"). Pursuant to Civil Code section 1471, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined

in Health and Safety Code section 25260. The Covenantor and the Department hereby agree that, pursuant to Civil Code section 1471 and Health and Safety Code section 25202.5 the use of the Property be restricted as set forth in this Covenant and that the Covenant shall conform with the requirements of California Code of Regulations, title 22, section 67391.1. With respect to the Polychlorinated Biphenyls (PCBs) at the Property, the provisions of this Covenant shall be for the benefit of, and shall be enforceable by, the United States Environmental Protection Agency ("U.S. EPA"), as a third party beneficiary pursuant to general contract law, including but not limited to Civil Code section 1559.

ARTICLE I
STATEMENT OF FACTS

1.01. Property Location. The Property, located at 1375 Magnolia Avenue, Corona, County of Riverside, California, that is subject to this Covenant, totaling approximately 16 acres, is more particularly described in the attached Exhibit A, "Legal Description of the Property", and depicted in Exhibit B, "Plot Plan". The Property is located in the area generally bounded by Magnolia Avenue on the south, railroad tracks and El Camino Avenue on the west, and a storm water channel towards the north and east. The Property is also identified as County of Riverside, Assessor's Parcel Number 107-030-022-3.

a) A limited portion of the Property is more particularly described in Exhibit C, "Legal Description of the Capped Property", and illustrated in Exhibit D, "Sketch", referred to as the "Capped Property". The "Capped Property", totaling approximately 9.964 acres of soil impacted by hazardous substances, is located on the northern portion of the Property now generally bounded by railroad and El Camino Avenue on the west, storm channel on the north and east. Its southern border runs parallel to Magnolia Avenue, approximately 195 feet north of Magnolia Avenue.

b) A limited portion of the Property is more particularly illustrated in Exhibit D as "Area 1" a Former Asphalt Dip Tank and as "Area 2" a PCB Transformer area. Former Asphalt Dip Tank was previously located, approximately 620 feet north of Magnolia

Avenue, 510 feet east of El Camino Avenue, and 200 feet west of the storm channel western edge. The PCB Transformer area is located approximately 240 feet west of the storm channel western edge, 510 feet east of El Camino Avenue, and 600 feet north of Magnolia Avenue.

1.02. Hazardous Substances. Hazardous wastes, or constituents of hazardous waste, including Polychlorinated Biphenyl's (PCBs) (Total Aroclors up to a maximum of 2,220 milligrams per kilogram (mg/kg)), Total Petroleum Hydrocarbons (TPH) (up to a maximum of 9,300 mg/kg), arsenic (up to a maximum of 52.9 mg/kg), cadmium (up to a maximum of 43.9 mg/kg), hexavalent chromium (up to a maximum of 6.6 mg/kg), and lead (up to a maximum of 7,360 mg/kg) in soil, and volatile organic compounds, such as tetrachloroethylene (PCE) (up to a maximum of 3 microgram/liter (ug/l)), in the soil gas remain at the Property above levels acceptable for unrestricted land use.

As of February 25, 2021, PCB concentrations in the soil at the Former Asphalt Dip Tank Bottom and PCB Transformer exceed the level for unrestricted use and the USEPA's site-specific industrial risk-based threshold of 15 mg/kg. PCB concentrations present in soils of the PCB Transformer area exceed the California hazardous waste level of Total Threshold Limit Concentration (TTLC) of 50 mg/kg.

As of February 25, 2021, lead concentrations detected in the soil at the Capped Property exceeded 320 milligrams per kilogram, a level deemed safe by DTSC for the continued use of the Site for industrial use and the TTLC of 1,000 mg/kg. A Human Health Risk Assessment (HHRA) was performed to evaluate the potential health risks associated with direct exposure of workers at the Property to soil containing Chemicals of Potential Concern (COPCs). Based on the HHRA, potential health risk to a commercial or industrial worker is $1x10^{-5}$ and to a construction worker is $2x10^{-4}$. The estimated Hazard Index (HI) for a commercial/industrial worker at the Property is 1.9, primarily due to the potential exposure to PCBs and cadmium. The estimated HI for a construction worker at the Property is 458. U.S. EPA recommends an HI of 1 or below and health risk below $1x10^{-6}$. The calculated risks were primarily associated with direct exposure to impacted soil and associated soil ingestion or dermal exposure, both of which will be eliminated by installation and maintenance of the capping materials described herein.

1.03. Remediation of Property. This Property has been investigated and/or remediated under the Department's oversight. The Department approved a Corrective Measures Study, dated February 19, 2018, prepared by EarthCon Consultants CA, Inc.,in accordance with Health and Safety Code, Division 20, Chapter 6.5. The remediation activities at the Property include:

a) Construction of an approximately 5,000 square foot, 6-inch-thick concrete or 3-inch thick asphalt cap in two areas encompassing approximately one-half acre, identified as Areas of Concern (AOCs), AOC-1 and AOC-5 (see Exhibit B).
b) Repair and maintenance of the existing asphalt and/or concrete surface cover of the Capped Property;
c) Soil Management Plan and Operation and Maintenance Plan preapproval by the Department for all future construction work involving soil excavation at the Capped Property; and,
d) Land use restriction recorded with the Riverside County Assessor's Office to prohibit sensitive uses.

1.04. PCB Remediation overseen by U.S. EPA. In addition to the corrective action measures for the Property under the Department's oversight, U.S. EPA approved with conditions the Risk-Based Approval Application submitted by EarthCon Consultants, CA, Inc. on behalf of Clow Valve Company, dated April 9, 2019, to remediate PCBs at the Property. PCBs are regulated by the U.S. EPA pursuant to the Toxic Substances Control Act (TSCA), 15 U.S.C. Section 2601 et seq., and the PCB regulations at 40 Code of Federal Regulations (CFR) Part 761. This U.S. EPA approval is available in EnviroStor, an online document repository at https://www.envirostor.dtsc.ca.gov/public/deliverable_documents/1318022012/2019-04-23_EPA%20to%20Clow%20Valve_761.61%28c%29_SIGNED.pdf

1.05. Basis for Environmental Restrictions. As a result of the presence of Hazardous Wastes, PCBs, TPH, arsenic, cadmium, lead, and PCE, which are also hazardous materials as defined in Health and Safety Code section 25260, at the Property, the Department has concluded that it is reasonably necessary to restrict the

use of the Property in order to protect present or future human health or safety or the environment, and that this Covenant is required as part of the Department-approved remedy for the Property. The Department has also concluded that the Property, as remediated and when used in compliance with the Environmental Restrictions of this Covenant, does not present an unacceptable risk to present and future human health or safety or the environment.

1.06. Land Use Covenant. A land use covenant is necessary to preclude potential users' exposure to hazardous substances that remain at the Property and to complete the remedy selected in the Corrective Measures Study. U.S. EPA, with the concurrence of the Department, has concluded that the Property, remediated to the goals presented in the Corrective Measures Study, subject to the restrictions of this Covenant, and used in compliance with such restrictions, does not present an unacceptable threat to present or future human health or safety or the environment. Additional information about the Site, including the 2019 PCB risk analysis by U.S. EPA,is available at the EnviroStor, an online repository listed in paragraph 1.04, above.

ARTICLE II
DEFINITIONS

2.01. Department. "Department" means the California Department of Toxic Substances Control and includes its successor agencies, if any.

2.02. Environmental Restrictions. "Environmental Restrictions" means all protective provisions, covenants, restrictions, requirements, prohibitions, and terms and conditions as set forth in this Covenant.

2.03. Improvements. "Improvements" includes, but is not limited to buildings, structures, roads, driveways, improved parking areas, wells, pipelines, or other utilities.

2.04. Lease. "Lease" means lease, rental agreement, or any other document that creates a right to use or occupy any portion of the Property.

2.05. Occupant. "Occupant" or "Occupants" means Owner and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.06. Owner. "Owner" or "Owners" means the Covenantor, and any successor in interest including any heir and assignee, who at any time holds title to all or any portion of the Property.

2.07. U.S. EPA. "U.S. EPA" means the United States Environmental Protection Agency, and includes its successor agencies, if any.

ARTICLE III
GENERAL PROVISIONS

3.01. Runs with the Land. This Covenant sets forth Environmental Restrictions that apply to and encumber the Property and every portion thereof no matter how it is improved, held, used, occupied, leased, sold, hypothecated, encumbered, or conveyed. This Covenant: (a) runs with the land pursuant to Civil Codesection 1471 and Health and Safety Code section 25202.5; (b) inures to the benefit of and passes with each and every portion of the Property; (c) is for the benefit of, and is enforceable by the Department; and (d) is imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding upon Owners/Occupants. This Covenant: (a) binds all Owners of the Property, their heirs, successors, and assignees; and (b) the agents, employees, and lessees of the Owners and the Owners' heirs, successors, and assignees. Pursuant to Civil Code section 1471, all successive Owners of the Property are expressly bound hereby for the benefit of the Department; this Covenant, however, is binding on all Owners and Occupants, and their respective successors and assignees, only during their respective periods of ownership or occupancy except that such Owners or Occupants shall continue to be liable for any violations of, or non-compliance with, the Environmental Restrictions of this Covenant or any acts or omissions during their ownership or occupancy.

3.03. Incorporation into Deeds and Leases. This Covenant shall be

incorporated by reference in each and every deed and Lease for any portion of the Property.

3.04. Conveyance of Property. The Owner and new Owner shall provide Notice to the Department and the U.S. EPA not later than 30 calendar days after any conveyance or receipt of any ownership interest in the Property (excluding Leases, and mortgages, liens, and other non-possessory encumbrances). The Notice shall include the name and mailing address of the new Owner of the Property and shall reference the site name and site code as listed on page one of this Covenant. The notice shall also include the Assessor's Parcel Number(s) noted on page one. If the new Owner's property has been assigned a different Assessor Parcel Number, each such Assessor Parcel Number that covers the Property must be provided. The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect proposed conveyance, except as otherwise provided by law or by administrative order.

3.05. Costs of Administering the Covenant to Be Paid by Owner. The Department has already incurred and will in the future incur costs associated with this Covenant. Therefore, the Covenantor hereby covenants for the Covenantor and for all subsequent Owners that, pursuant to California Code of Regulations, title 22, section 67391.1(h), the Owner agrees to pay the Department's costs in administering, implementing, and enforcing this Covenant.

ARTICLE IV
RESTRICTIONS AND REQUIREMENTS

4.01. Prohibited Uses. The Property shall not be used for any of the following purposes without prior written approval by the Department pursuant to Health and Safety Code section 25227 and prior written notice to U.S. EPA :

a) A residence, including single or multifamily housing, mobile homes, or factory-built housing constructed or installed for use as residential human habitation.

b) A hospital for humans.

c) A public or private school for persons under 18 years of age.

d) A day care center or a playground for children.

4.02. Soil Management. Soil management activities at the Capped Property are subject to the following requirements in addition to any other applicable Environmental Restrictions:

a) No activities that will disturb the soil at or below grade or below concrete (e.g., excavation, grading, removal, trenching, filling, earth movement, mining, or drilling) shall be allowed at the Property without a Soil Management Plan pre-approved by the Department and U.S. EPA in writing.

b) Any soil brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law.

4.03. Prohibited Activities. The following activities shall not be conducted at the Property:

a) Drilling for any water, oil, or gas without prior written approval by theDepartment.

b) Extraction or removal of groundwater without a Groundwater ManagementPlan pre-approved by the Department in writing.

c) Activity that may alter, interfere with, or otherwise affect the integrity or effectiveness of, or the access to, monitoring, operation, or maintenance ofthe concrete cover at the Capped Property without prior written approval of the Department and U.S. EPA.

4.04. Written Notice of Covenant and the Presence of Hazardous Substances. Prior to the sale, lease, assignment, or other transfer of the Property, or any portion thereof, the Owner, lessor, or sublessor shall give the buyer, lessee, or sublessee written notice of the existence of this Covenant and its Environmental Restrictions. Prior to recordation of any easement on any portion of the Property, the Owner shall provide a copy of this Covenant to the easement holder to ensure that the easement holder is on notice of the restrictions and requirements of this Covenant. Covenantor shall also provide a copy of this Covenant to all existing Occupants and easement holders of record within 30 days of recording this Covenant.

4.05. Access for Department. The Department shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the Department in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect the Department's right of entry and access, or authority to take response actions, under any applicable State Law.

4.06. Access for U.S EPA. The U.S. EPA shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the U.S. EPA in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect U.S. EPA's right of entry and access, or U.S. EPA's authority to take actions, under any applicable law.

4.07. Access for Implementing Operation and Maintenance. The entity or person responsible for implementing the operation and maintenance activities, if any, shall have reasonable right of entry and access to the Property for the purpose of implementing such operation and maintenance activities until the Department determines that no further operation and maintenance activity is required.

4.08. Inspection and Reporting Requirements. The Owner shall conduct an annual inspection of the Property verifying compliance with this Covenant; shall submit an annual inspection report to the Department for its approval by January 15th of each year; and also send a copy to U.S. EPA. Attached as Exhibit E is a sample format for an annual inspection report. The annual inspection report must include the dates, times, and names of those who conducted the inspection and reviewed the annual inspection report. It also shall describe how the observations that were the basis for the statements and conclusions in the annual inspection report were performed (e.g., drive by, fly over, walk in, etc.). If any violation is noted, the annual inspection report must detail the steps taken to correct the violation and return to compliance. If the Owner identifies any violations of this Covenant during the annual inspection or at any other

time, the Owner must within 10 calendar days of identifying the violation: (a) determine the identity of the party in violation; (b) send a letter advising the party of the violation of the Covenant; and (c) demand that the violation cease immediately. Additionally, a copy of any correspondence related to the violation of this Covenant shall be sent to the Department and U.S. EPA within 10 calendar days of its original transmission.

4.09. Five-Year Review. In addition to the annual reviews noted above, after a period of five (5) years from January 15, 2021 and every five (5) years thereafter, Owner shall submit a Five-Year Review report documenting its review of the remedy implemented and its evaluation to determine if human health and the environment are being adequately protected by the remedy as implemented. The Owner shall submit this report to DTSC, and submit a copy to U.S. EPA. The report shall describe the results of all inspections, sampling analyses, tests and other data generated or received by Owner and evaluate the adequacy of the implemented remedy in protecting human health and the environment. As a result of any review work performed, Department may require Owner to perform additional review work or modify the review work previously performed by Owner.

4.10. Changes to Use or Condition of Property. Any changes to land use, movement of PCB contaminated soils, or discovery of new contamination requires notification to, and may require additional approval from, the U.S. EPA by the Owner and/or Occupant.

4.11. Access for Five-Year Reviews. The entity, person, or persons responsible for Five-Year Reviews shall have reasonable right of entry and access to the Property for the purpose of implementing these activities. Such right of entry and access shall continue until such time as the U.S. EPA and DTSC both determine that no further Five-Year Review activities are required.

ARTICLE V
ENFORCEMENT

5.01. Enforcement. Failure of the Owner or Occupant to comply with this Covenant shall be grounds for the Department to require modification or removal of any Improvements constructed or placed upon any portion of the Property in violation of this

Covenant. Violation of this Covenant, such as failure to submit (including submission of any false statement) record or report to the Department, shall be grounds for the Department to pursue administrative, civil, or criminal actions, as provided by law.

5.02. Enforcement Rights of U.S. EPA as Third-Party Beneficiary. U.S. EPA, as a third-party beneficiary, has the right to enforce the Environmental Restrictions contained herein.

ARTICLE VI
VARIANCE, REMOVAL AND TERM

6.01. Variance from Environmental Restrictions. Any person may apply to the Department for a written variance from or other modification of any of the Environmental Restrictions imposed by this Covenant. Such application shall be made in accordance with Health and SafetyCode section 25223. A copy of the application shall be submitted to the U.S. EPA simultaneously with the application submitted to the Department. No variance or modification may be granted under this paragraph without prior notice and opportunity to comment by U.S. EPA.

6.02. Removal of Environmental Restrictions. Any person may apply to the Department to terminate or otherwise remove any or all of the Environmental Restrictions imposed by this Covenant or terminate the Covenant in its entirety. Such application shall be made in accordance with Health and Safety Code section 25224 and a copy of the application shall be submitted to U.S. EPA simultaneously with the application submitted to the Department. No termination may be granted under this paragraph without prior notice to and opportunity to comment by U.S. EPA.

6.03. Term. Unless ended in accordance with paragraph 6.02, by law, or by the Department in the exercise of its discretion, this Covenant, shall continue in effect in perpetuity.

ARTICLE VII
MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof, to the general public or anyone else for any purpose whatsoever.

7.02. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of Riverside within 10 calendar days of the Covenantor's receipt of a fully executed original. The Covenantor shall also provide copies showing the County Recorder's tracking information of its recording (i.e., document number or book and page number information) to the Department and U.S.EPA within ten (10) days of receiving it from the County Recorder's Office.

7.03. Notices. Whenever any person gives or serves any Notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (a) whendelivered, if personally delivered to the person being served or to an officer of a corporate party being served; or (b) five calendar days after deposit in the mail, if mailedby United States mail, postage paid, certified, return receipt requested:

To Owner:
Mark Willett, General Manager
Clow Valve Company
1375 Magnolia Avenue
Corona, California 91719

And

To Department:
A. Edward Morelan, Chief
Cypress Cleanup Branch
Site Mitigation and Restoration Program
Department of Toxic Substances Control
5796 Corporate Avenue
Cypress, California 90630

To U.S. EPA:
U.S. Environmental Protection Agency
Region IX
Attention: PCB Coordinator (Land Chemicals and
Redevelopment Division)
75 Hawthorne Street
San Francisco, CA 94105-3901

Any party may change its address or the individual to whose attention a Notice is to be sent by giving advance written Notice in compliance with this paragraph.

7.04. Partial Invalidity. If this Covenant or any of its terms are determined by a court of competent jurisdiction to be invalid for any reason, the surviving portions of thisCovenant shall

remain in full force and effect as if such portion found invalid had not been included herein.

7.05. Statutory References. All statutory or regulatory references includesuccessor provisions.

7.06. Incorporation of Exhibits. All exhibits and attachments to this Covenantare incorporated herein by reference.

IN WITNESS WHEREOF, the Covenantor and theDepartment hereby execute this Covenant.

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF CORONA, COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THAT PORTION OF THE NORTHWEST QUARTER OF SECTION 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, AS SHOWN BY SECTIONALIZED SURVEY OF THE RANCHO EL SOBRANTE DE SAN JACINTO AND OF LOT 13 IN BLOCK 63 OF THE LANDS OF THE RIVERSIDE LAND AND IRRIGATING COMPANY, AS SHOWN BY MAP ON FILE IN BOOK 1 PAGE 70 OF MAPS, SAN BERNARDINO COUNTY RECORDS, BOUNDED AS FOLLOWS: ON THE SOUTHEAST BY THE SOUTHWESTERLY EXTENSION OF THE NORTHWEST LINE OF MAGNOLIA AVENUE, AS SHOWN ON RECORD OF SURVEY ENTITLED "RECORD OF SURVEY OF A PORTION OF LOTS 11, 12, 13, 14, 15, IN BLOCK 63 OF RIVERSIDE LAND AND IRRIGATING COMPANY AND A PORTION OF SECTIONS 29 AND 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, SAN BERNARDINO BASE AND MERIDIAN" ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS; ON THE WEST BY THE EASTERLY LINE OF THE PORPHYRY SPUR OF THE ATCHISON, TOPEKA, AND SANTA FE RAILWAY COMPANY; AND ON THE NORTHEAST BY THE SOUTHERLY AND SOUTHWESTERLY LINE OF PARCELS 5 TO 11, INCLUSIVE, OF SAID RECORD OF SURVEY ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS.

EXCEPTING THEREFROM THAT PORTION GRANTED TO THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER DISTRICT CONSERVATION DISTRICT BY DEED RECORDED OCTOBER 22, 1984 AS INSTRUMENT NO. 84-227367 AND RE-RECORDED FEBRUARY 11, 1985 AS INSTRUMENT NO. 85-028214 BOTH OF OFFICIAL RECORDS.

LAND USE COVENANT
SAMPLE ANNUAL INSPECTION REPORT (2 Pages)

Site name:

Site address:

Current Site owner:

Date and times of inspection:

Name(s) of individual(s) who performed inspection:

How inspection observations were made (e.g. drive-by, fly-over, walking the Property):

1. Since the last annual inspection, has there been a change in the land use, such that there are now residences, a hospital for humans, a public or private school for persons under 21 years of age, or a day care center for children on the restricted Property?
   ☐ Yes ☐ No ☐ Not an applicable restriction

2. Since the last annual inspection, has the soil been disturbed on the restricted Property? Was evidence of soil disturbance observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

3. Since the last annual inspection, has there been any drilling on the restricted Property? Was evidence of drilling observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

Cap Condition

4. Since the last annual inspection, has there been any damage to, disturbance of, or modifications to the existing building foundation and/or surrounding pavement that serves as the cap over contaminated soil?
   ☐ Yes ☐ No

5. Has there been any damage to, disturbance of, or modifications to the asphalt/concrete Cap covering the restricted Property?

   ☐ Yes ☐ No

Land Use Covenant Compliance

6. Has there been a change in the land use of the property from commercial/industrial?

   ☐ Yes ☐ No

If the response to any of the above questions is yes, describe the circumstances.

Photos should be attached to this report that show the use of the Restricted Property at the time of the inspection and the condition of any Caps on the restricted Property. Photos showing any cracks in or damage to the Cap should also be included.

I certify under penalty of law that this document and all attachments were prepared by me or under my direction or supervision. With the exception of any areas of non-compliance noted above, all uses and activities on the restricted Property were found to be in compliance with the restrictions and requirements of the Land Use Covenant. Based on my personal knowledge or inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

1.0 INTRODUCTION AND REGULATORY STATUS

On behalf of Clow Valve Company (Clow), a Division of McWane, EarthCon Consultants CA, Inc (EarthCon), has prepared this Soil Management Plant (SMP) to guide future on-site activities that disturb the soil at the property located at 1375 Magnolia Avenue in Corona, California (Site; see Figures 1 and 2). Clow is currently in the process of implementing the field activities as identified in the Corrective Measures Implementation Workplan (CMIWP) for the Site. Proposed CMIWP activities will be conducted under the supervision of the Department of Toxic Substances Control (DTSC) and in accordance with the Corrective Action Consent Agreement between the California Department of Toxic Substances Control (DTSC) and Clow [Docket No. SPRD 00/01SCC-4208, March 2002]. The DTSC-approved corrective measures will be implemented to yield conditions suitable for continued commercial/industrial use. The entire Site will be restricted for industrial use in accordance with the future Land Use Covenant (LUC). Therefore, the future use of the Site must be in accordance with the deed restrictions identified in the proposed LUC. (See Appendix C draft LUC.)

The purpose of this SMP is to provide guidance for management of soils in the event soil disturbance is required during future construction and maintenance activities on-Site. Clow intends to implement the SMP during grading and capping activities at AOC1 and AOC5 associated with the approved CMIWP. Additionally, to support the future Site activities, this SMP has also been prepared to facilitate implementation of future projects and compliance with applicable laws. The current plan for the Site is industrial redevelopment with one or more tilt-up type building(s). This will entail limited over-excavation and re-compaction of the soil on-Site under the future building(s) and concrete truck courts and drive aisles for geotechnical purposes. Current plans are for Clow to retain ownership and redevelop the property in cooperation with a long-term lessee. In addition, both the DTSC and USEPA will be notified of such activities prior to implementation, as specified in Section 6.1.1.

A summary of previous investigations as well as elements of the SMP are described in detail in the following sections.

2.0 SUMMARY OF PREVIOUS INVESTIGATIONS

In October of 2000, the DTSC conducted a Compliance Evaluation Inspection at the Site and determined that there may have been potential releases of hazardous waste into the environment. A Corrective Action Consent Agreement (CACA) was prepared for the Site in October 2001 and was subsequently revised on March 6, 2002.

As required by the CACA and through negotiations with DTSC a Preliminary Endangerment Assessment and Facility Work plan was prepared (June 21, 2004) was prepared, which identified the following nine (9) areas of concern (AOC) at the Site (see Figure 2 and Figures 3A through 3J)):

- AOC1 – Rail Spur Area (including area of diesel impact)
- AOC2 – Chip-Bin Storage Area
- AOC3 – Water Pressure Test Area
- AOC4 – Former Iron Foundry Sand Cleanup Area
- AOC5 – Oil-Stained Pad (eastern portion of AOC1)
- AOC6 – Former Asphalt Dip Tank
- AOC7 – Transformer Area 1
- AOC8 – Transformer Area 2
- AOC9 – Former Test-Pond (filled)

Upon review of the revised PEA, the DTSC determined that interim measures were necessary due to the presence of a stockpile of dry, unconsolidated foundry sand waste located in the Rail Spur Area (AOC1).

Approximately 393 cubic yards of stockpile material containing elevated concentrations of copper, lead, and zinc was removed from the Site and transported to the Chemical Waste Management Class I disposal facility in Kettleman City, California in June 2005.

Additional investigation included the following:

- A soil sampling investigation was subsequently conducted in June and July of 2005 and the

results were provided in a document titled *Preliminary Summary of Site Assessment Results and Proposed Further Assessment* (November 29, 2005).

- Further delineation of the vertical and lateral extent of subsurface impacts was conducted at AOC1, AOC2, AOC3, AOC5, and AOC7 in September 2006 along with Site wide near surface soil sampling, to address a DTSC concern that metal impacted fill material may have been used on-Site. In addition, one groundwater well was installed at AOC1 to facilitate groundwater sampling. Results from this investigation were provided in a document titled *Report of Findings* (Fero, December 18, 2006).
- Groundwater sampling results from 2006 investigation showed a low level of TCE (1.43 ug/L, which is below the Maximum Contaminant Level of 5 ug/L) in groundwater beneath the Site. Given the absence of any chlorinated solvent use at the Site, the TCE detection was postulated to be related to an off-Site source.

In October 2015, Clow and DTSC reached a mutual decision to restart the stalled process due to the economic uncertainty associated with Site redevelopment. Clow subsequently contracted with EarthCon to assist with restarting the process and revising the Site Corrective Measures Study in the absence of site redevelopment. EarthCon and Clow met with the DTSC on March 15, 2016 to provide an overall project update and identify a path to move forward as requested. EarthCon evaluated the previous environmental activities, site assessment investigations, and the associated analytical results. The analytical results from the previous investigations are illustrated on Figures 1 through 3K. The results from the previous investigations were evaluated and subsequently included in a Site-specific Human Health Risk Assessment.

In February 2017, two additional groundwater monitoring wells were installed on-Site as identified by the locations illustrated on Figure 2. Installation of these wells allowed for calculation of the Site-specific groundwater flow direction and gradient, which confirmed that MW-1 was appropriately positioned to evaluate potential groundwater impacts related to the former TPH-d release at AOC-1. Groundwater monitoring events were conducted in March 2017 and subsequently in May 2017. Groundwater samples reported concentrations of various compounds below their associated MCLs with the exception of arsenic (March 2017 event only). However, the arsenic concentrations reported in MW-1 through MW-3 was within the local background arsenic concentrations. Therefore, it was determined that groundwater would not be incorporated into the overall scope of this CMS and the wells were removed.

The historical data, Human Health Risk Assessment, and current Site operations were used to prepare a CMS for the Site (EarthCon, 2018). The CMS identified that excavation (AOC7) and capping in place (AOC1, AOC5, and AOC7) as the selected remedy. However, due to the presence of PCBs at AOC-7, additional Site assessment activities were conducted in July 2018, October 2018, and January 2019 under the oversight of the USEPA. The USEPA also required that further assessment of potential PCB impacted soil would be evaluated at AOC3 and AOC6 as well. The results were summarized in a document titled *Risk-Based Approval Application 40 CFR 761.61 (c)(1)* (EarthCon, 2019). Based on the results from the PCB related Site assessment activities, EarthCon recommended that rather than excavating PCB-impacted soil at AOC7 that the Site remained capped, with the existing concrete cap having the ability to protect industrial workers from exposure to PCB concentration in the underlying soil. In a letter dated April 23, 2019, the USEPA approved the application with the conditions including preparation of the following: Deed Restriction, Operations and Maintenance Plan, and Soil Management Plan, and PCB Cleanup Report (CMI Report).

Upon receipt of the approval letter from the USEPA, the DTSC approved the CMS in a letter dated May 16, 2019. The CMIWP presented details associated with the cap design, installation and implementation schedule for AOC1 and AOC5. The proposed schedule for the evaluation and repair of the exiting ground cover in AOC2, AOC4, and AOC9 is also addressed. Additionally, potential cap repair and/or construction, if necessary, associated with AOC3, AOC6, and AOC7 was identified to require the oversight of the USEPA.

3.0 SOIL MANAGEMENT

3.1 Pre-Field Activities

Requirements of the Soil Management Plan apply to a portion of the Site depicted in Figure 4, a land survey of an area of the Site subject to 40 CFR 761.3 (PCB impacted soil), and an area subject to SMP and O&M Plan (lead impacted soil at or above 320 mg/kg). Figure 4 was prepared by a California licensed Professional Land Surveyor. Figure 4A, "Site Plan With Areas Subject to Land Use Covenant", depicts historical Site features and identifies the boundary of the area to be capped during the Corrective Measures implementation in addition to depicting the boundary of the area with lead concentrations exceeding 320 mg/kg (the same as in the land survey).

Prior to the commencement of activities that disturb soil, designated Site personnel will ensure that all proper underground utility clearances are conducted and marked with white paint as appropriate. Underground Services Alert (USA) will be subsequently notified at least 72-hours prior to initiation of field activities. Persons conducting soil disturbing activities will coordinate with knowledgeable Site personnel to determine the location of subsurface utilities and a geophysical survey will be conducted if necessary. In addition, field activities should not occur without a Site-specific Site Health and Safety Plan (HASP), elements of which should be discussed daily during tail-gate safety meetings. The current HASP for the Site, associated with the implementation of the CMIWP by Clow, is provided for reference in Appendix A. Updated health and safety documentation (e.g. HAZWOPER) for on-Site personnel will be provided to the DTSC prior to implementing field work.

Site personnel will notify the DTSC a minimum of 30 days before field work begins (see Section 6.1.1). Should the scope of work involve management of soil containing PCBs over 1 part per million (ppm) (AOC-6 or AOC-7), Site personnel will also notify the USEPA[1]. Notification to the DTSC and USEPA may require the submittal of documentation, such as excavation plan, soil confirmation sampling plan, waste profiling, transportation plan, destination facility, and City and/or County approved grading plans, to show how the soil under the LUC will be disturbed and ensure proper soil management. See Section 6.1 for details.

3.1.1 Work Description

In accordance with the CMIWP, grading operations within areas with lead impacted soil will involve

1 The Site Cleanup criteria for PCBs is based on the USEPA approved industrial cleanup level of 15 mg/kg. However, McWane may elect to remove impacted soil exceeding 1 mg/kg PCBs in order to remove references to PCBs from the LUC.

moisture conditioning for dust suppression purposes and recompacting of soil in place. Areas AOC-1 and AOC-5 depicted on Figure 4A and in Appendix D, Drawing No. 20-026P will be graded and paved to establish a barrier between lead contaminated soil and surface receptors and also to facilitate proper Site drainage. Moisture will be applied to soil prior to recompacting it within the borders of areas AOC1 and AOC5. The soil will not be moved to other areas of the project. The project is not anticipated to generate any excess lead contaminated soil to be transported from the Site for off-Site disposal so long as current conditions are encountered.

During Site redevelopment activities, if soil in the vicinity of AOC-6 and/or AOC-7 with PCB concentrations exceeding 1 mg/kg is disturbed, that soil will be removed and managed appropriately. Likewise, areas identified by samples AOC1-B3, AOC1-B17, SW-2, and SW-3 containing lead concentrations exceeding 1,000 mg/kg will be removed and appropriately managed, as discussed further in Sections 4.0, 4.1.1. and 4.2.1.

3.1.2 Unknowns

DTSC will be notified within 24 hours should previously unknown features such as underground storage tanks and/or odorous/discolored soil be encountered during soil excavation or grading activities. If such conditions are encountered, that area will be isolated and samples will be collected for laboratory analysis to assess the nature of the unknown condition.

3.1.3 Off Site Disposal

Any soil brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law. In the event soil is excavated from areas identified on Figure 3K with lead concentrations detected at or above California Code of Regulations, Title 22, Toxicity Threshold Limit Concentrations (1,000 mg/kg) the soil will be profiled and transported to an off-Site permitted hazardous waste treatment or disposal facility consistent with the procedures presented in Section 4 and Section 5.

For disposal purposes, in-situ sampling of PCB-impacted soil is required prior to excavation. Prior to excavating soil from areas identified on Figure 3F or Figure 3G with PCB concentrations above 1 mg/kg, McWane will provide a PCB Removal Workplan, including an in-situ soil sampling plan to US EPA for approval. Consistent with the procedures presented in Section 4 and Section 5, excavated soil will be profiled and soil at or above 50 ppm PCBs will either be transported to a TSCA landfill or with a TSCA

approval to a RCRA hazardous waste landfill. Additionally, McWane will notify USEPA, at a minimum 30 days prior to any soil disturbing activity at the Site, further details are provided in Section 6.1.1(b).

3.1.4 Soil Import

If needed, any off-Site soils brought to the Site for use as backfill (import fill) must be tested in general conformance with the DTSC, *Information Advisory Clean Imported Fill Material* document (DTSC, 2001). Import fill shall be tested for target compounds based on the location of the fill source area; however, at a minimum, the fill should be tested for the following constituents:

- TPHcc using EPA Method 8015;
- VOCs using EPA Method 5035/8260B;
- PCBs using EPA Method 8082 (using soxhlet extraction method 3540C); and
- Title 22 metals using 6010B/7271 A

Other analyses may be required contingent on the source of the import fill or recommendations by the supervising PG or PE. A minimum of one sample will be collected for laboratory analysis per each 1,000 tons, up to 5,000 tons, of import fill per borrow site (single source). For quantities above 5,000 tons of import fill per borrow site (single source), one additional sample will be collected for laboratory analysis per each additional 5,000 tons of import fill. In-situ samples (from the borrow source) will be collected randomly from surface, two feet, and five feet below ground surface, and from the bottom of the excavation if deeper than 5 feet. For PCBs, import soil shall contain less than 1 mg/kg of total PCBs.

3.2 Stockpile Management

Prior to initiation of earthmoving/soil disturbing activities, areas for stockpiling excess soil should be established to control contact by Site employees and dispersal into the environment. Management of excavated soil and subsequent characterization for proper off-Site disposal to an appropriate disposal facility is discussed in further detail in Section 4.

3.3 Air Quality Management

The constituents of concern at the Site do not include Volatile Organic Compound (VOC) contaminated soil. Therefore, Site activities conducted in accordance with this SMP are not expected to require a Rule 1166 permit under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). However, based on the metal and PCB concentrations present in

the soil, earth-moving activities are required to be conducted in accordance with SCAQMD Rule 1466. Rule 1466 requires training and certification from SCAQMD, monitoring, notification, and record keeping.

Ambient air monitoring (AAM) will be conducted during on-Site activities to quantify dust concentrations in the work area breathing zone and at the Site fence line. In accordance with SCAQMD Rule 1466, AAM will be conducted to determine if a two (2) hour average PM_{10} concentration exceeds 25 micrograms per cubic meter (ug/m^3). If the average concentration has been exceeded, earth-moving activities will cease, and dust suppression measures will be implemented as needed until the PM_{10} concentration is equal to or less than 25 ug/m^3 averaged over 30 minutes. At a minimum, PM_{10} AAM will include one (1) upwind monitor and one (1) downwind monitor which will record the collected direct-reading data every 10 minutes or less using a DustTrak, or equivalent. In addition, when earth-moving activities occur, the wind direction and speed will also be monitored using a weather station.

AAM data will be collected by a qualified designee at each monitoring location (which will include on-Site and fence line locations). Measurements will be recorded via electronic data logging and/or an air monitoring log. Windspeed and direction will be monitored and, if the wind speed is greater than 15 mph average over a 15-minute period or instantaneous wind speeds greater than 25 mph, earth moving activities will cease.

AAM monitoring for dust within the on-Site work zones will be conducted on a continuous basis using a direct reading instrument such as a Miniram, or equivalent. The detected values will be compared to the DTSC required criteria for total dust of 0.05 mg/m^3.

During excavation activities, Site workers will implement standard engineering controls available in the industry to manage dust emissions. Minimizing dust will also minimize potential hazards associated with airborne contaminants. The following table summarizes the control measures for the different activities:

Activity	Control Measure
Earth Moving Activities	- Apply water to prevent generation of visible dust plumes - Adequately wet to the depth of earth moving activity and allow time for penetration. - Setup fencing with windscreen (50+/-5% porosity). - Stabilize soil once earth-moving activities are completed.

Activity	Control Measure
	- If earth-moving activities will not occur for three (3) or more consecutive days, application of a chemical stabilizer to potential sources of fugitive dusts, diluted to the concentration required to maintain a stabilized surface for the period of inactivity, is required. - Within five (5) days of excavation, excess soil will be removed from the site.
Export of Material	- Pre-water material prior to loading into the hauling trucks, if applicable. - Provide water while loading/unloading to reduce visible dust plumes. - Post signs stating that vehicle speed will be limited on-Site to 15 mph or less. - Maintain at least six inches of freeboard on the hauling trucks. - Stabilize material while transporting. Use tarps or other suitable enclosures on the hauling trucks. - Comply with track-out prevention/mitigation requirements. Stabilize surface of vehicular traffic by applying dust suppressant, as needed.
Truck Loading	- Pre-water material prior to loading. - Empty loader bucket slowly so no dust plumes are created. - Ensure that freeboard exceeds six inches. - Ensure that the loader bucket is close to the truck to minimize drop height while loading. - Completely tarp the truck prior to leaving site.
Off-Site/ Perimeter	- Track-out will not extend beyond 25 feet of property line. Remove track-out each day using a vacuum sweeper equipped with a filter(s) rated by the manufacturer to achieve 99.97% capture efficiency for 0.3 micron particles. - Use shaker plates (minimum of 24 feet long and 10 feet wide) and stabilized construction entrance. - Sweep the immediate surroundings continuously or on an as-needed basis. - Clean soil from exterior of trucks prior to leaving site, if applicable. - Apply water as required.
Backfilling	- Apply water to prevent generation of visible dust plumes. - Empty loader buckets slowly so dust plumes are not created. - Stabilize material when not actively handling. - Stabilize material during handling. - Stabilize soil at completion of activity. - Minimize drop height from loader bucket.

Site personnel will provide an on-Site dust control supervisor that will be present during earthmoving activities to expeditiously employ sufficient dust control measures to ensure compliance with SCAQMD Rule 1466. Site personnel will have previously completed the SCAQMD Fugitive Dust Control Class and subsequently received a Certificate of Completion. Certificates will be retained with the project related records in accordance with the project record keeping

requirements identified in Section (h) of Rule 1466.

Site personnel will electronically notify the SCAQMD Executive Officer of the intent to conduct soil disturbing activities a minimum of 72 hours, and no more than 30 days, prior to such activities. Requirements of notification are listed in Section (f)(1) of Rule 1466. In addition, the Executive Officer must also be notified electronically of any exceedance of the PM_{10} emission limit within 72 hours of occurrence (See Section (f)(2) of Rule 1466).

3.4 Storm Water Management

Construction activities that result in land disturbance of 1 acre or greater are regulated by the NPDES *General Permit for Storm Water Discharges Associated with Construction Activity* (Construction General Permit) administered by the State Water Resources Control Board. However, land disturbance of less than 1 acre may be identified as a "Significant Redevelopment Project" according to the City of Corona. This designation requires preparation of a Water Quality Management Plan (WQMP) per the City of Corona Public Works Department for the Site. Therefore, field work associated with the capping of AOC1 and AOC5 (less than 1 acre) requires the preparation of a WQMP in accordance with the City of Corona and/or County of Riverside guidance is required prior to initiating field work, elements of which will be incorporated into Grading Plans for the Site. Future Site activities associated with redevelopment will involve a project area of greater than 1 acre; therefore, preparation of a construction Storm Water Pollution Prevention Plan (SWPPP) will be required prior to initiation of earth disturbing activities.

3.5 Noise Management

Soil disturbing activities at the Site will be conducted from Monday through Friday between the hours of 7:00 AM and 5:00 PM, without causing a nuisance, as defined in the City of Corona municipal code. Noise will be monitored on an as-needed basis with a calibrated noise level meter at the perimeter of the Site and recorded on field logs. Whenever possible, Site workers will conduct the more noise intense activities during less intrusive times such as mid-morning to mid-afternoon. Internal combustion equipment will be equipped with proper and well-maintained mufflers. Access doors and hatches will remain closed when the units are in operation. The Site is located in an industrial area; therefore, noise is not expected to be a concern.

4.0 WASTE MANAGEMENT & CLASSIFICATION

4.1 Waste Management

Any soil removed from the areas of higher lead levels (AOC1-B3, AOC1-B17, SW-2, and SW-3) identified on Figure 3K will be placed into stockpiles and sampled. As noted previously, areas for stockpiles of excess soil will be designated prior to implementation of field activities. Areas with unpaved surfaces will have the upper surface wheel rolled and lined with thick gauge plastic sheeting prior to accepting the excess soil. Soil stockpiles will be covered with thick gauge plastic sheeting at the end of each working day and perimeter berms will be constructed to provide run-on and run-off control. Stockpiled excess material will be characterized prior to transport to an appropriate off-Site disposal facility as discussed in Section 4.2. Stockpiled soil must be transported to a permitted off-site disposal facility within 90 days.

However, soil and/or concrete containing PCBs, that has not been previously characterized, must be tested in-situ prior to excavation and cannot be stockpiled. Further details on the PCB sampling protocol will be provided to the USEPA in a PCB Removal Workplan that will be approved by USEPA prior to implementation.

Following removal of the lead and PCBs hot spot areas, the planned future redevelopment of the Site may include removal of the concrete and asphalt and over-excavation and re-compaction of the soil as part of geotechnical requirements. As the soil is of economic value, it will be the intent of the future redevelopment to reuse all soil excavated during geotechnical grading on Site. Future Site redevelopment must include construction of a cover in the area subject to the Soil Management Plan and Operation & Maintenance Plan as depicted on Figure 4A to prevent exposure to contaminated soil by future Site occupants.

4.1.1 PCBs and Lead

If Site remedial activities during capping of AOC1 and AOC5 include soil disturbance in the vicinity of lead “hot spot” areas exceeding 1,000 mg/kg, or in the event future Site redevelopment activities warrant the removal of soil from areas with elevated lead concentrations associated with sample locations AOC1-B3, AOC1-B17, SW2, and SW3, soil hot spots will be excavated and transported off-Site to Soil Safe facility in Adelanto, CA, the Waste Management facility in Kettleman Hills, CA, or another waste disposal facility subject to DTSC approval upon review of waste profile report.

As noted previously, the Site cleanup criteria for PCBs is based on the USEPA approved Site-specific industrial cleanup level of 15 mg/kg. However, McWane may elect to remove impacted soil exceeding 1 mg/kg PCBs in order to remove references to PCBs from the LUC. PCB "hot spot" areas (>15 mg/kg) in AOC6 and AOC7 are identified on Figure 4 as the area subject to PCB management in accordance with 40 CFR 761.61. In the event soil from this area is being disturbed during future Site development activities following Corrective Measures Implementation, soil with PCB concentrations of 15 ppm or greater will be removed as required by the USEPA[2], and soil with PCB concentrations greater than 1 ppm may also be removed at McWane's discretion under the oversight of the USEPA. Once sampled in-situ and characterized, excavated PCB-impacted soil will be loaded directly into labeled containers and securely covered pending transportation. Soil characterized with PCB concentrations at or above 50 ppm will be transported off-Site for disposal at a TSCA-approved facility. Soil from lead impacted areas and soil characterized with PCB concentrations below 50 ppm will be managed and transported to either the Soil Safe facility in Adelanto, CA, the Waste Management facility in Kettleman Hills, CA, or another appropriate facility in accordance with applicable federal, state, and local laws and 40 CFR 761.50(a)(6).

DTSC and USEPA notification requirements, including details associated with confirmation soil sampling for soil disturbing activities, are provided in Section 6.1.1.

4.1.2 Sampling and Analysis Plan

As noted above, in-situ sampling required for the PCB impacted material will be conducted prior to excavation. Characterization sampling for PCB impacted soil will be conducted in-situ, details of which will be provided in a PCB Workplan submitted for approval to the USEPA prior to initiation of field work activities.

Soil and impacted material from area identified on Exhibit E "Legal Description" and Exhibit D "Sketch to Accompany Legal Description" and illustrated on Figure 4A as subject to SMP and O&M Plans with lead concentration at or above 320 mg/kg will be excavated, stockpiled and sampled for waste characterization purposes to determine appropriate management and disposal requirements. Each stockpile will be uniquely numbered in consecutive order and marked in the field with labeled stakes to ensure accurate management.

For stockpiles of lead impacted soil, a sufficient number of samples will be collected to represent the volume of soil to be classified. Therefore, for stockpiles containing up to 1,000 cubic yards, a total of 6 samples will be collected (Simple Random Sampling – USEPA SW-846 Chapter 9). However, the appropriate number of samples should be verified with the selected receiving facility, including for volumes that exceed 1,000 cubic yards.

Each sample container will be labeled with the following information, as appropriate, at the time of sampling:

- Sample Number
- Sample Date
- Container Designation
- Sample Location
- Time of Sampling
- Preservatives, if any
- Sample Type
- Handling Precautions
- Requested Analyses
- Laboratory Name
- Initials of Sampling Personnel

After labeling, the laboratory samples should be placed in a cooler on ice for transportation to the appropriate laboratory. In accordance with Chapter 9, Section 9.2.2.7 of SW-846, a chain of custody record will document sample possession from the time of collection until the samples are analyzed. The record also serves as a sample inventory and analysis order form.

The chain of custody record should be completed with a waterproof pen. When possession of the samples is transferred from sampling personnel to a courier or to the laboratory, both parties will sign the chain of custody. The chain of custody record should be placed in a large resealable plastic bag inside the cooler. Sampling personnel, a courier, a laboratory representative, or a commercial carrier can transport samples to the laboratory. The laboratory should be notified of the time by which analysis must begin so that the sample holding times are not exceeded.

---

2 A PCB Removal Workplan will be submitted to the USEPA and approved prior to removal of PCB impacted soil.

Based on previous analytical results, the analytical methods required for waste classification will include one or more of the following:

- CAM 17 Metals in accordance with USEPA Methods 6010B and 7471A
- PCBs in accordance with USEPA Method 8082 with Soxhlet extraction (SW-846 Method 3500B/3540C)

4.2 Waste Classification

4.2.1 Metals

Total metals concentrations for soil that is to be disposed should initially be compared to the Toxicity Threshold Limit Concentrations (TTLC)[3] and the screening levels for Soluble Threshold Limit Concentrations (STLC)[5] and Toxicity Characteristic Leaching Potential (TCLP)[4] analyses. Additional analysis to determine soluble metal concentrations should be performed for those samples that indicate total concentrations greater than 10 times the STLC. If the constituent concentration exceeds 10 times the STLC limit but does not exceed the California TTLC limit, the California Waste Extraction Test (WET) should be performed for the specific metal, or metals, exceeding the criterion. A TCLP extraction and subsequent analysis of a constituent should be performed if the constituent total concentration exceeds 20 times the toxicity characteristic leaching procedure (TCLP) limit.

Reported concentrations exceeding the applicable TTLC and/or STLC criteria should be identified as California Hazardous Waste and concentrations exceeding the applicable TCLP criteria should be identified as RCRA Hazardous Waste. Materials to be transported off-Site for disposal must be classified and profiled in accordance with the results of the waste classification analyses. A reference containing both state and federal hazardous waste criteria is provided in Appendix B.

4.2.2 PCBs

Previous investigations identified PCB concentrations ranging up to 2,220 mg/kg at AOC-6 and AOC-7. Additional PCB impacted soil with concentrations greater than the USEPA's Site-specific industrial risk-based threshold of 15 mg/kg are not expected to be encountered. However, PCB impacted soil will be characterized in-situ and transported to the appropriate disposal facility, as noted in Section 4.1.1.

3 As defined in 22CCR 66261.24 a.2.A
4 As defined in 22CCR 66261.24 a.1.B

5.0 Transportation and Disposal

The trucks will be staged on the Site and out of traffic lanes to the extent possible. Once on the Site, the trucks will be loaded by a front-end loader. Water will be sprayed on the material to limit dust emissions during the loading process. Once loaded, the truck will proceed to the decontamination area where the load will be covered with a tarp, and material will be removed from the tires and flat surfaces of the trailer as necessary prior to leaving the Site. A stabilized entrance/exit will be used to clean the truck tires. The area outside the access gate will be swept as necessary to remove any residual material.

Each load will be issued a uniquely identified manifest for transportation and each truck will use the appropriate placard as required by the Department of Transportation. Based on previous soil characterization and off-Site disposal, it is assumed that non-hazardous material (soil, concrete, etc.) will be transported via Interstate 15/395 to the Soil Safe facility in Adelanto, CA, or another appropriate location. Depending on the characterization of PCB-impacted soil, subsequent transportation will likely be to a TSCA disposal facility such as the Waste Management facility in Kettleman, CA, or another appropriate location, subject to DTSC approval upon review of the waste profile report. After characterization, PCB impacted material not required to go to a TSCA disposal facility and lead impacted soil will be transported to either a non-hazardous, Cal-haz, or RCRA disposal facility, as appropriate.

Trucks leaving the Site will travel west on Magnolia Street to the entrance of Interstate 15. The trucks will be operated Monday through Friday between 7:00 AM and 5:00 PM only and avoid leaving the Site during peak traffic hours. A hazardous materials response company will be available on an on-call basis for response to any accidents involving the trucks utilized to transport Site wastes.

5.1 Disposal Facility

The proposed off-Site disposal facilities identified above should be contacted to determine if their environmental permits have additional required laboratory testing requirements for the acceptance of soil from the Site. Waste classification/profiling by a proposed disposal facility may include additional or modified parameters. Therefore, the specific list of analyses should be verified with the selected receiving facility. The property owner is responsible for appropriate management of waste soil that is transported off-Site. Laboratory reports and facility disposal information associated

with waste characterization will also be provided to the DTSC prior to transportation off-Site

6.0 IMPLEMENTATION OF SOIL MANAGEMENT PLAN

6.1 Responsibilities

The property owner has ultimate responsibility for following the SMP, HASP, LUC, and grading plan/permit (See Appendix D). The property owner shall oversee implementation of this SMP at the Site. In addition, the property owner shall make available a copy of the SMP to contractors performing soil disturbance activities at the Site. The contractor shall be responsible for adhering to this SMP, following project specifications, and ensuring job site safety. The contractor also is responsible for providing a copy of the SMP to its subcontractors.

6.1.1 Notifications

McWane will notify DTSC and/or the USEPA, as appropriate, at a minimum 30 days prior to any soil disturbing activity at the Site as described in the LUC as Exhibit C, "Legal Description" and/or illustrated in Exhibit D, "Sketch", also illustrated in Figure 4A as the "Area subject to SMP and O&M Plan (lead concentrations > 320 mg/kg)".

a. Notification of soil disturbing activities associated with lead and/or PCB "hot spot" areas will include details of the excavation activities and associated confirmation sampling protocol using the timeline provided below: McWane will notify DTSC 30 days prior to excavation of lead impacted soil (>1,000 mg/kg) (Figure 3K). The notification will include a detailed excavation, disposal, transportation route, and confirmation soil sampling plan and field work schedule. DTSC approval is required before initiating work.
b. McWane will notify USEPA 30 days prior to excavation of PCB impacted soil (>1 mg/kg) (Figure 3F and Figure 3G). In addition, USEPA approval is required before initiating any future work proposed that will impact the soil, concrete, and/or asphalt with PCB levels over 1 ppm.

6.2 Reporting

Following completion of soil disturbing and associated off-Site disposal activities, a final report will be prepared documenting the results of such activities. The report will summarize on-Site activities, provide figures illustrating soil disturbing activities, and will provide the associated supporting documentation including but not limited to, laboratory data, including waste characterization and confirmation sampling; air monitoring; field sampling data; field notes; pictures; and waste manifest documents. The report will be submitted to the DTSC and the USEPA within 30 days from

receiving the manifests from the destination disposal facility.

PROJECT HEALTH & SAFETY PLAN (HASP)

Corrective Measures Study
Clow Valve
1375 Magnolia Avenue
Corona, California

EarthCon Project No. 04.20150013.00

August 22, 2016
Revised October 2, 2017

Project Health and Safety Plan (HASP)

Project Name: Corrective Measures Study - Clow Valve
1375 Magnolia Avenue
Corona, California

Project Number: 04.20150013.00

Prepared by:	Jennifer McGervey EarthCon Consultants CA, Inc.	8/19/16
Project Manager:	Jeff Bennett, PG EarthCon Consultants CA, Inc.	8/19/16
Approved by:	J. Ryan Clarke EarthCon HASP Reviewer	08/20/2016

Brief Description of Amendment	**Amendment Date**
Update field scope to include capping; updated dust action level;	10/2/17
Update of EarthCon H&S personnel	10/2/17

Health and Safety Plan Consent Agreement

Because of the potentially hazardous nature of this site and activity occurring at the site, it is not possible to discover, evaluate, and provide protection for all possible hazards that may be encountered. Strict adherence to the health and safety guidelines set forth in this document will reduce, but may not eliminate, the potential for injury and illness at this site. Guidelines in this Plan were prepared specifically for this site and should not be used on any other site without prior evaluation by trained health and safety personnel.

Site workers must also review this HASP. The Site Safety Officer (SSO) must conduct a pre-work briefing prior to initiating this project. All sections of this HASP must be reviewed during this briefing and documented via **Appendix A**. Any worker not attending the initial meeting must be trained by the SSO on the information covered in the pre-work briefing meeting. ***The SSO must hold tailgate meetings at the beginning of each work shift to discuss important safety and health issues concerning tasks to be performed on that day.*** After reading the HASP and attending a pre-work briefing, workers must sign the following acknowledgment statement.

I have read, understand, and will abide by the information set forth in this HASP. I have also attended a pre-work briefing. I agree to perform my work in accordance with this HASP **(See Appendix F).**

1.0 HASP SUMMARY INFORMATION

The first phase of this project is anticipated to include the collection of soil samples, using a direct push drill rig, at a total depth of 10 feet below ground surface (ft bgs) and installation of two groundwater monitoring wells. The second phase is to implement the CMS activities which includes removing impacted soil, collection of soil confirmation samples, and capping the identified exposed surfaces. This HASP will be updated or amended, as necessary, to reflect any changes that may be encountered. Personnel responsibilities are described in **Table 1** and personnel training requirements are provided in **Table 2.**

2.0 INTRODUCTION

This HASP serves the following purposes:

- Identifies and describes the potentially hazardous substances and working conditions that may be encountered during the field work;
- Specifies personal protective and monitoring equipment to be used during onsite activities; and
- Outlines measures to be implemented in the event of an emergency.

2.1 Site Location and Description

The Site is southwest corner of the intersection at 1375 Magnolia Avenue in Corona, California. **Figure 1** shows the site location. **Figure 2** provides a site layout for the facility. It is identified as Riverside County Assessor Parcel Number 107-030-022-3 and covers approximately 16 acres. Approximately 60% of the property is currently used for machining, product finishing and testing, and product storage. The remaining 40% includes asphalt-paved parking areas and unpaved areas. Unused foundry buildings, small offices and open areas are leased to other tenants.

2.2 Project Objectives

EarthCon will collect soil samples to assess the extent of soil contamination on-Site. The soil samples will be managed according to the workplan protocol.

EarthCon will provide oversight of advancement for well installation using a subcontracted drilling company. EarthCon will collect and manage water samples according to the workplan protocol.

EarthCon will provide oversight of the grading and asphalt cap placement associated with AOC-1 and AOC-5.

The ultimate objective is to conduct all activities in a safe and compliant manner.

2.3 Personnel Requirements and Responsibilities

Provisions of this HASP apply to all EarthCon personnel and subcontractors that will be participating in the above noted field activities. On-site personnel will be required to review the HASP prior to commencement of field activities and conduct all field activities in accordance with plan specifications. Other personnel on the site are expected to follow the provisions of the health and safety procedures outlined in this HASP as a minimum base standard but will retain full responsibility for the health and safety of their own employees or sub-subcontractors.

General safe work practices that must be implemented during work activities at this site are included in **Table 3**.

EarthCon considers each subcontractor to be an expert in all aspects of the work operations which they are tasked to provide, and each subcontractor is responsible for compliance with those regulatory and/or legal requirements which pertain to those services. While the EarthCon HASP will be the minimum H&S requirements for the work completed by EarthCon and its subcontractors, each subcontractor, in coordination with EarthCon's H&S personnel, is expected to perform its operations in accordance with its own H&S plans, policies and procedures unique to the subcontractor's work to ensure that hazards associated with the performance of the subcontractor's work activities are properly controlled. Copies of any required safety documentation for a subcontractor's work activities will be provided to EarthCon for review prior to the start of on-site activities. No review of any subcontractor plan or document by EarthCon will serve as an approval or ratification of such plan by or on behalf of EarthCon, and no such review will operate as any assumption of any duty or responsibility on the part of EarthCon (or any EarthCon employee or representative) for or as to any aspect of any subcontractor's own H&S responsibilities. Any comments or feedback from EarthCon to any subcontractor following any review by EarthCon of any subcontractor document or practice is provided solely for informational purposes and not for reliance.

In the event that the subcontractor's procedures/requirements conflict with requirements specified in this HASP, the more stringent guidance will be adopted after discussion and agreement between the subcontractor and EarthCon project H&S personnel. Hazards not listed in this HASP, but known to the subcontractor or known to be associated with the subcontractor's services, must be identified by the subcontractor and addressed to the EarthCon Project Manager prior to beginning work operations.

EarthCon personnel who have responsibility for the safe operations of this project include the Project Manager (PM), EarthCon Corporate Safety and Health Manager (CSHM), the Site Safety Officer (SSO) and the Project Field Staff. Responsibilities of each of the above referenced personnel as they relate to project safety and health are provided in **Table 1**.

2.4 Site Control

Site control procedures must be implemented **before** the start of site tasks to control worker exposures to hazardous substances. A Vicinity Map that shows the site location is included as **Figure 1**. A Site Layout Plan with proposed sampling locations is included as **Figure 2**. Changes may be made to the site map by the SSO, as needed, based on site conditions. The site map should be posted in the work area and/or field notebook.This site control program is designed to reduce the spread of hazardous substances from contaminated areas to clean areas, to identify and isolate contaminated areas of the site, to facilitate emergency evacuation and medical care, to prevent unauthorized entry to the site, and to deter vandalism and theft. The Site Safety Officer is responsible for evaluating site conditions and for verifying that the

site control program functions effectively. The site control program will be updated regularly to reflect current site conditions, work operations, and procedures.

2.4.1 Site Access

Access to the site shall be controlled using the following method(s):

☐	Security fence	☒	Temporary barricades and/or warning tape
☐	Sign in/Sign out log	☐	Guard
☐	Identification badges	☐	Other: Onsite Manager

2.4.2 Work Zones

Restricted work zones may be established to limit the spread of hazardous substances (when applicable) by workers from potentially affected areas to non-affected areas. The exact location and extent of the work zones will be modified as necessary as site investigation information becomes available. Delineation of work zones is as follows:

- Exclusion Zone: The Exclusion Zone is the area where the potential for exposure to hazards and contact with hazardous materials could occur. The zone may be marked by caution tape. Personnel working within the Exclusion Zone will be expected to follow protective measures as prescribed by the SSO.

