EXECUTIVE SUMMARY

At the request and authorization of the Client (Second Street Family, L.P.), TAGDD conducted a Phase I Environmental Site Assessment (ESA) for an approximately 4-acre property located in the city of Corona, Riverside County, California. No address has been assigned. The subject property is comprised of Assessor's Parcel Number (APN) 1183-020-30 and a portion of APN 1182-700-55.

The purpose of this Phase I ESA was to assess the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment (i.e., *recognized environmental condition* as delineated in ASTM International *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, Designation ASTM E1527-21.

The following bulleted items summarize the information obtained during the preparation of this ESA:

- The subject property comprises approximately 4-acres located on two non-contiguous lots located at the southwest and northwest corner of the intersection of W. 2nd Street and S. Buena Vista Avenue, in the City of Corona, Riverside County, California (**Figure 1**). The subject property is comprised of Assessor's Parcel Number (APN) 1183-020-30 and a portion of APN 1182-700-55.
- Based on historical records such as aerial photographs, topographic maps, and previous reports, the subject property was undeveloped until sometime between 1931 and 1938, when a structure (presumed rural residence) was constructed. Between 1948-1971 2-3 residences were present on the subject property. From at least 1960 to at least 1966 much of the western portion of the property was used for outdoor equipment storage. Between 1967 and 1971 the rural residences were replaced by a mobile home park. The mobile home park was removed between 2014-2016 during the construction of E. 2nd Street. Since that time the subject property has been either vacant or used for outdoor equipment storage.
- On August 19, 2023, TAGDD personnel conducted a reconnaissance of the subject property to physically observe the property and adjoining properties for conditions indicating a potential environmental concern. Concerns would include any evidence of contamination, distressed vegetation, petroleum-hydrocarbon staining, waste drums, illegal dumping, or improper waste storage and/or handling. The only utilities noted were underground at the sidewalks on the north and eastern adjacent sidewalks. Windblown trash is present. No evidence of environmental concerns was noted on the subject property during our site reconnaissance.
- TAGDD performed a Vapor Encroachment Screen (VES) for the subject property, in accordance with ASTM E2600-15. The purpose was to evaluate whether sites (e.g., gas stations, dry cleaners, or other listings of environmental concern) that store or dispose of potential chemicals of concern or have documented releases, may migrate as vapors onto the property, as a result of contaminated soil and/or groundwater which may be present on or near the property (i.e., a potential Vapor Encroachment Condition or pVEC). The presence of a pVEC could be ruled out due to the lack of release sites within the AOC.

Findings

- *Known or suspected RECs* – are defined by the ASTM E1527-21 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

This assessment has revealed no evidence of *known or suspected RECs* in connection with the subject property.

- *Controlled RECs (CRECs)* – are defined by the ASTM E1527-21 as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a NFA letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls).

This assessment has revealed no evidence of *CREC's* in connection with the subject property.

- *Historical RECs (HRECs)* – are defined by the ASTM E1527-21 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls).

This assessment has revealed no evidence of the presence of *HRECs* in connection with the subject property.

- *De Minimis Conditions* – include environmental concerns identified which may warrant discussion but do not qualify as RECs, as defined by the ASTM E1527-21.

This assessment has revealed no evidence of *De Minimis* Conditions at the subject property.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM E1527-21 of APN 1183-020-30 and a portion of APN 1182-700-55, the *subject property*. Any exceptions to, or deletions from, this practice are described in Section 7.0 of this report.

This assessment has revealed no evidence of *recognized environmental conditions* in connection with the *subject property*. *Further investigation is not warranted.*

1.0 INTRODUCTION

1.1 Purpose

The purpose of this Phase I Environmental Site Assessment (ESA) was to assess the possible presence of *recognized environmental conditions* (RECs) include property uses that may indicate the for the approximately 4-acre property located at the southwest and northwest corner of the intersection of W. 2nd Street and S. Buena Vista Avenue, in the City of Corona, Riverside County, California (**Figure 1**). The subject property is comprised of Assessor's Parcel Number (APN) 1183-020-30 and a portion of APN 1182-700-55. presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term *REC* is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment, and that would not be subject to enforcement action by a regulatory agency.

This ESA was performed in general conformance with the ASTM International *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*, Designation ASTM E1527-21 (E1527-21).

1.2 Scope of Services

The following scope of services was conducted by TAGDD:

- A review of readily available documents which included topographic, geologic, and hydrogeologic conditions associated with the subject property.
- A review of readily available maps, aerial photographs, and other documents relative to historical subject property usage and development.
- A review of previous environmental reports and regulatory file information pertaining to both existing and historic property conditions.
- A review of readily available federal, state, county, and city documents and database files concerning hazardous material storage, generation and disposal, active and inactive landfills, existing environmental concerns, and associated permits related to the subject property and/or immediately adjacent sites.
- A site reconnaissance to ascertain current conditions on the subject property.
- Interviews with person(s) knowledgeable of the subject property.
- The preparation of this report which presents our findings, conclusions, and recommendations.

1.3 Reliance

This ESA has been prepared for the use of Second Street Family L.P. (Client) and may also be relied upon by C&C Development, Orange Housing Development Corporation, Inc, National Equity Fund, Bank of America, Citi Bank, the City of Corona and/or the County of Riverside. This assessment should not be relied upon by other parties without the express written consent of TAGDD and Client. Any use or reliance upon this assessment by a party other than the Client; therefore, shall be solely at the risk of such third party

and without legal recourse against TAGDD, its employees, officers, or director regardless of whether the action in which recovery of damages is brought or based upon contract, tort, statute or otherwise.

This assessment should not be interpreted as a statistical evaluation of the subject property, but rather is intended to provide a preliminary indication of onsite impacts from previous property usage and/or the release of hazardous materials. If significant indicators of the presence of hazardous materials and/or petroleum contamination are not encountered during our research, such substances may still be present. The findings in this report are based upon published geologic and hydrogeologic information, information (both documentary and oral) provided by the Client, various local, state and federal agencies, Environmental Risk Information Services (ERIS) (i.e., agency database search), and TAGDD's field observations. Some of these data are subject to change over time. Some of these data are based on information not currently observable or measurable but recorded by documents or orally reported by individuals.

2.0 PHYSIOGRAPHIC SETTING

2.1 Subject Property Description

The subject property is comprised of 4-acres of undeveloped land on 2 non-contiguous parcels identified as Assessor's Parcel Number (APN) 1183-020-30 and a portion of APN 1182-700-55. The western end of APN 1182-700-55 is not part of the subject property (**Figure 2**).

The subject property is immediately bound by an onramp to Highway 91 to the north, and commercial properties to the east, west, and south. S. Buena Vista Avenue separates the two APN. The general surrounding area is developed with a combination of commercial and residential properties. According to the City's online zoning database (<https://gis-cityofcorona.opendata.arcgis.com/>), the majority of the subject property is zoned "MP" (low density residential). APN 1183-020-30 is zoned as "R3", or high density residential.

2.2 Topography

The subject property is located on the United States Geological Survey (USGS) 7.5 Minute Corona North Quadrangle map (USGS, 2022. GoogleEarth© indicates the elevation of the subject property ranges from approximately 642 feet above mean sea level (amsl) at the west end to approximately 632 feet amsl at the east end. The subject property is graded and relatively level. Surface drainage would tend to move west to east based on topography.

2.3 Regional and Local Geology

The subject property lies within the Peninsular Ranges Geomorphic Province. The Peninsular Ranges geomorphic province, one of the largest geomorphic units in western North America, extends from the Transverse Ranges geomorphic province and the Los Angeles Basin, south to Baja California. It is bound on the west by the Pacific Ocean, on the south by the Gulf of California and on the east by the Colorado Desert Province. The Peninsular Ranges are a series of northeast-southeast oriented fault blocks (CGS, 2002).

Three (3) major faults zones and some subordinate fault zones are found in this province. The Elsinore Fault zone and the San Jacinto Fault zone trend northwest-southeast and are found near the middle of the province. The San Andreas Fault zone borders the north-easterly margin of the province, whereas, a

fault related to the San Andreas Transform Fault System, the Newport-Inglewood-Rose Canyon Fault zone exists near the western margin and Continental Borderland Geomorphic Province (CDMG, 1977).

Based on a phase II ESA report for a nearby property (Lincoln and Highway 91/Geo-Cal, 2010): *“The City of Corona is developed on a substrate of Pleistocene alluvium referred to locally as the Corona compound alluvial fan. The proximal end of the fan abuts the northeast front of the Santa Ana Mountains and conceals the Elsinore Fault Zone (EFZ). The EFZ bifurcates approximately 2 miles south of the Site into the Whittier fault and the Chino fault. The distal end of the fan terminates against the flood plains of the Temescal Wash and the Santa Ana River to the east and north, respectively. Near the Site, the surficial deposits consist of alluvial terrace deposits and older alluvium (Morton, 1972). The terrace deposits are yellowish red to reddish brown unconsolidated gravels made up of angular to subrounded clastic material consisting of metavolcanic, metasedimentary, and granitic rock types. The older alluvium is composed of material similar to that of the terrace deposits; however, the clasts are generally smaller.”*

Soil in the immediate vicinity of the subject property was researched on the United States Department of Agriculture - Natural Resource Conservation Service, online Web Soil Survey database (<https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx>). Soil beneath the subject property was identified as a gravelly fine sandy loam of the Garretson Soil Series at 2 to 8 percent slopes. These soil series consists of well drained soils with slow to medium runoff and moderate permeability.

2.4 Regional and Local Hydrogeology

According to the Santa Ana Regional Water Quality Control Board – Region 8 (SARWQCB, 1995), the subject property is located within the Temescal Sub Area (8-002.09). Groundwater in this subarea has been designated as beneficial for municipal domestic supply, agricultural, and industrial.

Based on a nearby Phase II ESA project (Geo-Cal, 2010) *“The City of Corona is located within the Temescal Groundwater Basin in the Upper Santa Ana River watershed. The basin is bounded physiographically to the east, west, and south by the Gavilan Hills and Santa Ana Mountains and to the north by the Santa Ana River, which roughly separates the Temescal Basin from the adjacent Chino Basin (CRWQCB-SAR, 1995). Regional groundwater flow within the Temescal Basin is generally to the northwest and west towards the Prado Flood Control Basin.”* The same report identified groundwater depth at >100-feet below ground surface.

2.5 Hydrologic Flood Plain Information

On March 2, 2023 TAGDD reviewed the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) online database (FEMA, 2023) to determine if the subject property was in a flood zone. According to Panel 06065C0689G (effective August 28, 2008), the subject property is located within a Zone X subset. In this case the Zone is inside the 500-year flood plain, subject to 0.02% flood hazard. A copy of the FIRM is included in **Appendix B**.

3.0 SUBJECT PROPERTY BACKGROUND

3.1 Subject Property Ownership and AUL

The overall subject property is owned by the City of Corona Housing Authority, Specific Information regarding the ownership of the subject property was obtained from a Title Report prepared by TICOR Title Insurance Company, dated June 13, 2023. Ownership is identified as the *“City of Corona Housing*

Authority, California public body, corporate and politic". A copy of the Policy with detailed subject property descriptions is included in **Appendix B**.

No separate Title report was provided to evaluate Activity and Use Limitations (AUL). However, the State Envirostor© website includes a state-wide listing of DTSC sites with AUL. TAGDD reviewed that site; the subject property was not listed. Based on the undeveloped nature of the property, as well as its rural location, TAGDD does not consider a separate environmental lien title search to be necessary.

3.2 Subject Property History

TAGDD reviewed readily available information sources to evaluate historic land use in and around the subject site. These information sources include aerial photographs, United States Geological Survey (USGS) maps, and city and/or county records. The information sources are reviewed in the following sections.

3.2.1 Historical Aerial Photograph and Topographic Map Review

Historical aerial photographs and topographic maps were reviewed to identify historical land development and any surface conditions which may have impacted the subject property. Aerial photographs (1931 - 2022) and historical topographic maps (1942-2022) were obtained and reviewed from ERIS®. An aerial photograph was also obtained from Google Earth® and used to prepare **Figure 1**.

Table 1 summarizes the results of the aerial photograph review. Topo information may not be listed if additional information is not observed. Reviews were made at approximate 5-year jumps on recent maps to lessen repetitive data. Copies of all aerial photographs and historical topographic maps provided by ERIS® are included in **Appendix C**.

TABLE 1 Summary of Historical Aerial Photograph and Topographic Map Review		
Year	Source and Scale	Comments
1931	Fairchild 1" = 500'	The subject property is undeveloped and appears to be dry farmed for hay or a similar crop. S Buena Vista is present and may be paved. 2 nd Street is a dirt path. Adjacent properties north, west, and south are also cultivated and dry farmed. To the east are several rural residential properties on large lots.
1938	ASCS 1" = 500'	Subject property and adjacent generally as above. Pattern on subject property, property to south, and property to southeast may be (not confirmed) orchard or grape plantings? Surrounding generally as above but infilling and plants maturing.

1948	USGS 1" = 500'	North half of subject cultivated (hay?) as are properties east, north, and south. South half of subject is developed with structures at the southeast and southwest corners. Small lot at NE corner is part of a larger lot with several trees (small orchard?). Otherwise undeveloped. Surrounding generally as above but infilling.
1954	ASCS 1" = 500'	Small lot at NEC now appears to be a back yard for a residence. Larger subject property lot as above, with exception that there may be a shed or small structure added north of the SE corner structure. Adjacent property on northeast end of larger lot now has at least 2 small structures immediately adjacent. East end of property adjacent south now has a large building, as well as a driveway with either sheds or parking.

TABLE 1 Summary of Historical Aerial Photograph and Topographic Map Review

Former commercial to northwest removed. Property adjacent east end multifamily development with several buildings.
2018-2021	USDA 1" = 500'	Subject vacant. Surrounding generally as above.

ASCS is the Agriculture and Soil Conservation Service. NAIP is the National Agriculture Inspection Program. USGS is the U.S. Geological Survey. NHAP is National High-Altitude Photography.

3.2.2 City/County Directories

Directory listings associated with the street addresses located adjacent to and surrounding the subject property was obtained from ERIS, an environmental information/database retrieval

service. Searches were requested on the 100-500 blocks of S. Buena Vista Avenue and all of W. 2nd Street. Directories dating to 1924 were reviewed. The 300 S. Buena Vista address was noted as a school property starting in 1971 and remained school related to the present. The mobile home park Buena Vista Mobile Manor, or separate residents, associated with the larger APN was identified at an address from 1971-2016. Other addresses in the 100-200 S. Buena Vista range were individuals. No other listings for the subject property addresses were present.

No gas stations, cleaners, or other occupants of potential environmental concern were identified on the subject property, or adjacent properties. A copy of the City Directory Report is provided in **Appendix C**.

3.2.3 Fire Insurance Maps

TAGDD researched available Fire Insurance Maps of the subject property. Such maps provide detailed information on site structures, uses, and occupancies and were typically utilized by insurance companies to evaluate potential fire risk. Coverage was not available for the subject property. A copy of the ERIS report is included in **Appendix C**.

3.2.4 Summary of Property History

Based on historical records such as aerial photographs, topographic maps, and previous reports, the subject property was undeveloped until sometime between 1931 and 1938, when a structure (presumed rural residence) was constructed. Between 1948-1971 2-3 residences were present on the subject property. From at least 1960 to at least 1966 much of the western portion of the property was used for outdoor equipment storage. Between 1967 and 1971 the rural residences were replaced by a mobile home park. The mobile home park was removed between 2014-2016 during the construction of E. 2nd Street. Since that time the subject property has been either vacant or used for outdoor equipment storage.

3.3 Regulatory Database Review

TAGDD subcontracted an electronic database report from ERIS®, an environmental information/database retrieval service. Facilities were identified by county, state, or federal agencies that generate, store, or dispose of hazardous materials or which have or have had releases from underground storage tanks, industrial uses, or related sites. A copy of the full ERIS® report is provided in **Appendix D**, along with a description of the individual databases. **Table 2** summarizes noted information sorted by radius:

3.3.1 Subject Property

There are no listings on the subject property:

3.3.2 Adjacent Properties (within 1/8th Mile Radius Distance (660 feet))

Listings 1-25 are in this search radius:

- Listings 1-7 located in the vicinity of the subject property are all compliance/permit related listings which do not represent spill or releases. Such compliance/permit listings are not considered REC in the absence of releases.

- Listing 8 (**300 S. Buena Vista Avenue**) is the adjacent school and municipal property immediately south of the subject property. The listing documents 9 notations. Seven (7) of the listings are Permit/Compliance related and not considered further. Three (3) document former and current UST. In the absence of a release, such permit/compliance listings are not considered Recognized Environmental Conditions (REC). *WE note that a release case related to this property is discussed in **Section 3.4.3** which is not considered a REC.*
- Listing 9 (**100' ESE of subject property**) has 3 notations, all related to the discovery of "PFAS" constituents at parts-per-trillion (PPT) concentrations in a "desalter" well (Well 21) near the subject property. PFAS are "per-and polyfluoroalkyl substances." At this time, there are no Federal health risk standards for these substances, although we understand that such standards are being developed. Due to the depth of groundwater (>100'feet) in the referenced well, and due to the lack of industrial development on the subject property, it appears unlikely that the subject property would be a source for the PFAS in the local groundwater well. As such, we do not consider the presence of PFAS in local groundwater as a current REC.
- Listings 10 (**367-449 S. Buena Vista Avenue**) has a single compliance/permit notation. Such compliance/permit listings are not considered REC in the absence of releases.
- Listing 11 (**300 S. Buena Vista Avenue**), immediately adjacent south, is a school and municipal property with 10 notations, several of which relate to an historical LUST case. The project is further discussed in **Section 3.4.3**. As noted in that section, due to distance, size, and duration of LUST case, the site is not considered a REC.
- Listing 12 (**330 S. Buena Vista Avenue**), immediately adjacent south, has a single compliance/permit notation. Such compliance/permit listings are not considered REC in the absence of releases.
- Listing 13 (**231 S Lincoln Avenue**), is located several hundred feet to the west, at a former Honda Car Dealership. There are 4 notations, 2 of which relate to a gasoline LUST release case that was closed in 2011. Soil Vapor Extraction (SVE) was performed until 2007. Groundwater monitoring verified low or non-detect levels of most fuel constituents, and the case was closed. Based on distance, depth to groundwater, remediation, and regulatory closure, the case is not considered a REC.
- Listing 14 (**405 Sierra Vista Street**), is located several hundred feet to the west, has a single compliance/permit notation. Such compliance/permit listings are not considered REC in the absence of releases.
- Listing 15 (**301 S Lincoln Avenue**), is a Cardenas Market site located >500-feet west-southwest with 4 compliance/permit notations. Such compliance/permit listings are not considered REC in the absence of releases.
- Listing 16 (**no address**) located >600-feet southwest, is another municipal desalter well (Well 22) with PFAS (see Listing 9). As noted for listing 9: Due to the depth of groundwater (>100'feet) in the referenced well, and due to the lack of industrial development on the subject property, it appears unlikely that the subject property would

be a source for the PFAS in the local groundwater well. As such, we do not consider the presence of PFAS in local groundwater as a current REC.

- Listing 17-21 (**Various**) have compliance/permit notations. Such compliance/permit listings are not considered REC in the absence of releases.
- Listing 22 (no address) located >700-feet east-southeast, is another municipal desalter well (Well 25) with PFAS (see Listings 9 and 16). As noted for listing 9: Due to the depth of groundwater (>100'feet) in the referenced well, and due to the lack of industrial development on the subject property, it appears unlikely that the subject property would be a source for the PFAS in the local groundwater well. As such, we do not consider the presence of PFAS in local groundwater as a current REC.
- Listing 23-25 (**Various**) have compliance/permit notations. Such compliance/permit listings are not considered REC in the absence of releases.