- Contamination Reduction Zone: The Contamination Reduction Zone is a transition area between the potentially affected areas/materials and assumed non-affected areas/materials. Decontamination of personnel and equipment, if necessary, shall be conducted in this area to reduce the probability of contamination transfer to a non-affected area. The Contamination Reduction Zone shall be situated upwind of the Exclusion Zone.

- Support Zone: The Support Zone is the area, outside the Exclusion and Contamination Reduction Zone, where administrative and other project support functions are performed. The Support Zone shall be situated upwind of the Contamination Reduction Zone and/or the Exclusion Zone.

See Figure 2A for the location of the work zones.

2.4.3 Communications

Typical on-site communications may be conducted through the use of:

☒	Verbal		
☐	Two-way radio	☐	Horn
☒	Cellular telephone	☐	Siren
☒	Hand signals	☐	Other:_____

Off-site communications may be conducted through the use of:

☒ Cellular telephone: Verify cell phone reception in all work areas prior to starting work.
☐ Site Phone: Location & No. _____
☐ Pay phone: Location & No. _____
☐ Other: _____

Cell Phone reception should be verified throughout the site prior to commencing work.

2.4.4 Visitors

Visitors to the Site shall be continually escorted in order to assure their safety. Visitors will not be allowed past the Support Zone (if such a zone is established at this Site) unless they read, understand, sign, and abide by the requirements outlined in this HASP.

2.5 Worker Training

Table 2 will be used to document on-site workers who have received the appropriate training according to the company Environmental, Health, and Safety (EH&S) Training Program**. Table 2** must be completed prior to initiation of field activities. Pre-work briefing and routine tailgate meetings will be conducted to facilitate on-site training. Subcontractors must provide information requested in **Appendix G** prior to starting to work.

2.6 Safety Meetings

Project personnel who will be involved with on-site field activities must be appropriately trained in accordance with 29 CFR Part 1910.120 "Hazardous Waste Operations and Emergency Response". Before field work begins, the SSO will review the HASP with the field workers addressing the potential hazards associated with the proposed field activities. Components of the safety meeting will include, but will not be limited to, a review of the following:

- Location of sanitation facilities as seen on site plan.
- Potential chemical, operational and physical hazards present at the site.
- Personal protective equipment (PPE)/personal protection procedures.
- Hazardous materials handling procedures.
- Buddy system.
- Personal hygiene - general guidelines.
- Personal and equipment decontamination procedures.
- Emergency response procedures.
- Symptom awareness.
- Stop Work Authority

Periodic meetings with project personnel may be conducted by the SSO pending changes to the scope of work or modification to this HASP. To document the meetings, the SSO will complete

the Site Safety Meeting Minutes Form provided in **Appendix A**. Verification will be provided to the CHSM upon request.

2.7 Medical Monitoring Requirements

OSHA requires medical monitoring for personnel potentially exposed to chemical hazards at concentrations in excess of the PEL for more than 30 days per year and for personnel who must use respiratory protection for more than 30 days per year.

Will personnel working at this site be enrolled in a medical monitoring program? ☐**Yes** ☒**No**

Personnel who are diagnosed as having medical conditions which could directly or indirectly be aggravated by either exposure to chemical substances suspected of being present at the Site, or by the use of Personal Protective Equipment (PPE), will not be allowed to participate in field activities. In addition, personnel with injuries or illnesses involving open wounds may not be allowed on-site. Field personnel who develop an illness or injury during the project may be examined by a physician. A physician must determine if the employee is fit to return to work before they can return to field activities. In addition, the CHSM, SSO, or Site employees may request additional medical testing if a chemical exposure is suspected.

2.8 Hazard Communication Requirements

When chemicals are used on-site, EarthCon workers must adhere to the company's Hazard Communication Program (29 CFR §1910.1200). The following procedures must be followed for chemicals brought on-site (i.e., decontamination solution, sampling preservatives, etc.):

- Labels on incoming primary chemical containers must not be defaced (until after the container is empty, decontaminated and ready for disposal).
- Chemical containers must be stored in appropriate storage cabinets.
- Secondary containers and storage cabinets must be correctly and clearly labeled using the Hazardous Materials Identification System (HMIS).
- Incompatible chemicals must not be stored together.
- Workers must receive training on the hazards indicated in **Table 4.**
- Containers must be secured closed unless adding to or removing something from the container.
- Safety Data Sheets for the chemicals should be recent and are included in **Appendix B**.; they should be made available to workers upon request and applicable hazards covered during safety meetings.
- Workers must receive training on the hazards of the chemicals indicted in **Appendix C.**
- Include a safety training sign off sheet to document this training and provide a copy to the CHSM.
- Training on this information should be documented in **Appendix F**.

3.0 GENERAL PERFORMANCE REQUIREMENTS

General safe work practices that must be implemented during work activities at this site are included in **Table 3**.

3.1 Performance Requirements

- Workers are expected to show up alert and ready to work. No sleeping is allowed on the job.
- Any unsafe equipment, condition or work practice and injuries, no matter how slight, must be reported to the SSO immediately.
- Procedures for the proper set up and control of the worksite task area should be planned and implemented prior to starting individual tasks.
- Field personnel must have ready access to a telephone and a vehicle in case of emergency.
- Field personnel working in the Exclusion Zone are to work with another person at all times. The subcontractor's representative can serve as the second person while the work is being conducted in the field.

3.2 Hygiene Requirements

- Long hair will be secured away from the face so it does not interfere with any activities.
- Eating, drinking, chewing gum or tobacco, smoking, or any practice that increases the probability of hand-to-mouth transfer and ingestion of material is prohibited in any area designated as being potentially affected by site related chemicals.
- Hands and face must be thoroughly washed upon leaving the work area, and before eating, drinking, or other non-project activities.
- Personnel leaving potentially contaminated areas will shower (including washing hair) and change to clean clothing as soon as possible after leaving the site.
- Kneeling, sitting, leaning, or general contact with potentially affected surfaces or with surfaces suspected of being potentially affected by hazardous materials (i.e., puddles, mud, leachate, etc.) should be avoided.
- Medicine and alcohol can potentiate the effects of exposure to toxic chemicals. Neither should be taken by personnel if the likelihood of risk exists. Ingestion of alcohol during and immediately prior to field activities is prohibited.
- Sanitation facilities are provided on site. Potable water and restroom facilities are available and in accordance with 8 CCR 5192 for all employees and visitors.

4.0 HAZARD EVALUATION

A preliminary hazard evaluation was performed to identify existing site conditions and is documented in **Table 4**. The preliminary hazard evaluation addressed the following, where applicable:

- Identification of the suspected hazardous materials/wastes on-site;
- Toxicological aspects of the suspected hazardous materials on-site;
- Suspected chemical/elemental concentrations within the various media on-site;
- Inherent site hazards;
- Operational hazards; and
- Climate extremes.

Environmental site personnel have indicated fire, inhalation and skin absorption to pose a hazard on site. Reactivity including ionizing radiation is not of concern for the site due to past investigations and the operational history. All scrap steel and raw steel entering the site has been screened by radiation detection devices. Further information is documented in **Table 4**.

4.1 Suspected Chemical/Elemental Hazards

To select those contaminants that may cause health and safety concerns, henceforth referred to as potential Contaminants of Concern (COCs), a review of the site remediation and sampling history was performed. Based on this review, potential COCs were selected and are listed in **Table 5**. Chemical information for each of the potential COCs are provided in the NIOSH Pocket Guide pages located in **Appendix C**.

Information from the NIOSH Pocket Guide (e.g., flash point, water reactive, etc.) has been used in performing the chemical hazard analysis in **Table 5** (e.g., fire, inhalation, reactivity, and skin absorption hazards). If, based on the hazard analysis, chemical hazards exist, hazard mitigators must be implemented (**Appendix D**). In addition, air monitoring and personal protective equipment must also be used to evaluate airborne concentrations and protect workers.

After review of the relevant background information and data, if there is a potential for dermal and/or respiratory exposure to the materials or contaminants of concern, personnel shall perform the monitoring requirements summarized in **Section 5.2** and execute actions as appropriate. If action levels are exceeded, work shall be suspended until on-site conditions can be re-assessed and this HASP modified.

4.2 Operational/Physical Hazards/Biological Hazards

Potential operational/physical associated with tasks to be performed and the site have been analyzed in **Table 4**. If, based on the hazard analysis, these hazards exist; the hazard mitigators described in **Appendix D** must be implemented.

- **Utility (e.g., Electrical) hazards:** Utility hazards include buried cables, which pose a danger of shock or electrocution if workers or equipment contact or sever them during site operations. Onsite personnel are advised to pay special attention to the presence of utility hazards. Observe as built plans (if available) for the presence of underground hazards and advance the borings cautiously. A subsurface survey shall be conducted at each of the suspect locations, if necessary.

Lockout/Tag out procedures, in accordance with the EarthCon Lockout/Tag out Program, will be followed when working in the vicinity of electrical equipment. Electrical equipment will be considered energized unless tested and determined otherwise. Energized parts will be insulated or guarded from personal contact. Extension cords used with electrical tools will be the 3-wire type and connected to a ground fault circuit interrupter (GFCI). Wooden or fiberglass ladders will be used. Metal ladders will not be used in the work area.

- **Mechanical hazards:** Mechanical hazards include being struck by heavy equipment and being injured by excavation cave-ins. Onsite personnel are advised to stand at least 15 feet clear of heavy equipment and excavations, and wear appropriate protective equipment, including steel-toe boots and hard hats during the field activities. Fall, slip, and/or trip hazards exist when working with equipment and tools. Field personnel will observe walking surfaces in the work area to prevent tripping on equipment/tools placed on the ground. Good housekeeping will also be practiced. All walking surfaces with a drop of more than six feet will have fall protection devices. Fall protection devices may include adequate delineation of the excavation and trenches, guardrails, or climbing devices such as a harness and lanyard.

- **Noise Hazards:** Noise hazards may exist when working around heavy equipment. Loud noises interfere with communication and also lead to temporary and/or permanent hearing loss. Noise hazards may exist wherever heavy equipment such as loaders and any operating machinery, produce noise levels at or above the Action Level of 85 dBA for 8-hr Time Weighted Average (TWA). Noise in excess of 85 dBA may produce the following effects:

  1. Distraction, annoyance, or sudden surprise
  2. Inability to effectively communicate with co-workers
  3. Physical damage expressed initially as a Temporary Threshold Shift (TTS) and then, as a Permanent Threshold Shift (PTS), or immediately as a Permanent Threshold Shift if the impact noise is sufficient enough (usually greater than 100 dBA)

  Appropriate hearing protection must be utilized in areas of unacceptable noise levels.

If, based on the hazard analysis (**Table 4**), biological hazards exist associated with tasks to be performed and site location (e.g., allergic reactions to poisonous plants or insects indigenous to the area, etc.); hazard mitigators (**Appendix D**) must be implemented.

5.0 PERSONAL PROTECTION

5.1 Personal Protective Equipment (PPE)

The levels of personal protection required for each task are provided **in Appendix E.** This PPE is based on the hazards identified in **Section 4.** Required equipment and types of protective clothing materials are listed, as well as an indication of the initial level of protection.

Is there potential for a respirator to be donned during fieldwork? ☐Yes ☒No

It is not anticipated that the use of respirators will be needed, however during the drilling work and sampling the area will be monitored via dust particulate monitor (MiniRam or equivalent). If there is an indication that a respirator is required work will be halted until tasks have been re-evaluated and the HASP has been updated as needed.

The general use of PPE is acceptable when engineering controls cannot adequately eliminate the hazard. The use of PPE is intended to provide protection for on-site personnel from chemical, physical, and operational hazards that cannot be controlled through other safety procedures. Initially, Level D Protection will be employed by on-site personnel and will include varying levels of eye, head, body, hand, foot, and hearing protection.

Respiratory protection will not be required. However, if respirators are worn, workers must adhere to the company's Respiratory Protection Program (29 CFR §1910.134). **Table 2** should be used to provide a record of the site workers' last fit test. Beards (i.e., facial hair interfering with the respirator seal) are not allowed.

Acceptable PPE are further described below.

- Eye Protection: Eye protection will include the use of chemical splash goggles and/or face shields and impact resistant safety glasses with side shield protection that meet the current ANSI standard Z87.1.

- Head Protection: Non-metallic hard hats meeting the current ANSI standard Z89.1 will be worn by on-site personnel as required during field activities.

- Body Protection: Body protection will include the use of long sleeved shirt and pants work clothes.

- Hand Protection: Hand protection will include the use of nitrile gloves when hand contact with affected materials (e.g., groundwater and soil) may occur. Otherwise use work gloves of leather or other appropriate material.

- Foot Protection: Foot protection will include the use of impact resistant boots meeting the current ANSI standard Z41.1.

These levels shall only be downgraded upon approval by either the CSHM or SSO. Project personnel are not permitted to deviate from the specified levels of protection without prior approval of the SSO.

5.2 Personal Air Monitoring

Corrective measure activities may have the potential to generate dust; therefore, dust monitoring will be conducted on-Site. Airborne particulate concentrations will be measured with a portable particulate monitor (MiniRam or equivalent) to ensure compliance with the action levels (stop work level) and Cal OSHA Permissible Exposure Limits (PELs). The PELs for COCs potentially present on-Site, along with stop work levels are provided in Table 5.

According to calculations using the site specific maximum concentrations documented in **Table 5** and the OSHA Permissible Exposure Limit (PEL) for total dust, the only constituent of concern is lead. Total dust must measure below 6.8 mg per cubic meter (mg/m^3) to remain below the PEL for lead. However, at the direction of the DTSC the action level for total dust is 0.05 mg/m^3. A MiniRam will be on site at all times monitoring dust concentrations. The MiniRam is gravimetrically calibrated in mg/m^3using the standard SAE Fine (ISO fine) test dust. A zeroing kit will be present to accomplish zeroing in particle free air when on-site. In the case where dust levels measure over 0.05 mg/m3, work will be suspended and on-site conditions will be re-assessed.

5.3 Vehicle Safety

Vehicle safety requires the following:

- Vehicles are to be operated in a safe manner and in compliance with statutory traffic regulations and ordinances.
- Operators are to practice defensive driving and drive in a courteous manner.
- Operators are required to have a valid driver's license and liability insurance (per local/state laws).
- Seat belts are to be worn by the driver and passengers.
- No persons are allowed to ride in the back of any trucks or vans.
- Vehicles are to be driven in conformance with local speed limits.
- Personnel who are impaired by fatigue, illness, alcohol, illegal or prescription drugs, or who are otherwise physically unfit, are not allowed to drive.
- Personnel are to avoid using cellular phones or engaging in other distractions while driving.
- Vehicles should be maintained in a safe and clean condition.
- Field vehicles should be equipped with the following items; first-aid kit, fire extinguisher, spares tire and jack.
- Motor vehicle accidents shall be reported to the responsible law enforcement agency (when appropriate), the EarthCon CHSM, the EarthCon HR Director, the SSO and the EarthCon PM.
- Daily and monthly check lists to verify safe operations have been generated and should be utilized prior to operating a vehicle.
- If the site has specific driving rules, these should be reviewed and adhered to.

5.4 Illumination

Work will be completed during daylight hours only. This will ensure all work is done in accordance with 8 CCR 5192(m) illumination requirements.

6.0 DECONTAMINATION

The following decontamination (cleansing) procedures for the sampling equipment and PPE have been developed with the intent of reducing the potential for the transfer of hazardous chemicals.

6.1 Sampling Equipment

To reduce the potential for the distribution of contaminants or cross contamination of samples, the following procedures will be used. Decontamination of the sampling equipment will include washing the equipment in a detergent solution (Liqui-nox and water), rinse with potable water, rinse with organic-free/distilled water, and allow to air dry. Disposable equipment will be used when practical to eliminate the need for on-site decontamination.

6.2 Personnel and PPE

During this project the goal will be to use disposal PPE (nitrile gloves), therefore no PPE decontamination will be required. If this cannot be accomplished, PPE must be decontaminated (cleaned) per 29 CFR §1910.120(k). In an emergency, the primary concern is *to prevent the loss of life or severe injury to site personnel. If immediate medical treatment is* required to save a life, decontamination should be delayed until the victim is stabilized. If decontamination can be performed without interfering with essential life saving measures or first-aid, or if a worker has been contaminated with an extremely toxic or corrosive material that could cause severe injury or loss of life, decontamination must be performed in coordination with or prior to initial medical treatment at the scene.

Decontamination of PPE (e.g., gloves) shall be accomplished by passing personnel through appropriate stages of contamination reduction and removing contaminated clothing and equipment in decreasing order of the degree of potential contamination. Personnel who have entered areas suspected of containing hazardous materials (i.e., the Exclusion Zone) will be subjected to decontamination. The personnel decontamination corridor may be comprised of the following procedural stages. These stages/procedures are listed sequentially below.

Stage No. 1: Segregated Equipment Drop – Personnel will brush off loose dirt and wash off remaining soil, sediment, and dirt from clothes and shoes upon completion of sampling and field work. Equipment and consumables that require either disposal or special handling (e.g., special and/or equipment decontamination) shall remain in this area and be decontaminated, if appropriate, or disposed of with the excavated materials or other potentially contaminated materials.

Stage No. 2: PPE Decontamination - PPE that has been potentially contaminated will be washed with a TSP and water mixture followed by a water rinse.

Stage No. 3: General Field Wash - Personnel shall wash and rinse face and hands with soap and water before leaving the site and/or eating. If a change of clothing is necessary, it shall be done at this time.

6.3 Decontamination Fluids and Investigation-Derived Waste Disposal

Decontamination water and drill cuttings will be placed in appropriate containers. Disposal methods will be determined after characterizations have been completed. Solid waste generated during decontamination and field activities (i.e., paper towels, plastic tarps, used PPE) will be removed from the Site and disposed as refuse/trash.

6.4 Vehicles

Typically, vehicles will not be allowed inside the exclusion zone. If vehicles are required in the exclusion zone (e.g., drill rigs) the following procedures will be used. Personnel will wash or remove boots and change to dry clothing prior to vehicle entry. Non-disposable equipment will be washed or bagged before placement into field vehicles. Drill rigs will be decontaminated with detergent solution and rinsed with water before leaving the exclusion zone.

7.0 EMERGENCY PROCEDURES

A list of Emergency Response contacts and telephone numbers for applicable local off-site emergency responders is provided in **Table 6**. The following emergency response equipment is required for this project:

☒ Fire Extinguisher(s): ☐ Type A ☐ Type B ☐ Type C ☒ Type ABC
☒ Air Monitoring: ☐ PID ☐ Air Sampling Pumps ☐ CG/O2 meter
☒ MiniRam ☐ H2S Meter ☐ Radiation Meter
☐ Draeger Pump w/ Sample Tubes ☐ Other:
☒ Eyewash (Note: portable eyewash bottle)
☐ SCBA
☒ First Aid Kit
☐ Shower (Note: for acids and caustics)
☐ Personal Flotation Device(s)
☐ Windsock
☐ Stop Watch &Thermoscan for Measuring Heart Rate and Heat Stress
☐ Global Positioning System
☐ Other:

As a minimum, the project shall have the following equipment available during field activities:

- A first aid kit (mandatory, including adhesive Band-Aids, gauze, tape, gloves, CPR shield, triangle bandage) shall be available in the Support Zone at all times.

  Check additional items required for the site.

  ☐ Emergency Blanket ☒ Sunscreen (as needed)

  ☒ Insect Repellent (as needed) ☐ Other: ointment for poison plants and insect bites_____

- Copious amounts of cool potable water shall be readily available for both drinking purposes and for personal hygiene purposes (e.g., washing, rinsing, and cooling of face and body, etc.).
- Emergency references (e.g., nearest phone, emergency phone numbers and services, etc.) shall accompany the first aid kit.
- Communication equipment such as a cellular phone will be accessible in case of an emergency.
- A vehicle shall be easily accessible for transport/emergency.

The emergency response communication system for the site is:

- ☒ Verbal
- ☐ Two-way radio
- ☒ Hand signals: Hand gripping throat ="Out of Air, Can't Breathe"
  Grip partner's wrist or both hands around waist ="Leave area immediately"
  Hands on top of head ="Need assistance"
  Thumps up ="OK; I am all right; I understand"
  Thumps down ="No; negative"
- ☐ Horn
- ☐ Siren
- ☒ Other: Cellular Phone

If an on-site emergency develops, the procedures outlined in **Table 7** shall be followed immediately.

7.1 Natural Disasters

In the event of emergency conditions associated with natural disasters, such as severe weather, site personnel will remain calm, turn off equipment and ignition sources, and move away from buildings, cranes, and overhead utilities. Following an emergency, personnel will proceed to a designated meeting place. The SSO will take a head count to ensure that all personnel are present. Crews must remain together until accounted for. The SSO will assess any injuries and the need for emergency assistance.

7.2 Workplace Violence

If any employee or visitor is confronted by a potentially hostile person, he/she will remain calm and refrain from further aggravating the individual. Site personnel should contact the SSO. Protocol established by the site will be followed or local police will be contacted for assistance when needed.

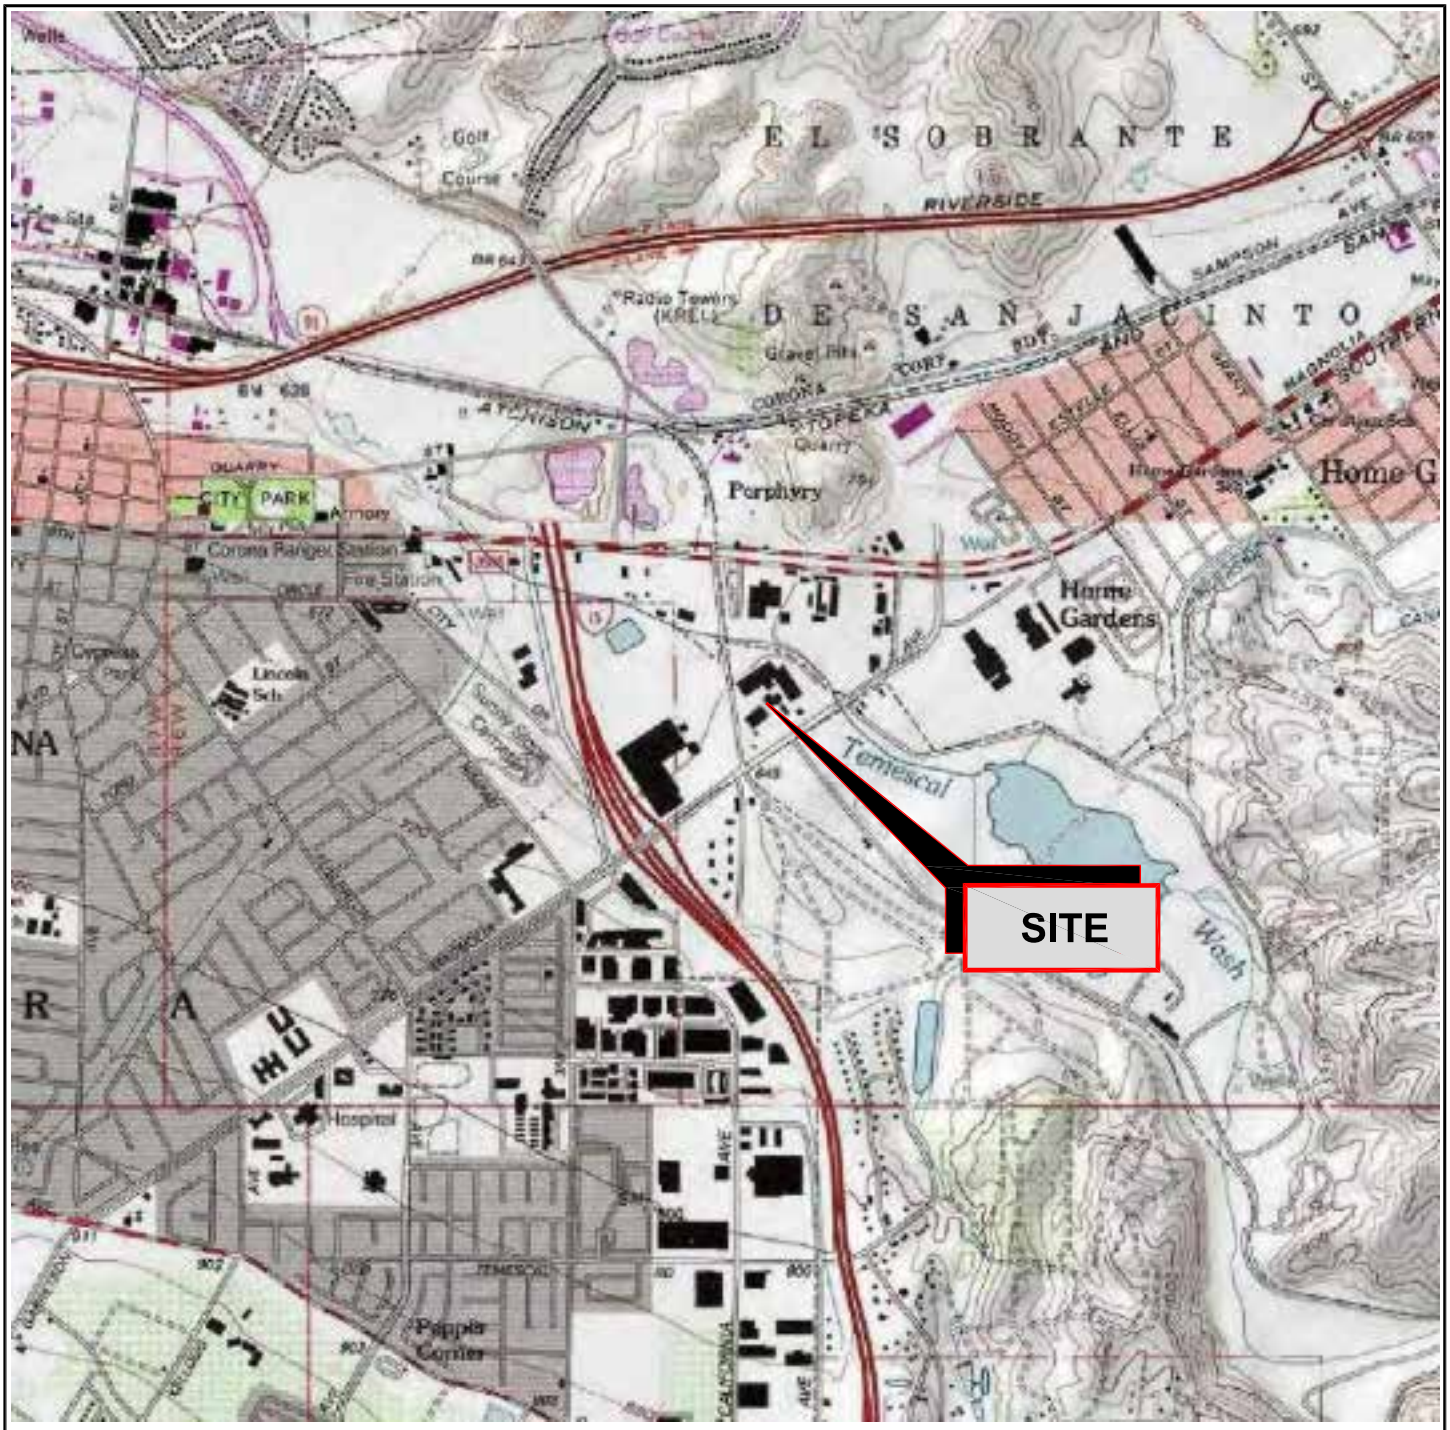
8.0 SHIPMENT OF RESTRICTED ARTICLES

Federal laws and international guidelines place restrictions on what materials may be shipped by passenger and cargo aircraft. In the course of field activities, the following items may be shipped to and from the site in the following manner.

Item	Hazardous Constituent	Quantity	Packaging	How Shipped
Soil samples	*NA	5	8 oz. glass jar with Teflon lid. Laboratory provided	EarthCon Personnel

Item	Hazardous Constituent	Quantity	Packaging	How Shipped
Groundwater Samples	HCL & HNO3 – lab preservatives	3	VOAs and HDPE laboratory provided containers	EarthCon Personnel

*soil samples do not have preservatives



9.0 SPILL CONTAINMENT

An evaluation was conducted to determine the potential for hazardous substance spills at this site. That evaluation indicates that there is no potential for a hazardous substance spill of a sufficient quantity to require containment planning, equipment, and procedures. For that reason, no spill containment program is implemented at this site. Employee training on how to respond and take protective measures during incidental releases of hazardous substances are provided consistent with the Hazard Communication Standard, 29 CFR 1910.12

Incidental spills are different from emergency releases. Incidental spills can safely be absorbed, neutralized, or otherwise controlled by EarthCon employees or contractors with the appropriate training.

Key Personnel and Health & Safety Responsibilities

Project Manager (PM) Jeff Bennett	**Regional H&S Coordinator** Hugh Walker	**Site Safety Officer (SSO)** Lindsey Langer/Jenn McGervey	**Project Field Staff** Lindsey Langer/Jenn McGervey
• Coordinate, approve, implement and manage this HASP and amendments, if any. • Incorporate H&S planning, implementation, and supplies (PPE, decontamination materials) into project plans and budget. • Select and assign responsibility to the SSO to implement HASP. • Monitor the Field Logbooks for health and safety work practices employed. • Coordinate with SSO so that emergency response procedures are implemented, if needed. • Inform CSHM of HASP violations, if any, and verify corrective actions are implemented. • Ensure personnel receive this plan, are aware of its provisions, are aware of the potential hazards associated with site operations, are instructed in safe work practices, are familiar with emergency response procedures and document this information • Coordinate with Client and SSO. • In the event of an incident or other emergency complete & submit appropriate forms and make proper notifications.	• Review and approve HASP; approve any associated amendments. • Evaluate documentation presented of site hazards for HASP preparation. Maintain a final copy of the completed HASP. • Perform periodic audits of documentation of project activities to evaluate general compliance with policies, procedures, directives and guidelines presented in this HASP. • Assist with the implementation of the Corporate Health and Safety Program. • Provide environmental, health and industrial hygiene consultation as needed. • In the event of an emergency, if required set up an incident investigation team and notify applicable outside agencies.	• Be present on-site, as appropriate, with the authority to implement HASP and EarthCon H&S protocols. • Confirm that site personnel meet the training and medical requirements. • Verify that monitoring equipment and personal protective equipment is operating correctly according to manufacturer's instructions and such equipment is utilized by on site personnel. Calibrate or verify calibration of monitoring equipment and record results. • Verify that decontamination procedures are being implemented and Site Control Plan is in place. • Provide and document pre-work briefing and daily tailgate safety meetings, monitor activities for safe work practices and HASP compliance. • Perform routine H&S inspections. Document meetings and inspections. Provide copies to CHSM as requested. • Report to the Project Manager deviations from the anticipated conditions, and authorize the cessation of work if necessary. • Notify the PM and CSHM in the event an emergency occurs, and implement site emergency response and follow-up procedures, provide First Aid, as needed. • Work with PM to verify appropriate notifications and forms are completed for any incident or near miss. • Secure the scene after an emergency until given notification to release the scene by the CHSM.	• Provide verification of required health and safety training and medical surveillance prior to arriving at the site. • Notify the SSO of any special medical conditions (e.g., allergies). • Review, be familiar with and abide by the HASP. • Attend pre-work briefings and daily tailgate safety meetings. • Comply with requests of PM, SSO, and HASP. • Perform work using safe techniques; be responsible for their personal safety. • Immediately report any accidents and/or unsafe conditions to the SSO.

Table 3

General Safe Work Practices

- Report to work alert and ready to perform assigned duties; no sleeping is allowed at the jobsite.
- Immediately report any unsafe acts, incidents, accidents, or near misses. Utilize Stop Work Authority if needed.
- Minimize contact with excavated or contaminated materials. Do not place equipment on the ground. Do not sit or kneel on potentially contaminated surfaces.
- Smoking, eating, or drinking after entering the work zone and before decontamination is prohibited. Use of illegal drugs and alcohol are prohibited. Workers taking prescribed medication that may cause drowsiness should not be operating heavy equipment, and should be prohibited from performing tasks where Level C, B, or A personal protective equipment is required.
- Practice good housekeeping. Keep everything orderly and out of potentially harmful situations.
- Use of contact lenses on-site shall only be allowed when dictated by working conditions.
- The following conditions must be observed when operating a motor vehicle.
  - Wearing of seat belts is mandatory
  - During periods of rain, fog, or other adverse weather conditions, the use of headlights is mandatory
  - A backup warning system or use of vehicle horn is mandatory when the vehicle is engaged in a backward motion
  - Posted traffic signs and directions from flagmen must be observed
  - Equipment and/or samples transported in vehicles must be secured from movement
  - The use of contractor acquired vehicles by non-contractor personnel is prohibited
  - Daily inspection sheets should be completed by driver and kept with equipment for the duration of the project.
- In an unknown situation, always assume the worst conditions.
- Be observant of your immediate surroundings and the surroundings of others. It is a team effort to notice and warn of impending dangerous situations. Withdrawal from a hazardous situation to reassess procedures is the preferred course of action.
- Conflicting situations may arise concerning safety requirements and working conditions and must be addressed and resolved rapidly by the SSO and PM to relieve any motivations or pressures to circumvent established safety policies.
- Unauthorized breaches of specified safety protocol must not be allowed. Workers unwilling or unable to comply with the established procedures must be removed from the site immediately.

Corona Regional Medical Center

800 South Main Street, Corona, CA 92882

Table 7

Emergency Response Procedures

- This plan must be discussed with verbal training for onsite EarthCon employees and subcontractors
- This training should be documented and a copy provided to the CHSM.
- The SSO (or alternate) should be immediately notified via the on-site communication system.
- If applicable, the SSO must notify off-site emergency responders (i.e., fire department, hospital, police department, etc.) and must inform the response team as to the nature and location of the emergency on site.
- If applicable, the SSO evacuates the site. Site workers should move to their respective refuge stations using the evacuation routes provided on the Site Map. SSO must account for all workers associated with the project.
- The SSO notifies the PM, Principal, and the CHSM of the emergency. If an EarthCon employee is injured, the SSO must contact the worker's Regional Manager/Branch Office Manager immediately. If the Regional Manager/Branch Office Manager cannot be contacted, then the Corporate Human Resources Department must be notified.
- For small fires, flames should be extinguished using the fire extinguisher. Large fires should be handled by the local fire department.
- In an unknown situation or if responding to toxic gas emergencies, appropriate PPE, including SCBAs, should be donned.
- If chemicals are accidentally spilled or splashed into eyes or on skin, use eyewash and/or shower.
- Before continuing site operations after an emergency involving toxic gas, the appropriate responder will don a SCBA and utilize appropriate air monitoring equipment to verify that the site is safe.
- An injured worker must be decontaminated appropriately.
- If a worker is injured, first aid will be administered by workers certified in first aid.
- If necessary, the SSO will secure the scene after the response. The scene should not be released until notification from the CHSM.
- After the response, the SSO and /or PM must complete and submit the appropriate incident reports.
- The PM or SSO should secure written /signed witness statements as appropriate, take pictures, etc. immediately and before the end of the shift.
- If an investigation is required, the CHSM and Safety Team will set up a team to start the investigation with input from the DL.
- The CHSM will notify outside agencies as appropriate.

Site Safety Meeting Minutes

Site Name: _____ Contract No. _____

Meeting Location _____

Meeting Date _____ Time _____ Conducted By _____

_____ Pre-Fieldwork Orientation _____ Weekly Site Meeting _____ Other

Subjects Discussed:

Safety Officer Comments:

Name and Signature of Participating Personnel (list company name if subcontractor)

Note: Attach additional pages if necessary. Send this form to the EarthCon Project Manager. Copies will be placed in the appropriate project files.

Appendix B

Safety Data Sheets

Chlorodiphenyl (42% chlorine)

Synonyms & Trade Names

Aroclor® 1242, PCB [Chlorodiphenyl (42% chlorine)], Polychlorinated biphenyl [Chlorodiphenyl (42% chlorine)]

CAS No.

53469-21-9

RTECS No.

TQ1356000

DOT ID & Guide

2315 171

Formula

$C_6H_4ClC_6H_3Cl_2$ (approx)

Conversion

IDLH

Ca [5 mg/m^3]
See: 53469219

Exposure Limits

NIOSH REL

Ca TWA 0.001 mg/m^3 See Appendix A (nengapdxa.html) [*Note: The REL also applies to other PCBs.]

OSHA PEL

TWA 1 mg/m^3 [skin]

Measurement Methods

NIOSH 5503 ;

OSHA PV2089

See: NMAM or OSHA Methods

Physical Description

Colorless to light-colored, viscous liquid with a mild, hydrocarbon odor.

Molecular Weight

258 (approx)

Boiling Point

617-691°F

Freezing Point

-2°F

Solubility

Insoluble

Nonflammable Liquid, but exposure in a fire results in the formation of a black soot containing PCBs, polychlorinated dibenzofurans & chlorinated dibenzo-p-dioxins.

Incompatibilities & Reactivities
Strong oxidizers

Exposure Routes
inhalation, skin absorption, ingestion, skin and/or eye contact

Symptoms
irritation eyes; chloracne; liver damage; reproductive effects; [potential occupational carcinogen]

Target Organs
Skin, eyes, liver, reproductive system

Cancer Site
[in animals: tumors of the pituitary gland & liver, leukemia]

Personal Protection/Sanitation
(See protection codes (protect.html))
Skin: Prevent skin contact
Eyes: Prevent eye contact
Wash skin: When contaminated
Remove: When wet or contaminated
Change: Daily
Provide: Eyewash, Quick drench

First Aid
(See procedures (firstaid.html))
Eye: Irrigate immediately
Skin: Soap wash immediately
Breathing: Respiratory support
Swallow: Medical attention immediately

Respirator Recommendations

NIOSH

At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:
(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode
(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter.

Click here (pgintrod.html#nrp) for information on selection of N, R, or P filters.

Any appropriate escape-type, self-contained breathing apparatus

Important additional information about respirator selection (pgintrod.html#mustread)

Material Safety Data Sheet
Arsenic MSDS

Section 1: Chemical Product and Company Identification

Product Name: Arsenic

Catalog Codes: SLA1006

CAS#: 7440-38-2

RTECS: CG0525000

TSCA: TSCA 8(b) inventory: Arsenic

CI#: Not applicable.

Synonym:

Chemical Name: Arsenic

Chemical Formula: As

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call:
1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Arsenic	7440-38-2	100

Toxicological Data on Ingredients: Arsenic: ORAL (LD50): Acute: 763 mg/kg [Rat]. 145 mg/kg [Mouse].

Section 3: Hazards Identification

Potential Acute Health Effects:
Very hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant), of eye contact (irritant).

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A1 (Confirmed for human.) by ACGIH. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, lungs, the nervous system, mucous membranes. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Flammable in presence of open flames and sparks, of heat, of oxidizing materials.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards:
Material in powder form, capable of creating a dust explosion. When heated to decomposition it emits highly toxic fumes.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Use appropriate tools to put the spilled solid in a convenient waste disposal container.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable

protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents, acids, moisture.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.01 from ACGIH (TLV) [United States] [1995] Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Lustrous solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 74.92 g/mole

Color: Silvery.

pH (1% soln/water): Not applicable.

Boiling Point: Not available.

Melting Point: Sublimation temperature: 615°C (1139°F)

Critical Temperature: Not available.

Specific Gravity: 5.72 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water, hot water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Reactive with oxidizing agents, acids, moisture.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals: Acute oral toxicity (LD50): 145 mg/kg [Mouse].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A1 (Confirmed for human.) by ACGIH. Causes damage to the following organs: kidneys, lungs, the nervous system, mucous membranes.

Other Toxic Effects on Humans:
Very hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Identification: : Arsenic UNNA: UN1558 PG: II

Special Provisions for Transport: Not available.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Arsenic California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Arsenic Pennsylvania RTK: Arsenic Massachusetts RTK: Arsenic TSCA 8(b) inventory: Arsenic

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada):
CLASS D-1A: Material causing immediate and serious toxic effects (VERY TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R22- Harmful if swallowed. R45- May cause cancer.

HMIS (U.S.A.):

Health Hazard: 3

Fire Hazard: 1

Reactivity: 2

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 3

Flammability: 1

Reactivity: 2

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Safety glasses.

Cadmium MSDS

Section 1: Chemical Product and Company Identification

Product Name: Cadmium

Catalog Codes: SLC3484, SLC5272, SLC2482

CAS#: 7440-43-9

RTECS: EU9800000

TSCA: TSCA 8(b) inventory: Cadmium

CI#: Not applicable.

Synonym:

Chemical Name: Cadmium

Chemical Formula: Cd

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call:
1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Cadmium	7440-43-9	100

Toxicological Data on Ingredients: Cadmium: ORAL (LD50): Acute: 2330 mg/kg [Rat.]. 890 mg/kg [Mouse]. DUST (LC50): Acute: 50 ppm 4 hour(s) [Rat].

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer), of eye contact (irritant). Severe over-exposure can result in death.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, lungs, liver. Repeated or prolonged exposure to the substance can produce target organs damage. Repeated exposure to an highly toxic material may produce general deterioration of health by an accumulation in one or many human organs.

Section 4: First Aid Measures

Eye Contact: No known effect on eye contact, rinse with water for a few minutes.

Skin Contact:
After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact: Not available.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. WARNING: It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled material is toxic, infectious or corrosive. Seek immediate medical attention.

Ingestion:
Do not induce vomiting. Examine the lips and mouth to ascertain whether the tissues are damaged, a possible indication that the toxic material was ingested; the absence of such signs, however, is not conclusive. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: 570°C (1058°F)

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances:
Non-flammable in presence of open flames and sparks, of heat, of oxidizing materials, of reducing materials, of combustible materials, of moisture.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards:
Material in powder form, capable of creating a dust explosion. When heated to decomposition it emits toxic fumes.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Use appropriate tools to put the spilled solid in a convenient waste disposal container.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable protective clothing In case of insufficient ventilation, wear suitable respiratory equipment If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage:
Keep container dry. Keep in a cool place. Ground all equipment containing material. Keep container tightly closed. Keep in a cool, well-ventilated place. Highly toxic or infectious materials should be stored in a separate locked safety storage cabinet or room.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.01 (ppm) Consult local authorities for acceptable exposure limits.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water, hot water, methanol, diethyl ether, n-octanol.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Not considered to be corrosive for metals and glass.

Special Remarks on Reactivity: Reacts violently with potassium.

Special Remarks on Corrosivity: Not available.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals:
WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 890 mg/kg [Mouse]. Acute toxicity of the dust (LC50): 229.9 mg/m3 4 hour(s) [Rat].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. The substance is toxic to kidneys, lungs, liver.

Other Toxic Effects on Humans:
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: An allergen. 0047 Animal: embryotoxic, passes through the placental barrier.

Special Remarks on other Toxic Effects on Humans: May cause allergic reactions, exzema and/or dehydration of the skin.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification:

Identification:

Special Provisions for Transport:

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Cadmium California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Cadmium Pennsylvania RTK: Cadmium Massachusetts RTK: Cadmium TSCA 8(b) inventory: Cadmium SARA 313 toxic chemical notification and release reporting: Cadmium CERCLA: Hazardous substances.: Cadmium

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada):
CLASS D-1A: Material causing immediate and serious toxic effects (VERY TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R26- Very toxic by inhalation. R45- May cause cancer.

HMIS (U.S.A.):

Gasoline

Synonyms & Trade Names

Motor fuel, Motor spirits, Natural gasoline, Petrol [Note: A complex mixture of volatile hydrocarbons (paraffins, cycloparaffins, and aromatics).]

CAS No.

8006-61-9

RTECS No.

LX3300000

DOT ID & Guide

1203 128

Formula

Conversion

1 ppm = 4.5 mg/m^3 (approx)

IDLH

Ca [N.D.]
See: IDLH INDEX

Exposure Limits

NIOSH REL

Ca See Appendix A (nengapdxa.html)

OSHA PEL

none See Appendix G (nengapdxg.html)

Measurement Methods

OSHA PV2028

See: NMAM or OSHA Methods

Physical Description

Clear liquid with a characteristic odor.

Molecular Weight

110 (approx)

Boiling Point

102°F

Freezing Point

?

Solubility

Insoluble

Vapor Pressure

Vapor Pressure
38-300 mmHg

Ionization Potential
?

Specific Gravity
(60°F): 0.72-0.76

Flash Point
-45°F

Upper Exposive Limit
7.6%

Lower Explosive Limit
1.4%

Class IB Flammable Liquid: Fl.P. below 73°F and BP at or above 100°F.

Incompatibilities & Reactivities
Strong oxidizers such as peroxides, nitric acid & perchlorates

Exposure Routes
inhalation, skin absorption, ingestion, skin and/or eye contact

Symptoms
irritation eyes, skin, mucous membrane; dermatitis; headache, lassitude (weakness, exhaustion), blurred vision, dizziness, slurred speech, confusion, convulsions; chemical pneumonitis (aspiration liquid); possible liver, kidney damage; [potential occupational carcinogen]

Target Organs
Eyes, skin, respiratory system, central nervous system, liver, kidneys

Cancer Site
[in animals: liver & kidney cancer]

Personal Protection/Sanitation
(See protection codes (protect.html))
Skin: Prevent skin contact
Eyes: Prevent eye contact
Wash skin: When contaminated
Remove: When wet (flammable)
Change: No recommendation
Provide: Eyewash, Quick drench

First Aid
(See procedures (firstaid.html))
Eye: Irrigate immediately
Skin: Soap flush immediately
Breathing: Respiratory support
Swallow: Medical attention immediately

Respirator Recommendations

NIOSH

At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:
(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode

(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister

Any appropriate escape-type, self-contained breathing apparatus

Important additional information about respirator selection (pgintrod.html#mustread)

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Lead	7439-92-1	100

Toxicological Data on Ingredients: Lead LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects: Slightly hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation.

Potential Chronic Health Effects:
Slightly hazardous in case of skin contact (permeator). CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to blood, kidneys, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation: Not available.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Non-flammable in presence of open flames and sparks, of shocks, of heat.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: When heated to decomposition it emits highly toxic fumes of lead.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable

protective clothing. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.05 (mg/m3) from ACGIH (TLV) [United States] TWA: 0.05 (mg/m3) from OSHA (PEL) [United States] TWA: 0.03 (mg/m3) from NIOSH [United States] TWA: 0.05 (mg/m3) [Canada]Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Metal solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 207.21 g/mole

Color: Bluish-white. Silvery. Gray

pH (1% soln/water): Not applicable.

Boiling Point: 1740°C (3164°F)

Melting Point: 327.43°C (621.4°F)

Critical Temperature: Not available.

Specific Gravity: 11.3 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials, excess heat

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Can react vigorously with oxidizing materials. Incompatible with sodium carbide, chlorine trifluoride, trioxane + hydrogen peroxide, ammonium nitrate, sodium azide, disodium acetylide, sodium acetylide, hot concentrated nitric acid, hot concentrated hydrochloric acid, hot concentrated sulfuric acid, zirconium.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. May cause damage to the following organs: blood, kidneys, central nervous system (CNS).

Other Toxic Effects on Humans: Slightly hazardous in case of skin contact (irritant), of ingestion, of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans:
Acute Potential: Skin: Lead metal granules or dust: May cause skin irritation by mechanical action. Lead metal foil, shot or sheets: Not likely to cause skin irritation Eyes: Lead metal granules or dust: Can irritate eyes by mechanical action. Lead metal foil, shot or sheets: No hazard. Will not cause eye irritation. Inhalation: In an industrial setting, exposure to lead mainly occurs from inhalation of dust or fumes. Lead dust or fumes: Can irritate the upper respiratory tract (nose, throat) as well as the bronchi and lungsby mechanical action. Lead dust can be absorbed through the respiratory system. However, inhaled lead does not accumulate in the lungs. All of an inhaled dose is eventually abssorbed or transferred to the gastrointestinal tract. Inhalation effects of exposure to fumes or dust of inorganic lead may not develop quickly. Symptoms may include metallic taste, chest pain, decreased physical fitness, fatigue, sleep disturbance, headache, irritability, reduces memory, mood and personality changes, aching bones and muscles, constipation, abdominal pains, decreasing appetite. Inhalation of large amounts may lead to ataxia, deliriuim, convulsions/seizures, coma, and death. Lead metal foil, shot, or sheets: Not an inhalation hazard unless metal is heated. If metal is heated, fumes will be released. Inhalation of these fumes may cause "fume metal fever", which is characterized by flu-like symptoms. Symptoms may include metallic taste, fever, nausea, vomiting, chills, cough, weakness, chest pain, generalized muscle pain/aches, and increased white blood cell count. Ingestion: Lead metal granules or dust: The symptoms of lead poisoning include abdominal pain or cramps (lead cholic), spasms, nausea, vomiting, headache, muscle weakness, hallucinations, distorted perceptions, "lead line" on the gums, metallic taste, loss of appetite, insomnia, dizziness and other symptoms similar to that of inhalation. Acute poisoning may result in high lead levels in the blood and urine, shock, coma and death in extreme cases. Lead metal foil, shot or sheets: Not an ingestion hazard for usual industrial handling.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are less toxic than the product itself.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (female) which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (male) which would require a warning under the statute: Lead California prop. 65 (no significant risk level): Lead: 0.0005 mg/day (value) California prop. 65: This product contains the following ingredients for which the State of California has found to cause birth defects which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Lead Connecticut hazardous material survey.: Lead Illinois toxic substances disclosure to employee act: Lead Illinois chemical safety act: Lead New York release reporting list: Lead Rhode Island RTK hazardous substances: Lead Pennsylvania RTK: Lead

Other Regulations:
OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada): CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R20/22- Harmful by inhalation and if swallowed. R33- Danger of cumulative effects. R61- May cause harm to the unborn child. R62- Possible risk of impaired fertility. S36/37- Wear suitable protective clothing and gloves. S44- If you feel unwell, seek medical advice (show the label when possible). S53- Avoid exposure - obtain special instructions before use.

Appendix C

Chemical Information Directory

Included in HASP	*Chemical Name*	*Synonyms*
	Acetone	Dimethyl Ketone; Ketone propane; 2-Propanone
	Aldrin	HHDN; Octalene
	Aniline	Aminobenzene; Aniline Oil; Benzeneamine
X	Arsenic	Arsenic metal; Arsenia
	Barium	Barium metal
	Benzene	Benzol; Phenyl hydride
	Bis(2-ethylhexyl)phthalate	Di(2-ethylhexyl)phthalate
X	Cadmium	Cadmium metal
	Carbon disulfide	Carbon bisulfide
	Chlorobenzene	Benzene chloride; Chlorobenzyl; MCB; Phenyl chloride
	Chloroethane	Ethyl chloride
	Chloroform	Methane trichloride; Trichloromethane
	Chromic Acid	Chromic anhydride; Chromium trioxide
	Chromium	Chromium metal
	Cobalt	Cobalt metal dust, cobalt metal fume
	Copper	Copper metal dusts; Copper metal mists
	Cyanide	Cyanide
	Cyclohexane	Benzene Hexahydride; hexamethylene
	Dieldrin	Dieldrin
	DIPE	Diisopropyl ether
	Dioxin	Dioxin
	1,2-Dichlorobenzene	O-DCB; Orthodichlorobenzene
	1,1-Dichloroethane	Ethylidene chloride
	1,2-Dichloroethane	Ethylene dichloride; Glycol dichloride
	1,1-Dichloroethylene	1,1-Dichloroethene, vinylidene chloride
	1,2-Dichloroethylene	1,2-Dichloroethene; (cis, trans, or sym-) Acetylene dichloride
	1,2-Dichloropropane	Propylene dichloride; Dichloro-1,2-propane
	2,4-Dinitrotoluene	Dinitrotoluene; DNT; Methyldinitrobenzene
	1,4-Dioxane	Dioxane, Diethylene dioxide, Diethylene ether

Appendix C

Chemical Information Directory
(continued)

Included in HASP	*Chemical Name*	*Synonyms*
	Ethylbenzene	Ethylbenzol; Phenylethane
	ETBE	Ethyl tert-butyl ether
	Ethylene Dibromide	EDB; 1,2-Dibromoethane, Ethylene bromide, Glycol dibromide
	Formaldehyde	Methanal; Methyl aldehyde; Methylene oxide
X	Gasoline& Diesel	Motor fuel; Motor spirits; Natural gasoline; Petrol
	Motor oil	Motor oil
	Hexachloroethane	Carbon hexachloride; Ethane hexachloride; Perchloroethane
	Hydrochloric Acid	Anhydrous hydrogen chloride; Aqueous hydrogen chloride; Muriatic acid
	Hydrogen Sulfide	Hydrosulfuric acid; Sewer gas; Sulfuretted hydrogen
	Iron	Iron
	Isophorone	Isoacetophorone; 3,5,5-Trimethyl 2- cyclohexenone
	Isopropanol	Isopropyl alcohol; IPA; 2-Propanol
X	Lead (inorganic)	Lead metal
	Manganese	Manganese
	MTBE	Methyl Tert Butyl Ether
	Mercury	Colloidal mercury; Metallic mercury; Quicksilver
	Methane	Fire damp; March gas; Methyl hydride
	Methanol	Carbinol; Columbian spirits; Pyroligneous spirit; Wood alcohol; Wood naphtha; Wood spirit
	Methoxyclor	p,p-Dimethoxydiphenyl/trichlorethane; DMDY
	Methyl chloroform	1,1,1-Trichloroethane
	Methylcyclohexane	Cyclohexylmethane; Hexahydrotoluene
	Methylene chloride	Dichloromethane; Methylene Dichloride
	Naphthalene	Naphthalin; Tar Camphor; White Tar
	Nickel	Nickel catalyst

Appendix C

Chemical Information Directory
(continued)

Included in HASP	*Chemical Name*	*Synonyms*
	Nitrobenzene	Essence of mirbane; Nitrobenzol; Oil of mirbane
	PAHs	Poly Aromatic Hydrocarbons
	Pentachlorophenol	PCP; Penta; 2,3,4,5,6-Pentachlorophenol
	Phenol	Carbonic acid; Hydroxybenzene; Monohydroxybenzene; Phenol alcohol; Phenyl hydroxide
	Phosgene	Carbonyl chloride; Carbon oxychloride; Chloroformyl chloride
X	Polychlorinated biphenyls (54%)	PCBs; Chlorodiphenyl
	Sodium bisulfate	
	Synergist-D	Proprietary product
	Silver	Silver metal; Argentum
	TAME	Tertiary-amyl methyl ether
	TBA	Tert butyl alchol
	Tetrachloroethylene	Tetrachloroethylene; Perchlorethylene; Perk
	Toluene	Methyl benzene; Methyl benzol
	Toxaphene	Chlorinated camphene
	1,1,2-Trichloroethane	Ethane trichloride; B-Trichloroethane; Vinyl trichloride
	1,2,4-Trichlorobenzene	Trichlorobenzene; 1,2,4-Trichlorobenzel
	Trichloroethene	Trichloroethylene; TCE
	Trichlorofluoromethane	Fluorotrichloromethane; Freon II
	Trichlorotrifluoroethane	Freon 113; 1,1,2-Trichloro-1,2,2-trifluoroethane; CFC-113
	1,2,3-Trichloropropane	Allyl trichloride, Glycerol trichorohydrin, Glyceryl trichlorohydrin; Trichlorohydrin
	1,2,3-Trimethylbenzene	Hemellitol
	1,2,4-Trimethylbenzene	psi-Cumene; Pseudocumene
	1,3,5-Trimethylbenzene	Mesitylene; sym-Trimethylbenzene
	Vinyl chloride	Chloroethene; VC; VCM
	Xylene (Mixed Isomers)	o-xylene; p-xylene; m-xylene

* All members of the drilling crews shall be trained in the safety features and procedures to be utilized during operation, inspection, and maintenance of the equipment.
* Conduct a survey, prior to bringing drilling equipment to the job site, to identify overhead electrical hazards, potential subsurface hazards, and terrain hazard. Once on-site, before drilling equipment is moved, the travel route shall again be visually surveyed for overhead and terrain hazards.
* Use only drilling equipment equipped with two easily accessible emergency shutdown devices, one for the operator and one for the helper.
* Do not transport drilling equipment with the mast in the upward position.
* Set up equipment on stable ground. Cribbing (a system of timbers, arranged in a rectangular pattern, used to support and distribute the weight of the equipment) shall be used when necessary.
* Extend outriggers per the manufacturer's specifications.
* Monitor weather conditions. Operations shall cease during electrical storms or when electrical storms are imminent.
* Wearing of loose clothing or equipment is not permitted.
* Use auger guides on hard surfaces.
* Verbally alert employees and visually ensure employees are clear from dangerous parts of equipment prior to starting or engaging equipment.
* Channel the discharge of drilling fluids away from the work area to prevent the pooling of water.
* Use hoists only for their designed intent. Hoists shall not be loaded beyond their rated capacity. Steps shall be taken to prevent two-blocking of hoists (the condition when the lower load block or hook assembly comes in contact with the upper load block, or when the load block comes in contact with the boom tip).
* Follow the equipment manufacturer's procedures if ropes become caught in, or objects are pulled into a cathead.

* Do not run or rotate drill rods through rod slipping devices. No more than one foot of drill rod column shall be hoisted above the top of the drill mast. Drill rod tool joints shall not be made up, tightened, or loosened while the rod column is supported by a rod slipping device.
* Control dust using dust suppression techniques.
* Clean augers only when the rotating mechanism is in neutral and the auger is stopped. Tools such as long handled shovels shall be used to remove cuttings from the auger.
* Cap and flag open boreholes; open excavations shall be barricaded.
* Keep all hand tool used during drilling operations clean and in good working condition.
* Wear hard hats and steel-toed boots at all times when performing drilling operations.
* Wear hearing protection when required.

During Geoprobe drilling

- Pay close attention to acetate sampling sleeves; can cause minor cuts when they become jiggered
- Probes /rods can have pinch points; take care when removing or adjusting.
- There will be noise so use hearing protections

- Be aware of the potential hazards of the contents of drums or containers before handling.
- Inspect the integrity of the drum or container before moving. Any drum or container lacking integrity shall be over packed.
- Consider any unlabeled drum or container as containing a hazardous substance and leave alone until contents are properly identified and labeled.
- Organize site operations to minimize the amount of drum or container movement.
- Never stand on drums or containers.
- Know that bulging drums or containers are an indication of pressure build-up. Pressure can be relieved slowly by carefully loosening the bung. If the possibility of fire or explosion exists, protective shield and/or remote opening devices should be used.
- Utilize drum/container handling equipment whenever possible. The equipment utilized should have a sufficiently rated load capacity, and should be able to operate smoothly on the available surface.
- Use proper lifting and moving techniques to prevent back injuries, if handling equipment is not available.
- Have a clear view of the available pathway when moving drums. If needed, an additional person should be available to provide guidance.
- Set up drum/container staging areas to safely identify and classify contents for proper shipment. Staging areas shall be provided with adequate ingress and egress routes.
- Label and identify drums and containers as to their contents when moved to the staging areas.
- Cease all site operations immediately if site activities uncover buried drums or containers. The SSO must be notified. The SSO will evacuate the site. All unknown situations must be evaluated before site activities are resumed. The services of a specialized contractor trained in handling unknown contaminants may be needed. If, after evaluating the situation, only a portion of the site is affected, that
- Use only drums and containers that meet the appropriate DOT, OSHA, and EPA regulations.

- When scheduling or work conditions necessitate leaving excavations open overnight, security fencing will be erected to restrict access to the site or work zones. An exclusion zone, contamination reduction zone and support zone will be identified for each soil disturbance site, as described in Section 2.4.5.

- Underground Service Alert must be notified of subsurface work at a minimum of 48 hours prior to the commencement of field activities.