3.3.3 Surrounding Area; 1/8 to 1/4 Miles Radius Distance (660-1,320 feet)

Listing numbers 26-57 are in this search radius.

- Listing 26-29 (**Various**) have compliance/permit notations. Such compliance/permit listings are not considered REC in the absence of releases.
- Listing 30 (**230 S. Lincoln Avenue**) located >900 feet west, is a former service station site with 12 notations. Several of the notations reference historical LUST cases which document soil-only release cases. The last case was closed in 1997. Due to distance, soil-only history, and closures, the release cases are not considered REC.
- Listing 31 (**130 N. Vicentia**) located >900 feet east-southeast, has a single compliance notation. Such compliance/permit listings are not considered REC in the absence of releases.
- Listing 32 (**341 S. Lincoln Avenue**) located >950 feet west-southwest, is a former dry cleaner location. Most of the notations are compliance related. However, one listing is a LOP (local oversight program) notation which identifies an initial 2010 investigation. The case is open as of 2020 but no work has been done since 2010. Based on distance and lack of evidence regarding any potential groundwater release, the site is not currently considered a REC.
- Listing 33-35 (**Various**) have compliance/permit notations. Such compliance/permit listings are not considered REC in the absence of releases.
- Listing 36 (**no address**) located 1,100-feet north-northeast, is another municipal desalter well (Well 28) with PFAS (see Listings 9 and 16). As noted for listing 9: Due to the depth of groundwater (>100'feet) in the referenced well, and due to the lack of industrial development on the subject property, it appears unlikely that the subject property would be a source for the PFAS in the local groundwater well. As such, we do not consider the presence of PFAS in local groundwater as a current REC.

- Listing 37-49 (**Various**) have compliance/permit notations. One listing (#45) is a dry cleaner site without a release case. Such compliance/permit listings are not considered REC in the absence of releases.
- Listing 50 (**no address**) located 1,200-feet southeast, is another municipal desalter well (Well 09A) with PFAS (see Listings 9 and 16). As noted for listing 9: Due to the depth of groundwater (>100'feet) in the referenced well, and due to the lack of industrial development on the subject property, it appears unlikely that the subject property would be a source for the PFAS in the local groundwater well. As such, we do not consider the presence of PFAS in local groundwater as a current REC.
- Listing 51-54 (**Various**) have compliance/permit notations. One listing (#45) is a dry cleaner site without a release case. Such compliance/permit listings are not considered REC in the absence of releases.
- Listing 55 (**846 W. 6th Street**) located >1,200-feet south-southeast, is a police station with a LUST release case involving a diesel release to soil. The case was closed in 1999. Based on soil-only release, distance, and closure status, the case is not considered a REC.
- Listing 56 (**no address**) located >1,280-feet east-southeast, is an industrial location with "metal machinery" location flagged as a potential PFAS emitter. No violations were noted and no release case is present. Such compliance/permit listings are not considered REC in the absence of releases.
- Listing 57 (**no address**) located >1,290-feet west-northwest, is a "mangular supply" well (Well 15) with PFAS (see Listings 9, 16, 50). As noted for listing 9: Due to the depth of groundwater (>100'feet) in the referenced well, and due to the lack of industrial development on the subject property, it appears unlikely that the subject property would be a source for the PFAS in the local groundwater well. As such, we do not consider the presence of PFAS in local groundwater as a current REC.

3.3.4 Surrounding Area; 1/4 to 1/2 Miles Radius Distance (1,320-2,640 feet)

Listing numbers 58-81 are in this search radius. Since TAGDD notes that proximity is the most important factor when assessing the degree of hazard to a subject property, we eliminate listings at this distance and further that are purely compliance/permit related. Only release cases are identified below (PFAS well locations are present but appear to reflect regional conditions rather than any site-specific point source release).

- Listing 63 (**625 W. 6th Street**), located >1,600-feet east, is a former service station (**Texaco Stanfield**) with an Listing 59 (**111 N Lincoln Avenue**), located approximately 1,400-feet northwest, is a former service station (**Shell Lincoln**), with an historical gasoline release discovered in 1989 and closed in 2004. The case file reports 2 monitoring wells which were not impacted (soil only). Remediation consisted of tank removals. Based on distance, soil-only release, and closure status, the location is not considered a REC.
- Listing 64 (**333 Railroad St.**), located >1,700-feet east-northeast, is a CALSITES listing of a manufactured gas plant site with operations dating to the early 1900's. The summary notations indicate a Preliminary Endangerment Assessment (PEA) was completed which concluded that a variety of contaminants could present threats to onsite workers. Based

on the lack of verified groundwater impact, distance, and lack of remedial actions (regulator concern) the location is not considered a REC.

- Listing 65 (**624 W. 6th St.**), located >1,700-feet southeast, is a service station (ARCO 9706 / Thrifty 336) with a LOP (local oversight) gasoline release to soil. The case was opened in 1999 and closed in 2003. No remediation occurred and the release was mitigated through tank removal. Based on soil only impact, distance, and closure status, the site is not considered a REC.
- Listing 66/67 (**706 S Vincentia**), located >1,800-feet south-southeast, is a private property (Harold King) with a LOP / LUST gasoline release to soil. The case was opened in 1992 and closed in 1995. No remediation occurred and the release was mitigated through tank removal. Based on soil only impact, distance, and closure status, the site is not considered a REC.
- Listing 68 (**612 W. 6th St.**), located >1,800-feet southeast, is an AAMCO transmission location with a LUST case documenting a gasoline release to soil. The case was opened in 1987 and closed in 1989. No remediation occurred and the release was mitigated through tank removal. Based on soil only impact, distance, and closure status, the site is not considered a REC.
- Listing 71 (**633 Railroad St.**), located >1,900-feet east-northeast, appears to be the same as Listing 64 (part of a manufactured gas site). The notation indicates a land use restriction is in place. As noted previously the case is not considered a REC.
- Listing 77 (**325 N. Cote St.**), located >2,300-feet north-northeast, is an MTA Truck School LOP/ LUST case documenting a diesel release to soil. The case was opened in 1993 and closed in 1994. No remediation occurred and the release was mitigated through tank removal. Based on soil only impact, distance, and closure status, the site is not considered a REC.
- Listing 78 (**401 W. 6th St.**), located >2,400-feet east-southeast, is an EZ Stop service station site with 2 LOP/LUST cases. The first documented a waste oil release to soil. The case was opened in 1993 and closed in 1994. A second case was opened and included 6 deep (100-foot+) monitoring wells showing a northerly gradient and low concentration fuel impacts. Deep soil vapor extraction (SVE) was conducted. Following remediation fuel impacted soils remained at depth, The release case was closed in 2010 due to a lack of receptors. Based on distance, low groundwater concentrations, and closure status, the site is not considered a REC.

3.3.5 Surrounding Area; 1/2 to 1.0 Miles Radius Distance (2,640-5,280 feet)

Listing numbers 82-93 are in this search radius.

- Listing 83 (**1267 W. 6th St.**), located >2,600-feet west, is identified as JAY'S MARKET, with a LOP/LUST case opened in 1999 and closed in 2009. Remediation of gasoline via SVE was conducted. Soil and groundwater were impacted. Three monitoring wells were installed in 2002/2003 and initial concentrations of fuel constituents dropped rapidly and were mostly non-detect in further sampling. Based on distance, low groundwater concentrations, and closure status, the site is not considered a REC.

- Listing 87 (**180 Sherman Ave**) located over 3,200-feet west-northwest, is an Envirostor listing. There is no release case – however the site is mentioned because it could be a substantial groundwater impact site. Based on great distance and lack of release case, the site is not currently considered a REC (and is unlikely to become a REC in our opinion).
- Several other cases similar to Listing 87 (not current release sites but requiring investigation) are also present at this great distance, and are not considered likely to become REC due to great distance.

None of the remaining release cases at this distance appear to be REC or potential REC.

3.3.6 Orphan / Unplottable Sites

There are 11 unplottable listings in the ERIS database. The majority are for non-release sites and are not considered further.

One is for a “CHMIRS” site documenting a release of petroleum at a site in “unincorporated east riverside county”. Such a release would be outside of the City of Corona and not near the subject property.

A second listing is for a “McDaniel Fruit” site referenced on “Buena Vista”. The case is an “irrigated lands” listing and not related to a release. Therefore, the case is not considered relevant.

Lastly there is a HMIRS case involving a hazardous materials release on Highway 91. Such a release would not typically be a threat to properties within the immediate vicinity and would have been mitigated by CalTrans if significant.

3.4 Regulatory y Agency Review and Interviews

Note that copies of requests and responses are not appended, as enough information is documented to allow a third party to recreate such information.

3.4.1 City of Corona

TAGDD contacted the City of Corona on August 19, 2023 though their record request portal ([https://coronaca.govqa.us/WEBAPP/rs/\(S\(z15wyuhnppt2mwpcpim1swd5\)\)/RequestOpen.aspx?rqst=1&SessionID=](https://coronaca.govqa.us/WEBAPP/rs/(S(z15wyuhnppt2mwpcpim1swd5))/RequestOpen.aspx?rqst=1&SessionID=)) concerning any permit, inspection, UST, or cleanup information available

for the subject property (request # C001156-081923). On February 28, 2023 the City responded on their portal had records. TAGDD reviewed records for the 300 S. Buena Vista address which pertained to the adjacent school property to the south. No records for the subject property were present. The City also referred TAGDD to the ETrakit website (<https://etrakit.coronaca.gov/etrakit/>) for permit records. TAGDD searched ETrakit by APN and addresses and found no records.

Following historical directory confirmation that the former mobile home park was associated with the address of 206 S. Buena Vista Avenue, a separate request (C001179-082323) was made on August 23, 2023. On August 24, 2023 the City indicated that no records were found.

3.4.2 Riverside County

On August 18, 2023 TAGDD contacted the County of Riverside, including the Department of Environmental Health (RCDEH); Land Use/Water Resources, and “all other programs” by and submitting the County’s Request for Records” form (<https://www.rivcoeh.org/Portals/0/PDF/Request-for-Records.pdf>) to the Hazardous Materials Division; Land Use/Water Division, and “all other programs” (request number 22423-5). Based on the location of the project and a review of neighboring addresses, 300 and 301 S. Buena Vista Avenue was used for the site address. APN’s were also provided. DEH directed TAGDD to a new request portal and also advised TAGDD that the City would hold building permit records.

We filed request 23-1330 on a new request website (<https://riversidecountyca.nextrequest.com/requests/23-1330>) to the DEH. On August 31, 2023 the County Land Use department responded that no records were present for the subject APN. On September 15, 2023 the DEH responded that no responsive records were present. On August 31, 2023 we filed a new request (23-1511) with a new address revealed through directory searches (206 S. Buena Vista). On September 22, 2023 Shantel Bacon at DEH indicated that no responsive records were found. She also noted in a separate response that no septic records were found.

The RCDEH also referred TAGDD to the County’s online “Find a Well” water well location resource (<https://rivcoeh.org/request-public-records>). The resource did not identify wells on the subject property. A 470-feet deep public water well (#WP0019845) completion report was on file for the property adjacent to the southeast. Depth of water was not reported.

Records also indicated that four groundwater monitoring wells had been present at the property located to the west of the subject property (231 S. Lincoln Avenue). Wells MW1-MW4 in 2000; MW-1 was perforated at depths below 100-feet. All 4 wells were abandoned (legally removed) in 2011.

On August 18, 2023 we also submitted a separate request to the County Transportation and Land Management Agency (TMLS) (<https://rctlma.org/building/Records-Request>) which includes Building Safety/Permitting; Code Enforcement; Planning; and Transportation. On August 18, 2023 the TMLS indicated that no building permits were located for the APN and addresses submitted.

3.4.3 State Water Resources Control Board

TAGDD reviewed the online database GeoTracker <https://geotracker.waterboards.ca.gov/> on August 18, 2023, which provides records on Leaking Underground Storage Tanks (LUSTs) and

Spills, Leaks, Investigation and Cleanup (SLIC) sites, which is maintained by the State Water Quality Control Board. The subject property was not listed on the GeoTracker database.

Geotracker did contain a listing; the Corona-Riverside Unified School District (T0606500336), immediately to the south. The listing address (300 Buena Vista Avenue) is the same address that would map to the subject site. Currently, the property adjacent south, which is owned by the School District, is listed with an address of 330 S. Buena Vista Avenue.

TAGDD reviewed Geotracker files on the case to verify the exact location of the release case. The case involved the removal of several fuel tanks; an investigation; the removal of fuel impacted soil to a depth of 25-feet below grade; and finally, the allowance of some impacted soils to remain in place.

TAGDD reviewed figures within a *“Tank Closure Report for Corona Unified School District, 300 South Buena Vista Avenue, Corona, California”* by AEC (AEC, 1993). A location map in the report indicates that school district property to the south (now 330 S. Buena Vista Avenue) was the location of the project. One of the figures identified the district’s “Bus Parking” area – that area is located on the eastern half of the adjacent property. To verify this information, TAGDD called the facility and spoke to Mr. Tim Russell in Facility Maintenance / 951-768-1588). Mr. Russell indicated that the referenced USTs had been at the extreme south end of the facility – “far away” from the subject property. Based on this confirmation the former USTs are not considered REC.

3.4.4 California Department of Toxic Substances Control

On March 1, 2023 TAGDD reviewed the online database EnviroStor, which provides records on: Federal Superfund sites (National Priority List); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites, which are maintained by the California Department of Toxic Substances Control. Envirostor has two listings in the immediate area, both of which are adjacent south:

- Transportation Office Orange Grove HS; 300 S. Buena Vista Avenue (#60003533)
- Orange Grove HS: 300 S. Buena Vista Avenue (#70000110)
- Orange Grove HS Case (#70000110) documents a Phase I ESA conducted in 2006 as required by DTSC for school sites. The case did not find evidence of REC and no further investigation was warranted.

The Transportation Office case (#60003533) documents a Phase I ESA request related to a new (June 2023) construction project at the school property immediately adjacent south. No report has been uploaded. TAGDD contacted the DTSC manager (Shahir Haddad / shahir.haddad@dtsc.ca.gov) to enquire if that report had been completed and whether REC were found. Ms. Haddad responded on August 21 that the Phase I was in progress and no determinations had been made.

As noted previously, Envirostor also provides a statewide listing (https://www.envirostor.dtsc.ca.gov/public/deed_restrictions) of Activity and Use Limitations (AUL). TAGDD reviewed those listings. Neither the subject site nor adjacent sites were listed.

3.4.5 California Department of Conservation Geologic Energy Management Division

Oil and gas wells were not observed at the subject property during our site reconnaissance. A August 18, 2023 review of the California Department of Conservation, Geologic Energy Management Division website for oil and gas fields in California and Alaska (<https://maps.conservation.ca.gov/oilgas/>) indicated that no oil and gas wells were present in the vicinity.

3.4.6 National Pipeline Mapping System

TAGDD reviewed the National Pipeline Mapping System (<https://pvnpm.phmsa.dot.gov/PublicViewer/>) public viewer website, accessed on August 18, 2023 for information on gas transmission pipelines and hazardous liquid trunk lines on or close to the subject property. According to the website, no pipelines are present at or in the immediate vicinity.

3.5 Current Property Owner Questionnaire

A representative of the property owner (Cynthia Lara of the City of Corona) completed an Owner questionnaire dated September 6, 2023. The information provided is documented below. A copy of the property owner questionnaire is included in **Appendix E**.

3.5.1 Past or Present Uses Indicating Environmental Concern

Ms. Lara stated that the subject property is currently vacant. Historically the property was identified as a mobile home park.

3.5.2 Environmental Liens or Governmental Notification

Ms. Lara stated that she was not aware of any environmental liens or governmental notification relating to past or recurrent violations of environmental laws with respect to the subject property.

3.5.3 Presence of Hazardous Substances or Environmental Violations

Ms. Lara stated that she was not aware of the presence of hazardous substances, drums, petroleum substance containers, underground or aboveground tanks, chemical spills/releases, or PCB containing equipment on the subject property. Ms. Lara also stated that he was not aware of any environmental violations and/or cleanups associated with the subject property.

3.5.4 Previous Assessments

Ms. Lara cited a 2018 vapor survey (**See Section 3.7.5**).

3.5.5 Legal Proceedings

Ms. Lara stated that she was not aware of any environmental liens, unresolved notices of violation, or litigation related to a contamination issue at the subject property.

3.6 User Provided Information

Pursuant to ASTM E1527-21, TAGDD provided a Phase I ESA User Specific Questionnaire to the “user” (the person on whose behalf the Phase I ESA is being conducted). *NOTE that this Phase I ESA is not part of a*

property transaction. Mr. Scott Bering, representing the User (2nd Street Family LP), filled out the User Questionnaire. The User Specific Information provided is documented in the following sections. A list of the user specific questions (per ASTM E1527-13/21) with associated responses is included in **Appendix E**.

3.6.1 Environmental Liens or Activity and Use Limitations

Mr. Bering did not have knowledge of environmental liens or activity and use limitations (AULs) in association with the subject property. No separate Environmental Lien Search was provided as part of this work product.

3.6.2 Specialized Knowledge

Mr. Bering stated that he has no specialized knowledge or experience related to the subject property or nearby properties (i.e., knowledge of the chemicals or processes used by a type of business).

3.6.3 Valuation Reduction for Environmental Issues

Mr. Bering stated that when purchased, the property was purchased at fair market value.

3.6.4 Presence or Likely Presence of Contamination

Mr. Bering stated that he was not aware of any environmental contamination, spills, or releases related to the subject property.

3.6.5 Other

Mr. Bering stated that no special Phase I ESA scope items were requested. Mr. Bering was aware of a past use of the property as a mobile home park.

3.7 Other Environmental Issues

3.7.1 Asbestos-Containing Materials

Asbestos, a natural fiber used in the manufacturing of several different building materials, has been identified as a human carcinogen. Most friable (i.e., easily broken or crushed) Asbestos-Containing Material (ACM) was banned in building materials by 1978. By 1989, most major manufacturers had voluntarily removed non-friable ACM (i.e., flooring, roofing, and mastics/sealants) from the market. These materials, however, were not banned completely.

In October 1995, the Federal Occupational Safety and Health Administration (OSHA) redefined how building materials are classified in regard to asbestos and the also the way these materials are to be handled. Under this ruling, “thermal system insulation and sprayed-on or troweled on or otherwise applied surfacing materials” applied before 1980 are considered presumed Asbestos-Containing Materials (PACM). Other building materials such as “floor or ceiling tiles, siding, roofing, transite panels” (i.e., non-friable) are also considered PACM unless tested.

The subject property is vacant and currently undeveloped. Based on this information, the presence of asbestos-containing materials is not considered likely.

3.7.2 Lead-Based Paint

Lead-Based Paint (LBP) is identified by OSHA, the Environmental Protection Agency (EPA) and the Department Housing and Urban Development Department (HUD) as being a potential health risk to humans, particularly children, based upon its effects to the central nervous system, kidneys, and bloodstream. The risk of Lead-Based Paint has been classified by HUD based upon the age and condition of the painted surface. This classification includes the following:

- maximum risk is from paint applied before 1950;
- a severe risk is present from paint applied before 1960;
- a moderate risk is present from paint applied before 1970;
- a slight risk is present from paint applied before 1977; and
- paint applied after 1977 is not expected to contain lead.

The subject property is undeveloped. Historically portions of the subject property were developed as a mobile home park. Based on this information, the presence of lead-based paint is not considered likely.