- As part of the on-site health and safety meeting, a Site walk with the operators will be conducted to identify work locations (locations shown on the work plan/site plan will be in areas free of utilities/subsurface structures). Mark outs of all utilities will be verified.

- If pea-gravel is encountered while excavating all work must stop and the SSO will be contacted for further instruction. Pea-gravel is a potential indication of underground storage tank(s) or utility bedding/backfilling material.

- If any utility/subsurface feature is hit or damaged the SSO will be IMMEDIATELY contacted for further instruction. If the SSO cannot be reached contact the Project Manager for further instruction.

* A minimum clearance of 12 feet (radius) will be maintained between heavy equipment (i.e., drill rig) and any overhead power lines, regardless of voltage.
* Before subsurface work, a utilities search for underground lines will occur and will be documented.
* Installation and maintenance of electrical facilities or equipment must only be performed by qualified and properly authorized personnel or electrical subcontractors. Apprentice personnel permitted to work on electrical equipment shall be under the surveillance of a fully qualified electrician.
* Electricians shall be familiar with the National Electrical Code; state and local electric codes; OSHA standards, including 29 CFR 1926, Subpart K; and applicable sections of the National Fire Protection Association Codes.
* When working on energized circuits of 440 volts or higher, at least one qualified electrician and one other employee shall be present.
* Do not wear rings, watches or metallic objects that could act as conductors when working with electrical circuits.
* Do not use metal ladders and un-insulated tools while working with electrical circuits and equipment.
* Follow the company Lock-out/Tag-out procedures when applicable. Electrical equipment and lines shall always be considered “energized” until proven “de-energized”. Before beginning work, each electrical circuit shall be inspected, tested, and where possible, isolated from the power source. Extreme care shall be exercised as wires designed to operate at ground potential may become energized by faulty or inadequate connections.
* Use only approved grounding equipment as a ground for electrical equipment. Metal frames on electricity powered equipment, electrical facilities, and transmission equipment shall be connected to the grounding system. Alternative grounding systems complying with applicable electrical codes may be used for temporary portable equipment.
* Protect electrical wires with suitable protective conduits or devices where they are exposed to possible damage.
* Connect grounding devices to a ground before contacting any conductor of a circuit. When grounding devices are removed, they shall be disconnected from the circuit before being disconnected from ground.
* Equip all portable extension cords with a non-conducting plug and/or another socket shell. All electrical cords shall be equipped with three-blade grounding type plugs.

* Use only heavy duty electrical cords that are not subjected to excessive bending, stretching, or kicking. All cords and wires shall be frequently inspected for signs of defects. Damaged or frayed electrical wires, cords, and plugs shall be immediately replaced by a qualified electrician or other properly trained personnel.
* Install adequate warning signs and barriers (in plain sight) in all areas where hazardous electrical facilities exist.
* Do not permit overloading of electrical circuits at any time. The replacement of fuses or circuit breakers with makeshift materials or over-capacity fuses is strictly prohibited.
* The type of circuit shall determine the type of protective equipment required. Rubber gloves, sleeves, blankets, mats, and insulated platforms shall be used as required. Questions regarding PPE should be directed to the SSO.
* Inspect all insulated protective equipment continuously for defects or damages. Any defective equipment shall be replaced before using.
* Establish and enforce testing schedules for insulation qualities for protective equipment. All users shall verify that equipment has been satisfactorily tested prior to use.

* Wear appropriate eye protection according to the task at hand (e.g., goggles if liquid splash could occur, welding lenses, etc.).

* Minimize the amount of vapor or particulate matter generated, if possible.

* Avoid touching the face and eyes.

* Flush eye with water for at least 15 minutes if chemicals do get into the eye.

* Be aware of “pinch points” when working with tools and heavy equipment.
* Use proper lifting techniques to avoid dropping heavy loads on hands and feet.
* Be aware of moving machinery and heavy equipment in the work area.
* Wear protective gloves as required in the Health and Safety Plan.
* Wear steel-toed boots as required in the Health and Safety Plan.

Fatal exposures to cold among workers have almost always resulted from accidental exposures involving failure to escape from low environmental air temperatures or from immersion in low temperature water. The single most important aspect of life-threatening hypothermia is the fall in the deep core temperature of the body. Workers should be protected from exposure to cold so that the deep core temperature does not fall below 96.8°F; lower body temperatures will very likely result in reduced mental alertness, reduction in rational decision making, or loss of consciousness with the threat of fatal consequences. Pain in the extremities may be the first early warning of danger to cold stress. During exposure to cold, maximum severe shivering develops when the body temperature has fallen to 95°F. This must be taken as a sign of danger to the workers and exposure to cold should be immediately terminated for any workers when severe shivering becomes evident. Since prolonged exposure to cold air, or to immersion in cold water, at temperatures well above freezing can lead to dangerous hypothermia, whole body protection must be provided.

Adequate insulating dry clothing to maintain core temperatures above 96.8°F must be provided to workers if work is performed in air temperatures below 40°F. Wind chill cooling rate must also be considered when determining protective clothing. The equivalent chill temperature should be used when estimating the combined cooling effect of wind and low air temperatures on exposed skin or when determining clothing insulation requirements to maintain the deep body core temperature.

Unless there are unusual or extenuating circumstances, cold injury to other than hands, feet, and head is not likely to occur without the development of the initial signs of hypothermia. Older workers or workers with circulatory problems require special precautionary protection against cold injury. The use of extra insulating clothing and/or a reduction in the duration of the exposure period are among the special precautions which should be considered.

Workers handling evaporative liquid (gasoline, alcohol, or cleaning fluids) at air temperatures below 39.2°F should take special precautions to avoid soaking of clothing or gloves with the liquids because of the added danger of cold injury due to evaporative cooling. Special note should be taken of the particularly acute effects of splashes of “cryogenic fluids” or those liquids and gases with a boiling point that is just above ambient temperature.

Heat stress is a medical condition where a worker exerts energy above his body's ability to adapt to the stress. Malfunctioning or overload of the body's temperature and sweat mechanisms results in heat stress. Poor adaptation to heat may lead to heat cramps, heat exhaustion, or heat stroke. There are three primary causes of heat stress: insufficient water intake; insufficient salt intake; and a deficiency in the production of sweat, the evaporation of which helps to cool the body naturally. Heat stress or heat exhaustion can result in a more life-threatening condition called heat stroke, which is an overexposure to extreme heat, where the body can no longer provide natural regulation of heat. The body overheats and core temperatures may reach 107F which can result in a coma and death

Field team members shall be observed for signs and symptoms of heat stress that include: confusion, dizziness, profuse sweating, skin color change, increased heart rate and vision problems. Personnel who exhibit any of these symptoms shall be removed from field work and requested to consume two to four pints of electrolyte fluid or cool water every hour while resting in a shaded area. The individual should not return to work until the symptoms are no longer recognizable. If symptoms appear critical, persist, or get worse, seek immediate medical attention.

To control the potential occurrence of heat stress, preventive measures will be evaluated and implemented on a daily basis. These measures may include:

- Frequent rest periods;
- Inducement of fluids (e.g., water, Gatorade, etc.) at a rate of one-half to one cup of cool (55ºF) water every 20 minutes of the workday; and
- Periodic cooling of personnel (e.g., via shaded areas, hose-downs with water, etc.).
- Sensitive personnel should wear sunscreen containing a minimum Sun Protection Factor of 15 when working outdoors in the sun. Sunscreen lotion should be applied prior to entering the work zones.

ainst heat, sun exposure, and other hazards. Employers and employees should know the potential hazards in their workplaces and how to manage them.

Sun

Sunlight contains ultraviolet (UV) radiation, which causes premature aging of the skin, wrinkles, cataracts, and skin cancer. There are no safe UV rays or safe suntans. Be especially careful in the sun if you burn easily, spend a lot of time outdoors, or have any of the following physical features: numerous, irregular, or large moles; freckles; fair skin; or blond, red, or light brown hair. Here's how to block those harmful rays:

- Cover up. Wear loose-fitting, long-sleeved shirts and long pants.
- Use sunscreen with a sun protection factor (SPF) of at least 30. Be sure to follow application directions on the bottle or tube.
- Wear a hat. A wide brim hat, not a baseball cap, works best because it protects the neck, ears, eyes, forehead, nose, and scalp.
- Wear UV-absorbent sunglasses (eye protection). Sunglasses don't have to be expensive, but they should block 99 to 100 percent of UVA and UVB radiation. Before you buy sunglasses, read the product tag or label.
- Limit exposure. UV rays are most intense between 10 a.m. and 4 p.m.

OSHA Card—Protecting Yourself in the Sun
www.osha.gov/Publications/osha3166.pdf

Heat

The combination of heat and humidity can be a serious health threat during the summer months. If you work outside (for example, at a beach resort, on a farm, at a construction site) or in a kitchen, laundry, or bakery you may be at increased risk for heat-related illness. So, take precautions. Here's how:

- Drink small amounts of water frequently.
- Wear light-colored, loose-fitting, breathable clothing—cotton is good.
- Take frequent short breaks in cool shade.
- Eat smaller meals before work activity.
- Avoid caffeine and alcohol or large amounts of sugar.
- Work in the shade.
- Find out from your health care provider if your medications and heat don't mix.
- Know that equipment such as respirators or work suits can increase heat stress.

There are three kinds of major heat-related disorders—heat cramps, heat exhaustion and heat stroke. You need to know how to recognize each one and what first aid treatment is necessary.

OSHA Heat Stress Fact Sheet:
www.osha.gov/OshDoc/data_Hurricane_Facts/heat_stress.pdf

OSHA Heat Stress Quick Card:
www.osha.gov/Publications/osha3154.pdf

Lyme Disease/Tick-Borne Diseases

These illnesses (i.e., Rocky Mountain spotted fever) are transmitted to people by bacteria from bites of infected deer (blacklegged) ticks. In the case of Lyme disease, most, but not all, victims will develop a "bulls-eye" rash. Other signs and symptoms may be non-specific and similar to flu-like symptoms such as fever, lymph node swelling, neck stiffness, generalized fatigue, headaches, migrating joint aches, or muscle aches. You are at increased risk if your work outdoors involves construction, landscaping, forestry, brush clearing, land surveying, farming, railroads, oil fields, utility lines, or park and wildlife management. Protect yourself with these precautions:

- Wear light-colored clothes to see ticks more easily.

- Wear long sleeves; tuck pant legs into socks or boots.
- Wear high boots or closed shoes that cover your feet completely.
- Wear a hat.
- Use tick repellants, but not on your face.
- Shower after work. Wash and dry your work clothes at high temperature.
- Examine your body for ticks after work. Remove any attached ticks promptly and carefully with fine-tipped tweezers by gripping the tick. Do not use petroleum jelly, a hot match, or nail polish to remove the tick.

OSHA Lyme Disease Fact Sheet: www.osha.gov/OshDoc/data_LymeFacts/lymefac.pdf

West Nile Virus

West Nile virus is transmitted by the bite of an infected mosquito. Mild symptoms include fever, headache, and body aches, occasionally with a skin rash on the trunk of the body and swollen lymph glands. Symptoms of severe infection include headache, high fever, neck stiffness, stupor, disorientation, coma, tremors, convulsions, muscle weakness, and paralysis. You can protect yourself from mosquito bites in these ways:

- Apply Picaridin or insect repellent with DEET to exposed skin.
- Spray clothing with repellents containing DEET or permethrin. (Note: Do not spray permethrin directly onto exposed skin.)
- Wear long sleeves, long pants, and socks.
- Be extra vigilant at dusk and dawn when mosquitoes are most active.
- Get rid of sources of standing water (used tires, buckets) to reduce or eliminate mosquito breeding areas.

OSHA West Nile Virus Fact Sheet: www.osha.gov/OshDoc/data_Hurricane_Facts/west_nile_virus.pdf

OSHA Safety and Health Information Bulletin: "Workplace Precautions Against West Nile Virus"

http://www.osha.gov/dts/shib/shib082903b.pdf

Poison Ivy-Related Plants

Poison ivy, poison oak and poison sumac have poisonous sap (urushiol) in their roots, stems, leaves and fruits. The urushiol may be deposited on the skin by direct contact with the plant or by contact with contaminated objects, such as clothing, shoes, tools, and animals.

Approximately 85 percent of the general population will develop an allergy if exposed to poison ivy, oak or sumac. Forestry workers and firefighters who battle forest fires have developed rashes or lung irritations from inhaling the smoke of burning plants.

- Wear long-sleeved shirts and long pants, tucked into boots. Wear cloth or leather gloves.
- Apply barrier creams to exposed skin.
- Educate workers on the identification of poison ivy, oak, and sumac plants.
- Educate workers on signs and symptoms of contact with poisonous ivy, oak, and sumac.
- Keep rubbing alcohol accessible. It removes the oily resin up to 30 minutes after exposure.

OSHA Web Page—Poisonous Plants: www.osha.gov/SLTC/etools/sawmills/poison.html

This is one in a series of informational fact sheets highlighting OSHA programs, policies or standards. It does not impose any new compliance requirements. For a comprehensive list of compliance requirements of OSHA standards or regulations, refer to Title 29 of the Code of Federal Regulations. This information will be made available to sensory impaired individuals upon request. The voice phone is (202) 693-1999; teletypewriter (TTY) number: (877) 889-5627.

OSHA Occupational Safety and Health Administration

U.S. Department of Labor

www.osha.gov

(800) 321-OSHA

DSTM 9/2005

* Apply Hazard Mitigators for motor vehicles when utilizing heavy equipment (where applicable).

* Remember, heavy equipment has the right-of-way over regular vehicles. Yield to heavy equipment.

* Listen for warning signals on heavy equipment.

* Perform a visual inspection and walk around parked heavy equipment before moving to assure that equipment is in good condition and that there are no personnel on the ground that could be injured or objects that could be damaged by vehicle movement.

* Use hand rails and footholds when mounting and dismounting equipment,

* Follow appropriate equipment startup procedures. Brakes, steering, clutches and controls shall be tested.

* Pay attention to workers on the ground that may be in the path and provide warning prior to moving the equipment.

* Permit no one to ride on, or in, heavy equipment. This includes any portion of a backhoe, bulldozer, forklift or the back of a pickup truck, except in locations specifically designed for passenger use and approved by the SSO.

* Locate and flag underground utilities and buried cables, whenever possible, prior to intrusive activities (such as excavation and drilling).

* Keep haulage vehicles under positive control at all times while operating. Vehicles shall be kept in gear when descending grades.

* Do not use heavy equipment on slopes with steepness exceeding 3H:1V unless operations are consistent with manufacturer's recommendations (if the Owner's Manual is not with the equipment or does not specify slope operating procedures, see the SSO).

* Operate equipment with booms, blades, buckets, beds, etc., lowered or in a stable position while on slopes. Safety cables tethered to appropriate anchors shall be used for equipment working on steep slopes, where appropriate. The use of cables and anchors must be approved by the SSO.

* Use rollover protection and seat belts.

* Lower hydraulic systems (e.g., blades, rippers, etc.) to the ground, set brakes, and shut down equipment if malfunction occurs which impairs the ability to control a piece of equipment.

* Suspend in slings or support by hoists or jacks heavy equipment in need of repair. The equipment must also be blocked or cribbed before workers are permitted to work underneath. Working under heavy equipment can pose a crushing hazard.

* Shut off motors, do not allow smoking, and use proper dispensing equipment when refueling gasoline-operated equipment to prevent fire hazards.

* Wear hearing protection if required.

* Maintain eye contact with the heavy equipment operator when working near equipment.

* Be aware of changes in sound of equipment that may indicate a change in direction or activity.

* Know and practice proper lifting techniques.
* Limit continuous lifting of weights to 50 pounds or less. Lifts of heavier weights are permitted on an interim basis. Help shall be obtained for lifting of loads greater than 50 pounds. Mechanical equipment should be used on heavy materials when possible. If mechanical assistance is not available, adequate manpower to maintain the 50-pound limit per employee will be required.
* Do not lift more weight than can be handled comfortably, regardless of load weight. If necessary, help should be requested to lift a load so that the lifting is comfortable.
* Use drum dollies when moving drums or barrels.
* Inspect objects for grease or slippery substances before they are lifted to ensure that the object will not slip.
* Do not carry long, bulky or heavy objects without first verifying that the way is clear and that vision is unobstructed. This ensures that other persons or objects will not be struck by the load.
* Do not carry loads that cannot be seen over or around.
* Make sure workers are physically suited for the job before assigning jobs requiring heavy and/or frequent lifting. A person's lifting ability is not necessarily indicated by his height or weight.
* Before lifting an object, consideration should be given to how the object will be set down without pinching or crushing hands or fingers. For example, to place an object on a bench or table, the object should be set on the edge and pushed far enough onto the support so it will not fall. The object can then be released gradually as it is set down, and pushed in place with the hands and body from in front of the object.
* When two or more persons are handling the same object, one should "call the signals". All the persons on the lift should know who this person is and should warn him if anyone in the crew is about to relax his grip.
* Proper lifting includes:
  - *Feet* - Feet should be parted, with one foot alongside the object being lifted and one behind. Feet should be comfortably spread to give greater stability. The rear foot should be in position for the upward thrust of the lift.
  - *Back* - Use the sit-down position and keep the back straight, but remember that "straight" does not mean "vertical". A straight back keeps the spine, back muscles, and organs of the body in correct alignment. It minimizes the compression of the abdomen that can cause a hernia.
  - *Arms and Elbows* - The load should be drawn close, and the arms and elbows should be tucked into the side of the body. When the arms are held away from the body, they lose much of their strength and power. Keeping the arms tucked in also helps keep body

weight centered.

- *Palm* - The palm grip is one of the most important elements of lifting. The fingers and the hand are extended around the object to be lifted. Use the full palm; fingers alone have very little power.
- *Chin* - Tuck in the chin so the neck and head continue the straight back line. Keep the spine straight and firm.
- *Body Weight* - Position the body so its weight is centered over the feet. This provides a more powerful line of thrust and assures better balance. Start the lift with a thrust of the rear foot. Shift hand positions so the object can be boosted after knees are bent. Straighten knees as object is lifted or shifted to the shoulders. To change direction, lift the object to a carrying position, and turn the entire body, including the feet. Do not twist your body. In repetitive work, both the person and the material should be positioned so that the worker will not have to twist his body when moving the material. If the object is too heavy to be handled by one person, get help.

* Know the effects of noise, including:
  - Workers being startled, annoyed, or distracted.
  - Physical damage to the ear, pain, and temporary and/or permanent hearing loss.
  - Communication interference that may increase potential hazards due to the inability to warn of danger and proper safety precautions to be taken.
* Utilize feasible administrative or engineering controls if workers are subjected to noise exceeding an 8-hour, time-weighted average (TWA) sound level of 90 dBA (decibels on the A-weighted scale).
* Implement the company Hearing Conservation Program when noise exposures equal or exceed an 8-hour, TWA sound level of 85 dBA.
* Wear hearing protection where applicable.

* Route cords, hoses, and cables supplying power to portable power tools to prevent tripping hazards or contact with equipment or machinery.
* Avoid abusing the power supply lines of portable equipment. Excessive scraping, kicking, stretching, and exposure to grease and oils will damage lines or cause them to fail prematurely, and possibly injure the operator or fellow workers.
* Inspect cords, hoses, and cables for wear or deterioration prior to each use. Defective power supply lines shall not be used.
* Do not use electrically powered tools near flammable materials or explosive atmosphere, unless they are of the explosion-proof type meeting the National Electrical Code for explosive area. Employees operating the equipment should be aware of sparks and or metal fragments when using this equipment.
* Ground-check portable electric power tools with metal cases initially and quarterly. At no time will electrical power equipment be operated without proper grounding. All electrical cords and cables, including extension cords, shall include a third wire ground.
* Prohibit operations of electric tools in wet or damp areas except in unusual emergency circumstances. When operation is required in wet or damp conditions, extreme care will be exercised to ensure effective grounding of equipment and proper use of protective gear.
* Size cords adequately for length and the electrical demand of the tool. Otherwise, they may cause a fire hazard.
* Limit use of tools to the purpose for which the tool is intended (e.g., wrenches will not be used as hammers). Defective tools (e.g., with mushroomed heads or split or defective handles) shall not be used.
* Protect tools from corrosion damage.
* Keep tools free of accumulated dirt and unnecessary oil or grease. Moving and adjustable parts shall be lubricated frequently to prevent wear and misalignment.
* Replace or repair damaged or worn tools promptly. Temporary or makeshift repairs are prohibited. At the discretion of the supervisor, discard all tools that cannot be repaired safely. Supervisors shall decide when to discard a tool.
* Store tools in suitable boxes or containers. Loose tools shall not be stored on ledges or where they might fall. Tools shall be picked up when a job is completed and not be allowed to accumulate in the work area. Store all tools in a safe place.
* Do not use conducting (i.e., metal) tools around electrical facilities. Insulated tools, approved for electrical work, shall be tested frequently for proper insulation.

* Select the correct size and type of wrench for each job. Wrench handles shall not be extended with a pipe or cheater because the jaws will spread.
* Repair mushroomed punch, drift and chisel heads. Mushroomed heads represent crystallized metal that will break and fly off when struck.
* Wear eye protection at all times.

* Wear the proper footwear for the task at hand.
* Pay attention to the environment and use caution when moving about on site.
* Follow the easiest and safest path to the destination.
* Follow good housekeeping procedures.
* Remove objects that pose tripping hazards where practicable.
* Prevent water accumulation where practicable.

The following sections address the major workplace fire hazards and the procedures for controlling the hazards.

A. Electrical Fire Hazards

Electrical system failures and the misuse of electrical equipment are leading causes of workplace fires. Fires can result from loose ground connections, wiring with frayed insulation, or overloaded fuses, circuits, motors, or outlets.

To prevent electrical fires, employees shall:

1. Make sure that worn wires are replaced.
2. Use only appropriately rated fuses.
3. Never use extension cords as substitutes for wiring improvements.
4. Use only approved extension cords [i.e., those with the Underwriters Laboratory (UL) or Factory Mutual (FM) label].
5. Check wiring in hazardous locations where the risk of fire is especially high.
6. Check electrical equipment to ensure that it is either properly grounded or double insulated.
7. Ensure adequate spacing while performing maintenance.

B. Portable Heaters

All portable heaters shall be approved by **SSO**. Portable electric heaters shall have tip-over protection that automatically shuts off the unit when it is tipped over. There shall be adequate clearance between the heater and combustible furnishings or other materials at all times.

C. Office Fire Hazards

Fire risks are not limited to industrial facilities. Fires in offices have become more likely because of the increased use of electrical equipment, such as computers and fax machines. To prevent office fires, employees shall:

1. Avoid overloading circuits with office equipment.
2. Turn off nonessential electrical equipment at the end of each workday.
3. Keep storage areas clear of rubbish.
4. Ensure that extension cords are not placed under carpets.
5. Ensure that trash and paper set aside for recycling is not allowed to accumulate.

D. Cutting, Welding, and Open Flame Work

The **SSO**will ensure the following:

1. All necessary hot work permits have been obtained prior to work beginning.
2. Cutting and welding are done by authorized personnel in designated cutting and welding areas whenever possible.

3. Adequate ventilation is provided.
4. Torches, regulators, pressure-reducing valves, and manifolds are UL listed or FM approved.
5. Oxygen-fuel gas systems are equipped with listed and/or approved backflow valves and pressure-relief devices.
6. Cutters, welders, and helpers are wearing eye protection and protective clothing as appropriate.
7. Cutting or welding is prohibited in sprinklered areas while sprinkler protection is out of service.
8. Cutting or welding is prohibited in areas where explosive atmospheres of gases, vapors, or dusts could develop from residues or accumulations in confined spaces.
9. Cutting or welding is prohibited on metal walls, ceilings, or roofs built of combustible sandwich-type panel construction or having combustible covering.
10. Confined spaces such as tanks are tested to ensure that the atmosphere is not over ten percent of the lower flammable limit before cutting or welding in or on the tank.
11. Small tanks, piping, or containers that cannot be entered are cleaned, purged, and tested before cutting or welding on them begins.
12. Fire watch has been established.

E. Flammable and Combustible Materials

The **SSO** shall regularly evaluate the presence of combustible materials at.

Certain types of substances can ignite at relatively low temperatures or pose a risk of catastrophic explosion if ignited. Such substances obviously require special care and handling.

1. Class A combustibles.

These include common combustible materials (wood, paper, cloth, rubber, and plastics) that can act as fuel and are found in non-specialized areas such as offices.

To handle Class A combustibles safely:

a. Dispose of waste daily.
b. Keep trash in metal-lined receptacles with tight-fitting covers (metal wastebaskets that are emptied every day do not need to be covered).
c. Keep work areas clean and free of fuel paths that could allow a fire to spread.
d. Keep combustibles away from accidental ignition sources, such as hot plates, soldering irons, or other heat- or spark-producing devices.
e. Store paper stock in metal cabinets.
f. Store rags in metal bins with self-closing lids.
g. Do not order excessive amounts of combustibles.
h. Make frequent inspections to anticipate fires before they start.

Water, multi-purpose dry chemical (ABC), and halon 1211 are approved fire extinguishing agents for Class A combustibles.

2. Class B combustibles.

These include flammable and combustible liquids (oils, greases, tars, oil-based paints, and lacquers), flammable gases, and flammable aerosols.

To handle Class B combustibles safely:

a. Use only approved pumps, taking suction from the top, to dispense liquids from tanks, drums, barrels, or similar containers (or use approved self-closing valves or faucets).
b. Do not dispense Class B flammable liquids into containers unless the nozzle and container are electrically interconnected by contact or by a bonding wire. Either the tank or container must be grounded.
c. Store, handle, and use Class B combustibles only in approved locations where vapors are prevented from reaching ignition sources such as heating or electric equipment, open flames, or mechanical or electric sparks.
d. Do not use a flammable liquid as a cleaning agent inside a building (the only exception is in a closed machine approved for cleaning with flammable liquids).
e. Do not use, handle, or store Class B combustibles near exits, stairs, or any other areas normally used as exits.
f. Do not weld, cut, grind, or use unsafe electrical appliances or equipment near Class B combustibles.
g. Do not generate heat, allow an open flame, or smoke near Class B combustibles.
h. Know the location of and how to use the nearest portable fire extinguisher rated for Class B fire.

Water should not be used to extinguish Class B fires caused by flammable liquids. Water can cause the burning liquid to spread, making the fire worse. To extinguish a fire caused by flammable liquids, exclude the air around the burning liquid. The following fire-extinguishing agents are approved for Class B combustibles: carbon dioxide, multi-purpose dry chemical (ABC), halon 1301, and halon 1211. (**NOTE:** Halon has been determined to be an ozone-depleting substance and is no longer being manufactured. Existing systems using halon can be kept in place.)

F. Smoking

Smoking is prohibited at the facility.

–

- Be aware of chemicals of concern that can directly injure the skin or that can be absorbed into the bloodstream and subsequently transported to other organs.
- Know that skin absorption is enhanced by abrasions, cuts, heat, and moisture.
- Do not wear contact lenses in contaminated atmospheres (since they may trap chemicals against the eye surface). The eye is particularly vulnerable because airborne chemicals can dissolve in its moist surface and be carried to the rest of the body through the bloodstream (capillaries are very close to the surface of the eye).
- Keep hands away from face.
- Minimize contact with liquid and solid chemicals.

Wear protective clothing (e.g., suits and gloves) as required by the Health and Safety Plan

– .

* Adhere to the 0.05 mg/m^3 action level for dust

* Be aware that the lungs are extremely vulnerable to chemical agents. Even substances that do not directly affect the lungs may pass through lung tissue into the bloodstream, where they are transported to other vulnerable areas of the body.

* Know the odor and odor threshold of the chemicals of concern. Some toxic chemicals present in the atmosphere may not be detected by human senses (i.e., they may be odorless and colorless, and their toxic effects may not produce any immediate symptoms).

* Use engineering controls to reduce vapor concentrations (e.g., ventilation) or dusty atmospheres (e.g., dust suppression techniques).

* Wear respiratory protection as indicated by air monitoring results and/or as required by the Health and Safety Plan.

* Conduct work zone air monitoring as required by the Health and Safety Plan.

Appendix E

Personal Protective Equipment Per Task

Applies to Task: ☒ **1.Excavation, soil sampling, well installation, GW sampling and capping**

☒ *Modified Level D**		☐ *Level C**		☐ *Level B**	
Equipment	***Material/ Type***	***Equipment***	***Material/Type***	***Equipment***	***Material/Type***
☒ Protective clothing	Long sleeve shirt and long pants, Tyvek coveralls	☐ Full-face air-purifying respirator	Cartridge Type:	☐ SCBA (pressure demand)	
☒ Outer gloves	Nitrile	☐ Half-mask air-purifying respirator	Cartridge Type:	☐ Air-line System (pressure demand)

OSHA Onsite Training Documentation Form

After completion of the OSHA 40-hour training class, 29 CFR 1910.120 states that 3 days of onsite experience under the direct supervision of a trained, experienced supervisor are required to complete the OSHA HAZWOPER training requirements. This form is to be used to document this requirement, and shall be completed by a qualified supervisor (i.e., someone who has completed the 8-hour supervisory training class). Upon completion of this form, please submit it to the EarthCon project manager.

EMPLOYEE INFORMATION

Category	***Observations/Corrective Actions (N/A, if Not Applicable)***
Pre-field activity briefing records are current	
Tailgate meeting records are current	
Training/medical surveillance/respiratory protection records are current	
Site map is posted	
Buddy system is implemented	
Work zones are identified	
Site access is controlled	
Visitors are escorted	
On-site/off-site communications are in working order	
Safe work practices are implemented	
Any additional hazards incurred?	
Air monitoring equipment is in working condition	
Air monitoring records are being recorded in field logbook	
Air monitoring calibration records are recorded in field logbook	
PPE storage area is neat and organized	
Standard operating procedures are implemented	
Housekeeping at decontamination zone is appropriate	
Decontamination procedures are implemented	
Emergency response equipment is in working condition	
Route to hospital is posted	
Confined space entry program is implemented	
Spill containment equipment is available	
Chemical inventory is up to date	
Safety data sheets are available	
Primary and secondary containers are properly labeled	
Housekeeping at the chemical storage area is appropriate	

APPENDIX B

FEDERAL (RCRA-TCLP) AND STATE (TITLE 22-STLC,TTLC) HAZARDOUS WASTE CRITERIA

Inorganic Parameters/Metals (Methods: EPA 6010B, 7000 Series)

Parameters	TCLP mg/l	STLC mg/l	TTLC[a] mg/kg
Antimony		15	500
Arsenic	5.0	5.0	500
Barium	100	100	10,000[b]
Beryllium		0.75	75
Cadmium	1.0	1.0	100
Chromium	5	5 (560)	2,500
Cobalt		80	8,000
Copper		25	2,500
Lead	5.0	5.0	1,000
Mercury	0.2	0.2	20
Molybdenum		350	3,500
Nickel		20	2,000
Selenium	1.0	1.0	100
Silver	5	5	500
Thallium		7.0	700
Vanadium		24	2,400
Zinc		250	5,000
Chromium (VI)		5	500
Fluoride Salts		180	18,000
Asbestos			1%

Volatiles (Method: EPA 8260B)

Benzene	0.5		
Carbon tetrachloride	0.5		
Chlorobenzene	100.0		
Chloroform	6.0		
1,4-Dichlorobenzene	7.5		
1,2-Dichloroethane	0.5		
1,1-Dichloroethylene	0.7		
Methyl ethyl ketone (MEK)	200.0		
Tetrachloroethylene (PCE)	0.7		
Trichloroethylene (TCE)	0.5	204	2,040
Vinyl chloride	0.2		

[a] *Values expressed as wet weight* [b] *Excluding barium sulfate.*

Chlorophenoxy Acid Herbicides (Method: EPA 8151A)

Compound	TCLP mg/l	STLC mg/l	TTLC[a] mg/kg
2,4-Dichlorophenoxyacetic acid	10.0	10	100
2,4,5-TP (Silvex)	1.0	1.0	10

Organochlorine Pesticides / PCBs (Method: EPA 8081A)

Aldrin		0.14	1.4
Chlordane	0.03	0.25	2.5
DDT/DDE/DDD		0.1	1.0
Dieldrin		0.8	8.0
Endrin	0.02	0.02	0.2
Heptachlor (& its Epoxide)	0.008	0.47	4.7
Kepone		2.1	21
Lindane	0.4	0.4	4.0
Methoxychlor	10.0	10	100
Mirex		2.1	21
Toxaphene	0.5	0.5	5.0

Semi-Volatiles (Method: EPA 8270C)

o-Cresol	200.0		
m-Cresol	200.0		
p-Cresol	200.0		
Cresols (Total)	200.0		
2,4-Dinitrotoluene	0.13		
Hexachlorobenzene	0.13		
Hexachlorobutadiene	0.5		
Hexachloroethane	3.0		
Nitrobenzene	2.0		
Pentachlorophenol	100.0	1.7	17
Pyridine	5.0		
2,4,5-Trichlorophenol	400.0		
2,4,6-Trichlorophenol	2.0		

Miscellaneous (Methods: EPA 8280*, CADHS-LUFT/7420)**

Dioxin (2,3,7,8-TCDD)*		0.001	0.01
Organic Lead Compounds**			13

See Sec 22-66261.27.(a).(7) for Additional Toxicity Compound/Criteria. Title (26) 22 Toxicity Criteria Section 22-66261.24

HAZARDOUS WASTE CHARACTERISTICS

	Matrix	Method	Criteria
Ignitability (40 CFR 261.21) (T22: 22-66261.21)	Liquid	ASTM D-93	Exhibits the characteristic of ignitability: if it is a liquid, and has a flash point <60°C (140°F). Aqueous solutions containing >24% alcohol by volume are considered ignitable and do not require flash point testing.
	Solid		Exhibits the characteristic of ignitability: if it is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard.
Corrosivity (40 CFR 261.22) (T22: 22-66261.22)	Liquid	EPA 9040 EPA 1110, NACE	Exhibits the characteristic of corrosivity if it is aqueous and has a pH ≤ 2 or ≥12.5 (Sec 260.20 and 260.21) If it corrodes steel (SAE 1020) at rate >6.35 mm or 0.250 in. per year at a test temperature of 55°C (130°F)
	Solid	EPA 9045	If it is not aqueous and, when mixed with an equivalent weight of water, produces a solution having a pH ≤ 2 or ≥12.5
Reactivity (40 CFR 261.22) (T22:22-66261.23)		SW846, Chapter 7	Exhibits the characteristic of reactivity: if the waste has any of the following properties: 1. It is normally unstable and readily undergoes violent change without detonating. 2. It reacts violently with water. 3. It forms potentially explosive mixtures with water. 4. When mixed with water, it generates toxic gases, vapors, or fumes in a quantity sufficient to present a danger to human health or environment. 5. It is a cyanide or sulfide bearing waste which, when exposed to pH conditions between 2 and 12.5 can generate toxic gases, vapors or fumes in a quantity sufficient to present a danger to human health or the environment.
		Sec.7.3.3.	The current EPA guidance level is: Total releasable cyanide: 250 mg HCN/kg waste. The current EPA guidance level is: Total releasable sulfide: 500 mg H_2S/kg waste. 6. It is readily capable of detonation or explosive reaction if it is a subjected to a strong initiating source or if heated under confinement. 7. It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure 8. It is a forbidden explosive, as defined in 49 CFR 173.51 or a class A or B explosive, as defined in 49 CFR 173.53 and 173.88.

TOXICITY Fish {Title 26 sec 66261.24(6)} **SMWW 18th Ed.** A waste, or material is toxic and hazardous if (6) has an acute aquatic 96-Hour LC50 less than 500mb/L.

NOTE: Criteria and limits are abbreviated for quick reference purposes only. Specific sources should always be referenced for a detailed, complete and up-to-date listing of regulatory criteria.

San Francisco, CA 94105-3901

SPACE ABOVE THIS LINE RESERVED FOR RECORDER'S USE

LAND USE COVENANT AND AGREEMENT
ENVIRONMENTAL RESTRICTIONS

County of Riverside, Assessor Parcel Number(s): 107-030-022-3
Clow Valve Company
(Department Site Code 600876-48)

This Land Use Covenant and Agreement ("Covenant") is made by and between Clow Valve Company (the "Covenantor"), the current owner of property located at 1375 Magnolia Avenue, Corona in the County of Riverside, State of California (the "Property"), and the Department of Toxic Substances Control (the "Department"). Pursuant to Civil Code section 1471, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined

in Health and Safety Code section 25260. The Covenantor and the Department hereby agree that, pursuant to Civil Code section 1471 and Health and Safety Code section 25202.5 the use of the Property be restricted as set forth in this Covenant and that the Covenant shall conform with the requirements of California Code of Regulations, title 22, section 67391.1. With respect to the Polychlorinated Biphenyls (PCBs) at the Property, the provisions of this Covenant shall be for the benefit of, and shall be enforceable by, the United States Environmental Protection Agency ("U.S. EPA"), as a third party beneficiary pursuant to general contract law, including but not limited to Civil Code section 1559.

ARTICLE I
STATEMENT OF FACTS

1.01. Property Location. The Property, located at 1375 Magnolia Avenue, Corona, County of Riverside, California, that is subject to this Covenant, totaling approximately 16 acres, is more particularly described in the attached Exhibit A, "Legal Description of the Property", and depicted in Exhibit B, "Plot Plan". The Property is located in the area generally bounded by Magnolia Avenue on the south, railroad tracks and El Camino Avenue on the west, and a storm water channel towards the north and east. The Property is also identified as County of Riverside, Assessor's Parcel Number 107-030-022-3.

(a) A limited portion of the Property is more particularly described in Exhibit C, "Legal Description of the Capped Property", and illustrated in Exhibit D, "Sketch", referred to as the "Capped Property". The "Capped Property", totaling approximately 9.964 acres of soil impacted by hazardous substances, is located on the northern portion of the Property now generally bounded by railroad and El Camino Avenue on the west, storm channel on the north and east. Its southern border runs parallel to Magnolia Avenue, approximately 195 feet north of Magnolia Avenue.

(b) A limited portion of the Property is more particularly described in Exhibit D as "Area 1" a Former Asphalt Dip Tank and as "Area2" a PCB Transformer area. Former Asphalt Dip Tank was previously located, approximately 620 feet north of Magnolia

Avenue, 510 feet east of El Camino Avenue, and 200 feet west of the storm channel western edge. The PCB Transformer area is located approximately 240 feet west of the storm channel western edge, 510 feet east of El Camino Avenue, and 600 feet north of Magnolia Avenue.

1.02. Hazardous Substances. Hazardous wastes, or constituents of hazardous waste, including Polychlorinated Biphenyl's (PCBs) (Total Aroclors up to a maximum of 2,220 milligrams per kilogram (mg/kg)), Total Petroleum Hydrocarbons (TPH) (up to a maximum of 9,300 mg/kg), arsenic (up to a maximum of 52.9 mg/kg), cadmium (up to a maximum of 43.9 mg/kg), hexavalent chromium (up to a maximum of 6.6 mg/kg), and lead (up to a maximum of 7,360 mg/kg) in soil, and volatile organic compounds, such as tetrachloroethylene (PCE) (up to a maximum of 3 microgram/liter (ug/l)), in the soil gas remain at the Property above levels acceptable for unrestricted land use.

As of February 25, 2021, PCB concentrations in the soil at the Former Asphalt Dip Tank Bottom and PCB Transformer exceed the level for unrestricted use and the USEPA's site-specific industrial risk-based threshold of 15 mg/kg. PCB concentrations present in soils of the PCB Transformer area exceed the California hazardous waste level of Total Threshold Limit Concentration (TTLC) of 50 mg/kg.

As of February 25, 2021, lead concentrations detected in the soil at the Capped Property exceeded 320 milligrams per kilogram, a level deemed safe by DTSC for the continued use of the Site for industrial use and the TTLC of 1,000 mg/kg. A Human Health Risk Assessment (HHRA) was performed to evaluate the potential health risks associated with direct exposure of workers at the Property to soil containing Chemicals of Potential Concern (COPCs). Based on the HHRA, potential health risk to a commercial or industrial worker is $1x10^{-5}$ and to a construction worker is $2x10^{-4}$. The estimated Hazard Index (HI) for a commercial/industrial worker at the Property is 1.9, primarily due to the potential exposure to PCBs and cadmium. The estimated HI for a construction worker at the Property is 458. U.S. EPA recommends an HI of 1 or below and health risk below $1x10^{-6}$. The calculated risks were primarily associated with direct exposure to impacted soil and associated soil ingestion or dermal exposure, both of which will be eliminated by installation and maintenance of the capping materials described herein.

1.03. Remediation of Property. This Property has been investigated and/or remediated under the Department's oversight. The Department approved a Corrective Measures Study, dated February 19, 2018, prepared by EarthCon Consultants CA, Inc, in accordance with Health and Safety Code, Division 20, Chapter 6.5. The remediation activities at the Property include:

a) Construction of an approximately 5,000 square foot, 6-inch thick concrete or 3-inch thick asphalt cap in two areas encompassing approximately one-half acre, identified as Areas of Concern (AOCs), AOC-1 and AOC-5 (see Exhibit B).
b) Repair and maintenance of the existing asphalt and/or concrete surface cover of the Capped Property;
c) Soil Management Plan and Operation and Maintenance Plan preapproval by the Department for all future construction work involving soil excavation at the Capped Property; and,
d) Land use restriction recorded with the Riverside County Assessor's Office to prohibit sensitive uses.

1.04. PCB Remediation overseen by U.S. EPA. In addition to the corrective action measures for the Property under the Department's oversight, U.S. EPA approved with conditions the Risk-Based Approval Application submitted by EarthCon Consultants, CA, Inc. on behalf of Clow Valve Company dated April 9, 2019 to remediate PCBs at the Property. PCBs are regulated by the U.S. EPA pursuant to the Toxic Substances Control Act (TSCA), 15 U.S.C. Section 2601 et seq., and the PCB regulations at 40 Code of Federal Regulations (CFR) Part 761. This document is available in Envirostor, an online document repository at https://www.envirostor.dtsc.ca.gov/public/deliverable_documents/1318022012/2019-04-23_EPA%20to%20Clow%20Valve_761.61%28c%29_SIGNED.pdf

1.05. Basis for Environmental Restrictions. As a result of the presence of Hazardous Wastes, PCBs, TPH, arsenic, cadmium, lead, and PCE, which are also hazardous materials as defined in Health and Safety Code section 25260, at the Property, the Department has concluded that it is reasonably necessary to restrict the

use of the Property in order to protect present or future human health or safety or the environment, and that this Covenant is required as part of the Department-approved remedy for the Property. The Department has also concluded that the Property, as remediated and when used in compliance with the Environmental Restrictions of this Covenant, does not present an unacceptable risk to present and future human health or safety or the environment.

1.06. Land Use Covenant. A land use covenant is necessary to preclude potential users' exposure to hazardous substances that remain at the Property and to complete the remedy selected in the Corrective Measures Study. U.S. EPA, with the concurrence of the Department, has concluded that the Property, remediated to the goals presented in the Corrective Measures Study, subject to the restrictions of this Covenant, and used in compliance with such restrictions, does not present an unacceptable threat to present or future human health or safety or the environment. Additional information about the Site, including the 2019 PCB risk analysis by U.S. EPA, is available at the Envirostor, an online repository listed in paragraph 1.04, above.

ARTICLE II
DEFINITIONS

2.01. Department. "Department" means the California Department of Toxic Substances Control and includes its successor agencies, if any.

2.02. Environmental Restrictions. "Environmental Restrictions" means all protective provisions, covenants, restrictions, requirements, prohibitions, and terms and conditions as set forth in this Covenant.

2.03. Improvements. "Improvements" includes, but is not limited to buildings, structures, roads, driveways, improved parking areas, wells, pipelines, or other utilities.

2.04. Lease. "Lease" means lease, rental agreement, or any other document that creates a right to use or occupy any portion of the Property.

2.05. Occupant. "Occupant" or "Occupants" means Owner and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.06. Owner. "Owner" or “Owners” means the Covenantor, and any successor in interest including any heir and assignee, who at any time holds title to all or any portion of the Property.

2.07. U.S. EPA. “U.S. EPA” means the United States Environmental Protection Agency, and includes its successor agencies, if any.

ARTICLE III
GENERAL PROVISIONS

3.01. Runs with the Land. This Covenant sets forth Environmental Restrictions that apply to and encumber the Property and every portion thereof no matter how it is improved, held, used, occupied, leased, sold, hypothecated, encumbered, or conveyed. This Covenant: (a) runs with the land pursuant to Civil Code section 1471 and Health and Safety Code section 25202.5; (b) inures to the benefit of and passes with each and every portion of the Property; (c) is for the benefit of, and is enforceable by the Department; and (d) is imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding upon Owners/Occupants. This Covenant: (a) binds all Owners of the Property, their heirs, successors, and assignees; and (b) the agents, employees, and lessees of the Owners and the Owners’ heirs, successors, and assignees. Pursuant to Civil Code section 1471, all successive Owners of the Property are expressly bound hereby for the benefit of the Department; this Covenant, however, is binding on all Owners and Occupants, and their respective successors and assignees, only during their respective periods of ownership or occupancy except that such Owners or Occupants shall continue to be liable for any violations of, or non-compliance with, the Environmental Restrictions of this Covenant or any acts or omissions during their ownership or occupancy.

3.03. Written Notice of the Presence of Hazardous Substances. Prior to the sale, lease, assignment, or other transfer of the Property, or any portion thereof, the Owner, lessor, or sublessor shall give the buyer, lessee, or sublessee written notice of the existence of this Covenant and its Environmental Restrictions.

3.04. Incorporation into Deeds and Leases. This Covenant shall be

incorporated by reference in each and every deed and Lease for any portion of the Property.

3.05. Conveyance of Property. The Owner and new Owner shall provide Notice to the Department and the U.S. EPA not later than 30 calendar days after any conveyance or receipt of any ownership interest in the Property (excluding Leases, and mortgages, liens, and other non-possessory encumbrances). The Notice shall include the name and mailing address of the new Owner of the Property and shall reference the site name and site code as listed on page one of this Covenant. The notice shall also include the Assessor's Parcel Number(s) noted on page one. If the new Owner's property has been assigned a different Assessor Parcel Number, each such Assessor Parcel Number that covers the Property must be provided. The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect proposed conveyance, except as otherwise provided by law or by administrative order.

3.06. Costs of Administering the Covenant to Be Paid by Owner. The Department has already incurred and will in the future incur costs associated with this Covenant. Therefore, the Covenantor hereby covenants for the Covenantor and for all subsequent Owners that, pursuant to California Code of Regulations, title 22, section 67391.1(h), the Owner agrees to pay the Department's costs in administering, implementing and enforcing this Covenant.

ARTICLE IV
RESTRICTIONS AND REQUIREMENTS

4.01. Prohibited Uses. The Property shall not be used for any of the following purposes without prior written approval by the Department pursuant to Health and Safety Code section 25227 and prior written notice to U.S. EPA :

(a) A residence, including single or multifamily housing, mobile homes, or factory-built housing constructed or installed for use as residential human habitation.

(b) A hospital for humans.

(c) A public or private school for persons under 18 years of age.

(d) A day care center or a playground for children.

4.02. Soil Management. Soil management activities at the Capped Property are subject to the following requirements in addition to any other applicable Environmental Restrictions:

(a) No activities that will disturb the soil at or below grade or below concrete (e.g., excavation, grading, removal, trenching, filling, earth movement, mining, or drilling) shall be allowed at the Property without a Soil Management Plan pre-approved by the Department and U.S. EPA in writing.

(b) Any soil brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law.

4.03. Prohibited Activities. The following activities shall not be conducted at the Property:

(a) Drilling for any water, oil, or gas without prior written approval by the Department.

(b) Extraction or removal of groundwater without a Groundwater Management Plan pre-approved by the Department in writing.

(c) Activity that may alter, interfere with, or otherwise affect the integrity or effectiveness of, or the access to, monitoring, operation or maintenance of the concrete cover at the Capped Property without prior written approval of the Department and U.S. EPA.

4.04. Written Notice of Covenant. Prior to any sale, lease, or rental of any portion of the Property, the Owner shall provide a copy of this Covenant to the buyer, lessee, or renter to ensure that the buyer, lessee, or renter is on notice of the restrictions and requirements of this Covenant. Prior to recordation of any easement on any portion of the Property, the Owner shall provide a copy of this Covenant to the easement holder to ensure that the easement holder is on notice of the restrictions and requirements of this Covenant. Covenantor shall also provide a copy of this Covenant to all existing Occupants and easement holders of record within 30 days of recording this Covenant.

4.05. Access for Department. The Department shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the Department in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect the Department's right of entry and access, or authority to take response actions, under any applicable State Law.

4.06. Access for U.S EPA. The U.S. EPA shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the U.S. EPA in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect U.S. EPA's right of entry and access, or U.S. EPA's authority to take actions, under any applicable law.

4.07. Access for Implementing Operation and Maintenance. The entity or person responsible for implementing the operation and maintenance activities, if any, shall have reasonable right of entry and access to the Property for the purpose of implementing such operation and maintenance activities until the Department determines that no further operation and maintenance activity is required.

4.08. Inspection and Reporting Requirements. The Owner shall conduct an annual inspection of the Property verifying compliance with this Covenant; shall submit an annual inspection report to the Department for its approval by January 15th of each year; and also send a copy to U.S. EPA. Attached as Exhibit F is a sample format for an annual inspection report. The annual inspection report must include the dates, times, and names of those who conducted the inspection and reviewed the annual inspection report. It also shall describe how the observations that were the basis for the statements and conclusions in the annual inspection report were performed (e.g., drive by, fly over, walk in, etc.). If any violation is noted, the annual inspection report must detail the steps taken to correct the violation and return to compliance. If the Owner identifies any violations of this Covenant during the annual inspection or at any other

time, the Owner must within 10 calendar days of identifying the violation: (a) determine the identity of the party in violation; (b) send a letter advising the party of the violation of the Covenant; and (c) demand that the violation cease immediately. Additionally, a copy of any correspondence related to the violation of this Covenant shall be sent to the Department and U.S. EPA within 10 calendar days of its original transmission.

4.09. Five-Year Review. In addition to the annual reviews noted above, after a period of five (5) years from January 15, 2021 and every five (5) years thereafter, Owner shall submit a Five-Year Review report documenting its review of the remedy implemented and its evaluation to determine if human health and the environment are being adequately protected by the remedy as implemented. The Owner shall submit this report to DTSC, and submit a copy to U.S. EPA. The report shall describe the results of all inspections, sampling analyses, tests and other data generated or received by Owner and evaluate the adequacy of the implemented remedy in protecting human health and the environment. As a result of any review work performed, Department may require Owner to perform additional review work or modify the review work previously performed by Owner.

4.10. Changes to Use or Condition of Property. Any changes to land use, movement of PCB contaminated soils, or discovery of new contamination requires notification to, and may require additional approval from, the U.S. EPA by the Owner and/or Occupant.

4.11. Access for Five-Year Reviews. The entity, person or persons responsible for Five-Year Reviews shall have reasonable right of entry and access to the Property for the purpose of implementing these activities. Such right of entry and access shall continue until such time as the U.S. EPA and DTSC both determine that no further Five-Year Review activities are required.

ARTICLE V
ENFORCEMENT

5.01. Enforcement. Failure of the Owner or Occupant to comply with this Covenant shall be grounds for the Department to require modification or removal of any Improvements constructed or placed upon any portion of the Property in violation of this

Covenant. Violation of this Covenant, such as failure to submit (including submission of any false statement) record or report to the Department, shall be grounds for the Department to pursue administrative, civil, or criminal actions, as provided by law.

5.02. Enforcement Rights of U.S. EPA as Third-Party Beneficiary. U.S. EPA, as a third-party beneficiary, has the right to enforce the Environmental Restrictions contained herein.

ARTICLE VI
VARIANCE, REMOVAL AND TERM

6.01. Variance from Environmental Restrictions. Any person may apply to the Department for a written variance from any of the Environmental Restrictions imposed by this Covenant. Such application shall be made in accordance with Health and Safety Code section 25223. A copy of the application shall be submitted to the U.S. EPA simultaneously with the application submitted to the Department. No variance may be granted under this paragraph without prior notice and opportunity to comment by U.S. EPA.

6.02 Termination, Modification, and/or Removal of Environmental Restrictions. Any person may apply to the Department to terminate, modify, and/or remove any or all of the Environmental Restrictions imposed by this Covenant or terminate the Covenant in its entirety. Such application shall be made in accordance with Health and Safety Code section 25224 and a copy of the application shall be submitted to U.S. EPA simultaneously with the application submitted to the Department. No termination may be granted under this paragraph without prior notice to and opportunity to comment by U.S. EPA.

6.03 Term. Unless ended in accordance with paragraph 6.02, by law, or by the Department in the exercise of its discretion, this Covenant, after providing notice to and an opportunity to comment by U.S. EPA, shall continue in effect in perpetuity.

ARTICLE VII
MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be

construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof, to the general public or anyone else for any purpose whatsoever.

7.02. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of Riverside within 10 calendar days of the Covenantor's receipt of a fully executed original. The Covenantor shall also provide copies showing the County Recorder's tracking information of its recording (i.e., document number or book and page number information) to the Department and U.S. EPA within ten (10) days of receiving it from the County Recorder's Office.

7.03. Notices. Whenever any person gives or serves any Notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (a) when delivered, if personally delivered to the person being served or to an officer of a corporate party being served; or (b) five calendar days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

To Owner:
Mark Willett, General Manager
Clow Valve Company
1375 Magnolia Avenue
Corona, California 91719
And

To Department:
A. Edward Morelan, Chief
Cypress Cleanup Branch
Site Mitigation and Restoration Program
Department of Toxic Substances Control
5796 Corporate Avenue
Cypress, California 90630

To U.S. EPA:
U.S. Environmental Protection Agency
Region IX
Attention**:** PCB Coordinator (Land Chemicals and Redevelopment Division)
75 Hawthorne Street
San Francisco, CA 94105-3901

Any party may change its address or the individual to whose attention a Notice is to be

sent by giving advance written Notice in compliance with this paragraph.

7.04. Partial Invalidity. If this Covenant or any of its terms are determined by a court of competent jurisdiction to be invalid for any reason, the surviving portions of this Covenant shall remain in full force and effect as if such portion found invalid had not been included herein.

7.05. Statutory References. All statutory or regulatory references include successor provisions.

7.06. Incorporation of Exhibits. All exhibits and attachments to this Covenant are incorporated herein by reference.

IN WITNESS WHEREOF, the Covenantor and the Department hereby execute this Covenant.

EXHIBIT F

LAND USE COVENANT
SAMPLE ANNUAL INSPECTION REPORT (2 Pages)

Site name:

Site address:

Current Site owner:

Date and times of inspection:

Name(s) of individual(s) who performed inspection:

How inspection observations were made (e.g. drive-by, fly-over, walking the Property):

1. Since the last annual inspection, has there been a change in the land use, such that there are now residences, a hospital for humans, a public or private school for persons under 21 years of age, or a day care center for children on the restricted Property?
   ☐ Yes ☐ No ☐ Not an applicable restriction

2. Since the last annual inspection, has the soil been disturbed on the restricted Property? Was evidence of soil disturbance observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

3. Since the last annual inspection, has there been any drilling on the restricted Property? Was evidence of drilling observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

Cap Condition

4. Since the last annual inspection, has there been any damage to, disturbance of, or modifications to the existing building foundation and/or surrounding pavement that serves as the cap over contaminated soil?
   ☐ Yes ☐ No

5. Has there been any damage to, disturbance of, or modifications to the asphalt/concrete Cap covering the restricted Property?
   ☐ Yes ☐ No

Land Use Covenant Compliance

6. Has there been a change in the land use of the property from commercial/industrial?
   ☐ Yes ☐ No

If the response to any of the above questions is yes, describe the circumstances.

Photos should be attached to this report that show the use of the Restricted Property at the time of the inspection and the condition of any Caps on the restricted Property. Photos showing any cracks in or damage to the Cap should also be included.