3.7.3 Radon

Radon is a radioactive gas which has been identified as a human carcinogen. Radon gas is typically associated with fine-grained rock and soil, and results from the radioactive decay of radium. The U.S. EPA recommends that homeowners in areas with radon screening levels greater than 4 Picocuries per liter (pCi/L) conduct mitigation of radon gas to reduce exposure. Sections 307 and 309 of the Indoor Radon Abatement Act of 1988 (IRAA) directed the U.S. EPA to list and identify areas of the U.S. with the potential for elevated indoor radon levels. U.S. EPA's Map of Radon Zones (EPA-402-R-93-071) assigns each of the 3,141 counties in the US to one of three zones based on radon potential:

- Zone 1 counties have a predicted average indoor radon screening level greater than 4 pCi/L.
- Zone 2 counties have a predicted average indoor radon screening level between 2 and 4 pCi/L.
- Zone 3 counties have a predicted average indoor radon screening level less than 2 pCi/L.

Based on such factors as indoor radon measurements; geology; aerial radioactivity; and soil permeability, the U.S. EPA has identified the Riverside as Zone 2 (i.e., a predicted average indoor radon screening level between 2 and 4 pCi/L). EEI does not consider radon as a significant environmental concern at this time.

3.7.4 Emerging Contaminants

Regulatory agencies are evaluating a number of "emerging chemicals", commonly to include per- and poly-fluoroalkyl substances (PFAS), 1-4 Dioxane, and others. According to the California State Water Board (https://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/pfas.html) *"Per- and polyfluoroalkyl substances (PFAS) are a group of more than 12,000 human-made substances that are not naturally occurring and are resistant to heat, water, and oil. These chemicals have been used and produced extensively in the United States for both commercial and industrial purposes, as well as for emergency fire response. Due to their unique chemistry, PFAS have been widely used as surface coatings and protectant formulations in consumer goods such*

as carpet and home textiles; clothing; food packaging; and non-stick cookware. PFAS have also been used as a surfactant in chrome plating, firefighting foam, and other industrial applications. In typical conditions, PFAS are resistant to degradation and do not break down in the environment. These substances can accumulate within the human body and are toxic at relatively low concentrations”.

As noted in **Section 3.3 database reviews**; PFAS have been documented at parts per trillion (PPT) levels in many “desalter well” within the database search radii. The closest of these is Well 21 located 100-feet to the east southeast of the subject property. PFAS are noted as a regional contamination issue in groundwater, which is present at depths of >100-feet below grade. The past lack of industrial development of the subject property would indicate that such chemicals would not likely have originated on the subject property. Additionally cleanup concentrations have not been approved by regulators at this time. We do not consider these PFAS to be a REC due to groundwater depth and the extremely low (parts per trillion) levels documented in regional groundwater.

3.7.5 Historical Vapor Survey / Phase I ESA

The City of Corona provided a Tier II Vapor Screen (Ninyo & Moore, 2019) for the subject property which identified 2 potential Vapor Encroachment Conditions (pVEC). One pVEC was identified at a dry cleaner release site located at 341 S. Lincoln (to the southwest). A second pVEC was identified at the school-owned property immediately south of the subject property. The Tier 2 study eliminated these pVEC.

PSI (PSI, 2011) prepared a closure report for a Honda LUST release located several hundred feet to the northwest. The report documented a gasoline release, remediation, and closure. The site was closed following Soil vapor extraction (SVE) remediation. Final rebound testing included influent soil gas testing. Relatively low concentrations of fuel remained in the soil. No vapor surveys were completed. The location is not considered a REC due to distance and closure status.

4.0 SITE RECONNAISSANCE

4.1 Purpose

The purpose of our site reconnaissance was to observe the subject property, any onsite structures, and adjoining properties visually and physically for conditions indicating an existing release, past release, or threatened release of any hazardous materials/substances or petroleum products into structures on the subject property, or into soil and/or groundwater beneath the property. This would include any evidence of contamination, distressed vegetation, petroleum-hydrocarbon surface staining, waste drums, ASTs/USTs, illegal dumping, or improper waste storage/handling. Detailed information is provided in the following text.

4.2 Subject Property

On August 19, 2023, TAGDD personnel conducted a site reconnaissance to visually observe the subject property and adjoining properties for conditions indicating a potential environmental concern. TAGDD was unescorted. Visual conditions present during the site reconnaissance are documented in the Photographic Log (**Appendix A**) and summarized in **Table 3**.

TAGDD accessed the subject property from S. Buena Vista Avenue. The overall subject property is unfenced, relatively level, and has surface vegetation ranging from weeds to trees. Much of the overall property is gravel covered with very sparse vegetation.

TAGDD initially walked the small lot at the northeast corner of S. Buena Vista and 2nd Street. The lot is vacant and unfenced along both frontage roads. A short concrete block wall is present on the south side, and a steel fence is located on the east end. An apartment complex bounds the property on the south and east. The lot is vacant, level, and its surface primarily gravel. Some vegetation is present at the south and east ends. Utilities are present in the street and/or sidewalks which bound the west and north sides.

TAGDD crossed S. Buena Vista and walked the main, larger lot at the northwest corner (NWC) of S. Buena Vista and 2nd Street. We proceeded westward on 2nd street to the lot's west end, crossed to the south boundary, and walked transects back through the balance of the lot. Abundant wind-blown trash is present. Utilities are also present in the adjacent sidewalks and street. A storm drain appears to be present along the north end of the subject property.

No evidence of contamination, distressed vegetation, petroleum-hydrocarbon surface staining, waste drums, USTs, ASTs, illegal dumping, or improper waste storage/handling was noted during our site reconnaissance.

4.3 Adjacent Properties

TAGDD conducted a visual and auto reconnaissance of the adjoining immediate area to observe the potential for offsite impacts that may affect the subject property. These would include evidence of chemical storage or usage, surface staining or leakage, distressed vegetation, or evidence of illegal dumping.

Highway 91 is adjacent immediately north of the subject property. A residential complex is located immediately east across S. Buena Vista Avenue. A school district headquarters and a Riverside County Transportation Commission office is located immediately south of the overall larger APN. To the west is a retail center.

No evidence of contamination, distressed vegetation, petroleum-hydrocarbon surface staining, waste drums, USTs, ASTs, illegal dumping, or improper waste storage/handling at these adjacent addresses was noted during our local reconnaissance.

5.0 VAPOR ENCROACHMENT SCREEN

ASTM Standard E2600-15 Standard Guide for Vapor Encroachment Screening (VES) on Property Involved in Real Estate Transactions was used as guidance for conducting a VES for the subject property. The purpose of the screening is to determine whether a Vapor Encroachment Condition (VEC) exists from chemicals of concern (COC) that may migrate as vapors onto a property because of contaminated soil and groundwater on or near the subject property. The screening involves a two-tiered approach to assessing VEC risk as described herein. The VES process includes a review of site conditions (e.g., aerial photographs, city directories, and environmental database information), which is information typically collected during a Phase I ESA, user provided information, and in some instances the use of a third-party vapor encroachment application. The following sections describe the VES performed on the property.

5.1 Site Conditions

The elevation of the subject property ranges from approximately 642 feet above mean sea level (amsl) at the west end to approximately 632 feet amsl at the east end. The subject property is graded and relatively level. Surface drainage would tend to move west to east based on topography.

Soil beneath the subject property was identified as a gravelly fine sandy loam of the Garretson Soil Series at 2 to 8 percent slopes. These soil series consists of well drained soils with slow to medium runoff and moderate permeability.

Referenced regional groundwater flow within the Temescal Basin is reported to be generally to the northwest and west towards the Prado Flood Control Basin. However, monitoring wells associated with a LUST release to the northwest (213 S. Lincoln Avenue) reported an eastward groundwater gradient roughly a decade ago. The referenced sources identified groundwater depth at >100-feet below ground surface.

5.2 User Provided VES Information

To assist TAGDD in the completion of the VES, Mr. Bering also completed a Vapor Encroachment Screen - User Questionnaire (**Appendix E**). The questionnaire provided basic information regarding the use, condition, and proposed development of the subject property.

According to Mr. Bering, future construction is intended to be a 110-unit affordable housing project. The project will be wood framed, slab-on-grade construction. Heating will be with electrical and gas utilities. Future development would not include service stations or dry cleaners, or hazardous materials.

5.3 Tier 1 Screening – Search Distance Test/Chemicals of Concern

A Tier 1 Screening includes the search distance test that involves a review of the regulatory database report and available historical records obtained during the Phase I ESA process to decide if any known or suspect potentially contaminated properties exist within the Area of Concern (AOC). High risk sites are typically current and former gas stations, former and current dry cleaners, manufactured gas plants, and industrial sites (Brownfields).

The AOC is defined as any up-gradient sites within the ASTM E1527-13/21 standard search distances and any cross or down gradient sites within 1/3 mile (1745-feet) *for solvents and petroleum products. If the contamination at the known or potentially contaminated sites within the AOC consists of Chemicals of Concern (COCs), then a potential Vapor Encroachment Condition (pVEC) exists, and a Tier 2 Screening evaluation is recommended. If no known or potentially contaminated sites with COCs exist within the AOC, no further inquiry is necessary.

Based on our understanding of the ASTM guidance, there are no upgradient releases, or releases within the AOC distances of 50 and 100-feet from the subject property boundary, that would qualify as potential pVEC.

5.4 Findings

TAGDD concludes that no potential Vapor Encroachment Conditions are present.

6.0 DATA GAPS AND DEVIATIONS FROM ASTM PRACTICES

Section 3.2.21 (ASTM E1527-21) defines a data gap as “a lack or inability to obtain information required by the practice despite good faith effort of the environmental professional to gather such information.”

6.1 Historical Data Gaps

No historical data gaps were identified during our research efforts.