I certify under penalty of law that this document and all attachments were prepared by me or under my direction or supervision. With the exception of any areas of non-compliance noted above, all uses and activities on the restricted Property were found to be in compliance with the restrictions and requirements of the Land Use Covenant. Based on my personal knowledge or inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

APPENDIX D

CITY OF CORONA
PRECISE GRADING PLAN
1375 MAGNOLIA AVENUE

GRADING GENERAL NOTES

1. A GRADING PERMIT FROM THE PUBLIC WORKS DEPARTMENT IS REQUIRED. ALL GRADING SHALL COMPLY WITH THE REQUIREMENTS OF THE CITY OF CORONA GRADING REGULATIONS– CORONA MUNICIPAL CODE 15.36. THESE PLANS, SPECIAL INSTRUCTIONS ON THE PERMIT, AND THE GEOTECHNICAL INVESTIGATION AND LIQUEFACTION EVALUATION DATED SEPTEMBER 10, 2019 BY GEOTECHNICAL PROFESSIONALS INC., AND ALL SUBSEQUENT ADDENDA.
2. SOURCE OF TOPOGRAPHY IS BASED ON FIELD SURVEY DATED SEPTEMBER 23, 2018.
3. A PRE–GRADING MEETING AT THE SITE IS REQUIRED BETWEEN THE CITY INSPECTOR, THE CIVIL ENGINEER, THE GEOTECHNICAL ENGINEER AND THE GRADING CONTRACTOR. CALL THE PUBLIC WORKS DEPARTMENT INSPECTION DIVISION AT (951) 279–3511 TO SCHEDULE A PRE–GRADING MEETING AT LEAST 48 HOURS PRIOR TO START OF ANY WORK.
4. HOURS OF OPERATION ARE 7:00 A.M. TO 5:00 P.M. – MONDAY THROUGH FRIDAY EXCLUDING HOLIDAYS.
5. SEPARATE PERMITS SHALL BE REQUIRED FOR ANY IMPROVEMENT WORK IN THE PUBLIC RIGHT–OF–WAY.
6. CONSTRUCTION MATERIAL AND EQUIPMENT SHALL NOT OCCUPY ANY PORTION OF THE PUBLIC RIGHT–OF–WAY, SUCH AS STREET, ALLEY OR PUBLIC SIDEWALK AT ANY TIME. TEMPORARY USE OF PUBLIC RIGHT–OF–WAY, WHENEVER REQUESTED, MUST BE REVIEWED AND APPROVED BY THE PUBLIC WORKS DIRECTOR.
7. REPAIR OR REPLACE ALL EXISTING DAMAGED OR ALTERED PUBLIC IMPROVEMENTS AS REQUIRED BY THE PUBLIC WORKS DIRECTOR.
8. ALL SURVEY MONUMENTS SHALL BE PROTECTED AND PERPETUATED IN PLACE. ANY DISTURBED OR COVERED MONUMENTS SHALL BE RESET BY A QUALIFIED CIVIL ENGINEER OR A LICENSED LAND SURVEYOR.
9. PRIOR TO TAKING WATER FROM A CITY FIRE HYDRANT, THE CONTRACTOR SHALL MAKE ARRANGEMENTS WITH THE PUBLIC WORKS DEPARTMENT TO OBTAIN A FIRE HYDRANT WATER METER. METER LOCATION MAY NOT BE ALTERED WITHOUT DEPARTMENT OF WATER AND POWER APPROVAL.
10. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE LOCATION OF ALL UTILITIES OR STRUCTURES ABOVE OR BELOW GROUND, SHOWN OR NOT SHOWN ON THESE PLANS. THE CONTRACTOR WILL BE HELD RESPONSIBLE FOR ALL DAMAGE TO ANY UTILITIES OR STRUCTURES CAUSED BY HIS OPERATION.
11. STRICT ADHERENCE TO DUST CONTROL REQUIREMENTS SHALL BE ENFORCED. ADJACENT STREETS ARE TO BE CLEANED DAILY OF ALL DIRT AND DEBRIS RESULTING FROM THIS OPERATION.
12. SEPARATE PERMITS FROM THE BUILDING DIVISION SHALL BE REQUIRED FOR ALL WALLS.
13. AN APPROVED PRECISE GRADING PLAN WILL BE REQUIRED PRIOR TO A BUILDING PERMIT BEING ISSUED.
14. THE DESIGN CIVIL ENGINEER/GEOTECHNICAL ENGINEER/ENGINEERING GEOLOGIST OF RECORD SHALL EXERCISE SUFFICIENT CONTROL DURING GRADING AND CONSTRUCTION TO ENSURE COMPLIANCE WITH THE PLANS, SPECIFICATIONS, AND CODE REQUIREMENTS WITHIN THEIR PURVIEW. THE ENGINEERS SHALL SUBMIT "ACKNOWLEDGMENT CONCERNING EMPLOYMENT" FORM TO THE CITY PRIOR TO THE ISSUANCE OF A GRADING PERMIT.
15. REVISIONS TO THE PLANS ARE TO BE SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR REVIEW AND APPROVAL PRIOR TO CHANGING ORIGINAL MYLARS.
16. THE CIVIL ENGINEER SHALL SUBMIT WRITTEN CERTIFICATION OF COMPLETION OF ROUGH GRADING IN ACCORDANCE WITH THE APPROVED GRADING PLAN AND CERTIFICATION OF BUILDING PAD ELEVATION PRIOR TO ISSUANCE OF THE BUILDING PERMIT. PAD ELEVATION GRADING TOLERANCE SHALL NOT EXCEED ±0.10'.
17. AN "AS–BUILT" GRADING PLAN SHALL BE SUBMITTED AT THE COMPLETION OF WORK SHOWING ALL WATER QUALITY MANAGEMENT PLAN FACILITIES.
18. GRADING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE GEOTECHNICAL ENGINEER WHO SHALL CERTIFY THAT ALL FILL HAS BEEN PROPERLY PLACED AND SUBMIT A FINAL COMPACTION REPORT FOR ALL FILLS OVER 1' DEEP.
19. THE GEOTECHNICAL ENGINEER SHALL, AFTER CLEARING AND PRIOR TO THE PLACEMENT OF FILL IN CANYONS, INSPECT EACH CANYON FOR AREAS OF ADVERSE STABILITY AND TO DETERMINE THE PRESENCE OR ABSENCE OF SUBSURFACE WATER OR SPRING FLOW. IF NEEDED, DRAINS WILL BE DESIGNED AND CONSTRUCTED PRIOR TO THE PLACEMENT OF FILL IN EACH RESPECTIVE CANYON.
20. FILL AREAS SHALL BE CLEANED OF ALL VEGETATION AND DEBRIS, SCARIFIED TO A MINIMUM DEPTH OF 12 INCHES AND INSPECTED BY THE GEOTECHNICAL ENGINEER PRIOR TO THE PLACING OF FILL.
21. ALL DELETERIOUS MATERIALS, I.E., LUMBER, LOGS, BRUSH, OR ANY OTHER ORGANIC MATERIALS OR RUBBISH SHALL BE REMOVED FROM ALL AREAS TO RECEIVE COMPACTED FILL.
22. UNSUITABLE MATERIALS, SUCH AS TOPSOIL, WEATHERED BEDROCK, ETC., SHALL BE REMOVED AS REQUIRED BY GEOTECHNICAL ENGINEER (AND ENGINEERING GEOLOGIST, WHERE EMPLOYED) FROM ALL AREAS TO RECEIVE COMPACTED FILL OR DRAINAGE STRUCTURES.
23. FILLS SHALL BE BENCHED INTO COMPETENT MATERIAL.
24. WHEN CUT PADS ARE BROUGHT TO NEAR GRADE, THE GEOTECHNICAL ENGINEER SHALL DETERMINE IF THE BEDROCK IS EXTENSIVELY FRACTURED OR FAULTED AND WILL READILY TRANSMIT WATER. IF CONSIDERED NECESSARY BY THE GEOTECHNICAL ENGINEER, A COMPACTED FILL BLANKET WILL BE PLACED.
25. WHERE SUPPORT OR BUTTRESSING OF CUT AND NATURAL SLOPES IS DETERMINED TO BE NECESSARY BY THE GEOTECHNICAL ENGINEER, THE GEOTECHNICAL ENGINEER SHALL SUBMIT DESIGN, LOCATIONS AND CALCULATIONS TO THE PUBLIC WORKS DIRECTOR PRIOR TO CONSTRUCTION. THE GEOTECHNICAL ENGINEER WILL INSPECT AND CONTROL THE CONSTRUCTION OF THE BUTTRESSING AND CERTIFY TO THE STABILITY OF THE SLOPE AND ADJACENT STRUCTURES UPON COMPLETION.
26. ALL CUT SLOPES SHALL BE INVESTIGATED, BOTH DURING AND AFTER GRADING BY THE GEOTECHNICAL ENGINEER, TO DETERMINE IF ANY SLOPE HAS STABILITY PROBLEMS. SHOULD EXCAVATION DISCLOSE ANY GEOLOGICAL HAZARDS, THE GEOTECHNICAL ENGINEER SHALL RECOMMEND NECESSARY TREATMENT TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL. ALL APPROVALS TO BE GRANTED ON THE BASIS OF DETAILED GEOLOGICAL MAPPING AND WRITTEN RECOMMENDATION FROM THE GEOTECHNICAL ENGINEER.
27. MAXIMUM ALLOWABLE CUT AND FILL SLOPES ARE 2 TO 1 OR 30' IN HEIGHT WITHOUT APPROVAL OF THE PUBLIC WORKS DIRECTOR. IF PROPOSED CUT AND FILL SLOPES ARE STEEPER THAN 2:1 OR OVER 30' IN HEIGHT, STABILITY CALCULATIONS WITH A SAFETY FACTOR OF AT LEAST ONE AND FIVE TENTHS (1.5) SHALL BE SUBMITTED BY A GEOTECHNICAL ENGINEER FOR APPROVAL FROM THE PUBLIC WORKS DIRECTOR.
28. PROVIDE 4' WIDE BY 1' HIGH BERM OR EQUIVALENT ALONG THE TOP OF ALL FILL SLOPES OVER 5' HIGH, EXCEPT WHERE SHOWN OTHERWISE ON THE PLANS.
29. ALL SLOPES ADJACENT TO PUBLIC RIGHT–OF–WAY SHALL CONFORM TO SECTION 15.36.220 OF THE CORONA MUNICIPAL CODE.
30. ALL SLOPES 4' OR HIGHER SHALL BE PLANTED AND COMPLY WITH REQUIREMENTS OF CHAPTER 17 OF THE CORONA MUNICIPAL CODE.
31. TERRACE DRAINS, INTERCEPTOR DRAINS AND DOWN DRAINS SHALL BE CONSTRUCTED OF 4" P.C.C. (OR GUNITE) REINFORCED WITH 6"x6" –2 1.4x1.4 W.W.M. REBAR SHALL BE GRADE 60 BILLET STEEL CONFORMING TO ASTM A615.
32. ALL CONCRETE STRUCTURES THAT COME IN CONTACT WITH THE ON–SITE SOILS SHALL BE CONSTRUCTED WITH TYPE II OR V CEMENT AS DEEMED NECESSARY BY SOLUBLE SULFATE CONTENT TEST CONDUCTED BY THE GEOTECHNICAL ENGINEER. ALL CONCRETE SHALL BE CITY STANDARD 560–C–3250 (600–E 3250 FOR GUNITE) PER CITY STANDARD SPECIFICATIONS.
33. GROUND SHALL BE PRE–WETTED PRIOR TO THE PLACEMENT OF CONCRETE. MOISTURE LOSS RETARDANT SHALL BE USED WHEN REQUIRED BY THE GEOTECHNICAL ENGINEER OR PUBLIC WORKS DIRECTOR.
34. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND/OR OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL.

POST CONSTRUCTION BMP GENERAL NOTES:

1. THIS PLAN UTILIZES STRUCTURAL BEST MANAGEMENT PRACTICES (BMPS) FOR POST CONSTRUCTION STORM WATER TREATMENT.
2. CONSTRUCT THE STORM WATER TREATMENT FACILITIES AFTER ALL CONTRIBUTING DRAINAGE AREAS ARE STABILIZED AND TO THE SATISFACTION OF THE ENGINEER OF RECORD.
3. DO NOT USE THE DEVICES AS TEMPORARY SEDIMENT CONTROL FACILITIES DURING CONSTRUCTION.
4. THE FOLLOWING BMPS HAVE BEEN DESIGNED INTO THE PLANS. PLEASE REFER TO THE PROJECT'S APPROVED WATER QUALITY MANAGEMENT PLAN (WQMP) FOR ADDITIONAL BMP's AND OPERATION AND MAINTENANCE DETAILS:

   A. BIORETENTION FACILITY AND OR ON–SITE RETENTION

NOTE:

1. A SEWER BACKFLOW PREVENTOR IS NOT REQUIRED FOR THIS PROJECT
2. WATER PRESSURE REDUCING VALVES ARE REQUIRED FOR THIS PROJECT

NOTICE TO CONTRACTORS

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES, CONDUITS, OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF AVAILABLE RECORDS. TO THE BEST OF OUR KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT THOSE SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN ON THESE DRAWINGS. THE CONTRACTOR FURTHER ASSUMES ALL LIABILITY AND RESPONSIBILITY FOR THE UTILITY PIPES, CONDUITS OR STRUCTURES, SHOWN OR NOT SHOWN ON THESE PLANS

CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOBSITE CONDITIONS DURING THE COURSE OF CONSTRUCTION ON THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS OR PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE CITY, THE OWNER, AND THE ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT.

THE CONTRACTOR SHALL CALL IN A LOCATION REQUEST TO UNDERGROUND SERVICE ALERT (USA) PH. 811, TWO (2) WORKING DAYS PRIOR TO DIGGING. NO CONSTRUCTION PERMIT ISSUED BY THE PUBLIC WORKS DEPARTMENT SHALL BE VALID INVOLVING UNDERGROUND FACILITIES UNLESS THE APPLICANT HAS AN INQUIRY IDENTIFICATION NUMBER ISSUED BY U.S.A.

CARE SHOULD BE TAKEN TO PREVENT GRADED DITCHES AND SWALES FROM UNDERMINING STREET IMPROVEMENTS. UPON INSPECTION OF THE SITES, THE PUBLIC WORKS DIRECTOR MAY REQUIRE TEMPORARY GUNITE SWALES, ENTERING OR LEAVING IMPROVEMENTS.

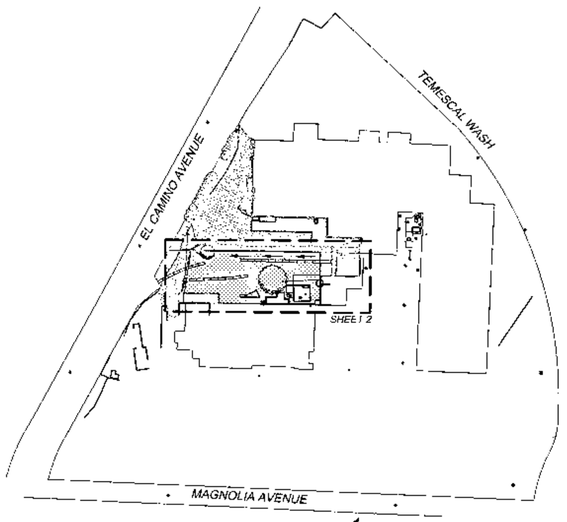
DECLARATION OF ENGINEER OF RECORD

I HEREBY DECLARE THAT THE DESIGN OF THE IMPROVEMENTS SHOWN ON THESE PLANS COMPLIES WITH ALL PROFESSIONAL ENGINEERING STANDARDS AND PRACTICES. AS THE ENGINEER OF RECORD FOR THE PLANS, I ASSUME FULL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. WITH RESPECT TO THE PLAN CHECK PERFORMED BY THE CITY OF CORONA, I UNDERSTAND AND ACKNOWLEDGE THE FOLLOWING: (1) THE PLAN CHECK IS A REVIEW FOR THE LIMITED PURPOSE OF ENSURING THE PLANS COMPLY WITH THE CITY'S STANDARDS, PROCEDURES, POLICIES, AND ORDINANCES, (2) THE PLAN CHECK IS NOT A DETERMINATION OF THE TECHNICAL ADEQUACY OF THE DESIGN OF THE IMPROVEMENTS, AND (3) THE PLAN CHECK DOES NOT RELIEVE ME OF MY LEGAL AND PROFESSIONAL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. AS THE ENGINEER OF RECORD, I AGREE TO DEFEND, INDEMNIFY, AND HOLD HARMLESS THE CITY, ITS ELECTED OFFICIALS, EMPLOYEES, AND AGENTS FROM ANY AND ALL ACTUAL OR ALLEGED CLAIMS, DEMANDS, CAUSES OF ACTION, LIABILITY, LOSS, DAMAGE, OR INJURY TO PROPERTY OR PERSONS, INCLUDING WRONGFUL DEATH, WHETHER IMPOSED BY A COURT OF LAW OR BY ADMINISTRATIVE ACTION OF ANY FEDERAL, STATE, OR LOCAL GOVERNMENTAL AGENCY, ARISING OUT OF OR INCIDENT TO ANY NEGLIGENT ACTS, OMISSIONS, OR ERRORS BY THE ENGINEER OF RECORD, ITS EMPLOYEES, CONSULTANTS, OR AGENTS.

WILLIAM D. BROOKS, RCE 53114 — EXPIRES 6/30/21 — 3/8/2021 DATE

ENGINEER OF RECORD

GEOTECHNICAL ENGINEER'S STATEMENT



THIS PLAN HAS BEEN REVIEWED BY GEOTECHNICAL PROFESSIONALS INC. AND APPEARS TO BE IN GENERAL CONFORMANCE WITH RECOMMENDATIONS IN OUR REPORT DATED SEPTEMBER 10, 2019–PROJECT NO. 2945.1. THIS PLAN HAS BEEN REVIEWED FOR GEOTECHNICAL ASPECTS ONLY. WE MAKE NO REPRESENTATION REGARDING ACCURACY OF DIMENSIONS, QUANTITIES, MEASUREMENTS, CALCULATIONS, OR ANY PORTION OF THE DESIGN. GEOTECHNICAL CONDITIONS AND RECOMMENDATIONS SHOULD BE CONFIRMED BY THE GEOTECHNICAL CONSULTANT IN THE FIELD AT TIME OF CONSTRUCTION.

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF CORONA, IN THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THAT PORTION OF THE NORTHWEST QUARTER OF SECTION 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, AS SHOWN BY SECTIONALIZED SURVEY OF THE RANCHO EL SOBRANTE DE SAN JACINTO AND OF LOT 13 IN BLOCK 63 OF THE LANDS OF THE RIVERSIDE LAND AND IRRIGATING COMPANY, AS SHOWN BY MAP ON FILE IN BOOK 1 PAGE 70 OF MAPS, SAN BERNARDINO COUNTY RECORDS, BOUNDED AS FOLLOWS: ON THE SOUTHEAST BY THE SOUTHWESTERLY EXTENSION OF THE NORTHWEST LINE OF MAGNOLIA AVENUE, AS SHOWN ON RECORD OF SURVEY ENTITLED "RECORD OF SURVEY OF A PORTION OF LOTS 11, 12, 13, 14, 15, IN BLOCK 63 OF RIVERSIDE LAND AND IRRIGATING COMPANY AND A PORTION OF SECTIONS 29 AND 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, SAN BERNARDINO BASE AND MERIDIAN" ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS, ON THE WEST BY THE EASTERLY LINE OF THE PROPERTY SPUR OF THE ATCHINSON, TOPEKA, AND SANTA FE RAILWAY COMPANY; AND ON THE NORTHEAST BY THE SOUTHERLY AND SOUTHWESTERLY LINE OF PARCELS 5 TO 11, INCLUSIVE, OF SAID RECORD OF SURVEY ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS.

EXCEPTING THEREFROM THAT PORTION GRANTED TO THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER DISTRICT CONSERVATION DISTRICT BY DEED RECORDED OCTOBER 22, 1984 AS INSTRUMENT NO. 84–227387 AND RE–RECORDED FEBRUARY 11, 1985 AS INSTRUMENT NO. 85–028214 BOTH OF OFFICIAL RECORDS.

EARTHWORK QUANTITIES

NOTE: THE CONSTRUCTION QUANTITIES SHOWN ON THESE PLANS ARE FOR CITY FEE PURPOSES ONLY.
IT IS THE CONTRACTOR'S RESPONSIBILITY TO PERFORM INDIVIDUAL TAKEOFFS FOR BIDDING PURPOSES.

(PRELIMINARY QUANTITIES DO NOT INCLUDE SHRINKAGE FACTOR AND OVEREXCAVATION OVER THE SITE)

RAW CUT	582 CU. YDS.
RAW FILL	0 CU. YDS.
NET EXPORT	–582 CU. YDS.

SITE AREA

TOTAL AREA – 16.9 ACRES
DISTURBED AREA – 0.7 ACRES

24" x 36"

EROSION CONTROL GENERAL NOTES:

1. EROSION CONTROL IS REQUIRED FOR GRADING OPERATIONS ON A YEAR ROUND BASIS. APPROVED PLANS ARE REQUIRED FOR ALL WORK REQUIRING A GRADING PERMIT.
2. IN CASE OF EMERGENCY CALL TIFFANY SMITH OF CLOW VALVE MANUFACTURING AT 317-364-0898.
3. THE ENGINEER OF RECORD WILL SUPERVISE EROSION CONTROL WORK AND INSURE THAT WORK IS IN ACCORDANCE WITH APPROVED PLANS.
4. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL
5. THE PUBLIC WORKS DIRECTOR RESERVES THE RIGHT TO MAKE CHANGES OR MODIFICATIONS TO THIS PLAN AS DEEMED NECESSARY.
6. STANDBY CREW FOR EMERGENCY WORK SHALL BE MADE AVAILABLE AT ALL TIMES. NECESSARY MATERIALS SHALL BE AVAILABLE ON SITE AND STOCKPILED AT CONVENIENT LOCATIONS TO FACILITATE RAPID CONSTRUCTION OF TEMPORARY EROSION AND SEDIMENT CONTROL BEST MANAGEMENT PRACTICES (BMPS) OR TO REPAIR ANY DAMAGED BMP's WHEN RAIN IS IMMINENT.
7. AN EFFECTIVE COMBINATION OF EROSION AND SEDIMENT CONTROL BMPS SHALL BE IMPLEMENTED AND MAINTAINED TO PREVENT AND/OR MINIMIZE THE TRANSPORT OF SOIL IN RUNOFF FROM DISTURBED SOIL AREAS ON THE CONSTRUCTION SITE AT ALL TIMES. IN ADDITION, BMPS SHALL BE INSPECTED PRIOR TO PREDICTED STORM EVENTS AND FOLLOWING STORM EVENTS. BMPS SHALL NOT BE MOVED OR MODIFIED WITHOUT THE APPROVAL OF THE CITY INSPECTOR.
8. ALL REMOVABLE PROTECTIVE DEVICES SHOWN SHALL BE IN PLACE AT THE END OF EACH WORKING DAY WHEN THE FIVE-DAY RAIN PROBABILITY FORECAST EXCEEDS 40 PERCENT, AS FORECASTED BY THE NATIONAL WEATHER SERVICE.
9. AFTER A RAIN EVENT EXCEEDING ONE-QUARTER INCH IN ANY 12 HOUR PERIOD, OR UPON DIRECTION OF THE PUBLIC WORKS DIRECTOR, ALL SILT AND DEBRIS SHALL BE REMOVED FROM CHECK DAMS, SILT FENCES, AND DESILTING BASINS; AND THE BASINS SHALL BE PUMPED DRY AND RESTORED TO ORIGINAL DESIGN CONDITION. ANY EROSION CONTROL MEASURES DAMAGED DURING A RAIN EVENT SHALL ALSO BE IMMEDIATELY REPAIRED.
10. DESILTING BASINS ARE TO BE CONSTRUCTED AS GRADING OF INDIVIDUAL GRADING AREAS ARE COMPLETE PER ROUGH GRADING PLANS.
11. THE CONTRACTOR SHALL BE RESPONSIBLE AND SHALL TAKE NECESSARY PRECAUTIONS TO PREVENT PUBLIC TRESPASS ONTO AREAS WHERE IMPOUNDED WATER CREATES A HAZARDOUS CONDITION.
12. AREAS SHALL BE MAINTAINED IN SUCH A STATE THAT FIRE ACCESS SHALL BE MAINTAINED AT ALL TIMES (INCLUDING ACCESS TO NEIGHBORING PROPERTIES).
13. GRADED AREAS AROUND THE SITE PERIMETER MUST DRAIN AWAY FROM THE FACE OF SLOPE AT THE CONCLUSION OF EACH WORKING DAY.
14. TEMPORARY EROSION PROTECTION IS REQUIRED FOR MANUFACTURED SLOPES PRIOR TO PERMANENT PLANTING.
15. ALL DISTURBED SLOPES SHALL BE PLANTED AND PROTECTED WITHIN 45 DAYS OF THE COMPLETION OF EACH STAGE OF GRADING. SUITABLE MEASURES TO PREVENT SLOPE EROSION INCLUDING, BUT NOT LIMITED TO, RAPID GROWTH VEGETATION SUFFICIENT TO STABILIZE THE SOIL, SHALL BE INSTALLED ON ALL DISTURBED AREAS UNTIL SUCH TIME AS THE PERMANENT VEGETATIVE COVER SUFFICIENTLY MATURES TO PROVIDE PERMANENT STABILITY.
16. NO OBSTRUCTION OR DISTURBANCE OF NATURAL DRAINAGE COURSES OR EXISTING STORM DRAIN INLETS SHALL OCCUR DURING GRADING OPERATIONS, UNLESS ADEQUATE TEMPORARY/PERMANENT DRAINAGE FACILITIES HAVE BEEN APPROVED AND INSTALLED TO CARRY SURFACE WATER TO THE NEAREST PRACTICAL STREET, STORM DRAIN OR NATURAL WATER COURSE. ALL EXISTING DRAINAGE COURSES ON THE PROJECT SITE MUST BE MAINTAINED IN A STATE TO ALLOW FOR CONTINUOUS FUNCTION.
17. THE CONTRACTOR SHALL CONDUCT HIS OPERATIONS IN SUCH A MANNER THAT STORM RUNOFF WILL BE CONTAINED WITHIN THE PROJECT OR CHANNELED INTO THE STORM DRAIN SYSTEM WHICH SERVES THE RUNOFF AREA. STORM RUNOFF FROM ONE AREA SHALL NOT BE ALLOWED TO DIVERT TO ANOTHER RUNOFF AREA.
18. CONFORMANCE WITH THE REQUIREMENTS OF THESE PLANS SHALL IN NO WAY RELIEVE THE CONTRACTOR FROM HIS RESPONSIBILITIES TO THIS SITE AND ADJACENT PROPERTIES. DURING GRADING OPERATIONS, TEMPORARY DRAINAGE CONTROL SHALL BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES. TEMPORARY DRAINAGE CONTROL SHALL CONSIST OF, BUT NOT BE LIMITED TO, CONSTRUCTING SUCH FACILITIES AND TAKING SUCH MEASURES AS ARE NECESSARY TO PREVENT, CONTROL AND ABATE WATER, MUD AND EROSION DAMAGE TO PUBLIC AND PRIVATE PROPERTY AS A RESULT OF THE CONSTRUCTION OF THIS PROJECT.
19. FILL AREAS WHILE BEING BROUGHT UP TO GRADE AND DURING PERIODS OF COMPLETION PRIOR TO FINAL GRADE, SHALL BE PROTECTED BY VARIOUS MEASURES TO ELIMINATE EROSION AND THE SILTATION OF DOWNSTREAM FACILITIES AND ADJACENT AREAS. THESE MEASURES MAY INCLUDE, BUT SHALL NOT BE LIMITED TO: TEMPORARY DOWN DRAINS, EITHER IN THE FORM OF PIPES OR PAVED DITCHES TO DESILT RUNOFF; PROTECTION SUCH AS SAND BAGS AROUND INLETS WHICH HAVE NOT BEEN BROUGHT UP TO GRADE; AND EARTH BERMS AND APPROPRIATE GRADING TO DIRECT DRAINAGE AWAY FROM THE EDGE OF THE TOP OF SLOPES SHALL BE CONSTRUCTED AND MAINTAINED ON THOSE FILL AREAS WHERE EARTHWORK OPERATIONS ARE NOT IN PROGRESS.
20. CLEARING AND GRUBBING SHOULD BE LIMITED TO AREAS THAT WILL RECEIVE IMMEDIATE GRADING. EROSION CONTROL MEASURES WILL BE REQUIRED TO PROTECT AREAS WHICH HAVE BEEN CLEARED AND GRUBBED PRIOR TO GRADING OPERATION, AND WHICH ARE SUBJECT TO RUNOFF DURING A RAIN EVENT. THESE MEASURES MAY INCLUDE BUT SHALL NOT BE LIMITED TO: GRADED DITCHES; BRUSH BARRIERS AND SILT FENCES. CARE SHALL BE EXERCISED TO PRESERVE VEGETATION BEYOND LIMITS OF GRADING.
21. CONSTRUCTION SITES SHALL BE MANAGED TO MINIMIZE THE EXPOSURE TIME OF DISTURBED SOIL AREAS THROUGH PHASING AND SCHEDULING OF GRADING TO THE EXTENT FEASIBLE AND THE USE OF TEMPORARY AND PERMANENT SOIL STABILIZATION.
22. STOCKPILES OF SOIL SHALL BE PROPERLY CONTAINED TO ELIMINATE OR REDUCE SEDIMENT TRANSPORT FROM THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJACENT PROPERTIES VIA RUNOFF, VEHICLE TRACKING, OR WIND.
23. CONSTRUCTION SITES SHALL BE MAINTAINED IN SUCH A CONDITION THAT WIND OR RUNOFF DOES NOT CARRY WASTES OR POLLUTANTS OFF THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJORNING PROPERTIES.
24. DISCHARGES OTHER THAN STORM WATER (NON-STORM WATER DISCHARGES) ARE PROHIBITED, EXCEPT AS AUTHORIZED BY AN INDIVIDUAL NPDES PERMIT, THE STATEWIDE GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY, OR OTHER APPLICABLE GENERAL NPDES PERMIT. POTENTIAL POLLUTANTS INCLUDE BUT ARE NOT LIMITED TO: SOLID OR LIQUID CHEMICAL SPILLS; WASTES FROM PAINTS, STAINS, SEALANTS, SOLVENTS, DETERGENTS, GLUES, LIME, PESTICIDES, HERBICIDES, FERTILIZERS, WOOD PRESERVATIVES, AND ASBESTOS FIBERS, PAINT FLAKES OR STUCCO FRAGMENTS; FUELS, OILS, LUBRICANTS, AND HYDRAULIC, RADIATOR OR BATTERY FLUIDS; CONCRETE AND RELATED CUTTING OR CURING RESIDUES; FLOATABLE WASTES; WASTES FROM STREET CLEANING; SUPER-CHLORINATED POTABLE WATER FROM LINE FLUSHING AND TESTING, AND RUNOFF FROM EQUIPMENT AND VEHICLE WASHING. DURING CONSTRUCTION, DISPOSAL OF SUCH MATERIALS SHOULD OCCUR IN A SPECIFIED AND CONTROLLED TEMPORARY AREA ONSITE PHYSICALLY SEPARATED FROM POTENTIAL STORM WATER RUNOFF, WITH ULTIMATE DISPOSAL IN ACCORDANCE WITH LOCAL, STATE AND FEDERAL REQUIREMENTS.
25. AT THE END OF EACH DAY OF CONSTRUCTION ACTIVITY ALL CONSTRUCTION DEBRIS AND WASTE MATERIALS SHALL BE COLLECTED AND PROPERLY DISPOSED IN TRASH OR RECYCLE BINS
26. PAVED STREETS, SIDEWALKS AND OTHER IMPROVEMENTS SHALL BE MAINTAINED IN A NEAT CLEAN CONDITION, FREE OF LOSE SOIL, CONSTRUCTION DEBRIS AND TRASH. STREET SWEEPING OR OTHER EQUALLY EFFECTIVE MEANS SHALL BE USED ON A REGULAR BASIS TO CONTROL SILT THAT HAS BEEN DEPOSITED ON STREETS OR SIDEWALKS. WATERING SHALL NOT USED TO CLEAN STREETS.
27. DISCHARGING CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING GROUNDWATER THAT HAS INFILTRATED INTO THE CONSTRUCTION SITE IS PROHIBITED. DISCHARGING OF CONTAMINATED SOILS VIA SURFACE EROSION IS ALSO PROHIBITED. DISCHARGING NON-CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING ACTIVITIES MAY REQUIRE A NPDES PERMIT FROM THE SANTA ANA REGIONAL BOARD.
28. ALL CONSTRUCTION CONTRACTOR AND SUBCONTRACTOR PERSONNEL ARE TO BE MADE AWARE OF THE REQUIRED BEST MANAGEMENT PRACTICES AND GOOD HOUSEKEEPING MEASURES FOR THE PROJECT SITE AND ANY ASSOCIATED CONSTRUCTION STAGING AREAS.

1.0 INTRODUCTION AND REGULATORY STATUS

On behalf of Clow Valve Company (Clow), a Division of McWane, EarthCon Consultants CA, Inc (EarthCon), has prepared this Operations and Maintenance Plan (O&M Plan) for the property located at 1375 Magnolia Avenue in Corona, California (Site; see Figures 1 and 2). The O&M Plan is required by the Corrective Measures Study (CMS) (EarthCon, 2019).

Clow will implement the field activities as identified in the Corrective Measures Implementation Workplan (CMIWP) for the Site during the Winter/Spring 2021. Proposed CMIWP activities will be conducted under the supervision of the Department of Toxic Substances Control (DTSC) and in accordance with the Corrective Action Consent Agreement between the California Department of Toxic Substances Control (DTSC) and Clow [Docket No. SPRD 00/01SCC-4208, March 2002]. The DTSC-approved corrective measures will be implemented to yield conditions suitable for continued commercial/industrial use. The entire Site is restricted for industrial use in accordance with the Land Use Covenant (LUC), executed by Clow and DTSC on (draft – TBD)

As noted in the CMS, the majority of the Site is covered by concrete or asphalt, with the exception of AOC1 and AOC5. A discussion of the capping activities associated with AOC1 and AOC5 are provided in the CMIWP. Minor localized cracking was identified in some of the remaining AOCs on-Site. Further, requirements for the Site included the implementation of institutional controls including an O&M Plan, as discussed in detail in the following sections.

1.1 O&M Plan Goals and Objectives

The O&M Plan has been designed to establish a set of procedures for LUC required inspection of the Site and inspection and maintenance of the concrete and/or asphalt cover (cap) on-Site. Additionally, this O&M Plan has been prepared in order to ensure compliance with the LUC and applicable State and Federal Hazardous Waste Control laws and regulations. The goal of the O&M Plan is to prevent contact with contaminated soil, reduce water infiltration, erosion, and dispersion of soil contaminated with constituents of concern. In addition, the O&M Plan will be utilized to protect on-Site personnel, contractors, personnel conducting O&M activities, and/or visitors. Therefore, this O&M Plan will address the following objectives:

- Provide a schedule and procedures for routine inspections and unplanned events.
- Provide procedures, construction details, and schedule for timely repair and/or replacement for concrete/asphalt cover (cap) on-Site.
- Maintain O&M related documentation (inspections, repairs, reporting to agencies, etc.) .
- Notify DTSC and US EPA of O&M and redevelopment plans that involve soil disturbance and or soil cover disturbance activities (See Section 5).
- Notify future Site lessees/occupants of the LUC requirements (See Section 3 and Appendix C). Provide annual notifications to DTSC and US EPA of the inspections outcome and return to compliance.

A summary of previous investigations as well as elements of the O&M Plan are described in detail in the following sections.

1.2 Responsibilities

The property owner has ultimate responsibility for following the O&M Plan, HASP, and LUC. The property owner shall oversee implementation of this O&M Plan at the Site. In addition, the property owner shall make available a copy of the O&M Plan to contractors that may be performing O&M activities at the Site and to lessees / occupants.

Any maintenance and redevelopment activities conducted by the property owner will be done in accordance with the requirements of this O&M Plan. In addition, both the DTSC and US EPA will be notified of such activities prior to implementation.

2.0 SUMMARY OF PREVIOUS INVESTIGATIONS

A DTSC Compliance Evaluation Inspection at the Site lead to development of a Corrective Action Consent Agreement (CACA) that was finalized on March 6, 2002 (Docket No. SPRD 00/01SCC-4208). In accordance with the CACA, the following nine (9) areas of concern (AOC) were identified at the Site (see Figure 2 and Figures 3A through 3J):

- AOC1 – Rail Spur Area (including area of diesel impact)
- AOC2 – Chip-Bin Storage Area
- AOC3 – Water Pressure Test Area
- AOC4 – Former Iron Foundry Sand Cleanup Area
- AOC5 – Oil-Stained Pad (eastern portion of AOC1)
- AOC6 – Former Asphalt Dip Tank
- AOC7 – Transformer Area 1
- AOC8 – Transformer Area 2
- AOC9 – Former Test-Pond (filled)

Groundwater investigations at the Site included installation of an initial groundwater monitoring well (MW-1) and sampling results from 2006 showed a low level of TCE (1.43 ug/L, which is below the Maximum Contaminant Level of 5 ug/L). Given the absence of any chlorinated solvent use at the Site, the TCE detection was postulated to be related to an off-Site source.

In February 2017, two additional groundwater monitoring wells (MW-2, MW-3) were installed on-Site as identified by the locations illustrated on Figure 2. Installation of these wells allowed for calculation of the Site-specific groundwater flow direction and gradient, which confirmed that MW-1 was appropriately positioned to evaluate potential groundwater impacts related to the former TPH-d release at AOC1. Subsequent monitoring demonstrated that groundwater chemistry beneath the Site was similar to local background concentrations; therefore, it was determined that groundwater would not be incorporated into the corrective measures for the Site.

The historical data, a Human Health Risk Assessment, and current Site operations were used to

prepare a *Corrective Measures Study* (CMS) for the Site (EarthCon, 2018). The CMS identified that excavation (AOC7) and capping in place (AOC1, AOC5, and AOC7) as the selected remedy. However, due to the presence of PCBs at AOC-7, additional Site assessment activities were conducted in July 2018, October 2018, and January 2019 under the oversight of the USEPA. The USEPA also required that further assessment of potential PCB impacted soil would be evaluated at AOC3 and AOC6 as well. The results were summarized in a document titled *Risk-Based Approval Application 40 CFR 761.61 (c)(1)* (EarthCon, 2019). Based on the results from the PCB related Site assessment activities, EarthCon recommended that rather than excavating PCB-impacted soil at AOC7 that the Site remained capped, with the existing concrete cap having the ability to protect industrial workers from exposure to PCB concentration in the underlying soil. In a letter dated April 23, 2019, the USEPA approved the application with the conditions including preparation of the following: Deed Restriction, Operations and Maintenance Plan, and Soil Management Plan, and PCB Cleanup Report (CMI Report).

Upon receipt of the approval letter from the USEPA, the DTSC approved the CMS in a letter dated May 16, 2019. The *Corrective Measures Implementation Work Plan* presented details associated with the cap design and the installation and implementation schedule for AOC1 and AOC5. The proposed schedule for the evaluation and repair of the exiting ground cover in AOC2, AOC4, and AOC9 was also addressed. Additionally, potential cap repair and/or construction, if necessary, associated with AOC3, AOC6, and AOC7 was identified to require the oversight of the USEPA.

3.0 LAND USE COVENANT

As noted previously, a LUC will be recorded to restrict the future use of the entire Site to commercial/industrial uses appropriate for the human health risk hazard and prohibits Site development for residential and sensitive receptor uses for the entire Site. For all restrictions and requirements in the LUC see Appendix C. In addition, for AOC3, AOC6, and AOC7, specific requirements of 40 CFR 761.61(a)(8) must also be met, including:

- Record deed restriction within 60 days of completion of cleanup activity
- Indicate that land has been used for PCB remediation waste disposal and is restricted to use as a low occupancy area as defined in 40 CFR 761.3
    - *Low occupancy area* means any area where PCB remediation waste has been disposed of on-site and where occupancy for any individual not wearing dermal and respiratory protection for a calendar year is: less than 840 hours (an average of 16.8 hours per week) for non-porous surfaces and less than 335 hours (an average of 6.7 hours per week) for bulk PCB remediation waste. Examples could include an electrical substation or a location in an industrial facility where a worker spends small amounts of time per week (such as an unoccupied area outside a building, an electrical equipment vault, or in the non-office space in a warehouse where occupancy is transitory).
- Identify the existence of the cap and the requirement to maintain the cap
- Denote the applicable cleanup levels used at the site, under the cap
- Submit a certification, signed by the owner, that he/she has recorded the notation specified in 40 CFR 761.61 (a)(8)(i)(A) to the EPA Regional Administrator
- If, in the future, additional cleanup activities are conducted to remove PCBs to achieve cleanup levels specified in 40 CFR 761.61(a)(4), which do not require a cap, the owner may remove the notice on the deed no earlier than 30 days after achieving the applicable cleanup levels.[1]
- A land survey was prepared by a California licensed Professional Land Surveyor is be included to provide a basis for the LUC. This survey depicts the Site, area subject to 40 CFR 761.3 (PCB impacted soil), and the area subject to soil cover O&M (lead impacted soil) (See Figure 4).

1 As noted in the *Site Management Plan* the Site soil with PCB concentrations of 15 ppm or greater will be removed, as required by the USEPA. Soil characterized with PCB concentrations $\geq$ to 50 ppm will be transported off-Site for disposal at a TSCA-approved facility.

4.0 O&M PLAN IMPLEMENTATION

The purpose of the O&M Plan is to ensure clarity of the ongoing requirements for the remedial surface cover (concrete/asphalt cap) for the Site after the CMIWP has been completed. The O&M Plan will be implemented while the LUC remains in effect. Projected costs associated with the O&M Plan are provided in Appendix D.

4.1 Routine Inspections

As noted in the CMIWP, annual inspections of the surface cover will continue in perpetuity until the contaminated material is removed or demonstrated to no longer represent a risk to human health or the environment.

During inspection of the surface cover, any crack visible at the surface should be identified as a "penetrating crack". One or more of following observations will identify which cracks that will require repair:

- Length equal or greater to 12 inches
- Width equal or greater to 0.25 inches
- Evidence of base course or soil exposure
- Evidence of vegetation (e.g. grass, weeds, etc.) growing through crack
- Evidence of surface deterioration
- Evidence of difference in elevation
- Evidence of ponding water

The corrective action for cracks, if warranted, should be identified on the inspection form. Corrective action may include a rubberized asphalt-emulsion crack filler, application of an area-wide slurry seal, or repaving. In addition, repairs will be made in the event that ponding is present/observed.

In addition to the inspection of the surface cover, the following items must be reported to if observed during inspections:

- Cap disturbing activities,
- Activities that bring soil to the surface,
- Unauthorized Site use for residential, or

- Unauthorized Site use for a school or day care for children under 18 years of age.

Annual inspections will be conducted by knowledgeable personnel as designated by the property owner. The knowledgeable personnel will inspect the condition of the surface cover noting observations on a Site-specific inspection form (see Appendix B for an example).

4.2 Inspections for Unplanned Events

Additional inspections should be conducted in the case of unexpected events occur that have the potential to affect the integrity of the surface cover (i.e. earthquake, on-Site fire, etc.). Details of the unplanned event should be noted on the inspection form. In the case of an earthquake, identify the magnitude and proximity to the Site. Generally, an earthquake with a magnitude 5.0 or greater within 100 miles would trigger an unexpected event inspection. Damage noted by Site personnel will be investigated whether it was determined to have been the result of a specific unplanned event or not.

4.3 Reporting

Written reporting of both annual and unplanned event inspections shall be submitted to DTSC for review within three (3) weeks of completing the on-Site inspection. In addition, a “Five Year Review” of the O&M inspections will be prepared and subsequently submitted to the DTSC.

4.4 Recordkeeping

Records will be maintained on-Site while the LUC remains in effect. Records will include, but not be limited to, inspections, Five Year Review, and associated agency correspondence. Cap repair records, soil management, and disposal records.

5.0 SOIL MANAGEMENT PLAN

The purpose of the Soil Management Plan (SMP) is to provide guidance for management of soils in the event excavation or soil disturbance is required. Areas of the Site subject to the SMP are identified in Figure 4. In the event repairs and/or replacement of the concrete/asphalt surface cover (cap) may require soil disturbing activities, such activities will be conducted in accordance with the SMP Plan. The O&M knowledgeable personnel is responsible for identifying such activities and subsequently notifying the property owner and/or designated individuals responsible for implementing the SMP.

CITY OF CORONA
PRECISE GRADING PLAN
1375 MAGNOLIA AVENUE

GRADING GENERAL NOTES

1. A GRADING PERMIT FROM THE PUBLIC WORKS DEPARTMENT IS REQUIRED. ALL GRADING SHALL COMPLY WITH THE REQUIREMENTS OF THE CITY OF CORONA GRADING REGULATIONS– CORONA MUNICIPAL CODE 15.36. THESE PLANS, SPECIAL INSTRUCTIONS ON THE PERMIT, AND THE GEOTECHNICAL INVESTIGATION AND LIQUEFACTION EVALUATION DATED SEPTEMBER 10, 2019 BY GEOTECHNICAL PROFESSIONALS INC., AND ALL SUBSEQUENT ADDENDA.
2. SOURCE OF TOPOGRAPHY IS BASED ON FIELD SURVEY DATED SEPTEMBER 23, 2018.
3. A PRE–GRADING MEETING AT THE SITE IS REQUIRED BETWEEN THE CITY INSPECTOR, THE CIVIL ENGINEER, THE GEOTECHNICAL ENGINEER AND THE GRADING CONTRACTOR. CALL THE PUBLIC WORKS DEPARTMENT INSPECTION DIVISION AT (951) 279–3511 TO SCHEDULE A PRE–GRADING MEETING AT LEAST 48 HOURS PRIOR TO START OF ANY WORK.
4. HOURS OF OPERATION ARE 7:00 A.M. TO 5:00 P.M. – MONDAY THROUGH FRIDAY EXCLUDING HOLIDAYS.
5. SEPARATE PERMITS SHALL BE REQUIRED FOR ANY IMPROVEMENT WORK IN THE PUBLIC RIGHT–OF–WAY.
6. CONSTRUCTION MATERIAL AND EQUIPMENT SHALL NOT OCCUPY ANY PORTION OF THE PUBLIC RIGHT–OF–WAY, SUCH AS STREET, ALLEY OR PUBLIC SIDEWALK AT ANY TIME. TEMPORARY USE OF PUBLIC RIGHT–OF–WAY, WHENEVER REQUESTED, MUST BE REVIEWED AND APPROVED BY THE PUBLIC WORKS DIRECTOR.
7. REPAIR OR REPLACE ALL EXISTING DAMAGED OR ALTERED PUBLIC IMPROVEMENTS AS REQUIRED BY THE PUBLIC WORKS DIRECTOR.
8. ALL SURVEY MONUMENTS SHALL BE PROTECTED AND PERPETUATED IN PLACE. ANY DISTURBED OR COVERED MONUMENTS SHALL BE RESET BY A QUALIFIED CIVIL ENGINEER OR A LICENSED LAND SURVEYOR.
9. PRIOR TO TAKING WATER FROM A CITY FIRE HYDRANT, THE CONTRACTOR SHALL MAKE ARRANGEMENTS WITH THE PUBLIC WORKS DEPARTMENT TO OBTAIN A FIRE HYDRANT WATER METER. METER LOCATION MAY NOT BE ALTERED WITHOUT DEPARTMENT OF WATER AND POWER APPROVAL.
10. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE LOCATION OF ALL UTILITIES OR STRUCTURES ABOVE OR BELOW GROUND, SHOWN OR NOT SHOWN ON THESE PLANS. THE CONTRACTOR WILL BE HELD RESPONSIBLE FOR ALL DAMAGE TO ANY UTILITIES OR STRUCTURES CAUSED BY HIS OPERATION.
11. STRICT ADHERENCE TO DUST CONTROL REQUIREMENTS SHALL BE ENFORCED. ADJACENT STREETS ARE TO BE CLEANED DAILY OF ALL DIRT AND DEBRIS RESULTING FROM THIS OPERATION.
12. SEPARATE PERMITS FROM THE BUILDING DIVISION SHALL BE REQUIRED FOR ALL WALLS.
13. AN APPROVED PRECISE GRADING PLAN WILL BE REQUIRED PRIOR TO A BUILDING PERMIT BEING ISSUED.
14. THE DESIGN CIVIL ENGINEER/GEOTECHNICAL ENGINEER/ENGINEERING GEOLOGIST OF RECORD SHALL EXERCISE SUFFICIENT CONTROL DURING GRADING AND CONSTRUCTION TO ENSURE COMPLIANCE WITH THE PLANS, SPECIFICATIONS, AND CODE REQUIREMENTS WITHIN THEIR PURVIEW. THE ENGINEERS SHALL SUBMIT "ACKNOWLEDGMENT CONCERNING EMPLOYMENT" FORM TO THE CITY PRIOR TO THE ISSUANCE OF A GRADING PERMIT.
15. REVISIONS TO THE PLANS ARE TO BE SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR REVIEW AND APPROVAL PRIOR TO CHANGING ORIGINAL MYLARS.
16. THE CIVIL ENGINEER SHALL SUBMIT WRITTEN CERTIFICATION OF COMPLETION OF ROUGH GRADING IN ACCORDANCE WITH THE APPROVED GRADING PLAN AND CERTIFICATION OF BUILDING PAD ELEVATION PRIOR TO ISSUANCE OF THE BUILDING PERMIT. PAD ELEVATION GRADING TOLERANCE SHALL NOT EXCEED ±0.10'.
17. AN "AS–BUILT" GRADING PLAN SHALL BE SUBMITTED AT THE COMPLETION OF WORK SHOWING ALL WATER QUALITY MANAGEMENT PLAN FACILITIES.
18. GRADING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE GEOTECHNICAL ENGINEER WHO SHALL CERTIFY THAT ALL FILL HAS BEEN PROPERLY PLACED AND SUBMIT A FINAL COMPACTION REPORT FOR ALL FILLS OVER 1' DEEP.
19. THE GEOTECHNICAL ENGINEER SHALL, AFTER CLEARING AND PRIOR TO THE PLACEMENT OF FILL IN CANYONS, INSPECT EACH CANYON FOR AREAS OF ADVERSE STABILITY AND TO DETERMINE THE PRESENCE OR ABSENCE OF SUBSURFACE WATER OR SPRING FLOW. IF NEEDED, DRAINS WILL BE DESIGNED AND CONSTRUCTED PRIOR TO THE PLACEMENT OF FILL IN EACH RESPECTIVE CANYON.
20. FILL AREAS SHALL BE CLEANED OF ALL VEGETATION AND DEBRIS, SCARIFIED TO A MINIMUM DEPTH OF 12 INCHES AND INSPECTED BY THE GEOTECHNICAL ENGINEER PRIOR TO THE PLACING OF FILL.
21. ALL DELETERIOUS MATERIALS, I.E., LUMBER, LOGS, BRUSH, OR ANY OTHER ORGANIC MATERIALS OR RUBBISH SHALL BE REMOVED FROM ALL AREAS TO RECEIVE COMPACTED FILL.
22. UNSUITABLE MATERIALS, SUCH AS TOPSOIL, WEATHERED BEDROCK, ETC., SHALL BE REMOVED AS REQUIRED BY GEOTECHNICAL ENGINEER (AND ENGINEERING GEOLOGIST, WHERE EMPLOYED) FROM ALL AREAS TO RECEIVE COMPACTED FILL OR DRAINAGE STRUCTURES.
23. FILLS SHALL BE BENCHED INTO COMPETENT MATERIAL.
24. WHEN CUT PADS ARE BROUGHT TO NEAR GRADE, THE GEOTECHNICAL ENGINEER SHALL DETERMINE IF THE BEDROCK IS EXTENSIVELY FRACTURED OR FAULTED AND WILL READILY TRANSMIT WATER. IF CONSIDERED NECESSARY BY THE GEOTECHNICAL ENGINEER, A COMPACTED FILL BLANKET WILL BE PLACED.
25. WHERE SUPPORT OR BUTTRESSING OF CUT AND NATURAL SLOPES IS DETERMINED TO BE NECESSARY BY THE GEOTECHNICAL ENGINEER, THE GEOTECHNICAL ENGINEER SHALL SUBMIT DESIGN, LOCATIONS AND CALCULATIONS TO THE PUBLIC WORKS DIRECTOR PRIOR TO CONSTRUCTION. THE GEOTECHNICAL ENGINEER WILL INSPECT AND CONTROL THE CONSTRUCTION OF THE BUTTRESSING AND CERTIFY TO THE STABILITY OF THE SLOPE AND ADJACENT STRUCTURES UPON COMPLETION.
26. ALL CUT SLOPES SHALL BE INVESTIGATED, BOTH DURING AND AFTER GRADING BY THE GEOTECHNICAL ENGINEER, TO DETERMINE IF ANY SLOPE HAS STABILITY PROBLEMS. SHOULD EXCAVATION DISCLOSE ANY GEOLOGICAL HAZARDS, THE GEOTECHNICAL ENGINEER SHALL RECOMMEND NECESSARY TREATMENT TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL. ALL APPROVALS TO BE GRANTED ON THE BASIS OF DETAILED GEOLOGICAL MAPPING AND WRITTEN RECOMMENDATION FROM THE GEOTECHNICAL ENGINEER.
27. MAXIMUM ALLOWABLE CUT AND FILL SLOPES ARE 2 TO 1 OR 30' IN HEIGHT WITHOUT APPROVAL OF THE PUBLIC WORKS DIRECTOR. IF PROPOSED CUT AND FILL SLOPES ARE STEEPER THAN 2:1 OR OVER 30' IN HEIGHT, STABILITY CALCULATIONS WITH A SAFETY FACTOR OF AT LEAST ONE AND FIVE TENTHS (1.5) SHALL BE SUBMITTED BY A GEOTECHNICAL ENGINEER FOR APPROVAL FROM THE PUBLIC WORKS DIRECTOR.
28. PROVIDE 4' WIDE BY 1' HIGH BERM OR EQUIVALENT ALONG THE TOP OF ALL FILL SLOPES OVER 5' HIGH, EXCEPT WHERE SHOWN OTHERWISE ON THE PLANS.
29. ALL SLOPES ADJACENT TO PUBLIC RIGHT–OF–WAY SHALL CONFORM TO SECTION 15.36.220 OF THE CORONA MUNICIPAL CODE.
30. ALL SLOPES 4' OR HIGHER SHALL BE PLANTED AND COMPLY WITH REQUIREMENTS OF CHAPTER 17 OF THE CORONA MUNICIPAL CODE.
31. TERRACE DRAINS, INTERCEPTOR DRAINS AND DOWN DRAINS SHALL BE CONSTRUCTED OF 4" P.C.C. (OR GUNITE) REINFORCED WITH 6"x6" –2 1.4x1.4 W.W.M. REBAR SHALL BE GRADE 60 BILLET STEEL CONFORMING TO ASTM A615.
32. ALL CONCRETE STRUCTURES THAT COME IN CONTACT WITH THE ON–SITE SOILS SHALL BE CONSTRUCTED WITH TYPE II OR V CEMENT AS DEEMED NECESSARY BY SOLUBLE SULFATE CONTENT TEST CONDUCTED BY THE GEOTECHNICAL ENGINEER. ALL CONCRETE SHALL BE CITY STANDARD 560–C–3250 (600–E 3250 FOR GUNITE) PER CITY STANDARD SPECIFICATIONS.
33. GROUND SHALL BE PRE–WETTED PRIOR TO THE PLACEMENT OF CONCRETE. MOISTURE LOSS RETARDANT SHALL BE USED WHEN REQUIRED BY THE GEOTECHNICAL ENGINEER OR PUBLIC WORKS DIRECTOR.
34. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND/OR OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL.

POST CONSTRUCTION BMP GENERAL NOTES:

1. THIS PLAN UTILIZES STRUCTURAL BEST MANAGEMENT PRACTICES (BMPS) FOR POST CONSTRUCTION STORM WATER TREATMENT.
2. CONSTRUCT THE STORM WATER TREATMENT FACILITIES AFTER ALL CONTRIBUTING DRAINAGE AREAS ARE STABILIZED AND TO THE SATISFACTION OF THE ENGINEER OF RECORD.
3. DO NOT USE THE DEVICES AS TEMPORARY SEDIMENT CONTROL FACILITIES DURING CONSTRUCTION.
4. THE FOLLOWING BMPS HAVE BEEN DESIGNED INTO THE PLANS. PLEASE REFER TO THE PROJECT'S APPROVED WATER QUALITY MANAGEMENT PLAN (WQMP) FOR ADDITIONAL BMP's AND OPERATION AND MAINTENANCE DETAILS:

   A. BIORETENTION FACILITY AND OR ON–SITE RETENTION

NOTE:

1. A SEWER BACKFLOW PREVENTOR IS NOT REQUIRED FOR THIS PROJECT
2. WATER PRESSURE REDUCING VALVES ARE REQUIRED FOR THIS PROJECT

NOTICE TO CONTRACTORS

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES, CONDUITS, OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF AVAILABLE RECORDS. TO THE BEST OF OUR KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT THOSE SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN ON THESE DRAWINGS. THE CONTRACTOR FURTHER ASSUMES ALL LIABILITY AND RESPONSIBILITY FOR THE UTILITY PIPES, CONDUITS OR STRUCTURES, SHOWN OR NOT SHOWN ON THESE PLANS

CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOBSITE CONDITIONS DURING THE COURSE OF CONSTRUCTION ON THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS OR PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE CITY, THE OWNER, AND THE ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT.

THE CONTRACTOR SHALL CALL IN A LOCATION REQUEST TO UNDERGROUND SERVICE ALERT (USA) PH. 811, TWO (2) WORKING DAYS PRIOR TO DIGGING. NO CONSTRUCTION PERMIT ISSUED BY THE PUBLIC WORKS DEPARTMENT SHALL BE VALID INVOLVING UNDERGROUND FACILITIES UNLESS THE APPLICANT HAS AN INQUIRY IDENTIFICATION NUMBER ISSUED BY U.S.A.

CARE SHOULD BE TAKEN TO PREVENT GRADED DITCHES AND SWALES FROM UNDERMINING STREET IMPROVEMENTS. UPON INSPECTION OF THE SITES, THE PUBLIC WORKS DIRECTOR MAY REQUIRE TEMPORARY GUNITE SWALES, ENTERING OR LEAVING IMPROVEMENTS.

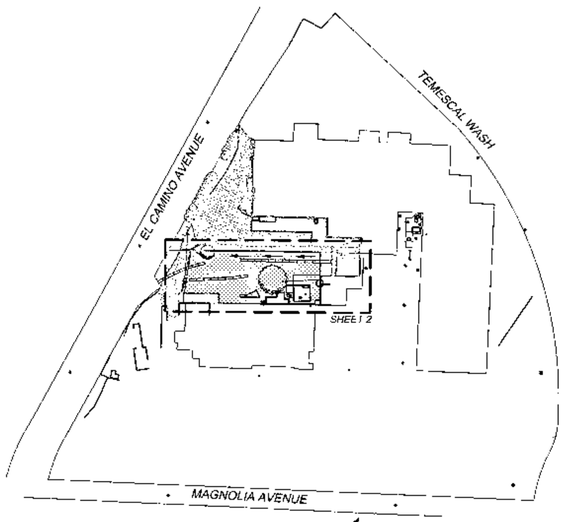
DECLARATION OF ENGINEER OF RECORD

I HEREBY DECLARE THAT THE DESIGN OF THE IMPROVEMENTS SHOWN ON THESE PLANS COMPLIES WITH ALL PROFESSIONAL ENGINEERING STANDARDS AND PRACTICES. AS THE ENGINEER OF RECORD FOR THE PLANS, I ASSUME FULL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. WITH RESPECT TO THE PLAN CHECK PERFORMED BY THE CITY OF CORONA, I UNDERSTAND AND ACKNOWLEDGE THE FOLLOWING: (1) THE PLAN CHECK IS A REVIEW FOR THE LIMITED PURPOSE OF ENSURING THE PLANS COMPLY WITH THE CITY'S STANDARDS, PROCEDURES, POLICIES, AND ORDINANCES, (2) THE PLAN CHECK IS NOT A DETERMINATION OF THE TECHNICAL ADEQUACY OF THE DESIGN OF THE IMPROVEMENTS, AND (3) THE PLAN CHECK DOES NOT RELIEVE ME OF MY LEGAL AND PROFESSIONAL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. AS THE ENGINEER OF RECORD, I AGREE TO DEFEND, INDEMNIFY, AND HOLD HARMLESS THE CITY, ITS ELECTED OFFICIALS, EMPLOYEES, AND AGENTS FROM ANY AND ALL ACTUAL OR ALLEGED CLAIMS, DEMANDS, CAUSES OF ACTION, LIABILITY, LOSS, DAMAGE, OR INJURY TO PROPERTY OR PERSONS, INCLUDING WRONGFUL DEATH, WHETHER IMPOSED BY A COURT OF LAW OR BY ADMINISTRATIVE ACTION OF ANY FEDERAL, STATE, OR LOCAL GOVERNMENTAL AGENCY, ARISING OUT OF OR INCIDENT TO ANY NEGLIGENT ACTS, OMISSIONS, OR ERRORS BY THE ENGINEER OF RECORD, ITS EMPLOYEES, CONSULTANTS, OR AGENTS.

WILLIAM D. BROOKS, RCE 53114 — EXPIRES 6/30/21 — 3/8/2021 DATE

ENGINEER OF RECORD

GEOTECHNICAL ENGINEER'S STATEMENT



THIS PLAN HAS BEEN REVIEWED BY GEOTECHNICAL PROFESSIONALS INC. AND APPEARS TO BE IN GENERAL CONFORMANCE WITH RECOMMENDATIONS IN OUR REPORT DATED SEPTEMBER 10, 2019–PROJECT NO. 2945.1. THIS PLAN HAS BEEN REVIEWED FOR GEOTECHNICAL ASPECTS ONLY. WE MAKE NO REPRESENTATION REGARDING ACCURACY OF DIMENSIONS, QUANTITIES, MEASUREMENTS, CALCULATIONS, OR ANY PORTION OF THE DESIGN. GEOTECHNICAL CONDITIONS AND RECOMMENDATIONS SHOULD BE CONFIRMED BY THE GEOTECHNICAL CONSULTANT IN THE FIELD AT TIME OF CONSTRUCTION.

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF CORONA, IN THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THAT PORTION OF THE NORTHWEST QUARTER OF SECTION 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, AS SHOWN BY SECTIONALIZED SURVEY OF THE RANCHO EL SOBRANTE DE SAN JACINTO AND OF LOT 13 IN BLOCK 63 OF THE LANDS OF THE RIVERSIDE LAND AND IRRIGATING COMPANY, AS SHOWN BY MAP ON FILE IN BOOK 1 PAGE 70 OF MAPS, SAN BERNARDINO COUNTY RECORDS, BOUNDED AS FOLLOWS: ON THE SOUTHEAST BY THE SOUTHWESTERLY EXTENSION OF THE NORTHWEST LINE OF MAGNOLIA AVENUE, AS SHOWN ON RECORD OF SURVEY ENTITLED "RECORD OF SURVEY OF A PORTION OF LOTS 11, 12, 13, 14, 15, IN BLOCK 63 OF RIVERSIDE LAND AND IRRIGATING COMPANY AND A PORTION OF SECTIONS 29 AND 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, SAN BERNARDINO BASE AND MERIDIAN" ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS, ON THE WEST BY THE EASTERLY LINE OF THE PROPERTY SPUR OF THE ATCHINSON, TOPEKA, AND SANTA FE RAILWAY COMPANY; AND ON THE NORTHEAST BY THE SOUTHERLY AND SOUTHWESTERLY LINE OF PARCELS 5 TO 11, INCLUSIVE, OF SAID RECORD OF SURVEY ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS.