6.2 Regulatory Data Gaps

As of the report date, records requests had not been answered by the Riverside County Transportation and Land Division. Based on the amount of data collected elsewhere, including our discussion with the adjacent school property, and a query to DTSC, we do not anticipate that significant hazmat-related records will be found for the subject property.

6.3 Onsite Data Gaps

No onsite data gaps were identified during our research efforts.

6.4 Deviations from ASTM Practices

Section 12.10 (ASTM E1527-21), states that all deletions and deviations from this practice shall be listed individually and in detail, including client-imposed constraints, and all additions should be listed.

TAGDD believes that no exceptions to, or deletions and deviations from, the ASTM E1527-21 Guidelines, are present.

7.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM E1527-121 of APN 1183-020-30 and a portion of APN 1182-700-55, the *subject property*. Any exceptions to, or deletions from, this practice are described in Section 7.0 of this report. Based on the information obtained in this ESA, TAGDD has the following conclusions and recommendations:

- *Known or suspected RECs* – are defined by the ASTM E1527-21 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

This assessment has revealed no evidence of *known or suspected RECs* in connection with the subject property.

- *Controlled RECs (CRECs)* – are defined by the ASTM E1527-21 as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (e.g., as evidenced by the issuance of a NFA letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls).

This assessment has revealed no evidence of *CREC's* in connection with the subject property.

- *Historical RECs (HRECs)* – are defined by the ASTM E1527-21 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (e.g., property use restrictions, AULs, institutional controls, or engineering controls).

This assessment has revealed no evidence of the presence of *HRECs* in connection with the subject property.

- *De Minimis Conditions* – include environmental concerns identified which may warrant discussion but do not qualify as RECs, as defined by the ASTM E1527-21.

This assessment has revealed no evidence of *De Minimis* Conditions at the subject property.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM E1527-21 of APN 1183-020-30 and a portion of APN 1182-700-55, the *subject property*. Any exceptions to, or deletions from, this practice are described in Section 7.0 of this report.

This assessment has revealed no evidence of *recognized environmental conditions* in connection with the *subject property*. *Further investigation is not warranted.*

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened.** DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

Site History:

Data prior to 2005 does not appear in GeoTracker. Consult agency files for all site data Honda Cars of Corona owned by Hendrick Automotive Group Agins Development is property owner - General Information The site is a former Honda Car dealership. Property is currently vacant. Site History/Release Information July 16, 1997 - One 10,000 gallon gasoline underground storage tank (UST) and one 1,000 gallon waste oil UST were removed. A total of seven soil samples were collected under the USTs, piping and dispensers. Impacted soils were detected in the piping and dispenser samples with concentrations up to: 9400 ppm TPHg, 230 ppm benzene, 780 ppm toluene, 220 ppm ethylbenzene, 1,400 ppm total xylenes, and 490 ppm MTBE. The site was placed into the Local Oversight Program in August 1997. Assessment September 1998 – Six direct push soil borings (HGA-1 through HGA-6) were advanced to depths of 25 to 40 ft. near the former dispenser and piping areas and the former waste oil UST area. Soil in the former UST area (HGA-1) was not impacted, whereas soil was impacted from 5- to greater than 35-ft in the piping/dispenser areas. Maximum detected soil concentrations were: TPH-g 4,800 ppm HGA-5-15' Benzene 29 ppm HGA-5-5' Toluene 400 ppm HGA-5-5' Ethylbenzene 110 ppm HGA-5-5' Xylenes 1200 ppm HGA-4-5' MTBE 40 ppm HGA-5-5' January 1999 – Three additional soil borings (HGA-7 through HGA-9) were advanced to depths of 70 to 90 ft. to further delineate the extent of impacts to the northwest of the former gasoline UST area. HGA-7 was angle-drilled at 22 ° under the building. Highest concentrations of petroleum-impacted soil were detected between 40 to 70 ft. with maximum soil concentrations of: TPHg 10 ppm HGA-9-45' Benzene 0.270 ppm HGA-9-45' Toluene 1.400 ppm HGA-9-45' Ethylbenzene 0.150 ppm HGA-9-45' Xylenes 0.830 ppm HGA-8-45' MTBE 15 ppm HGA-9-55' December 2000 – Four additional soil borings (HGA-10 through HGA-13) were advanced and completed as groundwater monitoring wells (MW-1 through MW-4). Groundwater (GW) was encountered at approximately 103 to 108 ft. in the boreholes and the wells were screened from 100 to 125 ft. MTBE was detected in the groundwater (GW) from all four wells with the highest concentration in MW-2 (470 ppb MTBE). Impacted soil was present between the depths of 45 and 80 ft. with maximum soil concentrations of: TPHg 26 ppm HGA-13/MW-4-55' Benzene 0.16 ppm HGA-13/MW-4-5' Toluene 0.57 ppm HGA-10/MW-1-55' Ethylbenzene 0.28 ppm HGA-13/MW-4-45' Xylenes 0.88 ppm HGA-13/MW-4-50' MTBE 29 ppm HGA-13/MW-4-55' &60' TBA 4.1 ppm HGA-10/MW-1-75' April 2003 - One nested soil vapor extraction well (SVE-1) was installed in source area with screens from 12 to 15 ft. and from 20 to 25 ft. Two test wells (TW-1, TW-2) were installed five and 10 feet from SVE-1 with screens from 12 to 15 ft and 20 to 25 ft, respectively. Soil samples were taken at five-foot intervals from each well during well installation, however, only samples from TW-2 were submitted for analysis based on field screening results. TW-2 samples at 16 and 21 ft. were non-detect (ND) for all constituents except total xylenes (0.010 ppm at 21 ft). October 2004 - Two vapor extraction wells (VW-1, VW-2) were installed. VW-1 was screened 55 to 65 ft and VW-2 was screened 50 to 60 ft. Soil samples were collected at five foot intervals for soil identification only; chemical analysis was not performed. Groundwater Monitoring: Groundwater monitoring was sporadically performed between 2000 and 2011 for a total of 16 sampling events. Water levels have fluctuated from 103.19 to 124.78 ft below ground surface with flow directions of northwest, southeast and east with predominant direction to the northeast. MTBE was initially detected in all of the wells with a maximum concentration of 470 ppb in MW-2, however, concentrations dropped below the detection limits (ND) in the third sampling event and have been non-detect in all subsequent sampling events. BTXE were detected in one sampling event (12/28/2001) and have been non-detect prior to and after this time. Other volatile organic compounds (VOCs) have not been detected in the GW with the exception of trichloroethene, which ranged from 1.39 to 3.15 micrograms per liter. Highest concentrations detected for all sampling events were: TPHg ND <50 ppb All Benzene 37 ppb MW-4 Toluene 31 ppb MW-4 Ethylbenzene 6.8 ppb MW-4 Xylenes 17 ppb MW-4 MTBE 470 ppb MW-2 TBA ND <50 ppb All TCE

3.15 ppb MW-3 Final groundwater sampling data collected May 2011 is shown in Section III above. The results were non-detect for TPHg, BTEX, and oxygenates, whereas several VOCs were detected at concentrations < 3 ppb. See Section III above for list of detections. Remediation SVE Pilot Testing: April 2003 - Soil vapor extraction (SVE) pilot testing was conducted from April 17 to April 18, 2003 using SVE-1 (shallow and deep) for extraction and TW-1 and TW-2 for monitoring. The average mass removal rate for TPHg for SVE-1A (deep) was approximately 71 pounds per day (lbs/day) and for SVE-1B (shallow) was approximately 22 lbs/day. The radius of influence (ROI) was approximately 8 feet for the shallow zone and 12 to 15 feet for the deep zone. SVE was determined to be viable remediation method for the site. October 2004 - A one-day SVE test was conducted October 26, 2004 using VW-1 and VW-2. Approximately 49 lbs of TPHg was removed from both wells during the 22-hr test. Maximum concentrations were: 472 ppmV TPHg (VW-2), benzene 6.88 ppmV (VW-1), toluene 170 ppmV (VW-2), ethylbenzene 25.7 ppmV (VW-2), and total xylenes 106.8 ppmV (VW-2), all other VOC's were ND. The ROI for these deep screened wells (approximately 50 to 60 ft bgs) was determined to be greater than 40 feet for each well. Combined mass removal rate ranged from 39 to 80 lb/day during the test. Soil Vapor Extraction: June 2006 to June 2007 - SVE operations were performed using SVE-1, VEW-1, and VEW-2 for extraction. During the year of operation, the SVE system extracted a total of 13,786 lbs. Maximum vapor concentrations were: 2100 ppmV TPHg (VW-2), 3.09 ppmV benzene (VW-2), 24 ppmV toluene (VW-1), 33.6 ppmV xylenes (VW-2), 9.68 ppmV ethylbenzene, 14.6 ppmV MTBE (VW-2), 4.4 ppmV 1,2,3-TMB (SVE-1), and 3.1 ppmV 1,3,5-TMB (SVE-1). Vapor concentrations decreased in VW-1 and VW-2 during SVE operations; however, concentrations in SVE-1 remained relatively stable since this well was only used for extraction at the beginning of SVE operations and prior to shut down. Vapor removal rates started at 30 lb/day, went as high as 106 lb/day, and decreased to 36 lb/day prior to system shutdown. Verification: Soil Vapor Extraction Rebound Testing: October 2007 - A 7 day (144 hour) SVE rebound test was conducted in October 2007. A total of 331 pounds of TPHg were extracted during the 144 hours of operation. The mass removal rate at the end of the test was 12.5 lb/day. Trends of TPHg, BTEX, and MTBE compounds showed initial increases followed by steep decreases in concentrations at the end of the test. To date the SVE system operated for a total of 7,715 hours and recovered a total of 14,117 pounds of TPHg. Confirmation Soil Borings: January 2011 - Four verification soil borings (B1- B4) were advanced to 100 ft. Soil samples were collected at five foot intervals beginning at five ft bgs and analyzed using EPA Methods 8015 and 8260. The bulk of the samples from B1, B2, and B3 were non-detect for all constituents tested, with the exception of MTBE (detected 80-90 ft in B1 and B2 at concentrations up to 410 ppb) and one detection of TBA (490 ppb B1-85'). Honda Cars of Corona owned by Hendrick Automotive Group Agins Development is property owner -

General Information The site is a former Honda Car dealership. Property is currently vacant.

Site History/Release Information

July 16, 1997 - One 10,000 gallon gasoline underground storage tank (UST) and one 1,000 gallon waste oil UST were removed. A total of seven soil samples were collected under the USTs, piping and dispensers. Impacted soils were detected in the piping and dispenser samples with concentrations up to: 9400 ppm TPHg, 230 ppm benzene, 780 ppm toluene, 220 ppm ethylbenzene, 1,400 ppm total xylenes, and 490 ppm MTBE. The site was placed into the Local Oversight Program in August 1997.

Assessment

September 1998 - Six direct push soil borings (HGA-1 through HGA-6) were advanced to depths of 25 to 40 ft. near the former dispenser and piping areas and the former waste oil UST area. Soil in the former UST area (HGA-1) was not impacted, whereas soil was impacted from 5- to greater than 35-ft in the piping/dispenser areas. Maximum detected soil concentrations were:

TPH-g 4,800 ppm HGA-5-15'
Benzene 29 ppm HGA-5-5'
Toluene 400 ppm HGA-5-5'
Ethylbenzene 110 ppm HGA-5-5'

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Xylenes 1200 ppm HGA-4-5'
MTBE 40 ppm HGA-5-5'

January 1999 - Three additional soil borings (HGA-7 through HGA-9) were advanced to depths of 70 to 90 ft. to further delineate the extent of impacts to the northwest of the former gasoline UST area. HGA-7 was angle-drilled at 22 ° under the building. Highest concentrations of petroleum-impacted soil were detected between 40 to 70 ft. with maximum soil concentrations of:

TPHg 10 ppm HGA-9-45'
Benzene 0.270 ppm HGA-9-45'
Toluene 1.400 ppm HGA-9-45'
Ethylbenzene 0.150 ppm HGA-9-45'
Xylenes 0.830 ppm HGA-8-45'
MTBE 15 ppm HGA-9-55'

December 2000 - Four additional soil borings (HGA-10 through HGA-13) were advanced and completed as groundwater monitoring wells (MW-1 through MW-4). Groundwater (GW) was encountered at approximately 103 to 108 ft. in the boreholes and the wells were screened from 100 to 125 ft. MTBE was detected in the groundwater (GW) from all four wells with the highest concentration in MW-2 (470 ppb MTBE). Impacted soil was present between the depths of 45 and 80 ft. with maximum soil concentrations of:

TPHg 26 ppm HGA-13/MW-4-55'
Benzene 0.16 ppm HGA-13/MW-4-45'
Toluene 0.57 ppm HGA-10/MW-1-55'
Ethylbenzene 0.28 ppm HGA-13/MW-4-45'
Xylenes 0.88 ppm HGA-13/MW-4-50'
MTBE 29 ppm HGA-13/MW-4-55' & 60'
TBA 4.1 ppm HGA-10/MW-1-75'

April 2003 - One nested soil vapor extraction well (SVE-1) was installed in source area with screens from 12 to 15 ft. and from 20 to 25 ft. Two test wells (TW-1, TW-2) were installed five and 10 feet from SVE-1 with screens from 12 to 15 ft and 20 to 25 ft, respectively. Soil samples were taken at five-foot intervals from each well during well installation, however, only samples from TW-2 were submitted for analysis based on field screening results. TW-2 samples at 16 and 21 ft. were non-detect (ND) for all constituents except total xylenes (0.010 ppm at 21 ft).

October 2004 - Two vapor extraction wells (VW-1, VW-2) were installed. VW-1 was screened 55 to 65 ft and VW-2 was screened 50 to 60 ft. Soil samples were collected at five foot intervals for soil identification only; chemical analysis was not performed.

Groundwater Monitoring:

Groundwater monitoring was sporadically performed between 2000 and 2011 for a total of 16 sampling events. Water levels have fluctuated from 103.19 to 124.78 ft below ground surface with flow directions of northwest, southeast and east with predominant direction to the northeast. MTBE was initially detected in all of the wells with a maximum concentration of 470 ppb in MW-2, however, concentrations dropped below the detection limits (ND) in the third sampling event and have been non-detect in all subsequent sampling events. BTXE were detected in one sampling event (12/28/2001) and have been non-detect prior to and after this time. Other volatile organic compounds (VOCs) have not been detected in the GW with the exception of trichloroethene, which ranged from 1.39 to 3.15 micrograms per liter. Highest concentrations detected for all sampling events were:

TPHg ND <50 ppb All
Benzene 37 ppb MW-4
Toluene 31 ppb MW-4
Ethylbenzene 6.8 ppb MW-4
Xylenes 17 ppb MW-4
MTBE 470 ppb MW-2
TBA ND <50 ppb All
TCE 3.15 ppb MW-3

Final groundwater sampling data collected May 2011 is shown in Section III above. The results were non-detect for TPHg, BTEX, and oxygenates, whereas several VOCs were detected at concentrations < 3 ppb. See Section III above for list of detections.

Remediation

SVE Pilot Testing:

April 2003 - Soil vapor extraction (SVE) pilot testing was conducted from April 17 to April 18, 2003 using SVE-1 (shallow and deep) for extraction and TW-1 and TW-2 for monitoring. The average mass removal rate for TPHg for SVE-1A (deep) was approximately 71 pounds per day (lbs/day) and for SVE-1B (shallow) was approximately 22 lbs/day. The radius of influence (ROI) was approximately 8 feet for the shallow zone and 12 to 15 feet for the deep zone. SVE was determined to be viable remediation method for the site.

October 2004 - A one-day SVE test was conducted October 26, 2004 using VW-1 and VW-2. Approximately 49 lbs of TPHg was removed from both wells during the 22-hr test. Maximum concentrations were: 472 ppmV TPHg (VW-2), benzene 6.88 ppmV (VW-1), toluene 170 ppmV (VW-2), ethylbenzene 25.7 ppmV (VW-2), and total xylenes 106.8 ppmV (VW-2), all other VOC's were ND. The ROI for these deep screened wells (approximately 50 to 60 ft bgs) was determined to be greater than 40 feet for each well. Combined mass removal rate ranged from 39 to 80 lb/day during the test.

Soil Vapor Extraction:

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

June 2006 to June 2007 - SVE operations were performed using SVE-1, VEW-1, and VEW-2 for extraction. During the year of operation, the SVE system extracted a total of 13,786 lbs. Maximum vapor concentrations were: 2100 ppmV TPHg (VW-2), 3.09 ppmV benzene (VW-2), 24 ppmV toluene (VW-1), 33.6 ppmV xylenes (VW-2), 9.68 ppmV ethylbenzene, 14.6 ppmV MTBE (VW-2), 4.4 ppmV 1,2,3-TMB (SVE-1), and 3.1 ppmV 1,3,5-TMB (SVE-1). Vapor concentrations decreased in VW-1 and VW-2 during SVE operations; however, concentrations in SVE-1 remained relatively stable since this well was only used for extraction at the beginning of SVE operations and prior to shut down. Vapor removal rates started at 30 lb/day, went as high as 106 lb/day, and decreased to 36 lb/day prior to system shutdown.

Verification:

Soil Vapor Extraction Rebound Testing: October 2007 - A 7 day (144 hour) SVE rebound test was conducted in October 2007. A total of 331 pounds of TPHg were extracted during the 144 hours of operation. The mass removal rate at the end of the test was 12.5 lb/day. Trends of TPHg, BTEX, and MTBE compounds showed initial increases followed by steep decreases in concentrations at the end of the test. To date the SVE system operated for a total of 7,715 hours and recovered a total of 14,117 pounds of TPHg.

Confirmation Soil Borings: January 2011 - Four verification soil borings (B1- B4) were advanced to 100 ft. Soil samples were collected at five foot intervals beginning at five ft bgs and analyzed using EPA Methods 8015 and 8260. The bulk of the samples from B1, B2, and B3 were non-detect for all constituents tested, with the exception of MTBE (detected 80-90 ft in B1 and B2 at concentrations up to 410 ppb) and one detection of TBA (490 ppb B1-85'). Boring B4 had detections in all samples from 5 to 45 ft and from 80 to 90 ft with maximum concentrations of:

TPHg 2200 ppm B4-15'
Benzene ND<250 ppb
Toluene 4100 ppb B4-5'
Ethylbenzene 2900 ppb B4-5'
Xylenes 60000 ppb B4-15'
MTBE 230 ppb B4-85'
TBA 1600 ppb B4-20'
1,2,4-TMB 290000 ppb B4-15'
1,3,5-TMB 200000 ppb B4-15'
Naphthalene 59000 ppb B4-15'
Other VOCs detected - See Section III above

Groundwater Sampling: May 2011 - Final groundwater sampling was conducted in May 2011 and concentrations of petroleum hydrocarbons were not detected above laboratory detection limits. Trace concentrations of various VOCs were detected in the groundwater samples, but are not believed to be attributed to the on-site release and all are below California Maximum Contaminant Levels (MCLs).

Violation Description:

Failure to maintain the following general tank operating requirements:

- Hazardous wastes or treatment reagents shall not be placed in a tank system if they could cause the tank, its ancillary equipment, or the secondary containment system to rupture, leak, corrode, or otherwise fail.
- The owner or operator shall use appropriate controls and practices to prevent spills and overflows from tank or secondary containment systems. These include at a minimum:
 - Spill prevention controls (e.g., check valves, dry discount couplings);
 - Overfill prevention controls (e.g., level sensing devices, high level alarms, automatic feed cutoff, or bypass to a standby tank); and
 - Maintenance of sufficient freeboard in uncovered tanks to prevent overtopping by wave or wind action or by precipitation. Uncovered tanks shall be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure (e.g., dike or trench), a drainage control system or a diversion structure (e.g., standby tank) with a capacity that equals or exceeds the volume of the top 60 centimeters (2 feet) of the tank.