EXCEPTING THEREFROM THAT PORTION GRANTED TO THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER DISTRICT CONSERVATION DISTRICT BY DEED RECORDED OCTOBER 22, 1984 AS INSTRUMENT NO. 84–227387 AND RE–RECORDED FEBRUARY 11, 1985 AS INSTRUMENT NO. 85–028214 BOTH OF OFFICIAL RECORDS.

EARTHWORK QUANTITIES

NOTE: THE CONSTRUCTION QUANTITIES SHOWN ON THESE PLANS ARE FOR CITY FEE PURPOSES ONLY.
IT IS THE CONTRACTOR'S RESPONSIBILITY TO PERFORM INDIVIDUAL TAKEOFFS FOR BIDDING PURPOSES.

(PRELIMINARY QUANTITIES DO NOT INCLUDE SHRINKAGE FACTOR AND OVEREXCAVATION OVER THE SITE)

RAW CUT	582 CU. YDS.
RAW FILL	0 CU. YDS.
NET EXPORT	–582 CU. YDS.

CITY OF CORONA 1375 MAGNOLIA AVENUE
PRECISE GRADING & DRAINAGE PLANS-CLOW VALVE
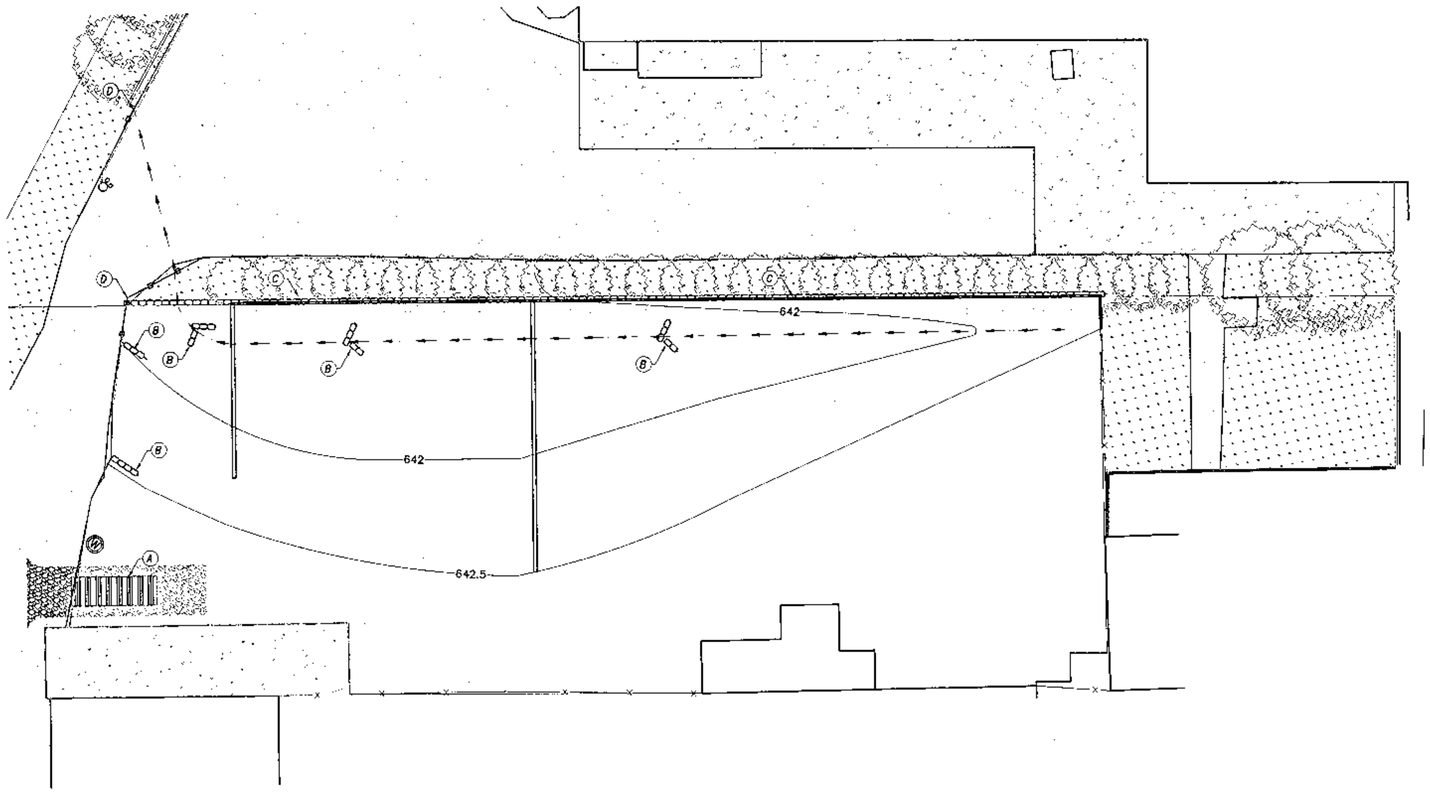
GRADING PLANS



Drawing No. 20-026P
Sh 3 of 4

24" x 36"

EROSION CONTROL GENERAL NOTES:

1. EROSION CONTROL IS REQUIRED FOR GRADING OPERATIONS ON A YEAR ROUND BASIS. APPROVED PLANS ARE REQUIRED FOR ALL WORK REQUIRING A GRADING PERMIT.
2. IN CASE OF EMERGENCY CALL TIFFANY SMITH OF CLOW VALVE MANUFACTURING AT 317-364-0898.
3. THE ENGINEER OF RECORD WILL SUPERVISE EROSION CONTROL WORK AND INSURE THAT WORK IS IN ACCORDANCE WITH APPROVED PLANS.
4. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL
5. THE PUBLIC WORKS DIRECTOR RESERVES THE RIGHT TO MAKE CHANGES OR MODIFICATIONS TO THIS PLAN AS DEEMED NECESSARY.
6. STANDBY CREW FOR EMERGENCY WORK SHALL BE MADE AVAILABLE AT ALL TIMES. NECESSARY MATERIALS SHALL BE AVAILABLE ON SITE AND STOCKPILED AT CONVENIENT LOCATIONS TO FACILITATE RAPID CONSTRUCTION OF TEMPORARY EROSION AND SEDIMENT CONTROL BEST MANAGEMENT PRACTICES (BMPS) OR TO REPAIR ANY DAMAGED BMP's WHEN RAIN IS IMMINENT.
7. AN EFFECTIVE COMBINATION OF EROSION AND SEDIMENT CONTROL BMPS SHALL BE IMPLEMENTED AND MAINTAINED TO PREVENT AND/OR MINIMIZE THE TRANSPORT OF SOIL IN RUNOFF FROM DISTURBED SOIL AREAS ON THE CONSTRUCTION SITE AT ALL TIMES. IN ADDITION, BMPS SHALL BE INSPECTED PRIOR TO PREDICTED STORM EVENTS AND FOLLOWING STORM EVENTS. BMPS SHALL NOT BE MOVED OR MODIFIED WITHOUT THE APPROVAL OF THE CITY INSPECTOR.
8. ALL REMOVABLE PROTECTIVE DEVICES SHOWN SHALL BE IN PLACE AT THE END OF EACH WORKING DAY WHEN THE FIVE-DAY RAIN PROBABILITY FORECAST EXCEEDS 40 PERCENT, AS FORECASTED BY THE NATIONAL WEATHER SERVICE.
9. AFTER A RAIN EVENT EXCEEDING ONE-QUARTER INCH IN ANY 12 HOUR PERIOD, OR UPON DIRECTION OF THE PUBLIC WORKS DIRECTOR, ALL SILT AND DEBRIS SHALL BE REMOVED FROM CHECK DAMS, SILT FENCES, AND DESILTING BASINS; AND THE BASINS SHALL BE PUMPED DRY AND RESTORED TO ORIGINAL DESIGN CONDITION. ANY EROSION CONTROL MEASURES DAMAGED DURING A RAIN EVENT SHALL ALSO BE IMMEDIATELY REPAIRED.
10. DESILTING BASINS ARE TO BE CONSTRUCTED AS GRADING OF INDIVIDUAL GRADING AREAS ARE COMPLETE PER ROUGH GRADING PLANS.
11. THE CONTRACTOR SHALL BE RESPONSIBLE AND SHALL TAKE NECESSARY PRECAUTIONS TO PREVENT PUBLIC TRESPASS ONTO AREAS WHERE IMPOUNDED WATER CREATES A HAZARDOUS CONDITION.
12. AREAS SHALL BE MAINTAINED IN SUCH A STATE THAT FIRE ACCESS SHALL BE MAINTAINED AT ALL TIMES (INCLUDING ACCESS TO NEIGHBORING PROPERTIES).
13. GRADED AREAS AROUND THE SITE PERIMETER MUST DRAIN AWAY FROM THE FACE OF SLOPE AT THE CONCLUSION OF EACH WORKING DAY.
14. TEMPORARY EROSION PROTECTION IS REQUIRED FOR MANUFACTURED SLOPES PRIOR TO PERMANENT PLANTING.
15. ALL DISTURBED SLOPES SHALL BE PLANTED AND PROTECTED WITHIN 45 DAYS OF THE COMPLETION OF EACH STAGE OF GRADING. SUITABLE MEASURES TO PREVENT SLOPE EROSION INCLUDING, BUT NOT LIMITED TO, RAPID GROWTH VEGETATION SUFFICIENT TO STABILIZE THE SOIL, SHALL BE INSTALLED ON ALL DISTURBED AREAS UNTIL SUCH TIME AS THE PERMANENT VEGETATIVE COVER SUFFICIENTLY MATURES TO PROVIDE PERMANENT STABILITY.
16. NO OBSTRUCTION OR DISTURBANCE OF NATURAL DRAINAGE COURSES OR EXISTING STORM DRAIN INLETS SHALL OCCUR DURING GRADING OPERATIONS, UNLESS ADEQUATE TEMPORARY/PERMANENT DRAINAGE FACILITIES HAVE BEEN APPROVED AND INSTALLED TO CARRY SURFACE WATER TO THE NEAREST PRACTICAL STREET, STORM DRAIN OR NATURAL WATER COURSE. ALL EXISTING DRAINAGE COURSES ON THE PROJECT SITE MUST BE MAINTAINED IN A STATE TO ALLOW FOR CONTINUOUS FUNCTION.
17. THE CONTRACTOR SHALL CONDUCT HIS OPERATIONS IN SUCH A MANNER THAT STORM RUNOFF WILL BE CONTAINED WITHIN THE PROJECT OR CHANNELED INTO THE STORM DRAIN SYSTEM WHICH SERVES THE RUNOFF AREA. STORM RUNOFF FROM ONE AREA SHALL NOT BE ALLOWED TO DIVERT TO ANOTHER RUNOFF AREA.
18. CONFORMANCE WITH THE REQUIREMENTS OF THESE PLANS SHALL IN NO WAY RELIEVE THE CONTRACTOR FROM HIS RESPONSIBILITIES TO THIS SITE AND ADJACENT PROPERTIES. DURING GRADING OPERATIONS, TEMPORARY DRAINAGE CONTROL SHALL BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES. TEMPORARY DRAINAGE CONTROL SHALL CONSIST OF, BUT NOT BE LIMITED TO, CONSTRUCTING SUCH FACILITIES AND TAKING SUCH MEASURES AS ARE NECESSARY TO PREVENT, CONTROL AND ABATE WATER, MUD AND EROSION DAMAGE TO PUBLIC AND PRIVATE PROPERTY AS A RESULT OF THE CONSTRUCTION OF THIS PROJECT.
19. FILL AREAS WHILE BEING BROUGHT UP TO GRADE AND DURING PERIODS OF COMPLETION PRIOR TO FINAL GRADE, SHALL BE PROTECTED BY VARIOUS MEASURES TO ELIMINATE EROSION AND THE SILTATION OF DOWNSTREAM FACILITIES AND ADJACENT AREAS. THESE MEASURES MAY INCLUDE, BUT SHALL NOT BE LIMITED TO: TEMPORARY DOWN DRAINS, EITHER IN THE FORM OF PIPES OR PAVED DITCHES TO DESILT RUNOFF; PROTECTION SUCH AS SAND BAGS AROUND INLETS WHICH HAVE NOT BEEN BROUGHT UP TO GRADE; AND EARTH BERMS AND APPROPRIATE GRADING TO DIRECT DRAINAGE AWAY FROM THE EDGE OF THE TOP OF SLOPES SHALL BE CONSTRUCTED AND MAINTAINED ON THOSE FILL AREAS WHERE EARTHWORK OPERATIONS ARE NOT IN PROGRESS.
20. CLEARING AND GRUBBING SHOULD BE LIMITED TO AREAS THAT WILL RECEIVE IMMEDIATE GRADING. EROSION CONTROL MEASURES WILL BE REQUIRED TO PROTECT AREAS WHICH HAVE BEEN CLEARED AND GRUBBED PRIOR TO GRADING OPERATION, AND WHICH ARE SUBJECT TO RUNOFF DURING A RAIN EVENT. THESE MEASURES MAY INCLUDE BUT SHALL NOT BE LIMITED TO: GRADED DITCHES; BRUSH BARRIERS AND SILT FENCES. CARE SHALL BE EXERCISED TO PRESERVE VEGETATION BEYOND LIMITS OF GRADING.
21. CONSTRUCTION SITES SHALL BE MANAGED TO MINIMIZE THE EXPOSURE TIME OF DISTURBED SOIL AREAS THROUGH PHASING AND SCHEDULING OF GRADING TO THE EXTENT FEASIBLE AND THE USE OF TEMPORARY AND PERMANENT SOIL STABILIZATION.
22. STOCKPILES OF SOIL SHALL BE PROPERLY CONTAINED TO ELIMINATE OR REDUCE SEDIMENT TRANSPORT FROM THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJACENT PROPERTIES VIA RUNOFF, VEHICLE TRACKING, OR WIND.
23. CONSTRUCTION SITES SHALL BE MAINTAINED IN SUCH A CONDITION THAT WIND OR RUNOFF DOES NOT CARRY WASTES OR POLLUTANTS OFF THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJORNING PROPERTIES.
24. DISCHARGES OTHER THAN STORM WATER (NON-STORM WATER DISCHARGES) ARE PROHIBITED, EXCEPT AS AUTHORIZED BY AN INDIVIDUAL NPDES PERMIT, THE STATEWIDE GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY, OR OTHER APPLICABLE GENERAL NPDES PERMIT. POTENTIAL POLLUTANTS INCLUDE BUT ARE NOT LIMITED TO: SOLID OR LIQUID CHEMICAL SPILLS; WASTES FROM PAINTS, STAINS, SEALANTS, SOLVENTS, DETERGENTS, GLUES, LIME, PESTICIDES, HERBICIDES, FERTILIZERS, WOOD PRESERVATIVES, AND ASBESTOS FIBERS, PAINT FLAKES OR STUCCO FRAGMENTS; FUELS, OILS, LUBRICANTS, AND HYDRAULIC, RADIATOR OR BATTERY FLUIDS; CONCRETE AND RELATED CUTTING OR CURING RESIDUES; FLOATABLE WASTES; WASTES FROM STREET CLEANING; SUPER-CHLORINATED POTABLE WATER FROM LINE FLUSHING AND TESTING, AND RUNOFF FROM EQUIPMENT AND VEHICLE WASHING. DURING CONSTRUCTION, DISPOSAL OF SUCH MATERIALS SHOULD OCCUR IN A SPECIFIED AND CONTROLLED TEMPORARY AREA ONSITE PHYSICALLY SEPARATED FROM POTENTIAL STORM WATER RUNOFF, WITH ULTIMATE DISPOSAL IN ACCORDANCE WITH LOCAL, STATE AND FEDERAL REQUIREMENTS.
25. AT THE END OF EACH DAY OF CONSTRUCTION ACTIVITY ALL CONSTRUCTION DEBRIS AND WASTE MATERIALS SHALL BE COLLECTED AND PROPERLY DISPOSED IN TRASH OR RECYCLE BINS
26. PAVED STREETS, SIDEWALKS AND OTHER IMPROVEMENTS SHALL BE MAINTAINED IN A NEAT CLEAN CONDITION, FREE OF LOSE SOIL, CONSTRUCTION DEBRIS AND TRASH. STREET SWEEPING OR OTHER EQUALLY EFFECTIVE MEANS SHALL BE USED ON A REGULAR BASIS TO CONTROL SILT THAT HAS BEEN DEPOSITED ON STREETS OR SIDEWALKS. WATERING SHALL NOT USED TO CLEAN STREETS.
27. DISCHARGING CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING GROUNDWATER THAT HAS INFILTRATED INTO THE CONSTRUCTION SITE IS PROHIBITED. DISCHARGING OF CONTAMINATED SOILS VIA SURFACE EROSION IS ALSO PROHIBITED. DISCHARGING NON-CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING ACTIVITIES MAY REQUIRE A NPDES PERMIT FROM THE SANTA ANA REGIONAL BOARD.
28. ALL CONSTRUCTION CONTRACTOR AND SUBCONTRACTOR PERSONNEL ARE TO BE MADE AWARE OF THE REQUIRED BEST MANAGEMENT PRACTICES AND GOOD HOUSEKEEPING MEASURES FOR THE PROJECT SITE AND ANY ASSOCIATED CONSTRUCTION STAGING AREAS.

Update field scope to include capping; updated dust action level;	10/2/17
Update of EarthCon H&S personnel	10/2/17

Health and Safety Plan Consent Agreement

Because of the potentially hazardous nature of this site and activity occurring at the site, it is not possible to discover, evaluate, and provide protection for all possible hazards that may be encountered. Strict adherence to the health and safety guidelines set forth in this document will reduce, but may not eliminate, the potential for injury and illness at this site. Guidelines in this Plan were prepared specifically for this site and should not be used on any other site without prior evaluation by trained health and safety personnel.

Site workers must also review this HASP. The Site Safety Officer (SSO) must conduct a pre-work briefing prior to initiating this project. All sections of this HASP must be reviewed during this briefing and documented via **Appendix A**. Any worker not attending the initial meeting must be trained by the SSO on the information covered in the pre-work briefing meeting. ***The SSO must hold tailgate meetings at the beginning of each work shift to discuss important safety and health issues concerning tasks to be performed on that day.*** After reading the HASP and attending a pre-work briefing, workers must sign the following acknowledgment statement.

I have read, understand, and will abide by the information set forth in this HASP. I have also attended a pre-work briefing. I agree to perform my work in accordance with this HASP **(See Appendix F).**

1.0 HASP SUMMARY INFORMATION

The first phase of this project is anticipated to include the collection of soil samples, using a direct push drill rig, at a total depth of 10 feet below ground surface (ft bgs) and installation of two groundwater monitoring wells. The second phase is to implement the CMS activities which includes removing impacted soil, collection of soil confirmation samples, and capping the identified exposed surfaces. This HASP will be updated or amended, as necessary, to reflect any changes that may be encountered. Personnel responsibilities are described in **Table 1** and personnel training requirements are provided in **Table 2.**

2.0 INTRODUCTION

This HASP serves the following purposes:

- Identifies and describes the potentially hazardous substances and working conditions that may be encountered during the field work;
- Specifies personal protective and monitoring equipment to be used during onsite activities; and
- Outlines measures to be implemented in the event of an emergency.

2.1 Site Location and Description

The Site is southwest corner of the intersection at 1375 Magnolia Avenue in Corona, California. **Figure 1** shows the site location. **Figure 2** provides a site layout for the facility. It is identified as Riverside County Assessor Parcel Number 107-030-022-3 and covers approximately 16 acres. Approximately 60% of the property is currently used for machining, product finishing and testing, and product storage. The remaining 40% includes asphalt-paved parking areas and unpaved areas. Unused foundry buildings, small offices and open areas are leased to other tenants.

2.2 Project Objectives

EarthCon will collect soil samples to assess the extent of soil contamination on-Site. The soil samples will be managed according to the workplan protocol.

EarthCon will provide oversight of advancement for well installation using a subcontracted drilling company. EarthCon will collect and manage water samples according to the workplan protocol.

EarthCon will provide oversight of the grading and asphalt cap placement associated with AOC-1 and AOC-5.

The ultimate objective is to conduct all activities in a safe and compliant manner.

2.3 Personnel Requirements and Responsibilities

Provisions of this HASP apply to all EarthCon personnel and subcontractors that will be participating in the above noted field activities. On-site personnel will be required to review the HASP prior to commencement of field activities and conduct all field activities in accordance with plan specifications. Other personnel on the site are expected to follow the provisions of the health and safety procedures outlined in this HASP as a minimum base standard but will retain full responsibility for the health and safety of their own employees or sub-subcontractors.

General safe work practices that must be implemented during work activities at this site are included in **Table 3**.

EarthCon considers each subcontractor to be an expert in all aspects of the work operations which they are tasked to provide, and each subcontractor is responsible for compliance with those regulatory and/or legal requirements which pertain to those services. While the EarthCon HASP will be the minimum H&S requirements for the work completed by EarthCon and its subcontractors, each subcontractor, in coordination with EarthCon's H&S personnel, is expected to perform its operations in accordance with its own H&S plans, policies and procedures unique to the subcontractor's work to ensure that hazards associated with the performance of the subcontractor's work activities are properly controlled. Copies of any required safety documentation for a subcontractor's work activities will be provided to EarthCon for review prior to the start of on-site activities. No review of any subcontractor plan or document by EarthCon will serve as an approval or ratification of such plan by or on behalf of EarthCon, and no such review will operate as any assumption of any duty or responsibility on the part of EarthCon (or any EarthCon employee or representative) for or as to any aspect of any subcontractor's own H&S responsibilities. Any comments or feedback from EarthCon to any subcontractor following any review by EarthCon of any subcontractor document or practice is provided solely for informational purposes and not for reliance.

In the event that the subcontractor's procedures/requirements conflict with requirements specified in this HASP, the more stringent guidance will be adopted after discussion and agreement between the subcontractor and EarthCon project H&S personnel. Hazards not listed in this HASP, but known to the subcontractor or known to be associated with the subcontractor's services, must be identified by the subcontractor and addressed to the EarthCon Project Manager prior to beginning work operations.

EarthCon personnel who have responsibility for the safe operations of this project include the Project Manager (PM), EarthCon Corporate Safety and Health Manager (CSHM), the Site Safety Officer (SSO) and the Project Field Staff. Responsibilities of each of the above referenced personnel as they relate to project safety and health are provided in **Table 1**.

2.4 Site Control

Site control procedures must be implemented **before** the start of site tasks to control worker exposures to hazardous substances. A Vicinity Map that shows the site location is included as **Figure 1**. A Site Layout Plan with proposed sampling locations is included as **Figure 2**. Changes may be made to the site map by the SSO, as needed, based on site conditions. The site map should be posted in the work area and/or field notebook.This site control program is designed to reduce the spread of hazardous substances from contaminated areas to clean areas, to identify and isolate contaminated areas of the site, to facilitate emergency evacuation and medical care, to prevent unauthorized entry to the site, and to deter vandalism and theft. The Site Safety Officer is responsible for evaluating site conditions and for verifying that the

site control program functions effectively. The site control program will be updated regularly to reflect current site conditions, work operations, and procedures.

2.4.1 Site Access

Access to the site shall be controlled using the following method(s):

☐	Security fence	☒	Temporary barricades and/or warning tape
☐	Sign in/Sign out log	☐	Guard
☐	Identification badges	☐	Other: Onsite Manager

2.4.2 Work Zones

Restricted work zones may be established to limit the spread of hazardous substances (when applicable) by workers from potentially affected areas to non-affected areas. The exact location and extent of the work zones will be modified as necessary as site investigation information becomes available. Delineation of work zones is as follows:

- Exclusion Zone: The Exclusion Zone is the area where the potential for exposure to hazards and contact with hazardous materials could occur. The zone may be marked by caution tape. Personnel working within the Exclusion Zone will be expected to follow protective measures as prescribed by the SSO.

- Contamination Reduction Zone: The Contamination Reduction Zone is a transition area between the potentially affected areas/materials and assumed non-affected areas/materials. Decontamination of personnel and equipment, if necessary, shall be conducted in this area to reduce the probability of contamination transfer to a non-affected area. The Contamination Reduction Zone shall be situated upwind of the Exclusion Zone.

- Support Zone: The Support Zone is the area, outside the Exclusion and Contamination Reduction Zone, where administrative and other project support functions are performed. The Support Zone shall be situated upwind of the Contamination Reduction Zone and/or the Exclusion Zone.

See Figure 2A for the location of the work zones.

2.4.3 Communications

Typical on-site communications may be conducted through the use of:

☒	Verbal		
☐	Two-way radio	☐	Horn
☒	Cellular telephone	☐	Siren
☒	Hand signals	☐	Other:_____

Off-site communications may be conducted through the use of:

☒ Cellular telephone: Verify cell phone reception in all work areas prior to starting work.
☐ Site Phone: Location & No. _____
☐ Pay phone: Location & No. _____
☐ Other: _____

Cell Phone reception should be verified throughout the site prior to commencing work.

2.4.4 Visitors

Visitors to the Site shall be continually escorted in order to assure their safety. Visitors will not be allowed past the Support Zone (if such a zone is established at this Site) unless they read, understand, sign, and abide by the requirements outlined in this HASP.

2.5 Worker Training

Table 2 will be used to document on-site workers who have received the appropriate training according to the company Environmental, Health, and Safety (EH&S) Training Program**. Table 2** must be completed prior to initiation of field activities. Pre-work briefing and routine tailgate meetings will be conducted to facilitate on-site training. Subcontractors must provide information requested in **Appendix G** prior to starting to work.

2.6 Safety Meetings

Project personnel who will be involved with on-site field activities must be appropriately trained in accordance with 29 CFR Part 1910.120 "Hazardous Waste Operations and Emergency Response". Before field work begins, the SSO will review the HASP with the field workers addressing the potential hazards associated with the proposed field activities. Components of the safety meeting will include, but will not be limited to, a review of the following:

- Location of sanitation facilities as seen on site plan.
- Potential chemical, operational and physical hazards present at the site.
- Personal protective equipment (PPE)/personal protection procedures.
- Hazardous materials handling procedures.
- Buddy system.
- Personal hygiene - general guidelines.
- Personal and equipment decontamination procedures.
- Emergency response procedures.
- Symptom awareness.
- Stop Work Authority

Periodic meetings with project personnel may be conducted by the SSO pending changes to the scope of work or modification to this HASP. To document the meetings, the SSO will complete

the Site Safety Meeting Minutes Form provided in **Appendix A**. Verification will be provided to the CHSM upon request.

2.7 Medical Monitoring Requirements

OSHA requires medical monitoring for personnel potentially exposed to chemical hazards at concentrations in excess of the PEL for more than 30 days per year and for personnel who must use respiratory protection for more than 30 days per year.

Will personnel working at this site be enrolled in a medical monitoring program? ☐**Yes** ☒**No**

Personnel who are diagnosed as having medical conditions which could directly or indirectly be aggravated by either exposure to chemical substances suspected of being present at the Site, or by the use of Personal Protective Equipment (PPE), will not be allowed to participate in field activities. In addition, personnel with injuries or illnesses involving open wounds may not be allowed on-site. Field personnel who develop an illness or injury during the project may be examined by a physician. A physician must determine if the employee is fit to return to work before they can return to field activities. In addition, the CHSM, SSO, or Site employees may request additional medical testing if a chemical exposure is suspected.

2.8 Hazard Communication Requirements

When chemicals are used on-site, EarthCon workers must adhere to the company's Hazard Communication Program (29 CFR §1910.1200). The following procedures must be followed for chemicals brought on-site (i.e., decontamination solution, sampling preservatives, etc.):

- Labels on incoming primary chemical containers must not be defaced (until after the container is empty, decontaminated and ready for disposal).
- Chemical containers must be stored in appropriate storage cabinets.
- Secondary containers and storage cabinets must be correctly and clearly labeled using the Hazardous Materials Identification System (HMIS).
- Incompatible chemicals must not be stored together.
- Workers must receive training on the hazards indicated in **Table 4.**
- Containers must be secured closed unless adding to or removing something from the container.
- Safety Data Sheets for the chemicals should be recent and are included in **Appendix B**.; they should be made available to workers upon request and applicable hazards covered during safety meetings.
- Workers must receive training on the hazards of the chemicals indicted in **Appendix C.**
- Include a safety training sign off sheet to document this training and provide a copy to the CHSM.
- Training on this information should be documented in **Appendix F**.

3.0 GENERAL PERFORMANCE REQUIREMENTS

General safe work practices that must be implemented during work activities at this site are included in **Table 3**.

3.1 Performance Requirements

- Workers are expected to show up alert and ready to work. No sleeping is allowed on the job.
- Any unsafe equipment, condition or work practice and injuries, no matter how slight, must be reported to the SSO immediately.
- Procedures for the proper set up and control of the worksite task area should be planned and implemented prior to starting individual tasks.
- Field personnel must have ready access to a telephone and a vehicle in case of emergency.
- Field personnel working in the Exclusion Zone are to work with another person at all times. The subcontractor's representative can serve as the second person while the work is being conducted in the field.

3.2 Hygiene Requirements

- Long hair will be secured away from the face so it does not interfere with any activities.
- Eating, drinking, chewing gum or tobacco, smoking, or any practice that increases the probability of hand-to-mouth transfer and ingestion of material is prohibited in any area designated as being potentially affected by site related chemicals.
- Hands and face must be thoroughly washed upon leaving the work area, and before eating, drinking, or other non-project activities.
- Personnel leaving potentially contaminated areas will shower (including washing hair) and change to clean clothing as soon as possible after leaving the site.
- Kneeling, sitting, leaning, or general contact with potentially affected surfaces or with surfaces suspected of being potentially affected by hazardous materials (i.e., puddles, mud, leachate, etc.) should be avoided.
- Medicine and alcohol can potentiate the effects of exposure to toxic chemicals. Neither should be taken by personnel if the likelihood of risk exists. Ingestion of alcohol during and immediately prior to field activities is prohibited.
- Sanitation facilities are provided on site. Potable water and restroom facilities are available and in accordance with 8 CCR 5192 for all employees and visitors.

4.0 HAZARD EVALUATION

A preliminary hazard evaluation was performed to identify existing site conditions and is documented in **Table 4**. The preliminary hazard evaluation addressed the following, where applicable:

- Identification of the suspected hazardous materials/wastes on-site;
- Toxicological aspects of the suspected hazardous materials on-site;
- Suspected chemical/elemental concentrations within the various media on-site;
- Inherent site hazards;
- Operational hazards; and
- Climate extremes.

Environmental site personnel have indicated fire, inhalation and skin absorption to pose a hazard on site. Reactivity including ionizing radiation is not of concern for the site due to past investigations and the operational history. All scrap steel and raw steel entering the site has been screened by radiation detection devices. Further information is documented in **Table 4**.

4.1 Suspected Chemical/Elemental Hazards

To select those contaminants that may cause health and safety concerns, henceforth referred to as potential Contaminants of Concern (COCs), a review of the site remediation and sampling history was performed. Based on this review, potential COCs were selected and are listed in **Table 5**. Chemical information for each of the potential COCs are provided in the NIOSH Pocket Guide pages located in **Appendix C**.

Information from the NIOSH Pocket Guide (e.g., flash point, water reactive, etc.) has been used in performing the chemical hazard analysis in **Table 5** (e.g., fire, inhalation, reactivity, and skin absorption hazards). If, based on the hazard analysis, chemical hazards exist, hazard mitigators must be implemented (**Appendix D**). In addition, air monitoring and personal protective equipment must also be used to evaluate airborne concentrations and protect workers.

After review of the relevant background information and data, if there is a potential for dermal and/or respiratory exposure to the materials or contaminants of concern, personnel shall perform the monitoring requirements summarized in **Section 5.2** and execute actions as appropriate. If action levels are exceeded, work shall be suspended until on-site conditions can be re-assessed and this HASP modified.

4.2 Operational/Physical Hazards/Biological Hazards

Potential operational/physical associated with tasks to be performed and the site have been analyzed in **Table 4**. If, based on the hazard analysis, these hazards exist; the hazard mitigators described in **Appendix D** must be implemented.

- **Utility (e.g., Electrical) hazards:** Utility hazards include buried cables, which pose a danger of shock or electrocution if workers or equipment contact or sever them during site operations. Onsite personnel are advised to pay special attention to the presence of utility hazards. Observe as built plans (if available) for the presence of underground hazards and advance the borings cautiously. A subsurface survey shall be conducted at each of the suspect locations, if necessary.

Lockout/Tag out procedures, in accordance with the EarthCon Lockout/Tag out Program, will be followed when working in the vicinity of electrical equipment. Electrical equipment will be considered energized unless tested and determined otherwise. Energized parts will be insulated or guarded from personal contact. Extension cords used with electrical tools will be the 3-wire type and connected to a ground fault circuit interrupter (GFCI). Wooden or fiberglass ladders will be used. Metal ladders will not be used in the work area.

- **Mechanical hazards:** Mechanical hazards include being struck by heavy equipment and being injured by excavation cave-ins. Onsite personnel are advised to stand at least 15 feet clear of heavy equipment and excavations, and wear appropriate protective equipment, including steel-toe boots and hard hats during the field activities. Fall, slip, and/or trip hazards exist when working with equipment and tools. Field personnel will observe walking surfaces in the work area to prevent tripping on equipment/tools placed on the ground. Good housekeeping will also be practiced. All walking surfaces with a drop of more than six feet will have fall protection devices. Fall protection devices may include adequate delineation of the excavation and trenches, guardrails, or climbing devices such as a harness and lanyard.

- **Noise Hazards:** Noise hazards may exist when working around heavy equipment. Loud noises interfere with communication and also lead to temporary and/or permanent hearing loss. Noise hazards may exist wherever heavy equipment such as loaders and any operating machinery, produce noise levels at or above the Action Level of 85 dBA for 8-hr Time Weighted Average (TWA). Noise in excess of 85 dBA may produce the following effects:

  1. Distraction, annoyance, or sudden surprise
  2. Inability to effectively communicate with co-workers
  3. Physical damage expressed initially as a Temporary Threshold Shift (TTS) and then, as a Permanent Threshold Shift (PTS), or immediately as a Permanent Threshold Shift if the impact noise is sufficient enough (usually greater than 100 dBA)

  Appropriate hearing protection must be utilized in areas of unacceptable noise levels.

If, based on the hazard analysis (**Table 4**), biological hazards exist associated with tasks to be performed and site location (e.g., allergic reactions to poisonous plants or insects indigenous to the area, etc.); hazard mitigators (**Appendix D**) must be implemented.

5.0 PERSONAL PROTECTION

5.1 Personal Protective Equipment (PPE)

The levels of personal protection required for each task are provided **in Appendix E.** This PPE is based on the hazards identified in **Section 4.** Required equipment and types of protective clothing materials are listed, as well as an indication of the initial level of protection.

Is there potential for a respirator to be donned during fieldwork? ☐Yes ☒No

It is not anticipated that the use of respirators will be needed, however during the drilling work and sampling the area will be monitored via dust particulate monitor (MiniRam or equivalent). If there is an indication that a respirator is required work will be halted until tasks have been re-evaluated and the HASP has been updated as needed.

The general use of PPE is acceptable when engineering controls cannot adequately eliminate the hazard. The use of PPE is intended to provide protection for on-site personnel from chemical, physical, and operational hazards that cannot be controlled through other safety procedures. Initially, Level D Protection will be employed by on-site personnel and will include varying levels of eye, head, body, hand, foot, and hearing protection.

Respiratory protection will not be required. However, if respirators are worn, workers must adhere to the company's Respiratory Protection Program (29 CFR §1910.134). **Table 2** should be used to provide a record of the site workers' last fit test. Beards (i.e., facial hair interfering with the respirator seal) are not allowed.

Acceptable PPE are further described below.

- Eye Protection: Eye protection will include the use of chemical splash goggles and/or face shields and impact resistant safety glasses with side shield protection that meet the current ANSI standard Z87.1.

- Head Protection: Non-metallic hard hats meeting the current ANSI standard Z89.1 will be worn by on-site personnel as required during field activities.

- Body Protection: Body protection will include the use of long sleeved shirt and pants work clothes.

- Hand Protection: Hand protection will include the use of nitrile gloves when hand contact with affected materials (e.g., groundwater and soil) may occur. Otherwise use work gloves of leather or other appropriate material.

- Foot Protection: Foot protection will include the use of impact resistant boots meeting the current ANSI standard Z41.1.

These levels shall only be downgraded upon approval by either the CSHM or SSO. Project personnel are not permitted to deviate from the specified levels of protection without prior approval of the SSO.

5.2 Personal Air Monitoring

Corrective measure activities may have the potential to generate dust; therefore, dust monitoring will be conducted on-Site. Airborne particulate concentrations will be measured with a portable particulate monitor (MiniRam or equivalent) to ensure compliance with the action levels (stop work level) and Cal OSHA Permissible Exposure Limits (PELs). The PELs for COCs potentially present on-Site, along with stop work levels are provided in Table 5.

According to calculations using the site specific maximum concentrations documented in **Table 5** and the OSHA Permissible Exposure Limit (PEL) for total dust, the only constituent of concern is lead. Total dust must measure below 6.8 mg per cubic meter (mg/m^3) to remain below the PEL for lead. However, at the direction of the DTSC the action level for total dust is 0.05 mg/m^3. A MiniRam will be on site at all times monitoring dust concentrations. The MiniRam is gravimetrically calibrated in mg/m^3using the standard SAE Fine (ISO fine) test dust. A zeroing kit will be present to accomplish zeroing in particle free air when on-site. In the case where dust levels measure over 0.05 mg/m3, work will be suspended and on-site conditions will be re-assessed.

5.3 Vehicle Safety

Vehicle safety requires the following:

- Vehicles are to be operated in a safe manner and in compliance with statutory traffic regulations and ordinances.
- Operators are to practice defensive driving and drive in a courteous manner.
- Operators are required to have a valid driver's license and liability insurance (per local/state laws).
- Seat belts are to be worn by the driver and passengers.
- No persons are allowed to ride in the back of any trucks or vans.
- Vehicles are to be driven in conformance with local speed limits.
- Personnel who are impaired by fatigue, illness, alcohol, illegal or prescription drugs, or who are otherwise physically unfit, are not allowed to drive.
- Personnel are to avoid using cellular phones or engaging in other distractions while driving.
- Vehicles should be maintained in a safe and clean condition.
- Field vehicles should be equipped with the following items; first-aid kit, fire extinguisher, spares tire and jack.
- Motor vehicle accidents shall be reported to the responsible law enforcement agency (when appropriate), the EarthCon CHSM, the EarthCon HR Director, the SSO and the EarthCon PM.
- Daily and monthly check lists to verify safe operations have been generated and should be utilized prior to operating a vehicle.
- If the site has specific driving rules, these should be reviewed and adhered to.

5.4 Illumination

Work will be completed during daylight hours only. This will ensure all work is done in accordance with 8 CCR 5192(m) illumination requirements.

6.0 DECONTAMINATION

The following decontamination (cleansing) procedures for the sampling equipment and PPE have been developed with the intent of reducing the potential for the transfer of hazardous chemicals.

6.1 Sampling Equipment

To reduce the potential for the distribution of contaminants or cross contamination of samples, the following procedures will be used. Decontamination of the sampling equipment will include washing the equipment in a detergent solution (Liqui-nox and water), rinse with potable water, rinse with organic-free/distilled water, and allow to air dry. Disposable equipment will be used when practical to eliminate the need for on-site decontamination.

6.2 Personnel and PPE

During this project the goal will be to use disposal PPE (nitrile gloves), therefore no PPE decontamination will be required. If this cannot be accomplished, PPE must be decontaminated (cleaned) per 29 CFR §1910.120(k). In an emergency, the primary concern is *to prevent the loss of life or severe injury to site personnel. If immediate medical treatment is* required to save a life, decontamination should be delayed until the victim is stabilized. If decontamination can be performed without interfering with essential life saving measures or first-aid, or if a worker has been contaminated with an extremely toxic or corrosive material that could cause severe injury or loss of life, decontamination must be performed in coordination with or prior to initial medical treatment at the scene.

Decontamination of PPE (e.g., gloves) shall be accomplished by passing personnel through appropriate stages of contamination reduction and removing contaminated clothing and equipment in decreasing order of the degree of potential contamination. Personnel who have entered areas suspected of containing hazardous materials (i.e., the Exclusion Zone) will be subjected to decontamination. The personnel decontamination corridor may be comprised of the following procedural stages. These stages/procedures are listed sequentially below.

Stage No. 1: Segregated Equipment Drop – Personnel will brush off loose dirt and wash off remaining soil, sediment, and dirt from clothes and shoes upon completion of sampling and field work. Equipment and consumables that require either disposal or special handling (e.g., special and/or equipment decontamination) shall remain in this area and be decontaminated, if appropriate, or disposed of with the excavated materials or other potentially contaminated materials.

Stage No. 2: PPE Decontamination - PPE that has been potentially contaminated will be washed with a TSP and water mixture followed by a water rinse.

Stage No. 3: General Field Wash - Personnel shall wash and rinse face and hands with soap and water before leaving the site and/or eating. If a change of clothing is necessary, it shall be done at this time.

6.3 Decontamination Fluids and Investigation-Derived Waste Disposal

Decontamination water and drill cuttings will be placed in appropriate containers. Disposal methods will be determined after characterizations have been completed. Solid waste generated during decontamination and field activities (i.e., paper towels, plastic tarps, used PPE) will be removed from the Site and disposed as refuse/trash.

6.4 Vehicles

Typically, vehicles will not be allowed inside the exclusion zone. If vehicles are required in the exclusion zone (e.g., drill rigs) the following procedures will be used. Personnel will wash or remove boots and change to dry clothing prior to vehicle entry. Non-disposable equipment will be washed or bagged before placement into field vehicles. Drill rigs will be decontaminated with detergent solution and rinsed with water before leaving the exclusion zone.

7.0 EMERGENCY PROCEDURES

A list of Emergency Response contacts and telephone numbers for applicable local off-site emergency responders is provided in **Table 6**. The following emergency response equipment is required for this project:

☒ Fire Extinguisher(s): ☐ Type A ☐ Type B ☐ Type C ☒ Type ABC
☒ Air Monitoring: ☐ PID ☐ Air Sampling Pumps ☐ CG/O2 meter
☒ MiniRam ☐ H2S Meter ☐ Radiation Meter
☐ Draeger Pump w/ Sample Tubes ☐ Other:
☒ Eyewash (Note: portable eyewash bottle)
☐ SCBA
☒ First Aid Kit
☐ Shower (Note: for acids and caustics)
☐ Personal Flotation Device(s)
☐ Windsock
☐ Stop Watch &Thermoscan for Measuring Heart Rate and Heat Stress
☐ Global Positioning System
☐ Other:

As a minimum, the project shall have the following equipment available during field activities:

- A first aid kit (mandatory, including adhesive Band-Aids, gauze, tape, gloves, CPR shield, triangle bandage) shall be available in the Support Zone at all times.

  Check additional items required for the site.

  ☐ Emergency Blanket ☒ Sunscreen (as needed)

  ☒ Insect Repellent (as needed) ☐ Other: ointment for poison plants and insect bites_____

- Copious amounts of cool potable water shall be readily available for both drinking purposes and for personal hygiene purposes (e.g., washing, rinsing, and cooling of face and body, etc.).
- Emergency references (e.g., nearest phone, emergency phone numbers and services, etc.) shall accompany the first aid kit.
- Communication equipment such as a cellular phone will be accessible in case of an emergency.
- A vehicle shall be easily accessible for transport/emergency.

The emergency response communication system for the site is:

- ☒ Verbal
- ☐ Two-way radio
- ☒ Hand signals: Hand gripping throat ="Out of Air, Can't Breathe"
  Grip partner's wrist or both hands around waist ="Leave area immediately"
  Hands on top of head ="Need assistance"
  Thumps up ="OK; I am all right; I understand"
  Thumps down ="No; negative"
- ☐ Horn
- ☐ Siren
- ☒ Other: Cellular Phone

If an on-site emergency develops, the procedures outlined in **Table 7** shall be followed immediately.

7.1 Natural Disasters

In the event of emergency conditions associated with natural disasters, such as severe weather, site personnel will remain calm, turn off equipment and ignition sources, and move away from buildings, cranes, and overhead utilities. Following an emergency, personnel will proceed to a designated meeting place. The SSO will take a head count to ensure that all personnel are present. Crews must remain together until accounted for. The SSO will assess any injuries and the need for emergency assistance.

7.2 Workplace Violence

If any employee or visitor is confronted by a potentially hostile person, he/she will remain calm and refrain from further aggravating the individual. Site personnel should contact the SSO. Protocol established by the site will be followed or local police will be contacted for assistance when needed.

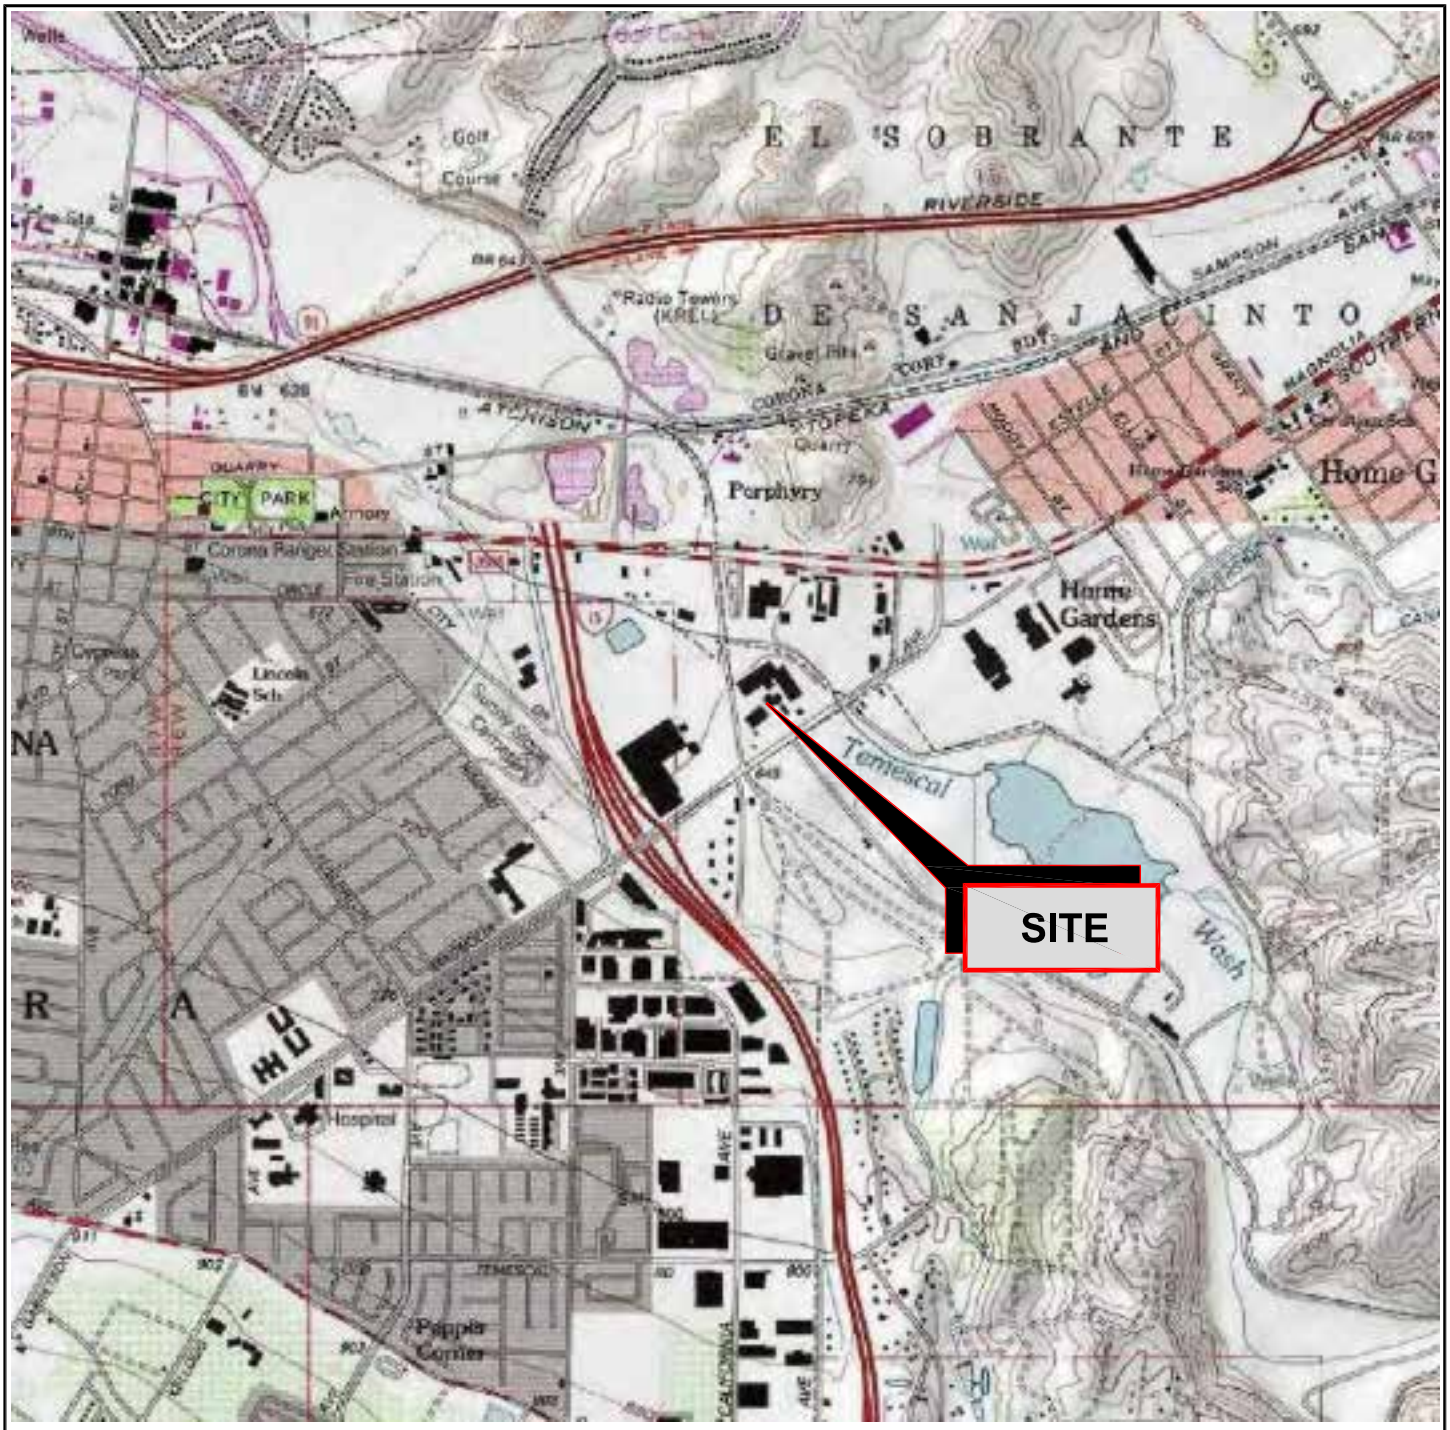
8.0 SHIPMENT OF RESTRICTED ARTICLES

Federal laws and international guidelines place restrictions on what materials may be shipped by passenger and cargo aircraft. In the course of field activities, the following items may be shipped to and from the site in the following manner.

Item	Hazardous Constituent	Quantity	Packaging	How Shipped
Soil samples	*NA	5	8 oz. glass jar with Teflon lid. Laboratory provided	EarthCon Personnel

Item	Hazardous Constituent	Quantity	Packaging	How Shipped
Groundwater Samples	HCL & HNO3 – lab preservatives	3	VOAs and HDPE laboratory provided containers	EarthCon Personnel

*soil samples do not have preservatives



9.0 SPILL CONTAINMENT

An evaluation was conducted to determine the potential for hazardous substance spills at this site. That evaluation indicates that there is no potential for a hazardous substance spill of a sufficient quantity to require containment planning, equipment, and procedures. For that reason, no spill containment program is implemented at this site. Employee training on how to respond and take protective measures during incidental releases of hazardous substances are provided consistent with the Hazard Communication Standard, 29 CFR 1910.12

Incidental spills are different from emergency releases. Incidental spills can safely be absorbed, neutralized, or otherwise controlled by EarthCon employees or contractors with the appropriate training.

Key Personnel and Health & Safety Responsibilities

Project Manager (PM) Jeff Bennett	**Regional H&S Coordinator** Hugh Walker	**Site Safety Officer (SSO)** Lindsey Langer/Jenn McGervey	**Project Field Staff** Lindsey Langer/Jenn McGervey
• Coordinate, approve, implement and manage this HASP and amendments, if any. • Incorporate H&S planning, implementation, and supplies (PPE, decontamination materials) into project plans and budget. • Select and assign responsibility to the SSO to implement HASP. • Monitor the Field Logbooks for health and safety work practices employed. • Coordinate with SSO so that emergency response procedures are implemented, if needed. • Inform CSHM of HASP violations, if any, and verify corrective actions are implemented. • Ensure personnel receive this plan, are aware of its provisions, are aware of the potential hazards associated with site operations, are instructed in safe work practices, are familiar with emergency response procedures and document this information • Coordinate with Client and SSO. • In the event of an incident or other emergency complete & submit appropriate forms and make proper notifications.	• Review and approve HASP; approve any associated amendments. • Evaluate documentation presented of site hazards for HASP preparation. Maintain a final copy of the completed HASP. • Perform periodic audits of documentation of project activities to evaluate general compliance with policies, procedures, directives and guidelines presented in this HASP. • Assist with the implementation of the Corporate Health and Safety Program. • Provide environmental, health and industrial hygiene consultation as needed. • In the event of an emergency, if required set up an incident investigation team and notify applicable outside agencies.	• Be present on-site, as appropriate, with the authority to implement HASP and EarthCon H&S protocols. • Confirm that site personnel meet the training and medical requirements. • Verify that monitoring equipment and personal protective equipment is operating correctly according to manufacturer's instructions and such equipment is utilized by on site personnel. Calibrate or verify calibration of monitoring equipment and record results. • Verify that decontamination procedures are being implemented and Site Control Plan is in place. • Provide and document pre-work briefing and daily tailgate safety meetings, monitor activities for safe work practices and HASP compliance. • Perform routine H&S inspections. Document meetings and inspections. Provide copies to CHSM as requested. • Report to the Project Manager deviations from the anticipated conditions, and authorize the cessation of work if necessary. • Notify the PM and CSHM in the event an emergency occurs, and implement site emergency response and follow-up procedures, provide First Aid, as needed. • Work with PM to verify appropriate notifications and forms are completed for any incident or near miss. • Secure the scene after an emergency until given notification to release the scene by the CHSM.	• Provide verification of required health and safety training and medical surveillance prior to arriving at the site. • Notify the SSO of any special medical conditions (e.g., allergies). • Review, be familiar with and abide by the HASP. • Attend pre-work briefings and daily tailgate safety meetings. • Comply with requests of PM, SSO, and HASP. • Perform work using safe techniques; be responsible for their personal safety. • Immediately report any accidents and/or unsafe conditions to the SSO.

4 Could include task-specific training, project-specific training, or project-specific medical surveillance.

Table 3

General Safe Work Practices

- Report to work alert and ready to perform assigned duties; no sleeping is allowed at the jobsite.
- Immediately report any unsafe acts, incidents, accidents, or near misses. Utilize Stop Work Authority if needed.
- Minimize contact with excavated or contaminated materials. Do not place equipment on the ground. Do not sit or kneel on potentially contaminated surfaces.
- Smoking, eating, or drinking after entering the work zone and before decontamination is prohibited. Use of illegal drugs and alcohol are prohibited. Workers taking prescribed medication that may cause drowsiness should not be operating heavy equipment, and should be prohibited from performing tasks where Level C, B, or A personal protective equipment is required.
- Practice good housekeeping. Keep everything orderly and out of potentially harmful situations.
- Use of contact lenses on-site shall only be allowed when dictated by working conditions.
- The following conditions must be observed when operating a motor vehicle.
  - Wearing of seat belts is mandatory
  - During periods of rain, fog, or other adverse weather conditions, the use of headlights is mandatory
  - A backup warning system or use of vehicle horn is mandatory when the vehicle is engaged in a backward motion
  - Posted traffic signs and directions from flagmen must be observed
  - Equipment and/or samples transported in vehicles must be secured from movement
  - The use of contractor acquired vehicles by non-contractor personnel is prohibited
  - Daily inspection sheets should be completed by driver and kept with equipment for the duration of the project.
- In an unknown situation, always assume the worst conditions.
- Be observant of your immediate surroundings and the surroundings of others. It is a team effort to notice and warn of impending dangerous situations. Withdrawal from a hazardous situation to reassess procedures is the preferred course of action.
- Conflicting situations may arise concerning safety requirements and working conditions and must be addressed and resolved rapidly by the SSO and PM to relieve any motivations or pressures to circumvent established safety policies.
- Unauthorized breaches of specified safety protocol must not be allowed. Workers unwilling or unable to comply with the established procedures must be removed from the site immediately.

Table 7

Emergency Response Procedures

- This plan must be discussed with verbal training for onsite EarthCon employees and subcontractors
- This training should be documented and a copy provided to the CHSM.
- The SSO (or alternate) should be immediately notified via the on-site communication system.
- If applicable, the SSO must notify off-site emergency responders (i.e., fire department, hospital, police department, etc.) and must inform the response team as to the nature and location of the emergency on site.
- If applicable, the SSO evacuates the site. Site workers should move to their respective refuge stations using the evacuation routes provided on the Site Map. SSO must account for all workers associated with the project.
- The SSO notifies the PM, Principal, and the CHSM of the emergency. If an EarthCon employee is injured, the SSO must contact the worker's Regional Manager/Branch Office Manager immediately. If the Regional Manager/Branch Office Manager cannot be contacted, then the Corporate Human Resources Department must be notified.
- For small fires, flames should be extinguished using the fire extinguisher. Large fires should be handled by the local fire department.
- In an unknown situation or if responding to toxic gas emergencies, appropriate PPE, including SCBAs, should be donned.
- If chemicals are accidentally spilled or splashed into eyes or on skin, use eyewash and/or shower.
- Before continuing site operations after an emergency involving toxic gas, the appropriate responder will don a SCBA and utilize appropriate air monitoring equipment to verify that the site is safe.
- An injured worker must be decontaminated appropriately.
- If a worker is injured, first aid will be administered by workers certified in first aid.
- If necessary, the SSO will secure the scene after the response. The scene should not be released until notification from the CHSM.
- After the response, the SSO and /or PM must complete and submit the appropriate incident reports.
- The PM or SSO should secure written /signed witness statements as appropriate, take pictures, etc. immediately and before the end of the shift.
- If an investigation is required, the CHSM and Safety Team will set up a team to start the investigation with input from the DL.
- The CHSM will notify outside agencies as appropriate.

Appendix A

Site Safety Meeting Minutes

Site Name: _____ Contract No. _____

Meeting Location _____

Meeting Date _____ Time _____ Conducted By _____

_____ Pre-Fieldwork Orientation _____ Weekly Site Meeting _____ Other

Subjects Discussed:

Safety Officer Comments:

Name and Signature of Participating Personnel (list company name if subcontractor)

Note: Attach additional pages if necessary. Send this form to the EarthCon Project Manager. Copies will be placed in the appropriate project files.

Appendix B

Safety Data Sheets

Chlorodiphenyl (42% chlorine)

Synonyms & Trade Names

Aroclor® 1242, PCB [Chlorodiphenyl (42% chlorine)], Polychlorinated biphenyl [Chlorodiphenyl (42% chlorine)]

CAS No.

53469-21-9

RTECS No.

TQ1356000

DOT ID & Guide

2315 171

Formula

$C_6H_4ClC_6H_3Cl_2$ (approx)

Conversion

IDLH

Ca [5 mg/m^3]
See: 53469219

Exposure Limits

NIOSH REL

Ca TWA 0.001 mg/m^3 See Appendix A (nengapdxa.html) [*Note: The REL also applies to other PCBs.]

OSHA PEL

TWA 1 mg/m^3 [skin]

Measurement Methods

NIOSH 5503 ;

OSHA PV2089

See: NMAM or OSHA Methods

Physical Description

Colorless to light-colored, viscous liquid with a mild, hydrocarbon odor.

Molecular Weight

258 (approx)

Boiling Point

617-691°F

Freezing Point

-2°F

Solubility

Insoluble

Vapor Pressure

Vapor Pressure
0.001 mmHg

Ionization Potential
?

Specific Gravity
(77°F): 1.39

Flash Point

Upper Exposive Limit
NA

Lower Explosive Limit
NA

Nonflammable Liquid, but exposure in a fire results in the formation of a black soot containing PCBs, polychlorinated dibenzofurans & chlorinated dibenzo-p-dioxins.

Incompatibilities & Reactivities
Strong oxidizers

Exposure Routes
inhalation, skin absorption, ingestion, skin and/or eye contact

Symptoms
irritation eyes; chloracne; liver damage; reproductive effects; [potential occupational carcinogen]

Target Organs
Skin, eyes, liver, reproductive system

Cancer Site
[in animals: tumors of the pituitary gland & liver, leukemia]

Personal Protection/Sanitation
(See protection codes (protect.html))
Skin: Prevent skin contact
Eyes: Prevent eye contact
Wash skin: When contaminated
Remove: When wet or contaminated
Change: Daily
Provide: Eyewash, Quick drench

First Aid
(See procedures (firstaid.html))
Eye: Irrigate immediately
Skin: Soap wash immediately
Breathing: Respiratory support
Swallow: Medical attention immediately

Respirator Recommendations

NIOSH

At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:
(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode
(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister having an N100, R100, or P100 filter.

Click here (pgintrod.html#nrp) for information on selection of N, R, or P filters.

Any appropriate escape-type, self-contained breathing apparatus

Important additional information about respirator selection (pgintrod.html#mustread)

Material Safety Data Sheet
Arsenic MSDS

Section 1: Chemical Product and Company Identification

Product Name: Arsenic

Catalog Codes: SLA1006

CAS#: 7440-38-2

RTECS: CG0525000

TSCA: TSCA 8(b) inventory: Arsenic

CI#: Not applicable.

Synonym:

Chemical Name: Arsenic

Chemical Formula: As

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call:
1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Arsenic	7440-38-2	100

Toxicological Data on Ingredients: Arsenic: ORAL (LD50): Acute: 763 mg/kg [Rat]. 145 mg/kg [Mouse].

Section 3: Hazards Identification

Potential Acute Health Effects:
Very hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant), of eye contact (irritant).

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A1 (Confirmed for human.) by ACGIH. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, lungs, the nervous system, mucous membranes. Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:
Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Flammable in presence of open flames and sparks, of heat, of oxidizing materials.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards:
Material in powder form, capable of creating a dust explosion. When heated to decomposition it emits highly toxic fumes.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Use appropriate tools to put the spilled solid in a convenient waste disposal container.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable

protective clothing. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents, acids, moisture.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.01 from ACGIH (TLV) [United States] [1995] Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Lustrous solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 74.92 g/mole

Color: Silvery.

pH (1% soln/water): Not applicable.

Boiling Point: Not available.

Melting Point: Sublimation temperature: 615°C (1139°F)

Critical Temperature: Not available.

Specific Gravity: 5.72 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water, hot water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Reactive with oxidizing agents, acids, moisture.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity: Not available.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals: Acute oral toxicity (LD50): 145 mg/kg [Mouse].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A1 (Confirmed for human.) by ACGIH. Causes damage to the following organs: kidneys, lungs, the nervous system, mucous membranes.

Other Toxic Effects on Humans:
Very hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans: Not available.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:

Section 14: Transport Information

DOT Classification: CLASS 6.1: Poisonous material.

Identification: : Arsenic UNNA: UN1558 PG: II

Special Provisions for Transport: Not available.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Arsenic California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Arsenic Pennsylvania RTK: Arsenic Massachusetts RTK: Arsenic TSCA 8(b) inventory: Arsenic

Other Regulations: OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

Other Classifications:

WHMIS (Canada):
CLASS D-1A: Material causing immediate and serious toxic effects (VERY TOXIC). CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R22- Harmful if swallowed. R45- May cause cancer.

HMIS (U.S.A.):

Health Hazard: 3

Fire Hazard: 1

Reactivity: 2

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 3

Flammability: 1

Reactivity: 2

Material Safety Data Sheet
Cadmium MSDS

Section 1: Chemical Product and Company Identification

Product Name: Cadmium

Catalog Codes: SLC3484, SLC5272, SLC2482

CAS#: 7440-43-9

RTECS: EU9800000

TSCA: TSCA 8(b) inventory: Cadmium

CI#: Not applicable.

Synonym:

Chemical Name: Cadmium

Chemical Formula: Cd

Contact Information:

Sciencelab.com, Inc.
14025 Smith Rd.
Houston, Texas 77396

US Sales: **1-800-901-7247**
International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

CHEMTREC (24HR Emergency Telephone), call:
1-800-424-9300

International CHEMTREC, call: 1-703-527-3887

For non-emergency assistance, call: 1-281-441-4400

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Cadmium	7440-43-9	100

Toxicological Data on Ingredients: Cadmium: ORAL (LD50): Acute: 2330 mg/kg [Rat.]. 890 mg/kg [Mouse]. DUST (LC50): Acute: 50 ppm 4 hour(s) [Rat].

Section 3: Hazards Identification

Potential Acute Health Effects:
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer), of eye contact (irritant). Severe over-exposure can result in death.

Potential Chronic Health Effects:
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to kidneys, lungs, liver. Repeated or prolonged exposure to the substance can produce target organs damage. Repeated exposure to an highly toxic material may produce general deterioration of health by an accumulation in one or many human organs.

Section 4: First Aid Measures

Eye Contact: No known effect on eye contact, rinse with water for a few minutes.

Skin Contact:
After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

Serious Skin Contact: Not available.

Inhalation: Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

Serious Inhalation:
Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. WARNING: It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled material is toxic, infectious or corrosive. Seek immediate medical attention.

Ingestion:
Do not induce vomiting. Examine the lips and mouth to ascertain whether the tissues are damaged, a possible indication that the toxic material was ingested; the absence of such signs, however, is not conclusive. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: 570°C (1058°F)

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances:
Non-flammable in presence of open flames and sparks, of heat, of oxidizing materials, of reducing materials, of combustible materials, of moisture.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards:
Material in powder form, capable of creating a dust explosion. When heated to decomposition it emits toxic fumes.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill: Use appropriate tools to put the spilled solid in a convenient waste disposal container.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable protective clothing In case of insufficient ventilation, wear suitable respiratory equipment If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage:
Keep container dry. Keep in a cool place. Ground all equipment containing material. Keep container tightly closed. Keep in a cool, well-ventilated place. Highly toxic or infectious materials should be stored in a separate locked safety storage cabinet or room.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.01 (ppm) Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Lustrous solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 112.4 g/mole

Color: Silvery.

pH (1% soln/water): Not applicable.

Boiling Point: 765°C (1409°F)

Melting Point: 320.9°C (609.6°F)

Critical Temperature: Not available.

Specific Gravity: 8.64 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water, hot water, methanol, diethyl ether, n-octanol.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Not available.

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Not considered to be corrosive for metals and glass.

Special Remarks on Reactivity: Reacts violently with potassium.

Special Remarks on Corrosivity: Not available.

Polymerization: No.

Section 11: Toxicological Information

Routes of Entry: Inhalation. Ingestion.

Toxicity to Animals:
WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 890 mg/kg [Mouse]. Acute toxicity of the dust (LC50): 229.9 mg/m3 4 hour(s) [Rat].

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A2 (Suspected for human.) by ACGIH, 2 (Reasonably anticipated.) by NTP. The substance is toxic to kidneys, lungs, liver.

Other Toxic Effects on Humans:
Hazardous in case of ingestion, of inhalation. Slightly hazardous in case of skin contact (irritant, sensitizer).

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: An allergen. 0047 Animal: embryotoxic, passes through the placental barrier.

Special Remarks on other Toxic Effects on Humans: May cause allergic reactions, exzema and/or dehydration of the skin.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are as toxic as the original product.

Special Remarks on the Products of Biodegradation: Not available.

Gasoline

Synonyms & Trade Names

Motor fuel, Motor spirits, Natural gasoline, Petrol [Note: A complex mixture of volatile hydrocarbons (paraffins, cycloparaffins, and aromatics).]

CAS No.

8006-61-9

RTECS No.

LX3300000

DOT ID & Guide

1203 128

Formula

Conversion

1 ppm = 4.5 mg/m^3 (approx)

IDLH

Ca [N.D.]
See: IDLH INDEX

Exposure Limits

NIOSH REL

Ca See Appendix A (nengapdxa.html)

OSHA PEL

none See Appendix G (nengapdxg.html)

Measurement Methods

OSHA PV2028

See: NMAM or OSHA Methods

Physical Description

Clear liquid with a characteristic odor.

Molecular Weight

110 (approx)

Boiling Point

102°F

Freezing Point

?

Solubility

Insoluble

Vapor Pressure

Vapor Pressure
38-300 mmHg

Ionization Potential
?

Specific Gravity
(60°F): 0.72-0.76

Flash Point
-45°F

Upper Exposive Limit
7.6%

Lower Explosive Limit
1.4%

Class IB Flammable Liquid: Fl.P. below 73°F and BP at or above 100°F.

Incompatibilities & Reactivities
Strong oxidizers such as peroxides, nitric acid & perchlorates

Exposure Routes
inhalation, skin absorption, ingestion, skin and/or eye contact

Symptoms
irritation eyes, skin, mucous membrane; dermatitis; headache, lassitude (weakness, exhaustion), blurred vision, dizziness, slurred speech, confusion, convulsions; chemical pneumonitis (aspiration liquid); possible liver, kidney damage; [potential occupational carcinogen]

Target Organs
Eyes, skin, respiratory system, central nervous system, liver, kidneys

Cancer Site
[in animals: liver & kidney cancer]

Personal Protection/Sanitation
(See protection codes (protect.html))
Skin: Prevent skin contact
Eyes: Prevent eye contact
Wash skin: When contaminated
Remove: When wet (flammable)
Change: No recommendation
Provide: Eyewash, Quick drench

First Aid
(See procedures (firstaid.html))
Eye: Irrigate immediately
Skin: Soap flush immediately
Breathing: Respiratory support
Swallow: Medical attention immediately

Respirator Recommendations

NIOSH

At concentrations above the NIOSH REL, or where there is no REL, at any detectable concentration:
(APF = 10,000) Any self-contained breathing apparatus that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode

(APF = 10,000) Any supplied-air respirator that has a full facepiece and is operated in a pressure-demand or other positive-pressure mode in combination with an auxiliary self-contained positive-pressure breathing apparatus

Escape:

(APF = 50) Any air-purifying, full-facepiece respirator (gas mask) with a chin-style, front- or back-mounted organic vapor canister

Any appropriate escape-type, self-contained breathing apparatus

Important additional information about respirator selection (pgintrod.html#mustread)

Material Safety Data Sheet
Lead MSDS

Section 1: Chemical Product and Company Identification

Product Name: Lead

Catalog Codes: SLL1291, SLL1669, SLL1081, SLL1459, SLL1834

CAS#: 7439-92-1

RTECS: OF7525000

TSCA: TSCA 8(b) inventory: Lead

CI#: Not available.

Synonym: Lead Metal, granular; Lead Metal, foil; Lead Metal, sheet; Lead Metal, shot

Chemical Name: Lead

Chemical Formula: Pb

Contact Information:

Section 2: Composition and Information on Ingredients

Composition:

Name	CAS #	% by Weight
Lead	7439-92-1	100

Toxicological Data on Ingredients: Lead LD50: Not available. LC50: Not available.

Section 3: Hazards Identification

Potential Acute Health Effects: Slightly hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion, of inhalation.

Potential Chronic Health Effects:
Slightly hazardous in case of skin contact (permeator). CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance may be toxic to blood, kidneys, central nervous system (CNS). Repeated or prolonged exposure to the substance can produce target organs damage.

Section 4: First Aid Measures

Eye Contact:

Check for and remove any contact lenses. In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Get medical attention if irritation occurs.

Skin Contact: Wash with soap and water. Cover the irritated skin with an emollient. Get medical attention if irritation develops.

Serious Skin Contact: Not available.

Inhalation:
If inhaled, remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention.

Serious Inhalation: Not available.

Ingestion:
Do NOT induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. If large quantities of this material are swallowed, call a physician immediately. Loosen tight clothing such as a collar, tie, belt or waistband.

Serious Ingestion: Not available.

Section 5: Fire and Explosion Data

Flammability of the Product: May be combustible at high temperature.

Auto-Ignition Temperature: Not available.

Flash Points: Not available.

Flammable Limits: Not available.

Products of Combustion: Some metallic oxides.

Fire Hazards in Presence of Various Substances: Non-flammable in presence of open flames and sparks, of shocks, of heat.

Explosion Hazards in Presence of Various Substances:
Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

Fire Fighting Media and Instructions:
SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

Special Remarks on Fire Hazards: When heated to decomposition it emits highly toxic fumes of lead.

Special Remarks on Explosion Hazards: Not available.

Section 6: Accidental Release Measures

Small Spill:
Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

Large Spill:
Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

Section 7: Handling and Storage

Precautions:
Keep locked up.. Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable

protective clothing. If ingested, seek medical advice immediately and show the container or the label. Keep away from incompatibles such as oxidizing agents.

Storage: Keep container tightly closed. Keep container in a cool, well-ventilated area.

Section 8: Exposure Controls/Personal Protection

Engineering Controls:
Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Personal Protection: Safety glasses. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

Personal Protection in Case of a Large Spill:
Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

Exposure Limits:
TWA: 0.05 (mg/m3) from ACGIH (TLV) [United States] TWA: 0.05 (mg/m3) from OSHA (PEL) [United States] TWA: 0.03 (mg/m3) from NIOSH [United States] TWA: 0.05 (mg/m3) [Canada]Consult local authorities for acceptable exposure limits.

Section 9: Physical and Chemical Properties

Physical state and appearance: Solid. (Metal solid.)

Odor: Not available.

Taste: Not available.

Molecular Weight: 207.21 g/mole

Color: Bluish-white. Silvery. Gray

pH (1% soln/water): Not applicable.

Boiling Point: 1740°C (3164°F)

Melting Point: 327.43°C (621.4°F)

Critical Temperature: Not available.

Specific Gravity: 11.3 (Water = 1)

Vapor Pressure: Not applicable.

Vapor Density: Not available.

Volatility: Not available.

Odor Threshold: Not available.

Water/Oil Dist. Coeff.: Not available.

Ionicity (in Water): Not available.

Dispersion Properties: Not available.

Solubility: Insoluble in cold water.

Section 10: Stability and Reactivity Data

Stability: The product is stable.

Instability Temperature: Not available.

Conditions of Instability: Incompatible materials, excess heat

Incompatibility with various substances: Reactive with oxidizing agents.

Corrosivity: Non-corrosive in presence of glass.

Special Remarks on Reactivity:
Can react vigorously with oxidizing materials. Incompatible with sodium carbide, chlorine trifluoride, trioxane + hydrogen peroxide, ammonium nitrate, sodium azide, disodium acetylide, sodium acetylide, hot concentrated nitric acid, hot concentrated hydrochloric acid, hot concentrated sulfuric acid, zirconium.

Special Remarks on Corrosivity: Not available.

Polymerization: Will not occur.

Section 11: Toxicological Information

Routes of Entry: Absorbed through skin. Inhalation. Ingestion.

Toxicity to Animals:
LD50: Not available. LC50: Not available.

Chronic Effects on Humans:
CARCINOGENIC EFFECTS: Classified A3 (Proven for animal.) by ACGIH, 2B (Possible for human.) by IARC. May cause damage to the following organs: blood, kidneys, central nervous system (CNS).

Other Toxic Effects on Humans: Slightly hazardous in case of skin contact (irritant), of ingestion, of inhalation.

Special Remarks on Toxicity to Animals: Not available.

Special Remarks on Chronic Effects on Humans: Not available.

Special Remarks on other Toxic Effects on Humans:
Acute Potential: Skin: Lead metal granules or dust: May cause skin irritation by mechanical action. Lead metal foil, shot or sheets: Not likely to cause skin irritation Eyes: Lead metal granules or dust: Can irritate eyes by mechanical action. Lead metal foil, shot or sheets: No hazard. Will not cause eye irritation. Inhalation: In an industrial setting, exposure to lead mainly occurs from inhalation of dust or fumes. Lead dust or fumes: Can irritate the upper respiratory tract (nose, throat) as well as the bronchi and lungsby mechanical action. Lead dust can be absorbed through the respiratory system. However, inhaled lead does not accumulate in the lungs. All of an inhaled dose is eventually abssorbed or transferred to the gastrointestinal tract. Inhalation effects of exposure to fumes or dust of inorganic lead may not develop quickly. Symptoms may include metallic taste, chest pain, decreased physical fitness, fatigue, sleep disturbance, headache, irritability, reduces memory, mood and personality changes, aching bones and muscles, constipation, abdominal pains, decreasing appetite. Inhalation of large amounts may lead to ataxia, deliriuim, convulsions/seizures, coma, and death. Lead metal foil, shot, or sheets: Not an inhalation hazard unless metal is heated. If metal is heated, fumes will be released. Inhalation of these fumes may cause "fume metal fever", which is characterized by flu-like symptoms. Symptoms may include metallic taste, fever, nausea, vomiting, chills, cough, weakness, chest pain, generalized muscle pain/aches, and increased white blood cell count. Ingestion: Lead metal granules or dust: The symptoms of lead poisoning include abdominal pain or cramps (lead cholic), spasms, nausea, vomiting, headache, muscle weakness, hallucinations, distorted perceptions, "lead line" on the gums, metallic taste, loss of appetite, insomnia, dizziness and other symptoms similar to that of inhalation. Acute poisoning may result in high lead levels in the blood and urine, shock, coma and death in extreme cases. Lead metal foil, shot or sheets: Not an ingestion hazard for usual industrial handling.

Section 12: Ecological Information

Ecotoxicity: Not available.

BOD5 and COD: Not available.

Products of Biodegradation:
Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

Toxicity of the Products of Biodegradation: The products of degradation are less toxic than the product itself.

Special Remarks on the Products of Biodegradation: Not available.

Section 13: Disposal Considerations

Waste Disposal:
Waste must be disposed of in accordance with federal, state and local environmental control regulations.

Section 14: Transport Information

DOT Classification: Not a DOT controlled material (United States).

Identification: Not applicable.

Special Provisions for Transport: Not applicable.

Section 15: Other Regulatory Information

Federal and State Regulations:
California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer, birth defects or other reproductive harm, which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (female) which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause reproductive harm (male) which would require a warning under the statute: Lead California prop. 65 (no significant risk level): Lead: 0.0005 mg/day (value) California prop. 65: This product contains the following ingredients for which the State of California has found to cause birth defects which would require a warning under the statute: Lead California prop. 65: This product contains the following ingredients for which the State of California has found to cause cancer which would require a warning under the statute: Lead Connecticut hazardous material survey.: Lead Illinois toxic substances disclosure to employee act: Lead Illinois chemical safety act: Lead New York release reporting list: Lead Rhode Island RTK hazardous substances: Lead Pennsylvania RTK: Lead

Other Regulations:
OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200). EINECS: This product is on the European Inventory of Existing Commercial Chemical Substances.

Other Classifications:

WHMIS (Canada): CLASS D-2A: Material causing other toxic effects (VERY TOXIC).

DSCL (EEC):
R20/22- Harmful by inhalation and if swallowed. R33- Danger of cumulative effects. R61- May cause harm to the unborn child. R62- Possible risk of impaired fertility. S36/37- Wear suitable protective clothing and gloves. S44- If you feel unwell, seek medical advice (show the label when possible). S53- Avoid exposure - obtain special instructions before use.

HMIS (U.S.A.):

Health Hazard: 1

Fire Hazard: 0

Reactivity: 0

Personal Protection: E

National Fire Protection Association (U.S.A.):

Health: 1

Flammability: 0

Reactivity: 0

Specific hazard:

Protective Equipment:
Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Safety glasses.

Section 16: Other Information

References: Not available.

Other Special Considerations: Not available.

Appendix C

Chemical Information Directory

Included in HASP	*Chemical Name*	*Synonyms*
	Acetone	Dimethyl Ketone; Ketone propane; 2-Propanone
	Aldrin	HHDN; Octalene
	Aniline	Aminobenzene; Aniline Oil; Benzeneamine
X	Arsenic	Arsenic metal; Arsenia
	Barium	Barium metal
	Benzene	Benzol; Phenyl hydride
	Bis(2-ethylhexyl)phthalate	Di(2-ethylhexyl)phthalate
X	Cadmium	Cadmium metal
	Carbon disulfide	Carbon bisulfide
	Chlorobenzene	Benzene chloride; Chlorobenzyl; MCB; Phenyl chloride
	Chloroethane	Ethyl chloride
	Chloroform	Methane trichloride; Trichloromethane
	Chromic Acid	Chromic anhydride; Chromium trioxide
	Chromium	Chromium metal
	Cobalt	Cobalt metal dust, cobalt metal fume
	Copper	Copper metal dusts; Copper metal mists
	Cyanide	Cyanide
	Cyclohexane	Benzene Hexahydride; hexamethylene
	Dieldrin	Dieldrin
	DIPE	Diisopropyl ether
	Dioxin	Dioxin
	1,2-Dichlorobenzene	O-DCB; Orthodichlorobenzene
	1,1-Dichloroethane	Ethylidene chloride
	1,2-Dichloroethane	Ethylene dichloride; Glycol dichloride
	1,1-Dichloroethylene	1,1-Dichloroethene, vinylidene chloride
	1,2-Dichloroethylene	1,2-Dichloroethene; (cis, trans, or sym-) Acetylene dichloride
	1,2-Dichloropropane	Propylene dichloride; Dichloro-1,2-propane
	2,4-Dinitrotoluene	Dinitrotoluene; DNT; Methyldinitrobenzene
	1,4-Dioxane	Dioxane, Diethylene dioxide, Diethylene ether

Appendix C

Chemical Information Directory
(continued)

Included in HASP	*Chemical Name*	*Synonyms*
	Ethylbenzene	Ethylbenzol; Phenylethane
	ETBE	Ethyl tert-butyl ether
	Ethylene Dibromide	EDB; 1,2-Dibromoethane, Ethylene bromide, Glycol dibromide
	Formaldehyde	Methanal; Methyl aldehyde; Methylene oxide
X	Gasoline& Diesel	Motor fuel; Motor spirits; Natural gasoline; Petrol
	Motor oil	Motor oil
	Hexachloroethane	Carbon hexachloride; Ethane hexachloride; Perchloroethane
	Hydrochloric Acid	Anhydrous hydrogen chloride; Aqueous hydrogen chloride; Muriatic acid
	Hydrogen Sulfide	Hydrosulfuric acid; Sewer gas; Sulfuretted hydrogen
	Iron	Iron
	Isophorone	Isoacetophorone; 3,5,5-Trimethyl 2- cyclohexenone
	Isopropanol	Isopropyl alcohol; IPA; 2-Propanol
X	Lead (inorganic)	Lead metal
	Manganese	Manganese
	MTBE	Methyl Tert Butyl Ether
	Mercury	Colloidal mercury; Metallic mercury; Quicksilver
	Methane	Fire damp; March gas; Methyl hydride
	Methanol	Carbinol; Columbian spirits; Pyroligneous spirit; Wood alcohol; Wood naphtha; Wood spirit
	Methoxyclor	p,p-Dimethoxydiphenyl/trichlorethane; DMDY
	Methyl chloroform	1,1,1-Trichloroethane
	Methylcyclohexane	Cyclohexylmethane; Hexahydrotoluene
	Methylene chloride	Dichloromethane; Methylene Dichloride
	Naphthalene	Naphthalin; Tar Camphor; White Tar
	Nickel	Nickel catalyst

Appendix C

Chemical Information Directory
(continued)

Included in HASP	*Chemical Name*	*Synonyms*
	Nitrobenzene	Essence of mirbane; Nitrobenzol; Oil of mirbane
	PAHs	Poly Aromatic Hydrocarbons
	Pentachlorophenol	PCP; Penta; 2,3,4,5,6-Pentachlorophenol
	Phenol	Carbonic acid; Hydroxybenzene; Monohydroxybenzene; Phenol alcohol; Phenyl hydroxide
	Phosgene	Carbonyl chloride; Carbon oxychloride; Chloroformyl chloride
X	Polychlorinated biphenyls (54%)	PCBs; Chlorodiphenyl
	Sodium bisulfate	
	Synergist-D	Proprietary product
	Silver	Silver metal; Argentum
	TAME	Tertiary-amyl methyl ether
	TBA	Tert butyl alchol
	Tetrachloroethylene	Tetrachloroethylene; Perchlorethylene; Perk
	Toluene	Methyl benzene; Methyl benzol
	Toxaphene	Chlorinated camphene
	1,1,2-Trichloroethane	Ethane trichloride; B-Trichloroethane; Vinyl trichloride
	1,2,4-Trichlorobenzene	Trichlorobenzene; 1,2,4-Trichlorobenzel
	Trichloroethene	Trichloroethylene; TCE
	Trichlorofluoromethane	Fluorotrichloromethane; Freon II
	Trichlorotrifluoroethane	Freon 113; 1,1,2-Trichloro-1,2,2-trifluoroethane; CFC-113
	1,2,3-Trichloropropane	Allyl trichloride, Glycerol trichorohydrin, Glyceryl trichlorohydrin; Trichlorohydrin
	1,2,3-Trimethylbenzene	Hemellitol
	1,2,4-Trimethylbenzene	psi-Cumene; Pseudocumene
	1,3,5-Trimethylbenzene	Mesitylene; sym-Trimethylbenzene
	Vinyl chloride	Chloroethene; VC; VCM
	Xylene (Mixed Isomers)	o-xylene; p-xylene; m-xylene

Appendix D

Hazard Mitigators Directory

	Medical Waste

* All members of the drilling crews shall be trained in the safety features and procedures to be utilized during operation, inspection, and maintenance of the equipment.
* Conduct a survey, prior to bringing drilling equipment to the job site, to identify overhead electrical hazards, potential subsurface hazards, and terrain hazard. Once on-site, before drilling equipment is moved, the travel route shall again be visually surveyed for overhead and terrain hazards.
* Use only drilling equipment equipped with two easily accessible emergency shutdown devices, one for the operator and one for the helper.
* Do not transport drilling equipment with the mast in the upward position.
* Set up equipment on stable ground. Cribbing (a system of timbers, arranged in a rectangular pattern, used to support and distribute the weight of the equipment) shall be used when necessary.
* Extend outriggers per the manufacturer's specifications.
* Monitor weather conditions. Operations shall cease during electrical storms or when electrical storms are imminent.
* Wearing of loose clothing or equipment is not permitted.
* Use auger guides on hard surfaces.
* Verbally alert employees and visually ensure employees are clear from dangerous parts of equipment prior to starting or engaging equipment.
* Channel the discharge of drilling fluids away from the work area to prevent the pooling of water.
* Use hoists only for their designed intent. Hoists shall not be loaded beyond their rated capacity. Steps shall be taken to prevent two-blocking of hoists (the condition when the lower load block or hook assembly comes in contact with the upper load block, or when the load block comes in contact with the boom tip).
* Follow the equipment manufacturer's procedures if ropes become caught in, or objects are pulled into a cathead.

* Do not run or rotate drill rods through rod slipping devices. No more than one foot of drill rod column shall be hoisted above the top of the drill mast. Drill rod tool joints shall not be made up, tightened, or loosened while the rod column is supported by a rod slipping device.
* Control dust using dust suppression techniques.
* Clean augers only when the rotating mechanism is in neutral and the auger is stopped. Tools such as long handled shovels shall be used to remove cuttings from the auger.
* Cap and flag open boreholes; open excavations shall be barricaded.
* Keep all hand tool used during drilling operations clean and in good working condition.
* Wear hard hats and steel-toed boots at all times when performing drilling operations.
* Wear hearing protection when required.

During Geoprobe drilling

- Pay close attention to acetate sampling sleeves; can cause minor cuts when they become jiggered
- Probes /rods can have pinch points; take care when removing or adjusting.
- There will be noise so use hearing protections

- Be aware of the potential hazards of the contents of drums or containers before handling.
- Inspect the integrity of the drum or container before moving. Any drum or container lacking integrity shall be over packed.
- Consider any unlabeled drum or container as containing a hazardous substance and leave alone until contents are properly identified and labeled.
- Organize site operations to minimize the amount of drum or container movement.
- Never stand on drums or containers.
- Know that bulging drums or containers are an indication of pressure build-up. Pressure can be relieved slowly by carefully loosening the bung. If the possibility of fire or explosion exists, protective shield and/or remote opening devices should be used.
- Utilize drum/container handling equipment whenever possible. The equipment utilized should have a sufficiently rated load capacity, and should be able to operate smoothly on the available surface.
- Use proper lifting and moving techniques to prevent back injuries, if handling equipment is not available.
- Have a clear view of the available pathway when moving drums. If needed, an additional person should be available to provide guidance.
- Set up drum/container staging areas to safely identify and classify contents for proper shipment. Staging areas shall be provided with adequate ingress and egress routes.
- Label and identify drums and containers as to their contents when moved to the staging areas.
- Cease all site operations immediately if site activities uncover buried drums or containers. The SSO must be notified. The SSO will evacuate the site. All unknown situations must be evaluated before site activities are resumed. The services of a specialized contractor trained in handling unknown contaminants may be needed. If, after evaluating the situation, only a portion of the site is affected, that
- Use only drums and containers that meet the appropriate DOT, OSHA, and EPA regulations.

- When scheduling or work conditions necessitate leaving excavations open overnight, security fencing will be erected to restrict access to the site or work zones. An exclusion zone, contamination reduction zone and support zone will be identified for each soil disturbance site, as described in Section 2.4.5.

- Underground Service Alert must be notified of subsurface work at a minimum of 48 hours prior to the commencement of field activities.

- As part of the on-site health and safety meeting, a Site walk with the operators will be conducted to identify work locations (locations shown on the work plan/site plan will be in areas free of utilities/subsurface structures). Mark outs of all utilities will be verified.

- If pea-gravel is encountered while excavating all work must stop and the SSO will be contacted for further instruction. Pea-gravel is a potential indication of underground storage tank(s) or utility bedding/backfilling material.

- If any utility/subsurface feature is hit or damaged the SSO will be IMMEDIATELY contacted for further instruction. If the SSO cannot be reached contact the Project Manager for further instruction.

* A minimum clearance of 12 feet (radius) will be maintained between heavy equipment (i.e., drill rig) and any overhead power lines, regardless of voltage.
* Before subsurface work, a utilities search for underground lines will occur and will be documented.
* Installation and maintenance of electrical facilities or equipment must only be performed by qualified and properly authorized personnel or electrical subcontractors. Apprentice personnel permitted to work on electrical equipment shall be under the surveillance of a fully qualified electrician.
* Electricians shall be familiar with the National Electrical Code; state and local electric codes; OSHA standards, including 29 CFR 1926, Subpart K; and applicable sections of the National Fire Protection Association Codes.
* When working on energized circuits of 440 volts or higher, at least one qualified electrician and one other employee shall be present.
* Do not wear rings, watches or metallic objects that could act as conductors when working with electrical circuits.
* Do not use metal ladders and un-insulated tools while working with electrical circuits and equipment.
* Follow the company Lock-out/Tag-out procedures when applicable. Electrical equipment and lines shall always be considered “energized” until proven “de-energized”. Before beginning work, each electrical circuit shall be inspected, tested, and where possible, isolated from the power source. Extreme care shall be exercised as wires designed to operate at ground potential may become energized by faulty or inadequate connections.
* Use only approved grounding equipment as a ground for electrical equipment. Metal frames on electricity powered equipment, electrical facilities, and transmission equipment shall be connected to the grounding system. Alternative grounding systems complying with applicable electrical codes may be used for temporary portable equipment.
* Protect electrical wires with suitable protective conduits or devices where they are exposed to possible damage.
* Connect grounding devices to a ground before contacting any conductor of a circuit. When grounding devices are removed, they shall be disconnected from the circuit before being disconnected from ground.
* Equip all portable extension cords with a non-conducting plug and/or another socket shell. All electrical cords shall be equipped with three-blade grounding type plugs.

* Use only heavy duty electrical cords that are not subjected to excessive bending, stretching, or kicking. All cords and wires shall be frequently inspected for signs of defects. Damaged or frayed electrical wires, cords, and plugs shall be immediately replaced by a qualified electrician or other properly trained personnel.
* Install adequate warning signs and barriers (in plain sight) in all areas where hazardous electrical facilities exist.
* Do not permit overloading of electrical circuits at any time. The replacement of fuses or circuit breakers with makeshift materials or over-capacity fuses is strictly prohibited.
* The type of circuit shall determine the type of protective equipment required. Rubber gloves, sleeves, blankets, mats, and insulated platforms shall be used as required. Questions regarding PPE should be directed to the SSO.
* Inspect all insulated protective equipment continuously for defects or damages. Any defective equipment shall be replaced before using.
* Establish and enforce testing schedules for insulation qualities for protective equipment. All users shall verify that equipment has been satisfactorily tested prior to use.

* Wear appropriate eye protection according to the task at hand (e.g., goggles if liquid splash could occur, welding lenses, etc.).

* Minimize the amount of vapor or particulate matter generated, if possible.

* Avoid touching the face and eyes.

* Flush eye with water for at least 15 minutes if chemicals do get into the eye.

* Be aware of “pinch points” when working with tools and heavy equipment.
* Use proper lifting techniques to avoid dropping heavy loads on hands and feet.
* Be aware of moving machinery and heavy equipment in the work area.
* Wear protective gloves as required in the Health and Safety Plan.
* Wear steel-toed boots as required in the Health and Safety Plan.

Fatal exposures to cold among workers have almost always resulted from accidental exposures involving failure to escape from low environmental air temperatures or from immersion in low temperature water. The single most important aspect of life-threatening hypothermia is the fall in the deep core temperature of the body. Workers should be protected from exposure to cold so that the deep core temperature does not fall below 96.8°F; lower body temperatures will very likely result in reduced mental alertness, reduction in rational decision making, or loss of consciousness with the threat of fatal consequences. Pain in the extremities may be the first early warning of danger to cold stress. During exposure to cold, maximum severe shivering develops when the body temperature has fallen to 95°F. This must be taken as a sign of danger to the workers and exposure to cold should be immediately terminated for any workers when severe shivering becomes evident. Since prolonged exposure to cold air, or to immersion in cold water, at temperatures well above freezing can lead to dangerous hypothermia, whole body protection must be provided.

Adequate insulating dry clothing to maintain core temperatures above 96.8°F must be provided to workers if work is performed in air temperatures below 40°F. Wind chill cooling rate must also be considered when determining protective clothing. The equivalent chill temperature should be used when estimating the combined cooling effect of wind and low air temperatures on exposed skin or when determining clothing insulation requirements to maintain the deep body core temperature.

Unless there are unusual or extenuating circumstances, cold injury to other than hands, feet, and head is not likely to occur without the development of the initial signs of hypothermia. Older workers or workers with circulatory problems require special precautionary protection against cold injury. The use of extra insulating clothing and/or a reduction in the duration of the exposure period are among the special precautions which should be considered.

Workers handling evaporative liquid (gasoline, alcohol, or cleaning fluids) at air temperatures below 39.2°F should take special precautions to avoid soaking of clothing or gloves with the liquids because of the added danger of cold injury due to evaporative cooling. Special note should be taken of the particularly acute effects of splashes of “cryogenic fluids” or those liquids and gases with a boiling point that is just above ambient temperature.

Heat stress is a medical condition where a worker exerts energy above his body's ability to adapt to the stress. Malfunctioning or overload of the body's temperature and sweat mechanisms results in heat stress. Poor adaptation to heat may lead to heat cramps, heat exhaustion, or heat stroke. There are three primary causes of heat stress: insufficient water intake; insufficient salt intake; and a deficiency in the production of sweat, the evaporation of which helps to cool the body naturally. Heat stress or heat exhaustion can result in a more life-threatening condition called heat stroke, which is an overexposure to extreme heat, where the body can no longer provide natural regulation of heat. The body overheats and core temperatures may reach 107F which can result in a coma and death

Field team members shall be observed for signs and symptoms of heat stress that include: confusion, dizziness, profuse sweating, skin color change, increased heart rate and vision problems. Personnel who exhibit any of these symptoms shall be removed from field work and requested to consume two to four pints of electrolyte fluid or cool water every hour while resting in a shaded area. The individual should not return to work until the symptoms are no longer recognizable. If symptoms appear critical, persist, or get worse, seek immediate medical attention.

To control the potential occurrence of heat stress, preventive measures will be evaluated and implemented on a daily basis. These measures may include:

- Frequent rest periods;
- Inducement of fluids (e.g., water, Gatorade, etc.) at a rate of one-half to one cup of cool (55ºF) water every 20 minutes of the workday; and
- Periodic cooling of personnel (e.g., via shaded areas, hose-downs with water, etc.).
- Sensitive personnel should wear sunscreen containing a minimum Sun Protection Factor of 15 when working outdoors in the sun. Sunscreen lotion should be applied prior to entering the work zones.

ainst heat, sun exposure, and other hazards. Employers and employees should know the potential hazards in their workplaces and how to manage them.

Sun

Sunlight contains ultraviolet (UV) radiation, which causes premature aging of the skin, wrinkles, cataracts, and skin cancer. There are no safe UV rays or safe suntans. Be especially careful in the sun if you burn easily, spend a lot of time outdoors, or have any of the following physical features: numerous, irregular, or large moles; freckles; fair skin; or blond, red, or light brown hair. Here's how to block those harmful rays:

- Cover up. Wear loose-fitting, long-sleeved shirts and long pants.
- Use sunscreen with a sun protection factor (SPF) of at least 30. Be sure to follow application directions on the bottle or tube.
- Wear a hat. A wide brim hat, not a baseball cap, works best because it protects the neck, ears, eyes, forehead, nose, and scalp.
- Wear UV-absorbent sunglasses (eye protection). Sunglasses don't have to be expensive, but they should block 99 to 100 percent of UVA and UVB radiation. Before you buy sunglasses, read the product tag or label.
- Limit exposure. UV rays are most intense between 10 a.m. and 4 p.m.

OSHA Card—Protecting Yourself in the Sun
www.osha.gov/Publications/osha3166.pdf

Heat

The combination of heat and humidity can be a serious health threat during the summer months. If you work outside (for example, at a beach resort, on a farm, at a construction site) or in a kitchen, laundry, or bakery you may be at increased risk for heat-related illness. So, take precautions. Here's how:

- Drink small amounts of water frequently.
- Wear light-colored, loose-fitting, breathable clothing—cotton is good.
- Take frequent short breaks in cool shade.
- Eat smaller meals before work activity.
- Avoid caffeine and alcohol or large amounts of sugar.
- Work in the shade.
- Find out from your health care provider if your medications and heat don't mix.
- Know that equipment such as respirators or work suits can increase heat stress.

There are three kinds of major heat-related disorders—heat cramps, heat exhaustion and heat stroke. You need to know how to recognize each one and what first aid treatment is necessary.

OSHA Heat Stress Fact Sheet:
www.osha.gov/OshDoc/data_Hurricane_Facts/heat_stress.pdf

OSHA Heat Stress Quick Card:
www.osha.gov/Publications/osha3154.pdf

Lyme Disease/Tick-Borne Diseases

These illnesses (i.e., Rocky Mountain spotted fever) are transmitted to people by bacteria from bites of infected deer (blacklegged) ticks. In the case of Lyme disease, most, but not all, victims will develop a "bulls-eye" rash. Other signs and symptoms may be non-specific and similar to flu-like symptoms such as fever, lymph node swelling, neck stiffness, generalized fatigue, headaches, migrating joint aches, or muscle aches. You are at increased risk if your work outdoors involves construction, landscaping, forestry, brush clearing, land surveying, farming, railroads, oil fields, utility lines, or park and wildlife management. Protect yourself with these precautions:

- Wear light-colored clothes to see ticks more easily.

- Wear long sleeves; tuck pant legs into socks or boots.
- Wear high boots or closed shoes that cover your feet completely.
- Wear a hat.
- Use tick repellants, but not on your face.
- Shower after work. Wash and dry your work clothes at high temperature.
- Examine your body for ticks after work. Remove any attached ticks promptly and carefully with fine-tipped tweezers by gripping the tick. Do not use petroleum jelly, a hot match, or nail polish to remove the tick.

OSHA Lyme Disease Fact Sheet: www.osha.gov/OshDoc/data_LymeFacts/lymefac.pdf

West Nile Virus

West Nile virus is transmitted by the bite of an infected mosquito. Mild symptoms include fever, headache, and body aches, occasionally with a skin rash on the trunk of the body and swollen lymph glands. Symptoms of severe infection include headache, high fever, neck stiffness, stupor, disorientation, coma, tremors, convulsions, muscle weakness, and paralysis. You can protect yourself from mosquito bites in these ways:

- Apply Picaridin or insect repellent with DEET to exposed skin.
- Spray clothing with repellents containing DEET or permethrin. (Note: Do not spray permethrin directly onto exposed skin.)
- Wear long sleeves, long pants, and socks.
- Be extra vigilant at dusk and dawn when mosquitoes are most active.
- Get rid of sources of standing water (used tires, buckets) to reduce or eliminate mosquito breeding areas.

OSHA West Nile Virus Fact Sheet: www.osha.gov/OshDoc/data_Hurricane_Facts/west_nile_virus.pdf

OSHA Safety and Health Information Bulletin: "Workplace Precautions Against West Nile Virus"

http://www.osha.gov/dts/shib/shib082903b.pdf

Poison Ivy-Related Plants

Poison ivy, poison oak and poison sumac have poisonous sap (urushiol) in their roots, stems, leaves and fruits. The urushiol may be deposited on the skin by direct contact with the plant or by contact with contaminated objects, such as clothing, shoes, tools, and animals.

Approximately 85 percent of the general population will develop an allergy if exposed to poison ivy, oak or sumac. Forestry workers and firefighters who battle forest fires have developed rashes or lung irritations from inhaling the smoke of burning plants.

- Wear long-sleeved shirts and long pants, tucked into boots. Wear cloth or leather gloves.
- Apply barrier creams to exposed skin.
- Educate workers on the identification of poison ivy, oak, and sumac plants.
- Educate workers on signs and symptoms of contact with poisonous ivy, oak, and sumac.
- Keep rubbing alcohol accessible. It removes the oily resin up to 30 minutes after exposure.

OSHA Web Page—Poisonous Plants: www.osha.gov/SLTC/etools/sawmills/poison.html

This is one in a series of informational fact sheets highlighting OSHA programs, policies or standards. It does not impose any new compliance requirements. For a comprehensive list of compliance requirements of OSHA standards or regulations, refer to Title 29 of the Code of Federal Regulations. This information will be made available to sensory impaired individuals upon request. The voice phone is (202) 693-1999; teletypewriter (TTY) number: (877) 889-5627.

OSHA Occupational Safety and Health Administration

U.S. Department of Labor

www.osha.gov

(800) 321-OSHA

DSTM 9/2005

* Apply Hazard Mitigators for motor vehicles when utilizing heavy equipment (where applicable).

* Remember, heavy equipment has the right-of-way over regular vehicles. Yield to heavy equipment.

* Listen for warning signals on heavy equipment.

* Perform a visual inspection and walk around parked heavy equipment before moving to assure that equipment is in good condition and that there are no personnel on the ground that could be injured or objects that could be damaged by vehicle movement.

* Use hand rails and footholds when mounting and dismounting equipment,

* Follow appropriate equipment startup procedures. Brakes, steering, clutches and controls shall be tested.

* Pay attention to workers on the ground that may be in the path and provide warning prior to moving the equipment.

* Permit no one to ride on, or in, heavy equipment. This includes any portion of a backhoe, bulldozer, forklift or the back of a pickup truck, except in locations specifically designed for passenger use and approved by the SSO.

* Locate and flag underground utilities and buried cables, whenever possible, prior to intrusive activities (such as excavation and drilling).

* Keep haulage vehicles under positive control at all times while operating. Vehicles shall be kept in gear when descending grades.

* Do not use heavy equipment on slopes with steepness exceeding 3H:1V unless operations are consistent with manufacturer's recommendations (if the Owner's Manual is not with the equipment or does not specify slope operating procedures, see the SSO).

* Operate equipment with booms, blades, buckets, beds, etc., lowered or in a stable position while on slopes. Safety cables tethered to appropriate anchors shall be used for equipment working on steep slopes, where appropriate. The use of cables and anchors must be approved by the SSO.

* Use rollover protection and seat belts.

* Lower hydraulic systems (e.g., blades, rippers, etc.) to the ground, set brakes, and shut down equipment if malfunction occurs which impairs the ability to control a piece of equipment.

* Suspend in slings or support by hoists or jacks heavy equipment in need of repair. The equipment must also be blocked or cribbed before workers are permitted to work underneath. Working under heavy equipment can pose a crushing hazard.

* Shut off motors, do not allow smoking, and use proper dispensing equipment when refueling gasoline-operated equipment to prevent fire hazards.

* Wear hearing protection if required.

* Maintain eye contact with the heavy equipment operator when working near equipment.

* Be aware of changes in sound of equipment that may indicate a change in direction or activity.

* Know and practice proper lifting techniques.
* Limit continuous lifting of weights to 50 pounds or less. Lifts of heavier weights are permitted on an interim basis. Help shall be obtained for lifting of loads greater than 50 pounds. Mechanical equipment should be used on heavy materials when possible. If mechanical assistance is not available, adequate manpower to maintain the 50-pound limit per employee will be required.
* Do not lift more weight than can be handled comfortably, regardless of load weight. If necessary, help should be requested to lift a load so that the lifting is comfortable.
* Use drum dollies when moving drums or barrels.
* Inspect objects for grease or slippery substances before they are lifted to ensure that the object will not slip.
* Do not carry long, bulky or heavy objects without first verifying that the way is clear and that vision is unobstructed. This ensures that other persons or objects will not be struck by the load.
* Do not carry loads that cannot be seen over or around.
* Make sure workers are physically suited for the job before assigning jobs requiring heavy and/or frequent lifting. A person's lifting ability is not necessarily indicated by his height or weight.
* Before lifting an object, consideration should be given to how the object will be set down without pinching or crushing hands or fingers. For example, to place an object on a bench or table, the object should be set on the edge and pushed far enough onto the support so it will not fall. The object can then be released gradually as it is set down, and pushed in place with the hands and body from in front of the object.
* When two or more persons are handling the same object, one should "call the signals". All the persons on the lift should know who this person is and should warn him if anyone in the crew is about to relax his grip.
* Proper lifting includes:
  - *Feet* - Feet should be parted, with one foot alongside the object being lifted and one behind. Feet should be comfortably spread to give greater stability. The rear foot should be in position for the upward thrust of the lift.
  - *Back* - Use the sit-down position and keep the back straight, but remember that "straight" does not mean "vertical". A straight back keeps the spine, back muscles, and organs of the body in correct alignment. It minimizes the compression of the abdomen that can cause a hernia.
  - *Arms and Elbows* - The load should be drawn close, and the arms and elbows should be tucked into the side of the body. When the arms are held away from the body, they lose much of their strength and power. Keeping the arms tucked in also helps keep body

weight centered.

- *Palm* - The palm grip is one of the most important elements of lifting. The fingers and the hand are extended around the object to be lifted. Use the full palm; fingers alone have very little power.
- *Chin* - Tuck in the chin so the neck and head continue the straight back line. Keep the spine straight and firm.
- *Body Weight* - Position the body so its weight is centered over the feet. This provides a more powerful line of thrust and assures better balance. Start the lift with a thrust of the rear foot. Shift hand positions so the object can be boosted after knees are bent. Straighten knees as object is lifted or shifted to the shoulders. To change direction, lift the object to a carrying position, and turn the entire body, including the feet. Do not twist your body. In repetitive work, both the person and the material should be positioned so that the worker will not have to twist his body when moving the material. If the object is too heavy to be handled by one person, get help.

* Know the effects of noise, including:
  - Workers being startled, annoyed, or distracted.
  - Physical damage to the ear, pain, and temporary and/or permanent hearing loss.
  - Communication interference that may increase potential hazards due to the inability to warn of danger and proper safety precautions to be taken.
* Utilize feasible administrative or engineering controls if workers are subjected to noise exceeding an 8-hour, time-weighted average (TWA) sound level of 90 dBA (decibels on the A-weighted scale).
* Implement the company Hearing Conservation Program when noise exposures equal or exceed an 8-hour, TWA sound level of 85 dBA.
* Wear hearing protection where applicable.

* Route cords, hoses, and cables supplying power to portable power tools to prevent tripping hazards or contact with equipment or machinery.
* Avoid abusing the power supply lines of portable equipment. Excessive scraping, kicking, stretching, and exposure to grease and oils will damage lines or cause them to fail prematurely, and possibly injure the operator or fellow workers.
* Inspect cords, hoses, and cables for wear or deterioration prior to each use. Defective power supply lines shall not be used.
* Do not use electrically powered tools near flammable materials or explosive atmosphere, unless they are of the explosion-proof type meeting the National Electrical Code for explosive area. Employees operating the equipment should be aware of sparks and or metal fragments when using this equipment.
* Ground-check portable electric power tools with metal cases initially and quarterly. At no time will electrical power equipment be operated without proper grounding. All electrical cords and cables, including extension cords, shall include a third wire ground.
* Prohibit operations of electric tools in wet or damp areas except in unusual emergency circumstances. When operation is required in wet or damp conditions, extreme care will be exercised to ensure effective grounding of equipment and proper use of protective gear.
* Size cords adequately for length and the electrical demand of the tool. Otherwise, they may cause a fire hazard.
* Limit use of tools to the purpose for which the tool is intended (e.g., wrenches will not be used as hammers). Defective tools (e.g., with mushroomed heads or split or defective handles) shall not be used.
* Protect tools from corrosion damage.
* Keep tools free of accumulated dirt and unnecessary oil or grease. Moving and adjustable parts shall be lubricated frequently to prevent wear and misalignment.
* Replace or repair damaged or worn tools promptly. Temporary or makeshift repairs are prohibited. At the discretion of the supervisor, discard all tools that cannot be repaired safely. Supervisors shall decide when to discard a tool.
* Store tools in suitable boxes or containers. Loose tools shall not be stored on ledges or where they might fall. Tools shall be picked up when a job is completed and not be allowed to accumulate in the work area. Store all tools in a safe place.
* Do not use conducting (i.e., metal) tools around electrical facilities. Insulated tools, approved for electrical work, shall be tested frequently for proper insulation.

* Select the correct size and type of wrench for each job. Wrench handles shall not be extended with a pipe or cheater because the jaws will spread.
* Repair mushroomed punch, drift and chisel heads. Mushroomed heads represent crystallized metal that will break and fly off when struck.
* Wear eye protection at all times.

* Wear the proper footwear for the task at hand.
* Pay attention to the environment and use caution when moving about on site.
* Follow the easiest and safest path to the destination.
* Follow good housekeeping procedures.
* Remove objects that pose tripping hazards where practicable.
* Prevent water accumulation where practicable.

The following sections address the major workplace fire hazards and the procedures for controlling the hazards.

A. Electrical Fire Hazards

Electrical system failures and the misuse of electrical equipment are leading causes of workplace fires. Fires can result from loose ground connections, wiring with frayed insulation, or overloaded fuses, circuits, motors, or outlets.

To prevent electrical fires, employees shall:

1. Make sure that worn wires are replaced.
2. Use only appropriately rated fuses.
3. Never use extension cords as substitutes for wiring improvements.
4. Use only approved extension cords [i.e., those with the Underwriters Laboratory (UL) or Factory Mutual (FM) label].
5. Check wiring in hazardous locations where the risk of fire is especially high.
6. Check electrical equipment to ensure that it is either properly grounded or double insulated.
7. Ensure adequate spacing while performing maintenance.

B. Portable Heaters

All portable heaters shall be approved by **SSO**. Portable electric heaters shall have tip-over protection that automatically shuts off the unit when it is tipped over. There shall be adequate clearance between the heater and combustible furnishings or other materials at all times.

C. Office Fire Hazards

Fire risks are not limited to industrial facilities. Fires in offices have become more likely because of the increased use of electrical equipment, such as computers and fax machines. To prevent office fires, employees shall:

1. Avoid overloading circuits with office equipment.
2. Turn off nonessential electrical equipment at the end of each workday.
3. Keep storage areas clear of rubbish.
4. Ensure that extension cords are not placed under carpets.
5. Ensure that trash and paper set aside for recycling is not allowed to accumulate.

D. Cutting, Welding, and Open Flame Work

The **SSO**will ensure the following:

1. All necessary hot work permits have been obtained prior to work beginning.
2. Cutting and welding are done by authorized personnel in designated cutting and welding areas whenever possible.

3. Adequate ventilation is provided.
4. Torches, regulators, pressure-reducing valves, and manifolds are UL listed or FM approved.
5. Oxygen-fuel gas systems are equipped with listed and/or approved backflow valves and pressure-relief devices.
6. Cutters, welders, and helpers are wearing eye protection and protective clothing as appropriate.
7. Cutting or welding is prohibited in sprinklered areas while sprinkler protection is out of service.
8. Cutting or welding is prohibited in areas where explosive atmospheres of gases, vapors, or dusts could develop from residues or accumulations in confined spaces.
9. Cutting or welding is prohibited on metal walls, ceilings, or roofs built of combustible sandwich-type panel construction or having combustible covering.
10. Confined spaces such as tanks are tested to ensure that the atmosphere is not over ten percent of the lower flammable limit before cutting or welding in or on the tank.
11. Small tanks, piping, or containers that cannot be entered are cleaned, purged, and tested before cutting or welding on them begins.
12. Fire watch has been established.

E. Flammable and Combustible Materials

The **SSO** shall regularly evaluate the presence of combustible materials at.

Certain types of substances can ignite at relatively low temperatures or pose a risk of catastrophic explosion if ignited. Such substances obviously require special care and handling.

1. Class A combustibles.

These include common combustible materials (wood, paper, cloth, rubber, and plastics) that can act as fuel and are found in non-specialized areas such as offices.

To handle Class A combustibles safely:

a. Dispose of waste daily.
b. Keep trash in metal-lined receptacles with tight-fitting covers (metal wastebaskets that are emptied every day do not need to be covered).
c. Keep work areas clean and free of fuel paths that could allow a fire to spread.
d. Keep combustibles away from accidental ignition sources, such as hot plates, soldering irons, or other heat- or spark-producing devices.
e. Store paper stock in metal cabinets.
f. Store rags in metal bins with self-closing lids.
g. Do not order excessive amounts of combustibles.
h. Make frequent inspections to anticipate fires before they start.

Water, multi-purpose dry chemical (ABC), and halon 1211 are approved fire extinguishing agents for Class A combustibles.

2. Class B combustibles.

These include flammable and combustible liquids (oils, greases, tars, oil-based paints, and lacquers), flammable gases, and flammable aerosols.

To handle Class B combustibles safely:

a. Use only approved pumps, taking suction from the top, to dispense liquids from tanks, drums, barrels, or similar containers (or use approved self-closing valves or faucets).
b. Do not dispense Class B flammable liquids into containers unless the nozzle and container are electrically interconnected by contact or by a bonding wire. Either the tank or container must be grounded.
c. Store, handle, and use Class B combustibles only in approved locations where vapors are prevented from reaching ignition sources such as heating or electric equipment, open flames, or mechanical or electric sparks.
d. Do not use a flammable liquid as a cleaning agent inside a building (the only exception is in a closed machine approved for cleaning with flammable liquids).
e. Do not use, handle, or store Class B combustibles near exits, stairs, or any other areas normally used as exits.
f. Do not weld, cut, grind, or use unsafe electrical appliances or equipment near Class B combustibles.
g. Do not generate heat, allow an open flame, or smoke near Class B combustibles.
h. Know the location of and how to use the nearest portable fire extinguisher rated for Class B fire.

Water should not be used to extinguish Class B fires caused by flammable liquids. Water can cause the burning liquid to spread, making the fire worse. To extinguish a fire caused by flammable liquids, exclude the air around the burning liquid. The following fire-extinguishing agents are approved for Class B combustibles: carbon dioxide, multi-purpose dry chemical (ABC), halon 1301, and halon 1211. (**NOTE:** Halon has been determined to be an ozone-depleting substance and is no longer being manufactured. Existing systems using halon can be kept in place.)

F. Smoking

Smoking is prohibited at the facility.

–

- Be aware of chemicals of concern that can directly injure the skin or that can be absorbed into the bloodstream and subsequently transported to other organs.
- Know that skin absorption is enhanced by abrasions, cuts, heat, and moisture.
- Do not wear contact lenses in contaminated atmospheres (since they may trap chemicals against the eye surface). The eye is particularly vulnerable because airborne chemicals can dissolve in its moist surface and be carried to the rest of the body through the bloodstream (capillaries are very close to the surface of the eye).
- Keep hands away from face.
- Minimize contact with liquid and solid chemicals.

Wear protective clothing (e.g., suits and gloves) as required by the Health and Safety Plan

– .

* Adhere to the 0.05 mg/m^3 action level for dust

* Be aware that the lungs are extremely vulnerable to chemical agents. Even substances that do not directly affect the lungs may pass through lung tissue into the bloodstream, where they are transported to other vulnerable areas of the body.

* Know the odor and odor threshold of the chemicals of concern. Some toxic chemicals present in the atmosphere may not be detected by human senses (i.e., they may be odorless and colorless, and their toxic effects may not produce any immediate symptoms).

* Use engineering controls to reduce vapor concentrations (e.g., ventilation) or dusty atmospheres (e.g., dust suppression techniques).

* Wear respiratory protection as indicated by air monitoring results and/or as required by the Health and Safety Plan.

* Conduct work zone air monitoring as required by the Health and Safety Plan.

Appendix E

Personal Protective Equipment Per Task

Applies to Task: ☒ **1.Excavation, soil sampling, well installation, GW sampling and capping**

☒ *Modified Level D**		☐ *Level C**		☐ *Level B**

OSHA Onsite Training Documentation Form

After completion of the OSHA 40-hour training class, 29 CFR 1910.120 states that 3 days of onsite experience under the direct supervision of a trained, experienced supervisor are required to complete the OSHA HAZWOPER training requirements. This form is to be used to document this requirement, and shall be completed by a qualified supervisor (i.e., someone who has completed the 8-hour supervisory training class). Upon completion of this form, please submit it to the EarthCon project manager.

County of Riverside, Assessor Parcel Number(s): 107-030-022-3
Clow Valve Company
(Department Site Code 600876-48)

This Land Use Covenant and Agreement ("Covenant") is made by and between Clow Valve Company (the "Covenantor"), the current owner of property located at 1375 Magnolia Avenue, Corona in the County of Riverside, State of California (the "Property"), and the Department of Toxic Substances Control (the "Department"). Pursuant to Civil Code section 1471, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined

in Health and Safety Code section 25260. The Covenantor and the Department hereby agree that, pursuant to Civil Code section 1471 and Health and Safety Code section 25202.5 the use of the Property be restricted as set forth in this Covenant and that the Covenant shall conform with the requirements of California Code of Regulations, title 22, section 67391.1. With respect to the Polychlorinated Biphenyls (PCBs) at the Property, the provisions of this Covenant shall be for the benefit of, and shall be enforceable by, the United States Environmental Protection Agency ("U.S. EPA"), as a third party beneficiary pursuant to general contract law, including but not limited to Civil Code section 1559.

ARTICLE I
STATEMENT OF FACTS

1.01. Property Location. The Property, located at 1375 Magnolia Avenue, Corona, County of Riverside, California, that is subject to this Covenant, totaling approximately 16 acres, is more particularly described in the attached Exhibit A, "Legal Description of the Property", and depicted in Exhibit B, "Plot Plan". The Property is located in the area generally bounded by Magnolia Avenue on the south, railroad tracks and El Camino Avenue on the west, and a storm water channel towards the north and east. The Property is also identified as County of Riverside, Assessor's Parcel Number 107-030-022-3.

(a) A limited portion of the Property is more particularly described in Exhibit C, "Legal Description of the Capped Property", and illustrated in Exhibit D, "Sketch", referred to as the "Capped Property". The "Capped Property", totaling approximately 9.964 acres of soil impacted by hazardous substances, is located on the northern portion of the Property now generally bounded by railroad and El Camino Avenue on the west, storm channel on the north and east. Its southern border runs parallel to Magnolia Avenue, approximately 195 feet north of Magnolia Avenue.

(b) A limited portion of the Property is more particularly described in Exhibit D as "Area 1" a Former Asphalt Dip Tank and as "Area2" a PCB Transformer area. Former Asphalt Dip Tank was previously located, approximately 620 feet north of Magnolia

Avenue, 510 feet east of El Camino Avenue, and 200 feet west of the storm channel western edge. The PCB Transformer area is located approximately 240 feet west of the storm channel western edge, 510 feet east of El Camino Avenue, and 600 feet north of Magnolia Avenue.

1.02. Hazardous Substances. Hazardous wastes, or constituents of hazardous waste, including Polychlorinated Biphenyl's (PCBs) (Total Aroclors up to a maximum of 2,220 milligrams per kilogram (mg/kg)), Total Petroleum Hydrocarbons (TPH) (up to a maximum of 9,300 mg/kg), arsenic (up to a maximum of 52.9 mg/kg), cadmium (up to a maximum of 43.9 mg/kg), hexavalent chromium (up to a maximum of 6.6 mg/kg), and lead (up to a maximum of 7,360 mg/kg) in soil, and volatile organic compounds, such as tetrachloroethylene (PCE) (up to a maximum of 3 microgram/liter (ug/l)), in the soil gas remain at the Property above levels acceptable for unrestricted land use.

As of February 25, 2021, PCB concentrations in the soil at the Former Asphalt Dip Tank Bottom and PCB Transformer exceed the level for unrestricted use and the USEPA's site-specific industrial risk-based threshold of 15 mg/kg. PCB concentrations present in soils of the PCB Transformer area exceed the California hazardous waste level of Total Threshold Limit Concentration (TTLC) of 50 mg/kg.

As of February 25, 2021, lead concentrations detected in the soil at the Capped Property exceeded 320 milligrams per kilogram, a level deemed safe by DTSC for the continued use of the Site for industrial use and the TTLC of 1,000 mg/kg. A Human Health Risk Assessment (HHRA) was performed to evaluate the potential health risks associated with direct exposure of workers at the Property to soil containing Chemicals of Potential Concern (COPCs). Based on the HHRA, potential health risk to a commercial or industrial worker is $1x10^{-5}$ and to a construction worker is $2x10^{-4}$. The estimated Hazard Index (HI) for a commercial/industrial worker at the Property is 1.9, primarily due to the potential exposure to PCBs and cadmium. The estimated HI for a construction worker at the Property is 458. U.S. EPA recommends an HI of 1 or below and health risk below $1x10^{-6}$. The calculated risks were primarily associated with direct exposure to impacted soil and associated soil ingestion or dermal exposure, both of which will be eliminated by installation and maintenance of the capping materials described herein.

1.03. Remediation of Property. This Property has been investigated and/or remediated under the Department's oversight. The Department approved a Corrective Measures Study, dated February 19, 2018, prepared by EarthCon Consultants CA, Inc, in accordance with Health and Safety Code, Division 20, Chapter 6.5. The remediation activities at the Property include:

a) Construction of an approximately 5,000 square foot, 6-inch thick concrete or 3-inch thick asphalt cap in two areas encompassing approximately one-half acre, identified as Areas of Concern (AOCs), AOC-1 and AOC-5 (see Exhibit B).
b) Repair and maintenance of the existing asphalt and/or concrete surface cover of the Capped Property;
c) Soil Management Plan and Operation and Maintenance Plan preapproval by the Department for all future construction work involving soil excavation at the Capped Property; and,
d) Land use restriction recorded with the Riverside County Assessor's Office to prohibit sensitive uses.

1.04. PCB Remediation overseen by U.S. EPA. In addition to the corrective action measures for the Property under the Department's oversight, U.S. EPA approved with conditions the Risk-Based Approval Application submitted by EarthCon Consultants, CA, Inc. on behalf of Clow Valve Company dated April 9, 2019 to remediate PCBs at the Property. PCBs are regulated by the U.S. EPA pursuant to the Toxic Substances Control Act (TSCA), 15 U.S.C. Section 2601 et seq., and the PCB regulations at 40 Code of Federal Regulations (CFR) Part 761. This document is available in Envirostor, an online document repository at https://www.envirostor.dtsc.ca.gov/public/deliverable_documents/1318022012/2019-04-23_EPA%20to%20Clow%20Valve_761.61%28c%29_SIGNED.pdf

1.05. Basis for Environmental Restrictions. As a result of the presence of Hazardous Wastes, PCBs, TPH, arsenic, cadmium, lead, and PCE, which are also hazardous materials as defined in Health and Safety Code section 25260, at the Property, the Department has concluded that it is reasonably necessary to restrict the

use of the Property in order to protect present or future human health or safety or the environment, and that this Covenant is required as part of the Department-approved remedy for the Property. The Department has also concluded that the Property, as remediated and when used in compliance with the Environmental Restrictions of this Covenant, does not present an unacceptable risk to present and future human health or safety or the environment.

1.06. Land Use Covenant. A land use covenant is necessary to preclude potential users' exposure to hazardous substances that remain at the Property and to complete the remedy selected in the Corrective Measures Study. U.S. EPA, with the concurrence of the Department, has concluded that the Property, remediated to the goals presented in the Corrective Measures Study, subject to the restrictions of this Covenant, and used in compliance with such restrictions, does not present an unacceptable threat to present or future human health or safety or the environment. Additional information about the Site, including the 2019 PCB risk analysis by U.S. EPA, is available at the Envirostor, an online repository listed in paragraph 1.04, above.

ARTICLE II
DEFINITIONS

2.01. Department. "Department" means the California Department of Toxic Substances Control and includes its successor agencies, if any.

2.02. Environmental Restrictions. "Environmental Restrictions" means all protective provisions, covenants, restrictions, requirements, prohibitions, and terms and conditions as set forth in this Covenant.

2.03. Improvements. "Improvements" includes, but is not limited to buildings, structures, roads, driveways, improved parking areas, wells, pipelines, or other utilities.

2.04. Lease. "Lease" means lease, rental agreement, or any other document that creates a right to use or occupy any portion of the Property.

2.05. Occupant. "Occupant" or "Occupants" means Owner and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.06. Owner. "Owner" or “Owners” means the Covenantor, and any successor in interest including any heir and assignee, who at any time holds title to all or any portion of the Property.

2.07. U.S. EPA. “U.S. EPA” means the United States Environmental Protection Agency, and includes its successor agencies, if any.

ARTICLE III
GENERAL PROVISIONS

3.01. Runs with the Land. This Covenant sets forth Environmental Restrictions that apply to and encumber the Property and every portion thereof no matter how it is improved, held, used, occupied, leased, sold, hypothecated, encumbered, or conveyed. This Covenant: (a) runs with the land pursuant to Civil Code section 1471 and Health and Safety Code section 25202.5; (b) inures to the benefit of and passes with each and every portion of the Property; (c) is for the benefit of, and is enforceable by the Department; and (d) is imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding upon Owners/Occupants. This Covenant: (a) binds all Owners of the Property, their heirs, successors, and assignees; and (b) the agents, employees, and lessees of the Owners and the Owners’ heirs, successors, and assignees. Pursuant to Civil Code section 1471, all successive Owners of the Property are expressly bound hereby for the benefit of the Department; this Covenant, however, is binding on all Owners and Occupants, and their respective successors and assignees, only during their respective periods of ownership or occupancy except that such Owners or Occupants shall continue to be liable for any violations of, or non-compliance with, the Environmental Restrictions of this Covenant or any acts or omissions during their ownership or occupancy.

3.03. Written Notice of the Presence of Hazardous Substances. Prior to the sale, lease, assignment, or other transfer of the Property, or any portion thereof, the Owner, lessor, or sublessor shall give the buyer, lessee, or sublessee written notice of the existence of this Covenant and its Environmental Restrictions.

3.04. Incorporation into Deeds and Leases. This Covenant shall be

incorporated by reference in each and every deed and Lease for any portion of the Property.

3.05. Conveyance of Property. The Owner and new Owner shall provide Notice to the Department and the U.S. EPA not later than 30 calendar days after any conveyance or receipt of any ownership interest in the Property (excluding Leases, and mortgages, liens, and other non-possessory encumbrances). The Notice shall include the name and mailing address of the new Owner of the Property and shall reference the site name and site code as listed on page one of this Covenant. The notice shall also include the Assessor's Parcel Number(s) noted on page one. If the new Owner's property has been assigned a different Assessor Parcel Number, each such Assessor Parcel Number that covers the Property must be provided. The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect proposed conveyance, except as otherwise provided by law or by administrative order.

3.06. Costs of Administering the Covenant to Be Paid by Owner. The Department has already incurred and will in the future incur costs associated with this Covenant. Therefore, the Covenantor hereby covenants for the Covenantor and for all subsequent Owners that, pursuant to California Code of Regulations, title 22, section 67391.1(h), the Owner agrees to pay the Department's costs in administering, implementing and enforcing this Covenant.

ARTICLE IV
RESTRICTIONS AND REQUIREMENTS

4.01. Prohibited Uses. The Property shall not be used for any of the following purposes without prior written approval by the Department pursuant to Health and Safety Code section 25227 and prior written notice to U.S. EPA :

(a) A residence, including single or multifamily housing, mobile homes, or factory-built housing constructed or installed for use as residential human habitation.

(b) A hospital for humans.

(c) A public or private school for persons under 18 years of age.

(d) A day care center or a playground for children.

4.02. Soil Management. Soil management activities at the Capped Property are subject to the following requirements in addition to any other applicable Environmental Restrictions:

(a) No activities that will disturb the soil at or below grade or below concrete (e.g., excavation, grading, removal, trenching, filling, earth movement, mining, or drilling) shall be allowed at the Property without a Soil Management Plan pre-approved by the Department and U.S. EPA in writing.

(b) Any soil brought to the surface by grading, excavation, trenching or backfilling shall be managed in accordance with all applicable provisions of state and federal law.

4.03. Prohibited Activities. The following activities shall not be conducted at the Property:

(a) Drilling for any water, oil, or gas without prior written approval by the Department.

(b) Extraction or removal of groundwater without a Groundwater Management Plan pre-approved by the Department in writing.

(c) Activity that may alter, interfere with, or otherwise affect the integrity or effectiveness of, or the access to, monitoring, operation or maintenance of the concrete cover at the Capped Property without prior written approval of the Department and U.S. EPA.

4.04. Written Notice of Covenant. Prior to any sale, lease, or rental of any portion of the Property, the Owner shall provide a copy of this Covenant to the buyer, lessee, or renter to ensure that the buyer, lessee, or renter is on notice of the restrictions and requirements of this Covenant. Prior to recordation of any easement on any portion of the Property, the Owner shall provide a copy of this Covenant to the easement holder to ensure that the easement holder is on notice of the restrictions and requirements of this Covenant. Covenantor shall also provide a copy of this Covenant to all existing Occupants and easement holders of record within 30 days of recording this Covenant.

4.05. Access for Department. The Department shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the Department in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect the Department's right of entry and access, or authority to take response actions, under any applicable State Law.

4.06. Access for U.S EPA. The U.S. EPA shall have reasonable right of entry and access to the Property for inspection, investigation, remediation, monitoring, and other activities as deemed necessary by the U.S. EPA in order to protect human health or safety or the environment. Nothing in this instrument shall limit or otherwise affect U.S. EPA's right of entry and access, or U.S. EPA's authority to take actions, under any applicable law.

4.07. Access for Implementing Operation and Maintenance. The entity or person responsible for implementing the operation and maintenance activities, if any, shall have reasonable right of entry and access to the Property for the purpose of implementing such operation and maintenance activities until the Department determines that no further operation and maintenance activity is required.

4.08. Inspection and Reporting Requirements. The Owner shall conduct an annual inspection of the Property verifying compliance with this Covenant; shall submit an annual inspection report to the Department for its approval by January 15th of each year; and also send a copy to U.S. EPA. Attached as Exhibit F is a sample format for an annual inspection report. The annual inspection report must include the dates, times, and names of those who conducted the inspection and reviewed the annual inspection report. It also shall describe how the observations that were the basis for the statements and conclusions in the annual inspection report were performed (e.g., drive by, fly over, walk in, etc.). If any violation is noted, the annual inspection report must detail the steps taken to correct the violation and return to compliance. If the Owner identifies any violations of this Covenant during the annual inspection or at any other

time, the Owner must within 10 calendar days of identifying the violation: (a) determine the identity of the party in violation; (b) send a letter advising the party of the violation of the Covenant; and (c) demand that the violation cease immediately. Additionally, a copy of any correspondence related to the violation of this Covenant shall be sent to the Department and U.S. EPA within 10 calendar days of its original transmission.

4.09. Five-Year Review. In addition to the annual reviews noted above, after a period of five (5) years from January 15, 2021 and every five (5) years thereafter, Owner shall submit a Five-Year Review report documenting its review of the remedy implemented and its evaluation to determine if human health and the environment are being adequately protected by the remedy as implemented. The Owner shall submit this report to DTSC, and submit a copy to U.S. EPA. The report shall describe the results of all inspections, sampling analyses, tests and other data generated or received by Owner and evaluate the adequacy of the implemented remedy in protecting human health and the environment. As a result of any review work performed, Department may require Owner to perform additional review work or modify the review work previously performed by Owner.

4.10. Changes to Use or Condition of Property. Any changes to land use, movement of PCB contaminated soils, or discovery of new contamination requires notification to, and may require additional approval from, the U.S. EPA by the Owner and/or Occupant.

4.11. Access for Five-Year Reviews. The entity, person or persons responsible for Five-Year Reviews shall have reasonable right of entry and access to the Property for the purpose of implementing these activities. Such right of entry and access shall continue until such time as the U.S. EPA and DTSC both determine that no further Five-Year Review activities are required.

ARTICLE V
ENFORCEMENT

5.01. Enforcement. Failure of the Owner or Occupant to comply with this Covenant shall be grounds for the Department to require modification or removal of any Improvements constructed or placed upon any portion of the Property in violation of this

Covenant. Violation of this Covenant, such as failure to submit (including submission of any false statement) record or report to the Department, shall be grounds for the Department to pursue administrative, civil, or criminal actions, as provided by law.

5.02. Enforcement Rights of U.S. EPA as Third-Party Beneficiary. U.S. EPA, as a third-party beneficiary, has the right to enforce the Environmental Restrictions contained herein.

ARTICLE VI
VARIANCE, REMOVAL AND TERM

6.01. Variance from Environmental Restrictions. Any person may apply to the Department for a written variance from any of the Environmental Restrictions imposed by this Covenant. Such application shall be made in accordance with Health and Safety Code section 25223. A copy of the application shall be submitted to the U.S. EPA simultaneously with the application submitted to the Department. No variance may be granted under this paragraph without prior notice and opportunity to comment by U.S. EPA.

6.02 Termination, Modification, and/or Removal of Environmental Restrictions. Any person may apply to the Department to terminate, modify, and/or remove any or all of the Environmental Restrictions imposed by this Covenant or terminate the Covenant in its entirety. Such application shall be made in accordance with Health and Safety Code section 25224 and a copy of the application shall be submitted to U.S. EPA simultaneously with the application submitted to the Department. No termination may be granted under this paragraph without prior notice to and opportunity to comment by U.S. EPA.

6.03 Term. Unless ended in accordance with paragraph 6.02, by law, or by the Department in the exercise of its discretion, this Covenant, after providing notice to and an opportunity to comment by U.S. EPA, shall continue in effect in perpetuity.

ARTICLE VII
MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be

construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof, to the general public or anyone else for any purpose whatsoever.

7.02. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of Riverside within 10 calendar days of the Covenantor's receipt of a fully executed original. The Covenantor shall also provide copies showing the County Recorder's tracking information of its recording (i.e., document number or book and page number information) to the Department and U.S. EPA within ten (10) days of receiving it from the County Recorder's Office.

7.03. Notices. Whenever any person gives or serves any Notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (a) when delivered, if personally delivered to the person being served or to an officer of a corporate party being served; or (b) five calendar days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

To Owner:
Mark Willett, General Manager
Clow Valve Company
1375 Magnolia Avenue
Corona, California 91719
And

To Department:
A. Edward Morelan, Chief
Cypress Cleanup Branch
Site Mitigation and Restoration Program
Department of Toxic Substances Control
5796 Corporate Avenue
Cypress, California 90630

To U.S. EPA:
U.S. Environmental Protection Agency
Region IX
Attention**:** PCB Coordinator (Land Chemicals and Redevelopment Division)
75 Hawthorne Street
San Francisco, CA 94105-3901

Any party may change its address or the individual to whose attention a Notice is to be

sent by giving advance written Notice in compliance with this paragraph.

7.04. Partial Invalidity. If this Covenant or any of its terms are determined by a court of competent jurisdiction to be invalid for any reason, the surviving portions of this Covenant shall remain in full force and effect as if such portion found invalid had not been included herein.

7.05. Statutory References. All statutory or regulatory references include successor provisions.

7.06. Incorporation of Exhibits. All exhibits and attachments to this Covenant are incorporated herein by reference.

IN WITNESS WHEREOF, the Covenantor and the Department hereby execute this Covenant.

EXHIBIT F

LAND USE COVENANT
SAMPLE ANNUAL INSPECTION REPORT (2 Pages)

Site name:

Site address:

Current Site owner:

Date and times of inspection:

Name(s) of individual(s) who performed inspection:

How inspection observations were made (e.g. drive-by, fly-over, walking the Property):

1. Since the last annual inspection, has there been a change in the land use, such that there are now residences, a hospital for humans, a public or private school for persons under 21 years of age, or a day care center for children on the restricted Property?
   ☐ Yes ☐ No ☐ Not an applicable restriction

2. Since the last annual inspection, has the soil been disturbed on the restricted Property? Was evidence of soil disturbance observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

3. Since the last annual inspection, has there been any drilling on the restricted Property? Was evidence of drilling observed on the restricted Property during the inspection?
   ☐ Yes ☐ No ☐ Not an applicable restriction

Cap Condition

4. Since the last annual inspection, has there been any damage to, disturbance of, or modifications to the existing building foundation and/or surrounding pavement that serves as the cap over contaminated soil?
   ☐ Yes ☐ No

5. Has there been any damage to, disturbance of, or modifications to the asphalt/concrete Cap covering the restricted Property?
   ☐ Yes ☐ No

Land Use Covenant Compliance

6. Has there been a change in the land use of the property from commercial/industrial?
   ☐ Yes ☐ No

If the response to any of the above questions is yes, describe the circumstances.

Photos should be attached to this report that show the use of the Restricted Property at the time of the inspection and the condition of any Caps on the restricted Property. Photos showing any cracks in or damage to the Cap should also be included.

I certify under penalty of law that this document and all attachments were prepared by me or under my direction or supervision. With the exception of any areas of non-compliance noted above, all uses and activities on the restricted Property were found to be in compliance with the restrictions and requirements of the Land Use Covenant. Based on my personal knowledge or inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete.

FINANCIAL ASSURANCE COST ESTIMATE VALIDATION MEMORANDUM

TO: Irena Edwards
Environmental Scientist
Site Mitigation and Restoration Program
DTSC Cypress Office

FROM: Christine P. Brown, P.E.
Hazardous Substances Engineer
Engineering Services, Southern California
Engineering and Special Projects Office

REVIEWER: Perry Myers, P.E.
Unit Chief, Engineering Services North
Engineering and Special Projects Office, Sacramento

SUBJECT: REVIEW OF THE FINANCIAL ASSURANCE OPERATION AND MAINTENANCE COST ESTIMATE FOR CLOW VALVE COMPANY, 1375 MAGNOLIA AVENUE, CORONA, RIVERSIDE COUNTY, CALIFORNIA (Site Code: DTSC600876)

DATE: May 28, 2021

Documents Reviewed

The result of this review is limited to the following documents, or sections thereof:

1. Operation and Maintenance Cost Estimate, part of Response to Comments, dated April 21, 2021, provided by EarthCon Consultants, CA.

COST ESTIMATE REVIEW

The Department of Toxic Substances Control's (DTSC's) Cost Estimating Work Group (CEWG) engineering staff reviewed the Operation and Maintenance Financial Assurance Cost Estimate for the Clow Valve Company in Corona, Riverside County, California to determine if the estimated dollar amount is sufficient for compliance with the financial assurance cost estimate requirements established for the site. This memorandum provides the findings of our review. CEWG provided a previous memorandum dated March 8, 2021 with review of the corrective action cost estimate. All comments in that memorandum have been adequately addressed.

BACKGROUND

The following information is taken from the Revised Corrective Measures Study (CMS) dated February 19, 2018.

The Site was originally developed for the production of iron pipes and connections by American Foundry in approximately 1950. In 1960, Rich Manufacturing of Los Angeles acquired the property and moved their iron pipe manufacturing business to the Corona location, adding additional structures in 1967 for the machine shop and brass foundry. Clow Valve, a manufacturer of wrought iron pipe and other foundry products as early as 1878, acquired Rich Manufacturing Company of Corona in 1972. This acquisition added the wet barrel fire hydrant to Clow Valve's product line of waterworks products. In 1985, McWane, Inc. purchased all Clow Corporation's stock and Clow became a wholly owned subsidiary and eventually operating division of McWane.

Current manufacturing processes include machining, testing, coating, and shipping wet barrel fire hydrants. Finished valves are also stored and distributed from this location. Anaco, Clow Valve's sister company, is also on-Site and is engaged in the manufacturing of rubber soil pipe couplings. Two other McWane Divisions, McWane Ductile-Utah and Tyler Union operate product distribution centers on the Site.

Site soils are comprised of Holocene Older and Younger alluvium and bedrock. The younger alluvium consists of unconsolidated sand, gravel, and silt. The older alluvium consists of semi-consolidated buff to dark brown sand, gravel, and silt. During previous site investigations, groundwater beneath the Site was encountered at approximately 47 ft bgs in coarse granular material composed of sand and gravel. The regional aquifer is reported to start at 124 ft bgs.

As a result of facility operations, site soils have been contaminated with lead, TPH and polychlorinated biphenyls (PCBs), and 1,1,2,2-tetrachloroethane has been found in soil gas. The CMS proposed a combined remedial approach including engineering controls (capping system – asphalt-concrete pavement), excavation with off-site disposal for soils

with high concentrations of PCBs (concentrations exceeding 100 mg/kg), and institutional controls (Soil Management Plan and Use Covenant). The remediation of PCB contamination is regulated by USEPA. Corrective Measures are ongoing.

The Scope of Work for the Operation and Maintenance activities at the site includes:

- Pavement inspection, maintenance, and repair.
- Land Use Covenant inspection and reporting.
- DTSC oversight

Based on my review of the above listed document, I have concluded that the Financial Assurance Cost Estimate for $1,559,685.16 in 2021-year dollars is valid and reasonably estimates the costs for a third party to perform the Scope of Work in the event the Owner or Operator will not.

The Cost Estimating Working Group (CEWG) review was based on the information available at the time the review was performed and does not constitute a guarantee of the accuracy of the assumptions used by the responsible party to develop their financial assurance cost estimate. The review of this financial assurance cost estimate is not intended to be all-inclusive as this review does not include a technical assessment and evaluation of the remedial design/controlling document or the accuracy and reliability of data used to support the assumptions.

The Financial Assurance Cost Estimate and supporting documentation was reviewed under the responsible charge of the following qualified Civil Engineer licensed in the State of California.

SUBJECT: RESPONSE TO COMMENTS

***FINANCIAL ASSURANCE COST ESTIMATE REVIEW* – CLOW VALVE COMPANY, 1375 MAGNOLIA AVENUE, CORONA. 22120-600876-48 WR:20039018**

Dear Ms. Edwards,

EarthCon Consultants CA, Inc. (EarthCon) on behalf of Clow Valve Company (Clow), is submitting this Response to Comments (RTC) letter addressing the DTSC comments provided on the *Financial Assurance Cost Estimate Review* letter dated March 8, 2021. Based on the comments provided, the RTCs associated with the requested information are provided below:

Comment 1: *The cost estimate should include a basis of estimate that describes the tasks involved and costs for each task. Line items should be included under each task. Cost data should include unit costs, materials, labor, and equipment and show adequate detail to allow CEWG to verify the cost estimate.*

Response: Line items for the individual tasks are provided in Appendix A. The general tasks include annual site inspections, cover operations and maintenance (O&M), and DTSC oversight. The costs associated with O&M of the asphalt cover utilize the City of Corona's Public Works form titled Quantity Estimate for Public Improvements (see Appendix B). This form includes materials, labor, and equipment in their cost estimate. In addition, when redevelopment activities occur the associated details will be utilized to prepare a revised O&M cost estimate.

Comment 2: *A figure showing the capped area of the site should be included with the cost estimate. The areal extent of the cap should be specified in the cost estimate. An engineering description of the cap should also be included in the basis of the estimate.*

Response: A copy of the grading plan is provided in Appendix B. The areal extent of the cap is identified on page one of the plans and is also utilized for the area calculations for the maintenance associated with AOC1/AOC5. Additionally, a description of the cap is included in the text portions of the grading plan documents.

Comment 3: *The asphalt pavement maintenance should include costs for crack repair, fog/slurry seal, and pavement resurfacing. CEWG recommends a resurfacing interval of 10 years.*

Response: As noted in Comment 1, line items for the individual tasks are provided in Appendix A. This includes minor crack repair, fog/slurry seal, and pavement resurfacing. As requested, the resurfacing interval of 10 years is included.

Comment 4: *DTSC oversight costs, including Land Use Covenant oversight, should be specified in the cost estimate.*

Response: As noted in Comment 1, the DTSC oversight costs are included. See Appendix A.

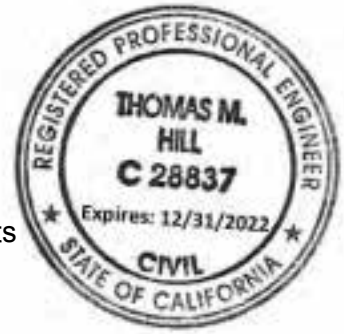
Comment 5: *A contingency should be included in the cost estimate. CEWG recommends at least a 15% contingency.*

Response: A 15% contingency is included. See Appendix A.

Comment 6: *The cost estimate should be prepared by a California licensed professional engineer because the operation and maintenance activities involve civil engineering. The cost estimate should be dated, signed, and stamped by the engineer in responsible charge who prepared the cost estimate.*

Response: The cost estimates have been approved and certified by a California licensed professional civil engineer. Please see the estimates provided in Appendix A.

If there are any questions regarding this letter, please contact one of the undesigned at 714-500-5400.



Respectfully submitted,

Rebecca Sundilson

CITY OF CORONA
PRECISE GRADING PLAN
1375 MAGNOLIA AVENUE

GRADING GENERAL NOTES

1. A GRADING PERMIT FROM THE PUBLIC WORKS DEPARTMENT IS REQUIRED. ALL GRADING SHALL COMPLY WITH THE REQUIREMENTS OF THE CITY OF CORONA GRADING REGULATIONS– CORONA MUNICIPAL CODE 15.36. THESE PLANS, SPECIAL INSTRUCTIONS ON THE PERMIT, AND THE GEOTECHNICAL INVESTIGATION AND LIQUEFACTION EVALUATION DATED SEPTEMBER 10, 2019 BY GEOTECHNICAL PROFESSIONALS INC., AND ALL SUBSEQUENT ADDENDA.
2. SOURCE OF TOPOGRAPHY IS BASED ON FIELD SURVEY DATED SEPTEMBER 23, 2018.
3. A PRE–GRADING MEETING AT THE SITE IS REQUIRED BETWEEN THE CITY INSPECTOR, THE CIVIL ENGINEER, THE GEOTECHNICAL ENGINEER AND THE GRADING CONTRACTOR. CALL THE PUBLIC WORKS DEPARTMENT INSPECTION DIVISION AT (951) 279–3511 TO SCHEDULE A PRE–GRADING MEETING AT LEAST 48 HOURS PRIOR TO START OF ANY WORK.
4. HOURS OF OPERATION ARE 7:00 A.M. TO 5:00 P.M. – MONDAY THROUGH FRIDAY EXCLUDING HOLIDAYS.
5. SEPARATE PERMITS SHALL BE REQUIRED FOR ANY IMPROVEMENT WORK IN THE PUBLIC RIGHT–OF–WAY.
6. CONSTRUCTION MATERIAL AND EQUIPMENT SHALL NOT OCCUPY ANY PORTION OF THE PUBLIC RIGHT–OF–WAY, SUCH AS STREET, ALLEY OR PUBLIC SIDEWALK AT ANY TIME. TEMPORARY USE OF PUBLIC RIGHT–OF–WAY, WHENEVER REQUESTED, MUST BE REVIEWED AND APPROVED BY THE PUBLIC WORKS DIRECTOR.
7. REPAIR OR REPLACE ALL EXISTING DAMAGED OR ALTERED PUBLIC IMPROVEMENTS AS REQUIRED BY THE PUBLIC WORKS DIRECTOR.
8. ALL SURVEY MONUMENTS SHALL BE PROTECTED AND PERPETUATED IN PLACE. ANY DISTURBED OR COVERED MONUMENTS SHALL BE RESET BY A QUALIFIED CIVIL ENGINEER OR A LICENSED LAND SURVEYOR.
9. PRIOR TO TAKING WATER FROM A CITY FIRE HYDRANT, THE CONTRACTOR SHALL MAKE ARRANGEMENTS WITH THE PUBLIC WORKS DEPARTMENT TO OBTAIN A FIRE HYDRANT WATER METER. METER LOCATION MAY NOT BE ALTERED WITHOUT DEPARTMENT OF WATER AND POWER APPROVAL.
10. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO VERIFY THE LOCATION OF ALL UTILITIES OR STRUCTURES ABOVE OR BELOW GROUND, SHOWN OR NOT SHOWN ON THESE PLANS. THE CONTRACTOR WILL BE HELD RESPONSIBLE FOR ALL DAMAGE TO ANY UTILITIES OR STRUCTURES CAUSED BY HIS OPERATION.
11. STRICT ADHERENCE TO DUST CONTROL REQUIREMENTS SHALL BE ENFORCED. ADJACENT STREETS ARE TO BE CLEANED DAILY OF ALL DIRT AND DEBRIS RESULTING FROM THIS OPERATION.
12. SEPARATE PERMITS FROM THE BUILDING DIVISION SHALL BE REQUIRED FOR ALL WALLS.
13. AN APPROVED PRECISE GRADING PLAN WILL BE REQUIRED PRIOR TO A BUILDING PERMIT BEING ISSUED.
14. THE DESIGN CIVIL ENGINEER/GEOTECHNICAL ENGINEER/ENGINEERING GEOLOGIST OF RECORD SHALL EXERCISE SUFFICIENT CONTROL DURING GRADING AND CONSTRUCTION TO ENSURE COMPLIANCE WITH THE PLANS, SPECIFICATIONS, AND CODE REQUIREMENTS WITHIN THEIR PURVIEW. THE ENGINEERS SHALL SUBMIT "ACKNOWLEDGMENT CONCERNING EMPLOYMENT" FORM TO THE CITY PRIOR TO THE ISSUANCE OF A GRADING PERMIT.
15. REVISIONS TO THE PLANS ARE TO BE SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR REVIEW AND APPROVAL PRIOR TO CHANGING ORIGINAL MYLARS.
16. THE CIVIL ENGINEER SHALL SUBMIT WRITTEN CERTIFICATION OF COMPLETION OF ROUGH GRADING IN ACCORDANCE WITH THE APPROVED GRADING PLAN AND CERTIFICATION OF BUILDING PAD ELEVATION PRIOR TO ISSUANCE OF THE BUILDING PERMIT. PAD ELEVATION GRADING TOLERANCE SHALL NOT EXCEED ±0.10'.
17. AN "AS–BUILT" GRADING PLAN SHALL BE SUBMITTED AT THE COMPLETION OF WORK SHOWING ALL WATER QUALITY MANAGEMENT PLAN FACILITIES.
18. GRADING SHALL BE PERFORMED UNDER THE SUPERVISION OF THE GEOTECHNICAL ENGINEER WHO SHALL CERTIFY THAT ALL FILL HAS BEEN PROPERLY PLACED AND SUBMIT A FINAL COMPACTION REPORT FOR ALL FILLS OVER 1' DEEP.
19. THE GEOTECHNICAL ENGINEER SHALL, AFTER CLEARING AND PRIOR TO THE PLACEMENT OF FILL IN CANYONS, INSPECT EACH CANYON FOR AREAS OF ADVERSE STABILITY AND TO DETERMINE THE PRESENCE OR ABSENCE OF SUBSURFACE WATER OR SPRING FLOW. IF NEEDED, DRAINS WILL BE DESIGNED AND CONSTRUCTED PRIOR TO THE PLACEMENT OF FILL IN EACH RESPECTIVE CANYON.
20. FILL AREAS SHALL BE CLEANED OF ALL VEGETATION AND DEBRIS, SCARIFIED TO A MINIMUM DEPTH OF 12 INCHES AND INSPECTED BY THE GEOTECHNICAL ENGINEER PRIOR TO THE PLACING OF FILL.
21. ALL DELETERIOUS MATERIALS, I.E., LUMBER, LOGS, BRUSH, OR ANY OTHER ORGANIC MATERIALS OR RUBBISH SHALL BE REMOVED FROM ALL AREAS TO RECEIVE COMPACTED FILL.
22. UNSUITABLE MATERIALS, SUCH AS TOPSOIL, WEATHERED BEDROCK, ETC., SHALL BE REMOVED AS REQUIRED BY GEOTECHNICAL ENGINEER (AND ENGINEERING GEOLOGIST, WHERE EMPLOYED) FROM ALL AREAS TO RECEIVE COMPACTED FILL OR DRAINAGE STRUCTURES.
23. FILLS SHALL BE BENCHED INTO COMPETENT MATERIAL.
24. WHEN CUT PADS ARE BROUGHT TO NEAR GRADE, THE GEOTECHNICAL ENGINEER SHALL DETERMINE IF THE BEDROCK IS EXTENSIVELY FRACTURED OR FAULTED AND WILL READILY TRANSMIT WATER. IF CONSIDERED NECESSARY BY THE GEOTECHNICAL ENGINEER, A COMPACTED FILL BLANKET WILL BE PLACED.
25. WHERE SUPPORT OR BUTTRESSING OF CUT AND NATURAL SLOPES IS DETERMINED TO BE NECESSARY BY THE GEOTECHNICAL ENGINEER, THE GEOTECHNICAL ENGINEER SHALL SUBMIT DESIGN, LOCATIONS AND CALCULATIONS TO THE PUBLIC WORKS DIRECTOR PRIOR TO CONSTRUCTION. THE GEOTECHNICAL ENGINEER WILL INSPECT AND CONTROL THE CONSTRUCTION OF THE BUTTRESSING AND CERTIFY TO THE STABILITY OF THE SLOPE AND ADJACENT STRUCTURES UPON COMPLETION.
26. ALL CUT SLOPES SHALL BE INVESTIGATED, BOTH DURING AND AFTER GRADING BY THE GEOTECHNICAL ENGINEER, TO DETERMINE IF ANY SLOPE HAS STABILITY PROBLEMS. SHOULD EXCAVATION DISCLOSE ANY GEOLOGICAL HAZARDS, THE GEOTECHNICAL ENGINEER SHALL RECOMMEND NECESSARY TREATMENT TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL. ALL APPROVALS TO BE GRANTED ON THE BASIS OF DETAILED GEOLOGICAL MAPPING AND WRITTEN RECOMMENDATION FROM THE GEOTECHNICAL ENGINEER.
27. MAXIMUM ALLOWABLE CUT AND FILL SLOPES ARE 2 TO 1 OR 30' IN HEIGHT WITHOUT APPROVAL OF THE PUBLIC WORKS DIRECTOR. IF PROPOSED CUT AND FILL SLOPES ARE STEEPER THAN 2:1 OR OVER 30' IN HEIGHT, STABILITY CALCULATIONS WITH A SAFETY FACTOR OF AT LEAST ONE AND FIVE TENTHS (1.5) SHALL BE SUBMITTED BY A GEOTECHNICAL ENGINEER FOR APPROVAL FROM THE PUBLIC WORKS DIRECTOR.
28. PROVIDE 4' WIDE BY 1' HIGH BERM OR EQUIVALENT ALONG THE TOP OF ALL FILL SLOPES OVER 5' HIGH, EXCEPT WHERE SHOWN OTHERWISE ON THE PLANS.
29. ALL SLOPES ADJACENT TO PUBLIC RIGHT–OF–WAY SHALL CONFORM TO SECTION 15.36.220 OF THE CORONA MUNICIPAL CODE.
30. ALL SLOPES 4' OR HIGHER SHALL BE PLANTED AND COMPLY WITH REQUIREMENTS OF CHAPTER 17 OF THE CORONA MUNICIPAL CODE.
31. TERRACE DRAINS, INTERCEPTOR DRAINS AND DOWN DRAINS SHALL BE CONSTRUCTED OF 4" P.C.C. (OR GUNITE) REINFORCED WITH 6"x6" –2 1.4x1.4 W.W.M. REBAR SHALL BE GRADE 60 BILLET STEEL CONFORMING TO ASTM A615.
32. ALL CONCRETE STRUCTURES THAT COME IN CONTACT WITH THE ON–SITE SOILS SHALL BE CONSTRUCTED WITH TYPE II OR V CEMENT AS DEEMED NECESSARY BY SOLUBLE SULFATE CONTENT TEST CONDUCTED BY THE GEOTECHNICAL ENGINEER. ALL CONCRETE SHALL BE CITY STANDARD 560–C–3250 (600–E 3250 FOR GUNITE) PER CITY STANDARD SPECIFICATIONS.
33. GROUND SHALL BE PRE–WETTED PRIOR TO THE PLACEMENT OF CONCRETE. MOISTURE LOSS RETARDANT SHALL BE USED WHEN REQUIRED BY THE GEOTECHNICAL ENGINEER OR PUBLIC WORKS DIRECTOR.
34. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND/OR OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL.

POST CONSTRUCTION BMP GENERAL NOTES:

1. THIS PLAN UTILIZES STRUCTURAL BEST MANAGEMENT PRACTICES (BMPS) FOR POST CONSTRUCTION STORM WATER TREATMENT.
2. CONSTRUCT THE STORM WATER TREATMENT FACILITIES AFTER ALL CONTRIBUTING DRAINAGE AREAS ARE STABILIZED AND TO THE SATISFACTION OF THE ENGINEER OF RECORD.
3. DO NOT USE THE DEVICES AS TEMPORARY SEDIMENT CONTROL FACILITIES DURING CONSTRUCTION.
4. THE FOLLOWING BMPS HAVE BEEN DESIGNED INTO THE PLANS. PLEASE REFER TO THE PROJECT'S APPROVED WATER QUALITY MANAGEMENT PLAN (WQMP) FOR ADDITIONAL BMP's AND OPERATION AND MAINTENANCE DETAILS:

   A. BIORETENTION FACILITY AND OR ON–SITE RETENTION

NOTE:

1. A SEWER BACKFLOW PREVENTOR IS NOT REQUIRED FOR THIS PROJECT
2. WATER PRESSURE REDUCING VALVES ARE REQUIRED FOR THIS PROJECT

NOTICE TO CONTRACTORS

THE EXISTENCE AND LOCATION OF ANY UNDERGROUND UTILITY PIPES, CONDUITS, OR STRUCTURES SHOWN ON THESE PLANS WERE OBTAINED BY A SEARCH OF AVAILABLE RECORDS. TO THE BEST OF OUR KNOWLEDGE, THERE ARE NO EXISTING UTILITIES EXCEPT THOSE SHOWN ON THESE PLANS. THE CONTRACTOR IS REQUIRED TO TAKE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN ON THESE DRAWINGS. THE CONTRACTOR FURTHER ASSUMES ALL LIABILITY AND RESPONSIBILITY FOR THE UTILITY PIPES, CONDUITS OR STRUCTURES, SHOWN OR NOT SHOWN ON THESE PLANS

CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOBSITE CONDITIONS DURING THE COURSE OF CONSTRUCTION ON THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS OR PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY, AND HOLD THE CITY, THE OWNER, AND THE ENGINEER HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT.

THE CONTRACTOR SHALL CALL IN A LOCATION REQUEST TO UNDERGROUND SERVICE ALERT (USA) PH. 811, TWO (2) WORKING DAYS PRIOR TO DIGGING. NO CONSTRUCTION PERMIT ISSUED BY THE PUBLIC WORKS DEPARTMENT SHALL BE VALID INVOLVING UNDERGROUND FACILITIES UNLESS THE APPLICANT HAS AN INQUIRY IDENTIFICATION NUMBER ISSUED BY U.S.A.

CARE SHOULD BE TAKEN TO PREVENT GRADED DITCHES AND SWALES FROM UNDERMINING STREET IMPROVEMENTS. UPON INSPECTION OF THE SITES, THE PUBLIC WORKS DIRECTOR MAY REQUIRE TEMPORARY GUNITE SWALES, ENTERING OR LEAVING IMPROVEMENTS.

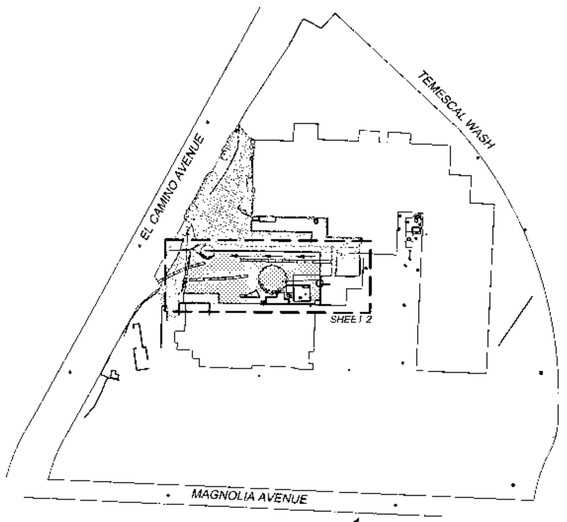
DECLARATION OF ENGINEER OF RECORD

I HEREBY DECLARE THAT THE DESIGN OF THE IMPROVEMENTS SHOWN ON THESE PLANS COMPLIES WITH ALL PROFESSIONAL ENGINEERING STANDARDS AND PRACTICES. AS THE ENGINEER OF RECORD FOR THE PLANS, I ASSUME FULL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. WITH RESPECT TO THE PLAN CHECK PERFORMED BY THE CITY OF CORONA, I UNDERSTAND AND ACKNOWLEDGE THE FOLLOWING: (1) THE PLAN CHECK IS A REVIEW FOR THE LIMITED PURPOSE OF ENSURING THE PLANS COMPLY WITH THE CITY'S STANDARDS, PROCEDURES, POLICIES, AND ORDINANCES, (2) THE PLAN CHECK IS NOT A DETERMINATION OF THE TECHNICAL ADEQUACY OF THE DESIGN OF THE IMPROVEMENTS, AND (3) THE PLAN CHECK DOES NOT RELIEVE ME OF MY LEGAL AND PROFESSIONAL RESPONSIBILITY FOR THE DESIGN OF THE IMPROVEMENTS. AS THE ENGINEER OF RECORD, I AGREE TO DEFEND, INDEMNIFY, AND HOLD HARMLESS THE CITY, ITS ELECTED OFFICIALS, EMPLOYEES, AND AGENTS FROM ANY AND ALL ACTUAL OR ALLEGED CLAIMS, DEMANDS, CAUSES OF ACTION, LIABILITY, LOSS, DAMAGE, OR INJURY TO PROPERTY OR PERSONS, INCLUDING WRONGFUL DEATH, WHETHER IMPOSED BY A COURT OF LAW OR BY ADMINISTRATIVE ACTION OF ANY FEDERAL, STATE, OR LOCAL GOVERNMENTAL AGENCY, ARISING OUT OF OR INCIDENT TO ANY NEGLIGENT ACTS, OMISSIONS, OR ERRORS BY THE ENGINEER OF RECORD, ITS EMPLOYEES, CONSULTANTS, OR AGENTS.

WILLIAM D. BROOKS, RCE 53114 — EXPIRES 6/30/21 — 3/8/2021 DATE

ENGINEER OF RECORD

GEOTECHNICAL ENGINEER'S STATEMENT



THIS PLAN HAS BEEN REVIEWED BY GEOTECHNICAL PROFESSIONALS INC. AND APPEARS TO BE IN GENERAL CONFORMANCE WITH RECOMMENDATIONS IN OUR REPORT DATED SEPTEMBER 10, 2019–PROJECT NO. 2945.1. THIS PLAN HAS BEEN REVIEWED FOR GEOTECHNICAL ASPECTS ONLY. WE MAKE NO REPRESENTATION REGARDING ACCURACY OF DIMENSIONS, QUANTITIES, MEASUREMENTS, CALCULATIONS, OR ANY PORTION OF THE DESIGN. GEOTECHNICAL CONDITIONS AND RECOMMENDATIONS SHOULD BE CONFIRMED BY THE GEOTECHNICAL CONSULTANT IN THE FIELD AT TIME OF CONSTRUCTION.

LEGAL DESCRIPTION:

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF CORONA, IN THE COUNTY OF RIVERSIDE, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS:

THAT PORTION OF THE NORTHWEST QUARTER OF SECTION 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, AS SHOWN BY SECTIONALIZED SURVEY OF THE RANCHO EL SOBRANTE DE SAN JACINTO AND OF LOT 13 IN BLOCK 63 OF THE LANDS OF THE RIVERSIDE LAND AND IRRIGATING COMPANY, AS SHOWN BY MAP ON FILE IN BOOK 1 PAGE 70 OF MAPS, SAN BERNARDINO COUNTY RECORDS, BOUNDED AS FOLLOWS: ON THE SOUTHEAST BY THE SOUTHWESTERLY EXTENSION OF THE NORTHWEST LINE OF MAGNOLIA AVENUE, AS SHOWN ON RECORD OF SURVEY ENTITLED "RECORD OF SURVEY OF A PORTION OF LOTS 11, 12, 13, 14, 15, IN BLOCK 63 OF RIVERSIDE LAND AND IRRIGATING COMPANY AND A PORTION OF SECTIONS 29 AND 32, TOWNSHIP 3 SOUTH, RANGE 6 WEST, SAN BERNARDINO BASE AND MERIDIAN" ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS, ON THE WEST BY THE EASTERLY LINE OF THE PROPERTY SPUR OF THE ATCHINSON, TOPEKA, AND SANTA FE RAILWAY COMPANY; AND ON THE NORTHEAST BY THE SOUTHERLY AND SOUTHWESTERLY LINE OF PARCELS 5 TO 11, INCLUSIVE, OF SAID RECORD OF SURVEY ON FILE IN BOOK 20, PAGE 3 OF RECORDS OF SURVEY, RIVERSIDE COUNTY RECORDS.

EXCEPTING THEREFROM THAT PORTION GRANTED TO THE RIVERSIDE COUNTY FLOOD CONTROL AND WATER DISTRICT CONSERVATION DISTRICT BY DEED RECORDED OCTOBER 22, 1984 AS INSTRUMENT NO. 84–227387 AND RE–RECORDED FEBRUARY 11, 1985 AS INSTRUMENT NO. 85–028214 BOTH OF OFFICIAL RECORDS.

EARTHWORK QUANTITIES

NOTE: THE CONSTRUCTION QUANTITIES SHOWN ON THESE PLANS ARE FOR CITY FEE PURPOSES ONLY.
IT IS THE CONTRACTOR'S RESPONSIBILITY TO PERFORM INDIVIDUAL TAKEOFFS FOR BIDDING PURPOSES.

(PRELIMINARY QUANTITIES DO NOT INCLUDE SHRINKAGE FACTOR AND OVEREXCAVATION OVER THE SITE)

RAW CUT	582 CU. YDS.
RAW FILL	0 CU. YDS.
NET EXPORT	–582 CU. YDS.

SITE AREA

TOTAL AREA – 16.9 ACRES
DISTURBED AREA – 0.7 ACRES

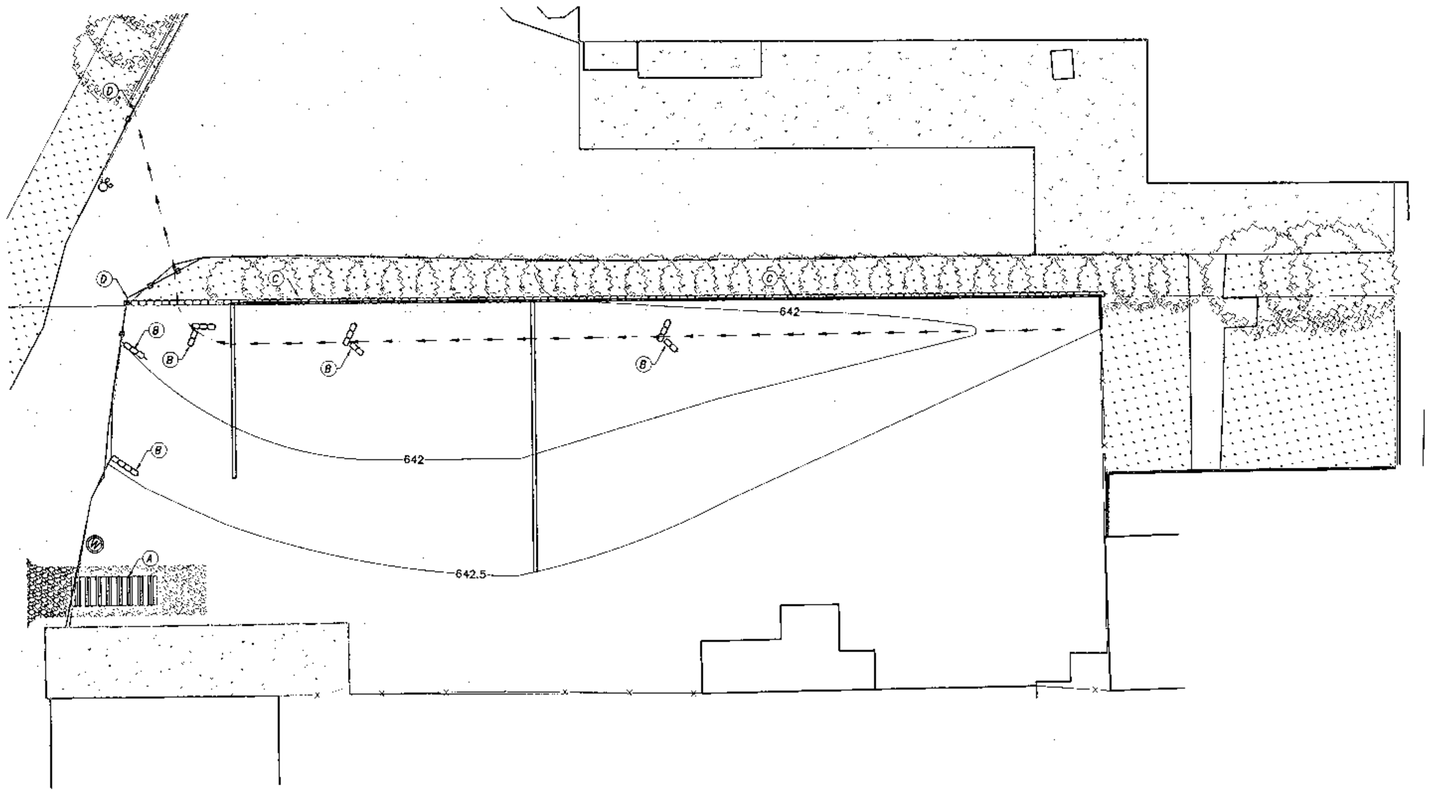
GRADING PLANS



Drawing No. 20-026P
Sh 3 of 4

24" x 36"

EROSION CONTROL GENERAL NOTES:

1. EROSION CONTROL IS REQUIRED FOR GRADING OPERATIONS ON A YEAR ROUND BASIS. APPROVED PLANS ARE REQUIRED FOR ALL WORK REQUIRING A GRADING PERMIT.
2. IN CASE OF EMERGENCY CALL TIFFANY SMITH OF CLOW VALVE MANUFACTURING AT 317-364-0898.
3. THE ENGINEER OF RECORD WILL SUPERVISE EROSION CONTROL WORK AND INSURE THAT WORK IS IN ACCORDANCE WITH APPROVED PLANS.
4. CITY APPROVAL OF PLANS DOES NOT RELIEVE THE DEVELOPER FROM RESPONSIBILITY FOR THE CORRECTION OF ERROR AND OMISSION DISCOVERED DURING CONSTRUCTION. UPON REQUEST, THE REQUIRED PLAN REVISIONS SHALL BE PROMPTLY SUBMITTED TO THE PUBLIC WORKS DIRECTOR FOR APPROVAL
5. THE PUBLIC WORKS DIRECTOR RESERVES THE RIGHT TO MAKE CHANGES OR MODIFICATIONS TO THIS PLAN AS DEEMED NECESSARY.
6. STANDBY CREW FOR EMERGENCY WORK SHALL BE MADE AVAILABLE AT ALL TIMES. NECESSARY MATERIALS SHALL BE AVAILABLE ON SITE AND STOCKPILED AT CONVENIENT LOCATIONS TO FACILITATE RAPID CONSTRUCTION OF TEMPORARY EROSION AND SEDIMENT CONTROL BEST MANAGEMENT PRACTICES (BMPS) OR TO REPAIR ANY DAMAGED BMP's WHEN RAIN IS IMMINENT.
7. AN EFFECTIVE COMBINATION OF EROSION AND SEDIMENT CONTROL BMPS SHALL BE IMPLEMENTED AND MAINTAINED TO PREVENT AND/OR MINIMIZE THE TRANSPORT OF SOIL IN RUNOFF FROM DISTURBED SOIL AREAS ON THE CONSTRUCTION SITE AT ALL TIMES. IN ADDITION, BMPS SHALL BE INSPECTED PRIOR TO PREDICTED STORM EVENTS AND FOLLOWING STORM EVENTS. BMPS SHALL NOT BE MOVED OR MODIFIED WITHOUT THE APPROVAL OF THE CITY INSPECTOR.
8. ALL REMOVABLE PROTECTIVE DEVICES SHOWN SHALL BE IN PLACE AT THE END OF EACH WORKING DAY WHEN THE FIVE-DAY RAIN PROBABILITY FORECAST EXCEEDS 40 PERCENT, AS FORECASTED BY THE NATIONAL WEATHER SERVICE.
9. AFTER A RAIN EVENT EXCEEDING ONE-QUARTER INCH IN ANY 12 HOUR PERIOD, OR UPON DIRECTION OF THE PUBLIC WORKS DIRECTOR, ALL SILT AND DEBRIS SHALL BE REMOVED FROM CHECK DAMS, SILT FENCES, AND DESILTING BASINS; AND THE BASINS SHALL BE PUMPED DRY AND RESTORED TO ORIGINAL DESIGN CONDITION. ANY EROSION CONTROL MEASURES DAMAGED DURING A RAIN EVENT SHALL ALSO BE IMMEDIATELY REPAIRED.
10. DESILTING BASINS ARE TO BE CONSTRUCTED AS GRADING OF INDIVIDUAL GRADING AREAS ARE COMPLETE PER ROUGH GRADING PLANS.
11. THE CONTRACTOR SHALL BE RESPONSIBLE AND SHALL TAKE NECESSARY PRECAUTIONS TO PREVENT PUBLIC TRESPASS ONTO AREAS WHERE IMPOUNDED WATER CREATES A HAZARDOUS CONDITION.
12. AREAS SHALL BE MAINTAINED IN SUCH A STATE THAT FIRE ACCESS SHALL BE MAINTAINED AT ALL TIMES (INCLUDING ACCESS TO NEIGHBORING PROPERTIES).
13. GRADED AREAS AROUND THE SITE PERIMETER MUST DRAIN AWAY FROM THE FACE OF SLOPE AT THE CONCLUSION OF EACH WORKING DAY.
14. TEMPORARY EROSION PROTECTION IS REQUIRED FOR MANUFACTURED SLOPES PRIOR TO PERMANENT PLANTING.
15. ALL DISTURBED SLOPES SHALL BE PLANTED AND PROTECTED WITHIN 45 DAYS OF THE COMPLETION OF EACH STAGE OF GRADING. SUITABLE MEASURES TO PREVENT SLOPE EROSION INCLUDING, BUT NOT LIMITED TO, RAPID GROWTH VEGETATION SUFFICIENT TO STABILIZE THE SOIL, SHALL BE INSTALLED ON ALL DISTURBED AREAS UNTIL SUCH TIME AS THE PERMANENT VEGETATIVE COVER SUFFICIENTLY MATURES TO PROVIDE PERMANENT STABILITY.
16. NO OBSTRUCTION OR DISTURBANCE OF NATURAL DRAINAGE COURSES OR EXISTING STORM DRAIN INLETS SHALL OCCUR DURING GRADING OPERATIONS, UNLESS ADEQUATE TEMPORARY/PERMANENT DRAINAGE FACILITIES HAVE BEEN APPROVED AND INSTALLED TO CARRY SURFACE WATER TO THE NEAREST PRACTICAL STREET, STORM DRAIN OR NATURAL WATER COURSE. ALL EXISTING DRAINAGE COURSES ON THE PROJECT SITE MUST BE MAINTAINED IN A STATE TO ALLOW FOR CONTINUOUS FUNCTION.
17. THE CONTRACTOR SHALL CONDUCT HIS OPERATIONS IN SUCH A MANNER THAT STORM RUNOFF WILL BE CONTAINED WITHIN THE PROJECT OR CHANNELED INTO THE STORM DRAIN SYSTEM WHICH SERVES THE RUNOFF AREA. STORM RUNOFF FROM ONE AREA SHALL NOT BE ALLOWED TO DIVERT TO ANOTHER RUNOFF AREA.
18. CONFORMANCE WITH THE REQUIREMENTS OF THESE PLANS SHALL IN NO WAY RELIEVE THE CONTRACTOR FROM HIS RESPONSIBILITIES TO THIS SITE AND ADJACENT PROPERTIES. DURING GRADING OPERATIONS, TEMPORARY DRAINAGE CONTROL SHALL BE PROVIDED TO PREVENT PONDING WATER AND DAMAGE TO ADJACENT PROPERTIES. TEMPORARY DRAINAGE CONTROL SHALL CONSIST OF, BUT NOT BE LIMITED TO, CONSTRUCTING SUCH FACILITIES AND TAKING SUCH MEASURES AS ARE NECESSARY TO PREVENT, CONTROL AND ABATE WATER, MUD AND EROSION DAMAGE TO PUBLIC AND PRIVATE PROPERTY AS A RESULT OF THE CONSTRUCTION OF THIS PROJECT.
19. FILL AREAS WHILE BEING BROUGHT UP TO GRADE AND DURING PERIODS OF COMPLETION PRIOR TO FINAL GRADE, SHALL BE PROTECTED BY VARIOUS MEASURES TO ELIMINATE EROSION AND THE SILTATION OF DOWNSTREAM FACILITIES AND ADJACENT AREAS. THESE MEASURES MAY INCLUDE, BUT SHALL NOT BE LIMITED TO: TEMPORARY DOWN DRAINS, EITHER IN THE FORM OF PIPES OR PAVED DITCHES TO DESILT RUNOFF; PROTECTION SUCH AS SAND BAGS AROUND INLETS WHICH HAVE NOT BEEN BROUGHT UP TO GRADE; AND EARTH BERMS AND APPROPRIATE GRADING TO DIRECT DRAINAGE AWAY FROM THE EDGE OF THE TOP OF SLOPES SHALL BE CONSTRUCTED AND MAINTAINED ON THOSE FILL AREAS WHERE EARTHWORK OPERATIONS ARE NOT IN PROGRESS.
20. CLEARING AND GRUBBING SHOULD BE LIMITED TO AREAS THAT WILL RECEIVE IMMEDIATE GRADING. EROSION CONTROL MEASURES WILL BE REQUIRED TO PROTECT AREAS WHICH HAVE BEEN CLEARED AND GRUBBED PRIOR TO GRADING OPERATION, AND WHICH ARE SUBJECT TO RUNOFF DURING A RAIN EVENT. THESE MEASURES MAY INCLUDE BUT SHALL NOT BE LIMITED TO: GRADED DITCHES; BRUSH BARRIERS AND SILT FENCES. CARE SHALL BE EXERCISED TO PRESERVE VEGETATION BEYOND LIMITS OF GRADING.
21. CONSTRUCTION SITES SHALL BE MANAGED TO MINIMIZE THE EXPOSURE TIME OF DISTURBED SOIL AREAS THROUGH PHASING AND SCHEDULING OF GRADING TO THE EXTENT FEASIBLE AND THE USE OF TEMPORARY AND PERMANENT SOIL STABILIZATION.
22. STOCKPILES OF SOIL SHALL BE PROPERLY CONTAINED TO ELIMINATE OR REDUCE SEDIMENT TRANSPORT FROM THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJACENT PROPERTIES VIA RUNOFF, VEHICLE TRACKING, OR WIND.
23. CONSTRUCTION SITES SHALL BE MAINTAINED IN SUCH A CONDITION THAT WIND OR RUNOFF DOES NOT CARRY WASTES OR POLLUTANTS OFF THE SITE TO STREETS, DRAINAGE FACILITIES OR ADJORNING PROPERTIES.
24. DISCHARGES OTHER THAN STORM WATER (NON-STORM WATER DISCHARGES) ARE PROHIBITED, EXCEPT AS AUTHORIZED BY AN INDIVIDUAL NPDES PERMIT, THE STATEWIDE GENERAL PERMIT FOR STORM WATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY, OR OTHER APPLICABLE GENERAL NPDES PERMIT. POTENTIAL POLLUTANTS INCLUDE BUT ARE NOT LIMITED TO: SOLID OR LIQUID CHEMICAL SPILLS; WASTES FROM PAINTS, STAINS, SEALANTS, SOLVENTS, DETERGENTS, GLUES, LIME, PESTICIDES, HERBICIDES, FERTILIZERS, WOOD PRESERVATIVES, AND ASBESTOS FIBERS, PAINT FLAKES OR STUCCO FRAGMENTS; FUELS, OILS, LUBRICANTS, AND HYDRAULIC, RADIATOR OR BATTERY FLUIDS; CONCRETE AND RELATED CUTTING OR CURING RESIDUES; FLOATABLE WASTES; WASTES FROM STREET CLEANING; SUPER-CHLORINATED POTABLE WATER FROM LINE FLUSHING AND TESTING, AND RUNOFF FROM EQUIPMENT AND VEHICLE WASHING. DURING CONSTRUCTION, DISPOSAL OF SUCH MATERIALS SHOULD OCCUR IN A SPECIFIED AND CONTROLLED TEMPORARY AREA ONSITE PHYSICALLY SEPARATED FROM POTENTIAL STORM WATER RUNOFF, WITH ULTIMATE DISPOSAL IN ACCORDANCE WITH LOCAL, STATE AND FEDERAL REQUIREMENTS.
25. AT THE END OF EACH DAY OF CONSTRUCTION ACTIVITY ALL CONSTRUCTION DEBRIS AND WASTE MATERIALS SHALL BE COLLECTED AND PROPERLY DISPOSED IN TRASH OR RECYCLE BINS
26. PAVED STREETS, SIDEWALKS AND OTHER IMPROVEMENTS SHALL BE MAINTAINED IN A NEAT CLEAN CONDITION, FREE OF LOSE SOIL, CONSTRUCTION DEBRIS AND TRASH. STREET SWEEPING OR OTHER EQUALLY EFFECTIVE MEANS SHALL BE USED ON A REGULAR BASIS TO CONTROL SILT THAT HAS BEEN DEPOSITED ON STREETS OR SIDEWALKS. WATERING SHALL NOT USED TO CLEAN STREETS.
27. DISCHARGING CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING GROUNDWATER THAT HAS INFILTRATED INTO THE CONSTRUCTION SITE IS PROHIBITED. DISCHARGING OF CONTAMINATED SOILS VIA SURFACE EROSION IS ALSO PROHIBITED. DISCHARGING NON-CONTAMINATED GROUNDWATER PRODUCED BY DEWATERING ACTIVITIES MAY REQUIRE A NPDES PERMIT FROM THE SANTA ANA REGIONAL BOARD.
28. ALL CONSTRUCTION CONTRACTOR AND SUBCONTRACTOR PERSONNEL ARE TO BE MADE AWARE OF THE REQUIRED BEST MANAGEMENT PRACTICES AND GOOD HOUSEKEEPING MEASURES FOR THE PROJECT SITE AND ANY ASSOCIATED CONSTRUCTION STAGING AREAS.

1.0 INTRODUCTION

Clow Valve Company (Clow), a Division of McWane, contracted EarthCon Consultants CA, Inc. (EarthCon) to prepare this PCB Soil Investigation Report (Report) for the facility located at 1375 Magnolia Avenue in Corona, California (Site; see Figure 1 and Figure 2). During the implementation of the Department of Toxic Substances Control (DTSC) approved *Corrective Measures Implementation Workplan* (CMIWP), elevated PCB concentrations were reported during the characterization sampling of the soil stockpiles. These PCB concentrations were associated with areas containing foundry sand that were identified as "hot spots" because they contained lead levels over 1,000 mg/kg. Foundry sand from "hot spot" areas in the northern parking lot and Area of Concern 1 (AOC1) was excavated and subsequently stockpiled for characterization. Sample results from the stockpile associated with the former SW3 sample location exhibited elevated total PCB concentrations that were reported as high as 280 mg/kg. Subsequent analysis of the remaining stockpiles from the CMIWP implementation reported total PCB concentrations ranging from 11 mg/kg to 29 mg/kg.

Due to potential future Site redevelopment activities, McWane contacted the United States Environmental Protection Agency (USEPA) to discuss the necessity for conducting a PCB soil investigation at the Site to understand the distribution of the PCB concentrations and their relationship to the foundry sand. As a result of the discussions with the USEPA during a conference call on September 29, 2021, the soil investigation program described in this document was developed.

The following sections provide a summary of the soil investigation activities and the associated results.

2.0 SOIL INVESTIGATION ACTIVITIES

As noted previously, representatives from EarthCon, McWane, and Anaco participated in a conference call with the USEPA on September 29, 2021. During the conference call, the information discussed included historical Site operations, examples of materials encountered in the subsurface during implementation of the CMIWP, and identification of the proposed sample locations. The purpose of the soil investigation was to identify the extent of foundry sand as well as the range of PCB concentrations on-Site in order to facilitate planning for potential redevelopment activities in light of the requirements of 40 CFR 761. Therefore, after input was received from the USEPA, a revised soil sample location map was subsequently provided to the USEPA and approved.

2.1 Pre-Field Activities

Prior to the commencement of field activities, EarthCon verified that proper underground utility clearances were conducted. Underground Services Alert (USA) was notified at least 72-hours prior to initiation of field activities. In addition, due to the concern of subgrade utilities and/or piping, a geophysical survey was conducted prior to initiation of sampling activities.

Field work was conducted in accordance with the current Site Health and Safety Plan (HASP). The scope of work and elements of the HASP were discussed daily during the tail-gate safety meetings.

2.2 Field Activities

Soil sampling investigation activities were conducted on-Site over a series of days beginning on October 4, 2021 and ending on October 29, 2021. Various types of material were encountered in the subsurface including, but not limited to, foundry sand, sand core fragments, rocks, bricks, rubber, and a “spongy” vesicular material that appeared to be residual glue or resin. In a few instances, the bore holes collapsed due to the dry fine-grained sand that was encountered, preventing samples from being collected beyond the initial depth. Detailed field notes and representative photographs were recorded throughout soil investigation. Further information can be found from the individual boring logs provided in Appendix A and photographs provided in Appendix B.

A total of thirty-six (36) soil boring locations (S-1 through S-36) were advanced across the Site (See Figure 2). A hand-auger was initially utilized to advance the boring to 5 ft bgs, collecting soil samples at 1 ft, 3ft, and 5 ft bgs. However, based on the materials encountered as described previously, some samples required the assistance of an air knife rig and/or a direct push drilling rig to collect samples to depth. Additionally, based on the materials encountered at 5 ft bgs and/or the initial analytical results, the borings were advanced to greater depths. Borings advanced to greater depths were completed so that the depth of foundry sand could be defined by identifying when native sand was observed. In addition, deeper samples were also collected in instances where the initial sample results reported elevated PCB concentrations in order to potentially define the limits of concentrations exceeding 1 mg/kg. Three step-out borings (S-34 though S-36) locations were added to the original proposed locations in the vicinity of S-9 to define the limits of the initial PCB results reported in that location. As a result, a total of ninety-nine (99) soil samples were collected at the Site during the soil investigation.

Once sample collection was completed, each boring location was backfilled using commercially available sand and subsequently patched with quick setting concrete that was color dyed as needed in order to match the existing ground cover surface conditions.

2.2.1 Sample Management

Soil samples were collected under a strict chain of custody protocol and were submitted to a California-State Certified Laboratory, on a rush turn-around time. Sampling equipment was decontaminated in between each sample collection in accordance with the USEPA Guidance[1] using a 2-rinse system followed by a hexane wipe. The rinseate was stored in a 55-gallon steel drum on-Site pending disposal.

Soil samples were analyzed for the following:

- PCBs in accordance with U.S. EPA Method 8082A/3540C (Soxhlet extraction)

Each sample container was labeled with unique sample number, date, time, requested analyses, and initials of sampling personnel, as appropriate. After labeling, the soil samples were placed in a

1 USEPA. 2011. *Standard Operating Procedure for Sampling Porous Surfaces for Polychlorinated Biphenyls.* May 2011

cooler on ice for transportation to the laboratory. In accordance with Chapter 9, Section 9.2.2.7 of SW-846, a chain of custody record documented sample possession from the time of collection until the samples were analyzed. The record also served as a sample inventory and analysis order form.

Sampling personnel transported the samples at the end of each field day to the laboratory. When possession of the samples was transferred from sampling personnel to the laboratory, both parties signed the chain of custody.

2.2.2 Investigation Derived Waste

Investigation derived waste generated during soil investigation activities included soil cuttings and decon rinseate water. Disposal will be based on the analytical results from the characterization samples. The disposal of PCBs at concentrations of 50 ppm or greater, if encountered, will be conducted in accordance with 40 CFR 761 subpart D. Depending on the characterization of PCB-impacted soil, subsequent transportation will likely be to a TSCA disposal facility such as US Ecology in Beatty, NV. Laboratory reports and facility disposal information associated with waste characterization will also be provided to the USEPA prior to transportation off-Site.

3.0 INVESTIGATION RESULTS

3.1 Field Observations

As noted previously, various types of material were encountered during the soil sampling investigation (see boring logs provided in Appendix A). Of all the non-native material observed, the largest quantity encountered was foundry sand. In general, foundry sand was encountered in the soil borings located along the northern portion of the Site through the parking lot area and it extended east/southeast underneath the former Clow Building. The depth at which foundry and was encountered was generally from the surface to approximately 5 ft bgs in most of the identified borings. However, in isolated locations the foundry sand total depth ranged from approximately 6 ft bgs to 11 ft bgs.

Further details are provided in the boring logs provided in Appendix A and the photologs provided in Appendix B. Extent of the foundry sand is illustrated in the contour figures provided in Appendix C

3.2 Analytical Results

As discussed previously, a total of 99 soil samples were collected from a total of 36 soil boring locations. PCB concentrations were detected in 18 boring locations with the majority of these detections correlating to the presence of foundry sand. Generally, the aroclors reported included Aroclor-1248 and Aroclor-1260, with two isolated occurrences of Aroclor-1016 and Aroclor-1254. The highest PCB concentrations were reported in the 1 ft bgs sample with the maximum concentrations of total PCBs reported at 290 mg/kg (S-31). In comparison, the highest total PCB concentrations at greater depths were 170 mg/kg (S-31 at 3 ft bgs), 120 mg/kg (S-31 at 5 ft bgs), and 7.8 mg/kg (one 6 ft bgs sample at S-30)[2].

As show on Figure 3 the extent of PCB impacted soil appears to have a larger presence at 1 ft bgs and decreasing in extent moving towards greater depths. Additionally, the highest total PCB concentrations appear to be focused in the center of the parking lot north of the Anaco Production Plant. The reported total PCB concentrations are generally correlated to the presence of foundry sand as illustrated in contours provided in Appendix C compared to the results provided in Figure 3.

A summary of the analytical results is provided in Table 1 and on Figure 4. In addition, the

2 Two attempts were made to try and collect a deeper sample below 6 ft bgs at S-30 to delineate the elevated PCB concentrations. However, large rocks in the area prevented advancement and collection of a deeper sample.

associated laboratory reports and chain of custody forms are provided in Appendix D.

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 451402 Project No: CLOW Location: Clow - 1375 Magnolia Ave Date Received: 10/04/21

This data package contains sample and QC results for sixteen soil samples, requested for the above referenced project on 10/04/21. The samples were received cold and intact.

PCBs (EPA 8082):

High surrogate recoveries were observed for decachlorobiphenyl (PCB surrogate) in many samples. S-3-1 (lab # 451402-007) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: EARTH CON CONSULTANTS Project: CLOSE

Date Received: 10/4/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 3) Sample Temp (°C) the Cooler: 5

Sample Temp (°C), One from each cooler: #1: 5 V #2: #3: #4:

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information:

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other

Cooler Temp (°C): #1: 1.9 #2: #3: #4:

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)			✓
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: Date/Time:

☐ Email (email sent to/on): /

Project Manager's response.

Case Narrative

EarthCon Consultants CA, Inc.
1100 W. Town and Country Rd
Suite 200
Orange, CA 92868
Becky Sundilson

Lab Job Number: 451564
Project No: CLOW
Location: CLOW - EAR051921
Date Received: 10/06/21

This data package contains sample and QC results for fourteen soil samples, requested for the above referenced project on 10/06/21. The samples were received cold and intact.

PCBs (EPA 8082):

S-12-1 (lab # 451564-012) was diluted due to the color of the sample extract. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: Clow

Date Received: 10/06/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 3) Sample Temp (°C, No Cooler):

Sample Temp (°C), One from each cooler: #1: 5.0 #2: #3: #4:

(Acceptance range is 0°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information:

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other

Cooler Temp (°C): #1: 2.9 #2: #3: #4:

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Water seen in Sample jars: 2,8,6,11,12. Time on the jar for sample 10 is 14:40.

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal (Initials: Date/Time:) ☑ Email ("e-mail" sent to/on): PAM / 10/6/21

Project Manager's response:

Completed By: Date: 10/06/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 451567 Project No: CLOW Location: CLOW - EAR051921 Date Received: 10/06/21

This data package contains sample and QC results for six soil samples, requested for the above referenced project on 10/06/21. The samples were received cold and intact.

PCBs (EPA 8082):

A number of samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: CLOW

Date Received: 10/6/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip to section 3) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 5.9 #2: _____ #3: _____ #4: _____

Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is > 0°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 3.4 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓	✓	
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Sample 004 had water in it.

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time: _____

☑ Email (email sent to/on): EAM / 10/6/21

Project Manager's response:

Completed By: Yolanda Sylvestre Date: 10/6/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 451659 Project No: CLOW Location: Clow - 1375 Magnolia Ave Date Received: 10/07/21

This data package contains sample and QC results for fourteen soil samples, requested for the above referenced project on 10/07/21. The samples were received cold and intact.

PCBs (EPA 8082):

Low internal standard responses were observed for 1-bromo-2-nitrobenzene (PCB) in S-19-1 (lab # 451659-006) and S-21-3 (lab # 451659-011); affected data was qualified with "b". High internal standard responses were observed for 1-bromo-2-nitrobenzene (1248) in S-20-3 (lab # 451659-009) and S-22-1 (lab # 451659-012); the affected analyte was not detected at or above the RL in the associated samples, and affected data was qualified with "b". Response exceeding the instrument's linear range was observed for decachlorobiphenyl (PCB surrogate) in S-21-3 (lab # 451659-011); affected data was qualified with "E". High surrogate recoveries were observed for decachlorobiphenyl (PCB surrogate) in S-19-1 (lab # 451659-006) and S-21-3 (lab # 451659-011); no target analytes were detected in these samples. S-17-1 (lab # 451659-001) was diluted due to the dark color of the sample extract. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Ennhcon Consultants Project: Clow

Date Received: 10/07/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) [No Cooler]: ____

Sample Temp (°C), One from each cooler: #1: 3.2 #2: ____ #3: ____ #4: ____

(Acceptance range is <6°C but not frozen (for Microbiology samples, acceptance range is <10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: ____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other ____

Cooler Temp (°C): #1: 0.7 #2: ____ #3: ____ #4: ____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-5 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal (Initials: ____ Date/Time: ____ ____) ☐ Email (email sent on/or): ____ / ____

Project Manager's response:

Completed By: [signature] Date: 10/7/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 451711 Project No: CLOW Location: CLOW Date Received: 10/08/21

This data package contains sample and QC results for five soil samples, requested for the above referenced project on 10/08/21. The samples were received cold and intact.

PCBs (EPA 8082):

Low recoveries were observed for Aroclor-1260 in the MS/MSD of S-10-3 (lab # 451711-001); the LCS was within limits. High RPD was observed for Aroclor-1016 and Aroclor-1260. S-23-1 (lab # 451711-002), S-23-3 (lab # 451711-003), and S-24-1 (lab # 451711-004) were diluted due to the color of the sample extracts. S-10-5 (lab # 451711-005) was diluted due to the dark color of the sample extract. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: Clow

Date Received: 10/8/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (see section 3) Sample Temp (°C) [No Cooler]: _____

Sample Temp (°C), One from each cooler. #1: 5.6 #2: _____ #3: _____ #4: _____

(Acceptance range is 0 to 6°C but not frozen for Microbiology samples, acceptance range is > 0°C but not frozen). If unacceptable for samples collected the same day, client notified to leave at higher temperature or temperature evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other: _____

Cooler Temp (°C): #1: 5.0 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✔		
Are sample IDs present?	✔		
Are sampling dates & times present?	✔		
Is a relinquished signature present?	✔		
Are the tests required clearly indicated on the COC?	✔		
Are custody seals present?		✔	
If custody seals are present, were they intact?			✔
Are all samples sealed in plastic bags? [Recommended for Microbiology samples]	✔		
Did all samples arrive intact? If no, indicate in Section 4 below	✔		
Did all bottle labels agree with COC? (ID, dates and times)	✔		
Were the samples collected in the correct containers for the required tests?	✔		
Are the containers labeled with the correct preservatives?			✔
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✔
Was a sufficient amount of sample submitted for the requested tests?	✔		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal Initials _____ Date/Time _____

☐ Email Email sent to/on: _____ / _____

Project Manager's response.

Completed By: _____ Date: 10/8/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 451879 Project No: CLOW Location: Corona - Clow Date Received: 10/12/21

This data package contains sample and QC results for sixteen soil samples, requested for the above referenced project on 10/12/21. The samples were received cold and intact.

PCBs (EPA 8082):

High recoveries were observed for Aroclor-1016 and Aroclor-1260 in the MS/MSD of S-25-1 (lab # 451879-001); the LCS was within limits. High RPD was also observed for Aroclor-1016 and Aroclor-1260. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants — Project: Corona-CLOW

Date Received: 10/12/21 — Sample's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 3) — Sample Temp (°C) (No Cooler): _____

Sample Temp (°C) One from each cooler: #1 5.4 #2 _____ #3: _____ #4: _____

(Note: for chilled (4°C but not frozen) microbiology samples, acceptance range is 2-10°C but not frozen) It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 2.0 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✔		
Are sample IDs present?	✔		
Are sampling dates & times present?	✔		
Is a relinquished signature present?	✔		
Are the tests required clearly indicated on the COC?	✔		
Are custody seal's present?		✔	
If custody seals are present, were they intact?			✔
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✔		
Did all samples arrive intact? If no, indicate in Section 4 below	✔		
Did all bottle labels agree with COC? (ID, dates and times)	✔		
Were the samples collected in the correct containers for the required tests?	✔		
Are the containers labeled with the correct preservatives?			✔
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✔
Was a sufficient amount of sample submitted for the requested tests?	✔		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal (Initials: _____ Date/Time: _____) ☐ Email (email sent to/on): _____ / _____

Project Manager's response

Completed By: _____ Date: 10/12/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 452005 Project No: CLOW Location: Corona CLOW Date Received: 10/14/21

This data package contains sample and QC results for twelve soil samples, requested for the above referenced project on 10/14/21. The samples were received cold and intact.

PCBs (EPA 8082):

High recoveries were observed for Aroclor-1016 and Aroclor-1260 in the MS/MSD of S-30-6 (lab # 452005-004); the LCS was within limits. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: CLCW

Date Received: 10/14/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip to Section 3) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 7.8 #2: _____ #3: _____ #4: _____

(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance range is < 10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 7.2 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time: _____ ☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: Elena Sylvester Date: 10/18/21 14:05

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: Corona-Clow

Date Received: 10/15/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 5.0 #2: _____ #3: _____ #4: _____

(Acceptance range is 0-6°C but not frozen for Microbiology samples. Exception: if temp is <0°C but not frozen, it is acceptable for samples received the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 5.0 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✔		
Are sample IDs present?	✔		
Are sampling dates & times present?	✔		
Is a relinquished signature present?	✔		
Are the tests required clearly indicated on the COC?	✔		
Are custody seals present?		✔	
If custody seals are present, were they intact?			✔
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✔		
Did all samples arrive intact? If no, indicate in Section 4 below.	✔		
Did all bottle labels agree with COC? (ID, dates and times)	✔		
Were the samples collected in the correct containers for the required tests?	✔		
Are the containers labeled with the correct preservatives?			✔
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✔
Was a sufficient amount of sample submitted for the requested tests?	✔		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal PM Initials: _____ Date/Time: _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 10/15/21

Case Narrative

EarthCon Consultants CA, Inc. 1100 W. Town and Country Rd Suite 200 Orange, CA 92868 Becky Sundilson	Lab Job Number: 452232 Project No: CLOW Location: Corona- CLOW Date Received: 10/19/21

This data package contains sample and QC results for thirteen soil samples, requested for the above referenced project on 10/19/21. The samples were received cold and intact.

PCBs (EPA 8082):

No analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1

Client: Earthcon Consultants Project: Corona - CLOW

Date Received: 10/19/21 Sampler's Name Present: ☑ Yes ☐ No

Section 2

Sample(s) received in a cooler? ☑ Yes, How many? 1 ☐ No (skip section 2) Sample Temp (°C) (No Cooler): _____

Sample Temp (°C), One from each cooler: #1: 6.9 #2: _____ #3: _____ #4: _____

(Acceptance range is 0°C to 6°C but not frozen (for Microbiology samples, acceptance range is <10°C but not frozen). It is acceptable for samples collected the same day as sample receipt to have a higher temperature as long as there is evidence that cooling has begun.)

Shipping Information: _____

Section 3

Was the cooler packed with: ☑ Ice ☐ Ice Packs ☐ Bubble Wrap ☐ Styrofoam ☐ Paper ☐ None ☐ Other _____

Cooler Temp (°C): #1: 2.3 #2: _____ #3: _____ #4: _____

Section 4	YES	NO	N/A
Was a COC received?	✓		
Are sample IDs present?	✓		
Are sampling dates & times present?	✓		
Is a relinquished signature present?	✓		
Are the tests required clearly indicated on the COC?	✓		
Are custody seals present?		✓	
If custody seals are present, were they intact?			✓
Are all samples sealed in plastic bags? (Recommended for Microbiology samples)	✓		
Did all samples arrive intact? If no, indicate in Section 4 below.	✓		
Did all bottle labels agree with COC? (ID, dates and times)	✓		
Were the samples collected in the correct containers for the required tests?	✓		
Are the containers labeled with the correct preservatives?			✓
Is there headspace in the VOA vials greater than 5-6 mm in diameter?			✓
Was a sufficient amount of sample submitted for the requested tests?	✓		

Section 5 Explanations/Comments

Section 6

For discrepancies, how was the Project Manager notified? ☐ Verbal Initials: _____ Date/Time _____

☐ Email (email sent to/on): _____ / _____

Project Manager's response:

Completed By: _____ Date: 10/19/21

APPROVAL OF CORRECTIVE MEASURES IMPLEMENTATION REPORT, CLOW VALVE COMPANY, 1375 MAGNOLIA AVENUE, CORONA, CALIFORNIA (SITE CODE: 600876-48)

Dear Mr. Willett:

The Department of Toxic Substances Control (DTSC) reviewed the Final Corrective Measures Implementation Report (Report), dated October 25, 2021, and revised on April 1, 2022. The Report was prepared by Earthcon Consultants for the Clow Valve Company site located at 1375 Magnolia Avenue, Corona, California (Site). Clow Valve is conducting investigation and remediation at the Site under a Corrective Action Consent Agreement (Docket Number SRPD 00/01SCC-4208) with DTSC.

Historic operations at the Site resulted in lead contamination in shallow soil at multiple locations throughout the Site; diesel fuel contamination identified beneath a former fuel tank; and impacts by polychlorinated biphenyls (PCBs) present in the soil beneath an electrical transformer.

Based on the Report, Clow Valve implemented the approved Corrective Measures Implementation Workplan (CMIWP), dated March 26, 2020, between July and October 2021. In addition, Clow Valve excavated all lead-contaminated soil that exceeded the lead hazardous waste criterion of 1,000 milligrams per kilogram (mg/kg) in preparation for the anticipated future Site grading and redevelopment activities.

Printed on Recycled Paper

The following activities were completed:

1. All debris was removed in Areas of Concern (AOCs) 1 and 5.

2. Pavement was removed from AOC 5 and in the parking lot in the vicinity of soil borings SW2 and SW3 north of Buildings 2A and 2B, and south of the ANACO production plant.

3. Soil with lead concentrations exceeding hazardous waste criteria was excavated and transported under hazardous waste manifests to US Ecology Nevada Inc., a permitted hazardous waste treatment and storage facility.

4. Confirmation soil samples were collected and analyzed for chemicals of concern at the Site. Lead concentrations were reported below the lead hazardous waste criterion.

5. Excavations were backfilled with virgin quarry base material.

6. A concrete cap was constructed on AOC 1 and the adjoining AOC 5 in accordance with the City of Corona approved grading plan to ensure proper drainage and to prevent water accumulation on top of the cap.

7. Paving was restored in the parking lot excavation in the vicinity of soil borings SW2 and SW3 and on September 2, 2021, a slurry seal coat was applied to the cracks and degradation in pavement at AOC-2, AOC-3, AOC-4, and AOC-9 that required repair in accordance with the Corrective Measures Implementation Workplan.

8. Separate from the CMI activities conducted on Site, additional PCB-related soil investigation activities were conducted under the oversight of the U.S.EPA in October and December of 2021. The results of the supplemental investigations with regards to PCB concentrations have been discussed with the U.S. EPA and will be addressed in the revised Risk-Based Approval Application 40 CFR 761.61 (c)(1). The required actions will be accomplished through expansion of the cap to encompass PCB-impacted materials, and targeted excavation of the material identified at boring S-60. The work is expected to take place prior to the summer of 2023 when redevelopment activities are tentatively scheduled.

The Report concluded that Clow Valve had implemented the CMIWP without data gaps. Following completion of the CMIWP, the Site will be redeveloped with one or more industrial tilt-up type building(s). All DTSC comments have been addressed, therefore DTSC hereby approves the Report.

If you have any questions, or would like to schedule a teleconference, please contact our DTSC Project Manager, Ms. Irena Edwards, at irena.edwards@dtsc.ca.gov. You may also contact her Supervisor, Ms. Eileen Mananian at eileen.mananian@dtsc.ca.gov.

APPROVAL OF THE CORRECTIVE MEASURES STUDY; CLOW VALVE COMPANY
1375 MAGNOLIA AVENUE, CORONA, CALIFORNIA (SITE CODE: 600876-48)

Dear Ms. Smith:

The Department of Toxic Substances Control (DTSC) circulated the Corrective Measures Study (CMS), dated February 19, 2018, prepared by Earthcon Consultants for the Clow Valve Company, located at 1375 Magnolia Avenue, Corona, California (Site) for public review and comment. The 30-day comment period began on March 1, 2018 and ended on March 30, 2018. During the public comment period, DTSC received two comments for the CMS, and responded to them. The comments did not result in changes to the CMS. Therefore, DTSC hereby approves the CMS as final.

The CMS addresses potential health risks attributed to the historic operations that resulted in lead contamination in shallow soil at multiple locations throughout the Site, diesel fuel contamination identified beneath a former fuel tank, and impacts by polychlorinated bi-phenyls (PCBs) present in the soil beneath an electrical transformer. The CMS summarizes the findings from previous investigations and recommends excavation of PCBs contaminated soil in AOC-7 with off-Site disposal, engineering controls (capping system), and institutional controls to address the Site contamination.

Consistent with Toxic Substances Control Act ("TSCA"), following completion of the public comment period, Clow Valve coordinated PCB contaminated soil remediation with Sara Ziff, P.E., Project Manager, U.S. Environmental Protection Agency (U.S. EPA) Region 9. Based on U.S. EPA letter, dated April 23, 2019, addressed to Mark Willet, Clow Valve, Clow Valve is not required to excavate PCB contaminated soil in AOC-7.

Cap repair and/or construction at AOC-7, AOC-3, and AOC-6 will be conducted under U.S. EPA oversight. Therefore, significant changes to the CMS are not required.

Please provide, within 30-days of the date of this letter, a schedule for the following documents:

1. a CMS implementation workplan for cap design, installation, and schedule for AOC-1 and AOC-5;
2. a schedule to evaluate and repair the existing ground cover in AOC-2, AOC-4, and AOC-9;
3. an operation and maintenance plan;
4. and a site wide soil management plan.

If you have any questions, please contact Project Manager, Irena Edwards, at (714) 484-5385 or e-mail irena.edwards@dtsc.ca.gov or you may e-mail maryam.tasnif-abbasi@dtsc.ca.gov.

Sincerely,

Maryam Tasnif-Abbasi

Re: USEPA Conditional Approval of PCB Cleanup Plan for Clow Valve Company at 1375 Magnolia Avenue in Corona, California

Dear Mr. Willett:

Thank you for working with the U.S. Environmental Protection Agency, Region 9 ("USEPA") to address the disposal of polychlorinated biphenyls ("PCBs") found at Clow Valve Company ("Clow") located at 1375 Magnolia Avenue in Corona, California (the "Site"). USEPA has received and reviewed the *Risk-Based Approval Application* (the "Application") submitted by EarthCon Consultants CA, Inc. ("EarthCon") on behalf of Clow dated April 9, 2019, which outlines Clow's plan for leaving soils containing PCBs in place, in some cases under existing concrete caps.

The Site houses an active industrial facility that manufactures water pipes, valves, fire hydrants and fittings. The original building dates to the 1950s, with subsequent buildings from the 1960s. There are no plans for Clow to vacate the Site. The Application includes preparation of a land-use covenant ("LUC"), an operations and maintenance plan for the caps, and a soil management plan.

The Application describes disposal of PCB-impacted soils in place at the Site, consistent with Toxic Substances Control Act ("TSCA") standards. There are three areas of concern ("AOCs") to be remediated for PCBs, known as AOC-3, AOC-6, and AOC-7. At AOCs 6 and 7 the soil will be capped under existing concrete with a maximum PCB concentration of 1.1 mg/kg (ppm). The soil concentrations at AOC-3 are well below USEPA's risk-based threshold for industrial workers, and the soils will be left in place without a cap.

AOC-3 is the location of a former water pressure testing area. This AOC has a maximum concentration of PCBs in soils of 5.55 ppm, which is lower than USEPA's risk-based threshold for industrial workers of 15 ppm. USEPA therefore considers it appropriate to leave these soils in place.

AOC-6 is the location of a former asphalt dip tank. The maximum concentration in soils is 48 ppm. The 95% upper confidence limit of the mean is 13 ppm, which is below USEPA's risk-based threshold for industrial workers. There is currently concrete covering the contaminated soil at AOC-6, with a maximum concentration of PCBs in concrete of approximately 1.1 ppm. The concrete at AOC-6 acts as a cap, adding a layer of protection to workers.

AOC-7 is a fenced area currently containing two transformers. The maximum concentration in soils is 2,220 ppm at three feet below ground surface ("bgs"). The source of PCBs at AOC-7 was a leak of PCB oils from a former transformer in 1994, after which contaminated soil and concrete were removed from the surface until the area appeared clean. Groundwater depth on-Site is approximately 40 feet below ground surface ("bgs"),

with perched layers reported near the Site starting at approximately 23 feet bgs. To address a possible groundwater pathway, PCBs were delineated to a depth of 6.5 feet bgs, a depth at which the sampling equipment hit refusal. The result at 6.5 feet bgs was 16 ppm, which is just above USEPA's industrial risk based threshold of 15 ppm. Given that there are no constituents at AOC-7 that could mobilize PCBs into groundwater, USEPA considers the proposed remedy of capping in-place to be appropriate for AOC-7. The highest level in concrete at AOC-7 is 0.133 ppm.

USEPA is approving Clow's Application with conditions pursuant to 40 C.F.R. § 761.61(c) (i.e., risk-based disposal standards of TSCA). Clow shall implement the Application as modified by the conditions listed below:

USEPA Conditions of Approval and Additional Comments:

1. **Deed Restriction:** A land use control in the form of a deed restriction shall be implemented to prohibit residential use. In addition, certain commercial uses defined as "sensitive uses" shall also be prohibited; sensitive uses include (a) a hospital for humans, (b) a public or private school for persons less than 15 years of age, (c) a day care center for children, and (d) any permanently occupied habitation other than those used for industrial purposes. The deed restriction shall also note the areas covered by concrete caps. A figure showing the known PCB levels left in place shall be included with the deed restriction. The deed restriction shall state that if the cap at AOC-6 is removed in the future, then the 48 ppm PCB hot spot shall be removed. The deed restriction shall be recorded within 60 days of submittal of the cleanup completion report.

2. **Operations and Maintenance Plan:** Clow shall submit an operations and maintenance plan to USEPA within 90 days of submittal of the cleanup completion report.

3. **Soil Management Plan:** Clow shall submit a soil management plan to USEPA within 90 days of submittal of the cleanup completion report.

4. **PCB Cleanup Report:** Clow shall submit a PCB cleanup report to USEPA, to include all relevant data and justification demonstrating that the work completed is consistent with this approval. Clow must address at a minimum all the reporting requirements listed in 40 C.F.R. § 761.61(a)(9) and 40 C.F.R. § 761.125(c)(5). Clow shall also include figures, surveys, or GPS coordinates depicting the location and results for all Site characterization samples and any PCBs left under a cap.

5. **Future Proposed Modifications to Cleanup Plan:** Clow shall request any changes to the approved cleanup plan via email to USEPA, and USEPA will provide any response to the request via email.

This approval does not relieve Clow from complying with all other applicable federal, state, and local regulations and permits. Departure from the conditions of the approval without prior written permission from USEPA may result in the commencement of proceedings to revoke this approval and/or an enforcement action. Nothing in this approval bars USEPA from imposing penalties for violations of this approval or for violations of other applicable TSCA PCB requirements or for activities not covered under this approval.

This approval only applies to the Site. USEPA reserves the right to require additional characterization and/or cleanup of PCBs at the Site if new information during additional Site characterization, cleanup verification, and/or during future post cleanup activities (e.g. redevelopment or post redevelopment) at the property shows that PCBs remain at the Site above the PCB cleanup level of 15 ppm total PCBs. In addition, USEPA may require cleanup of areas immediately adjacent to the Site if those areas are found to be impacted by PCBs from the Site.

USEPA appreciates the opportunity to assist Chow with this PCB cleanup. If you have any questions regarding this approval, please contact Sam Ziff at (415) 972-3536 or ziff.sam@epa.gov. Thank you for your cooperation.

Sincerely,

Jeff Scott, Director
Land Division

Re: Amendment 1 to TSCA PCB Cleanup Plan for Clow Valve Company, 1375 Magnolia Avenue, Corona, California–CATSCA102301

Dear Mark Willett and Britton Winterer:

Thank you for working with the U.S. Environmental Protection Agency, Region 9 ("USEPA") to address the disposal of polychlorinated biphenyls ("PCBs") found at Clow Valve Company ("Clow") located at 1375 Magnolia Avenue in Corona, California (the "Site"). USEPA has reviewed the *Risk-Based Approval Modification Application 40 CFR 761.61 (c)(1)* ("Amendment 1") dated April 25, 2022 prepared by WSP USA ("WSP") on behalf of Clow and the current owner of the property, B9 Magnolia Owner, LLC ("B9 Magnolia").

The original *Risk-Based Approval Application* (the "Application") dated April 9, 2019 approved leaving soils containing PCBs in place, in some cases under existing concrete caps. A land use covenant for the Site was recorded in November 2021, and there is a soil management plan and operation and maintenance plan addressing maintenance of the caps.

During implementation of the Application workplan, additional PCB-impacted soil was discovered. Amendment 1 proposes to excavate soil from two areas with elevated PCB levels surrounding sample locations AOC7-B1 and S-60, and to cap all remaining locations with total PCB levels above the approved cleanup level of 15 ppm.

Sample locations AOC7-B1 (within the cap area) and S-60 (outside the cap area) have total PCB levels of approximately 2,200 ppm and 37 ppm respectively. Material from these areas will be removed prior to implementation of grading activities, and confirmation sampling will ensure that the cleanup level of 15 ppm has been reached. Excavations will be backfilled in accordance with the 2001 *DTSC Information Advisory Clean Imported Fill Material Fact Sheet*.

The Site is being redeveloped into a warehouse and distribution center following remediation. The cap will consist of a mix of 6-inch concrete, building footprint, and 10-inch compacted soil. The maximum PCB level to be left in place under the cap is 290 ppm. The maximum level to be left uncapped is approximately 3 ppm.

Redevelopment of the Site will require Site-wide grading. Soil from within the capped area will not be moved outside the capped area. This will ensure that soil from the capped area, which has relatively high levels of PCBs, does not contaminate the rest of the Site. Additionally, any soil that is excavated from the capped area and disposed off-site will be disposed as if it has at or above 50 ppm PCBs.

USEPA is approving Amendment 1 with conditions pursuant to 40 C.F.R. § 761.61(c) (i.e., risk-based disposal standards of TSCA). USEPA finds that the methods described in Amendment 1, as modified by the conditions in this approval, will not pose an unreasonable risk of injury to health or the environment. Clow and B9 Magnolia shall implement Amendment 1 as modified by the conditions listed below.

USEPA Conditions of Approval and Additional Comments:

1. **Off-Site Applications:** Initial sample results indicate PCB contamination from the Site has spread to an adjacent property to the east owned by Riverside County. Sample results from near the western fence line of the Site indicate contamination may have spread to a property owned by BSNF Railroad. Clow and B9 Magnolia shall submit an application(s) for the Riverside County and BSNF Railroad properties within one (1) year of the date of this letter, unless USEPA agrees in writing that characterization sampling data for these area(s) indicate an application(s) is not needed under TSCA. Any characterization sampling shall be completed within nine (9) months of the date of this letter.

2. **Soil Management Plan and O&M Plan Amendment:** The existing soil management plan ("SMP") and operation and maintenance plan ("O&M plan") shall be amended to include updated figure(s) showing the known PCB levels left in place and the TSCA cap area(s), address maintenance of concrete and soil caps, and to specify that any soil removed from the footprint of the cap must be disposed as if it has at or above 50 ppm PCBs. The amended SMP and O&M plan shall also state that any changes to land use or modification or removal of the TSCA cap requires notification by the owner and/or occupant to, and additional approval from, USEPA. Updated versions of these documents shall be submitted for USEPA approval within 30 days of submittal of the cleanup completion report.

3. **Land Use Control Amendment:** The applicant shall revise the existing Land Use Covenant ("LUC") with the California Department of Toxic Substances Control ("DTSC") and submit a draft to USEPA for review and approval no later than 90 days after submittal of the cleanup completion report. The revised LUC shall reference Amendment 1, include updated figure(s) showing the known PCB levels left in place and the TSCA cap area(s), require that any soil removed from the footprint of the TSCA cap be disposed as PCB remediation waste disposed as if it has at or above 50 ppm PCBs, and require that any changes to land use or modification or removal of the TSCA cap requires notification by the owner and/or occupant to, and additional approval from, USEPA. The revised LUC shall also document the following: (1) the PCB levels left in place following the work approved in Amendment 1, (2) the updated TSCA cap area, and (3) cap maintenance and soil removal activities that must be performed as required by this approval and as specified in the revised and USEPA-approved soil management plan and O&M plan. The applicant shall record the USEPA-approved revised LUC in accordance with California state law.

4. **Stockpiling of Soil:** Clow and B9 Magnolia shall comply with the provisions of 40 C.F.R. § 761.65(c)(9) if stockpiling soils for off-Site disposal.

5. **Disposal of PCBs:** Clow and B9 Magnolia shall dispose of all PCB waste that it generates during the PCB cleanup in accordance with the TSCA PCB regulations and other applicable federal, state, and local regulations. In determining the disposal method for the waste, Clow and B9 Magnolia must comply with the anti-dilution requirements in 40 C.F.R. § 761.1(b). All bulk PCB remediation waste (i.e., soil) must be

disposed of in accordance with the requirements in 40 C.F.R. § 761.61(a)(5). Clow and B9 Magnolia must select appropriate disposal facilities based on the in-situ PCB concentrations of the waste.

6. **PCB Cleanup Waste Disposal:** Cleanup waste (e.g., personal protective equipment, rags, gloves, booties) shall be disposed of in accordance with 40 C.F.R. § 761.61(a)(5)(v). Disposal of all waste shall be in accordance with all federal, state, and local regulations.

7. **Equipment Decontamination:** Clow and B9 Magnolia shall decontaminate non-disposable sampling tools and equipment, as well as movable equipment used during cleanup and/or additional sampling in accordance with 40 C.F.R. § 761.79(c)(2). Decontamination residues must be disposed of at their original concentrations in accordance with the requirements in 40 C.F.R. § 761.79(g). Recordkeeping of the decontamination events must be maintained in accordance with the requirements in 40 C.F.R. § 761.79(f)(2). These procedures must be implemented in a manner that is protective of human health and the environment consistent with the requirements in 40 C.F.R. § 761.79(e).

8. **PCB Cleanup Report:** Clow and B9 Magnolia shall submit a PCB cleanup report to USEPA, to include all relevant data and justification demonstrating that the work completed is consistent with this approval. Clow and B9 Magnolia must address at a minimum all the reporting requirements set forth at 40 C.F.R. § 761.61(a)(9) and 40 C.F.R. § 761.125(c)(5). Clow and B9 Magnolia shall also include figures, surveys, or GPS coordinates depicting the location and results for all site characterization samples and verification samples.

9. **Procedures to Submit Reports, Documentation, and Correspondence to USEPA:** The cleanup party (i.e., Clow and B9 Magnolia) should follow the below procedures to submit reports and documentation required in this approval to USEPA and to send correspondence to USEPA related to this approval.
    a. The title of the report or the subject line on documentation and correspondence (inclusive of emails) shall include the PCB cleanup site identification number ("PCB SITE ID") assigned by USEPA and the PCB site name ("PCB Site"). Specific to USEPA's approval of the cleanup party's initial application: the PCB SITE ID is CATSCA102301, the PCB Site is CLOW VALVE, and the USEPA project manager is Sara Ziff (ziff.sara@epa.gov).
    b. If no claim of confidentiality accompanies the submitted information, then such information may be made available to the public by USEPA without further notice to you [15 U.S.C. 2613; 82 FR 6522 (January 19, 2017); 40 C.F.R. § 2.203(a)].
    c. The cleanup party must contact USEPA about submission procedures, if the cleanup party intends to submit information to USEPA with an assertion of business confidentiality.
    d. Except as otherwise specified in these instructions, all documentation (e.g., reports), correspondence, and other written communications shall be submitted to USEPA electronically via email to the USEPA project manager (ziff.sara@epa.gov) with a courtesy electronic copy via email to R9LandSubmit@EPA.gov. Please include the PCB SITE ID (i.e., CATSCA102301) and PCB Site name (i.e., CLOW VALVE) in the email's subject line.

10. **Future Proposed Modifications to Cleanup Plan:** Clow and B9 Magnolia shall request any changes to the approved cleanup plan via email to USEPA, and USEPA will provide any response to the request via email.

This approval does not relieve Clow and B9 Magnolia from complying with all applicable TSCA requirements and federal, state, and local law, regulations and permits. Departure from the conditions of the approval without prior written permission from USEPA may result in revocation of this approval, and/or commencement of an enforcement action. Nothing in this approval bars USEPA from imposing penalties for violations of this approval or for violations of other applicable TSCA PCB requirements or for activities not covered under this approval.

This approval only applies to the Site. USEPA reserves the right to require additional characterization and/or cleanup of PCBs at the Site based on new information acquired during additional site characterization, cleanup verification, and/or during future post-cleanup activities (e.g. redevelopment or post-redevelopment) at the Site. In addition, USEPA may require cleanup of areas immediately adjacent to the Site if those areas are found to be impacted by PCBs from the Site. If additional information demonstrates that USEPA cannot sustain the no unreasonable risk determination, USEPA will modify or revoke this approval. In case of conflict between the Application and applicable requirements in 40 C.F.R. Part 761, the applicable requirements in 40 C.F.R. Part 761 take precedent.

USEPA appreciates the opportunity to assist Clow and B9 Magnolia with this PCB cleanup. If you have any questions regarding this approval, please contact Sara Ziff at (415) 972-3536. Thank you for your cooperation.

Sincerely,

JEFFREY SCOTT

Re: Clow Valve Company Underground Storage Tank Removal

Dear Mr. Robison:

This letter is to inform you that the requirements for the closure of the four underground storage tanks located at 1375 Magnolia Avenue in Corona have been completed. This department has received the results for the laboratory analyses of soil samples collected from beneath the tank. It has been determined that no further site mitigation will be required (reference Del Mar Analytical analyses dated 11/18/93 and 12/10/93).

With the provision that the results obtained from the soil sampling were accurate and properly handled, it is the position of this department that no further action will be required at this location.

It should be pointed out that this letter does not relieve you of any responsibilities mandated under the California Health and Safety Code if additional or previously unidentified contamination is discovered at this same location.

The details of the tank removal are on file at the County of Riverside, Department of Environmental Health, Hazardous Materials Management Division located at 4065 County Circle Drive, Room 123. If you have any questions, please do not hesitate to contact me at (909) 358-5055.

Sincerely,

Sandra J. Wages

UNDERGROUND STORAGE TANK PERMIT FOR CLOSURE

TYPE OF PERMIT

[X] Removal

[ ] Abandonment In Place

[ ] Temporary Closure (12 Months Only)

This permit shall not be construed as to allow the violation of any law, nor does it prevent further corrections of errors found on the application, plans, or at the site. Plans must be resubmitted for approval if any additional changes are made by the applicant.

In addition to this permit, all applicable permits required by the local fire department, building department, and the air quality management district must be obtained and should be available for review at the closure site.

All tank closures must, at a minimum, comply with the California Underground Storage Tank Regulations and the appropriate section of the California Health & Safety Code.

81057

CLOW VALVE/PETRO BUILDER (Owner/Contractor/Applicant) has applied for and is granted a permit to

REMOVE (Remove/Abandon/Temp. Close) FOUR (No.) underground storage tank(s) at

CLOW VALVE (Facility Name) located at

1375 MAGNOLIA (Street Address) in CORONA (City/Town), California.

Underground tank closure inspections **must be scheduled five (5) business days in advance.** Telephone (714) 358-5055.

Daniel T. Workman — Permit Approved By

11-8-93 — Date

93-326 — Plan Check #

*This Permit for Closure is VALID FOR 90 DAYS from the date of approval. If no reasonable action is taken within that period, the applicant will be required to reapply for a closure permit with all pertinent fees associated.

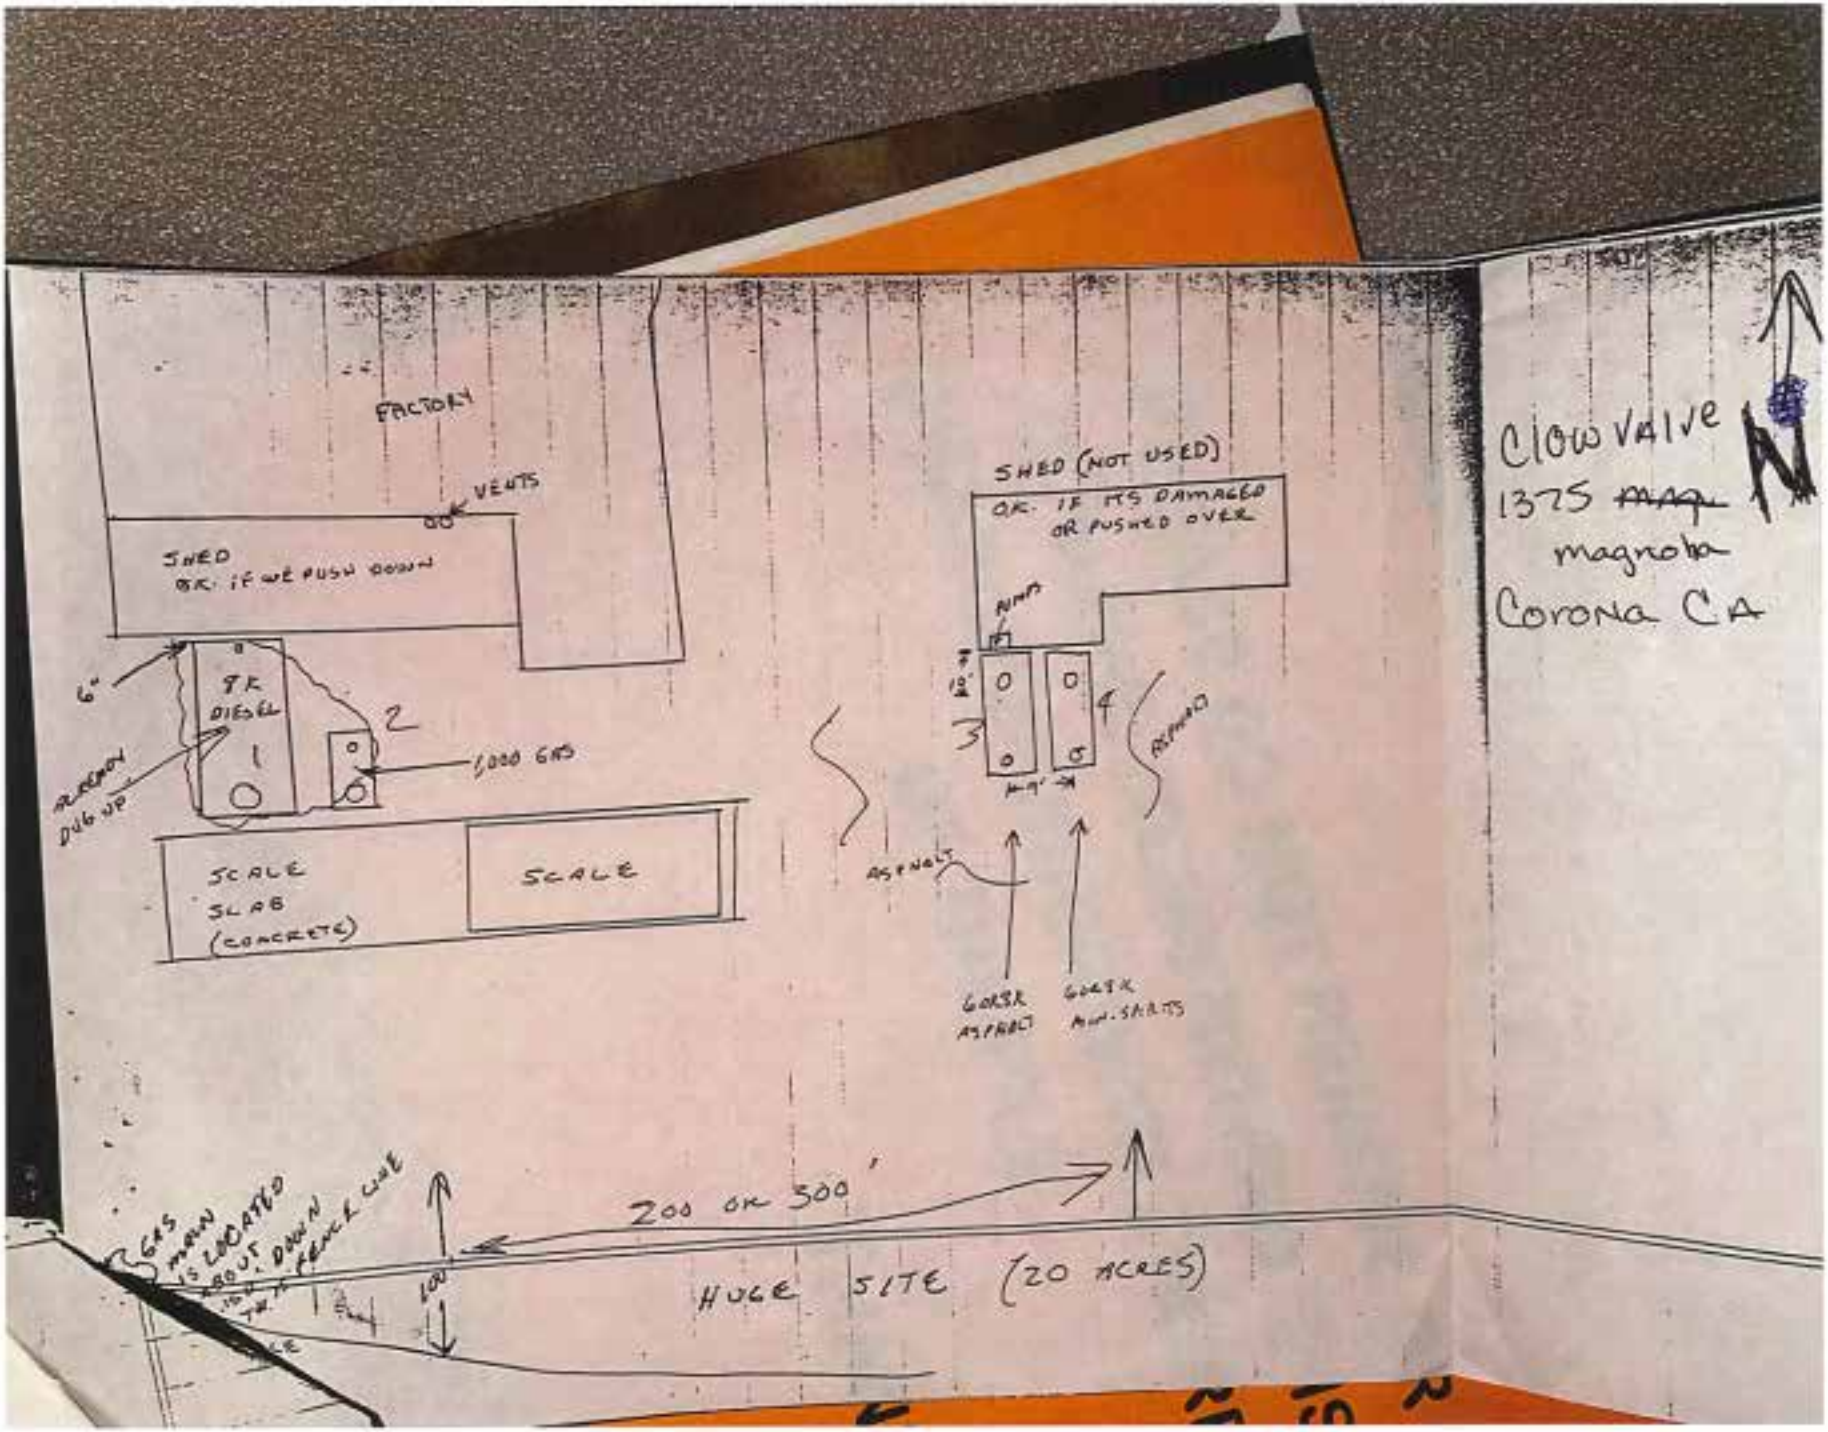
RE: Underground Storage Tanks at
1375 Magnolia Avenue
Corona, CA 91719

Attn: Joe Scheliga

Dear Mr. Scheliga:

It has come to the attention of the Hazardous Materials Management Division that the above-mentioned property has two, or possibly three, Underground Storage Tanks (USTs) for which current Underground Storage Tank Permits have not been obtained. Under Riverside County Ordinance 617 and Section 25284(a) of the California Health and Safety Code, "no person shall own or operate an underground storage tank unless a permit for its operation has been issued by the local agency." Therefore, as the property owner of the above location, you are in violation of County and State regulations thereby subject to regulatory action.



In order to remedy these violations, this office provides three options listed as follows:

I. Obtain current UST permits by providing this office with the following information for all tank systems:

-Tank integrity test results
-Pipeline integrity test results
-An approved monitoring alternative application
-Forms A and B (contact this office for applications)
-A statement of financial responsibility
-Daily monitoring records
-Monthly inventory reconciliation records
-Calibration of the meters
-Annual inventory reconciliation records
-Payment of all past and current fees including penalties

II. Place the USTs in Temporary Closure requiring a Closure Permit from this office. A Temporary Closure Permit is valid for one year.

III. Obtain a Permit for Removal from this office and remove the tanks within 90 days.

magnolia
Corona CA

In addition to the current Underground Storage Tank regulations, as stated in Title 23 of the California Code of Regulations, existing UST systems must either be upgraded to include secondary containment or removed by 1998.

One of the above options must be carried out by 10/28/93 to avoid regulatory action. For further details, please call Sande Wages at (909)358-5055.

Thank You,

Sandra J. Wages