Department requested that a preliminary endangerment assessment be conducted 3/15/91. DHS met with SCE personnel to discuss PEA requirement 4/10/91. Southern California Edison Company requested an extension until 15 September 1991 for PEA submission. Extension granted until 15 September verbally. PEA completed March 1995. RI/FS will be conducted 95/96. DTSC entered into a Consent Order with the Southern California Edison Company and the Southern California Edison Company. The objective of the Order is to conduct a Remedial Investigation/Feasibility Study under the oversight Study under the oversight of the Department. RI Report will be submitted in 4/97. RI Workplan and PPP approved. Round 1 RI Soil Sampling occurred 2/28/96 for Metal Scan, BTEX, PAHs, PCBs, TPH & Arsenic. Further RI sampling will be performed pending clearance from Southern Pacific Railroad. Performed Round 2 RI Soil Sampling for Arsenic. RI to be submitted end of April. An amendment to the Consent Order was signed by the Southern California Edison Co. (SCE) and the Southern California Gas Co. (SCG), (the Responsible Parties); and DTSC. The amendment adds an additional jurisdictional basis for the existing order, namely DTSC's administrative order authority under HSC Section 25187. DTSC sent comments on HRA to SCE.

Background:

The Corona Manufactured Gas Plant site consists of two parcels: 1) a parcel owned by SCE and operating as an electric substation; and 2) a vacant lot owned by Southern Pacific Transportation Co. used as a railroad right-of-way. The Corona MGP was operated by various utility companies from 1903 to 1918 as a steam electric plant, and from 1903 to 1921 to produce gas from crude oil. The arrival of natural gas to the site in 1921 terminated the gas generating activities. However, the site was used as a natural gas holder station until sometime between 1936 and 1942. The site was also used as an electric facility from as early as 1903 until the present time. Gas manufacturing and purification processes may have yielded various by-products such as lampblack, light oils, tars, sludges, other petroleum products and residues, and heavy metals. Principal chemicals of potential concern in these by-products include polynuclear aromatic hydrocarbons (PAHs) and phenolic compounds; total petroleum hydrocarbons (TPH; benzene, toluene, ethylbenzene, and total xylenes (BTEX); cyanide; and heavy metals. In addition, the electric facility may have been a source of polychlorinated biphenyls (PCBs). The PEA dated February 18, 1993 states that direct contact with affected soil is limited to site workers and that the chemicals' concentrations may present a threat in the event of exposure during excavation activities within the affected areas. The exposure routes for human receptors are by inhalation, ingestion and dermal contact. Under current conditions, the exposure potential is low.

Site History:

The Corona Manufactured Gas Plant (Site) was located on two parcels of land, which presently consist of one parcel owned by SCE and operating as an electric substation and a second parcel owned by Burlington Northern and Santa Fe (BNSF) Railway Company which is used as a railroad right-of-way. In addition to the substation facilities located on the property there is also an asphalt driveway with the remainder of the Site covered by gravel. There is no soil visible at the surface. A portion of the former gas plant extended approximately 20 feet onto the BNSF Railway right-of-way. The Site is bounded by Railroad Street to the south/southwest, by Cota Street to the west/northwest, and by the BNSF Railroad to the north/northeast. Beyond Railroad Street are single-family residences. Beyond Cota Street is a commercial self-storage facility. The Site is bounded by an industrial business center to the east/southeast.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

In 1903, the former Corona MGP was constructed by the Corona Gas and Electric Company to produce gas from crude oil. In 1910, a crude oil tank was installed near the main building. Though ownership changed between various utility companies, the Site continued to operate as a MGP until 1921. After 1921, the Site operated as a gas holding station until 1942. In 1936, a portion of the Site to the northeast was deeded to Pacific Electric Railway Company. In addition to the gas plant, the Site has operated as an electrical plant from 1903 to the present.

The gasification process used at the Site converted oil to a gaseous product known as "town gas." The process produced residues consisted primarily of lampblack (finely powdered carbon) and tars. Other possible by-products yielded by gas manufacturing and purification processes are light oils, sludges, petroleum products and residues, and heavy metals. Storage and handling practices at the Site were not known. The primary contaminants at the site consist of polynuclear aromatic hydrocarbons (PAHs) and arsenic impacting soil.

The Responsible Party (RP) signed a Land Use Covenant (LUC) with DTSC and a site certificate of Operable Unit 1 (OU 1) was completed in October 2014. The RP is has prepared a summary report and implementation plan for the Operable Unit 2 (OU 2) (Railroad Right of Way) to complete the remedy proposed in 2006. The RP is currently negotiating access with the railroads that own the land in OU 2 that require additional excavations.

Site History:

The Corona Manufactured Gas Plant (Site) was located on two parcels of land, which presently consist of one parcel owned by SCE and operating as an electric substation and a second parcel owned by Burlington Northern and Santa Fe (BNSF) Railway Company which is used as a railroad right-of-way. In addition to the substation facilities located on the property there is also an asphalt driveway with the remainder of the Site covered by gravel. There is no soil visible at the surface. A portion of the former gas plant extended approximately 20 feet onto the BNSF Railway right-of-way. The Site is bounded by Railroad Street to the south/southwest, by Cota Street to the west/northwest, and by the BNSF Railroad to the north/northeast. Beyond Railroad Street are single-family residences. Beyond Cota Street is a commercial self-storage facility. The Site is bounded by an industrial business center to the east/southeast.

In 1903, the former Corona MGP was constructed by the Corona Gas and Electric Company to produce gas from crude oil. In 1910, a crude oil tank was installed near the main building. Though ownership changed between various utility companies, the Site continued to operate as a MGP until 1921. After 1921, the Site operated as a gas holding station until 1942. In 1936, a portion of the Site to the northeast was deeded to Pacific Electric Railway Company. In addition to the gas plant, the Site has operated as an electrical plant from 1903 to the present.

The gasification process used at the Site converted oil to a gaseous product known as "town gas." The process produced residues consisted primarily of lampblack (finely powdered carbon) and tars. Other possible by-products yielded by gas manufacturing and purification processes are light oils, sludges, petroleum products and residues, and heavy metals. Storage and handling practices at the Site were not known. The primary contaminants at the site consist of polynuclear aromatic hydrocarbons (PAHs) and arsenic impacting soil.

The Responsible Party (RP) signed a Land Use Covenant (LUC) with DTSC and a site certificate of Operable Unit 1 (OU 1) was completed in October 2014. The RP is has prepared a summary report and implementation plan for the Operable Unit 2 (OU 2) (Railroad Right of Way) to complete the remedy proposed in 2006. The RP is currently negotiating access with the railroads that own the land in OU 2 that require additional excavations.

The Corona Manufactured Gas Plant (Site) was located on two parcels of land, which presently consist of one parcel owned by SCE and operating as an electric substation and a second parcel owned by Burlington Northern and Santa Fe (BNSF) Railway Company which is used as a railroad right-of-way. In addition to the substation facilities located on the property there is also an asphalt driveway with the remainder of the Site covered by gravel. There is no soil visible at the surface. A portion of the former gas plant extended approximately 20 feet onto the BNSF Railway right-of-way. The Site is bounded by Railroad Street to the south/southwest, by Cota Street to the west/northwest, and by the BNSF Railroad to the north/northeast. Beyond Railroad Street are single-family residences. Beyond Cota Street is a commercial self-storage facility. The Site is bounded by an industrial business center to the east/southeast.

In 1903, the former Corona MGP was constructed by the Corona Gas and Electric Company to produce gas from crude oil. In 1910, a crude oil tank was installed near the main building. Though ownership changed between various utility companies, the Site continued to operate as a MGP until 1921. After 1921, the Site operated as a gas holding station until 1942. In 1936, a portion of the Site to the northeast was deeded to Pacific Electric Railway Company. In addition to the gas plant, the Site has operated as an electrical plant from 1903 to the present.

The gasification process used at the Site converted oil to a gaseous product known as "town gas." The process produced residues consisted primarily of lampblack (finely powdered carbon) and tars. Other possible by-products yielded by gas manufacturing and purification processes are light oils, sludges, petroleum products and residues, and heavy metals. Storage and handling practices at the Site were not known. The primary contaminants at the site consist of polynuclear aromatic hydrocarbons (PAHs) and arsenic impacting soil.

The Responsible Party (RP) signed a Land Use Covenant (LUC) with DTSC and a site certificate of Operable Unit 1 (OU 1) was completed in October 2014. The RP is has prepared a summary report and implementation plan for the Operable Unit 2 (OU 2) (Railroad Right of Way) to complete the remedy proposed in 2006. The RP is currently negotiating access with the railroads that own the land in OU 2 that require additional excavations.

Data prior to 2005 not uploaded to GeoTracker. See case file. Assessment - September 1998 – Two 10,000 gal gasoline and one 10,000 gal diesel USTs removed. Impacted soil was detected under the USTs and piping with maximum concentrations of: 12,729 ppm TPHg, 347 ppm TPHd, 120.6 ppm Benzene, 783.422 ppm Toluene, 276 ppm Ethylbenzene, 751.99 ppm Xylenes, and 903.5 ppm MTBE. May 2000 to October 2002 – Six soil borings were completed and three multi-completion vapor extraction/groundwater monitoring wells, three vapor extraction wells and one vapor probe were installed. Highest soil concentrations were located south of the USTs: 8400 ppm TPHg (MW-1-55 ft), 65 ppm B (VW-1-55 ft), 310 ppm T (MW-1-55 ft), 150 ppm E (VW-1-55 ft), 590 ppm X (MW-1-55 ft), 100 ppm MTBE (VW-1-40 ft). Remediation – October 1998 – 277.57 tons of impacted soils were excavated and removed from the site. January 2001 – A soil vapor extraction (SVE) pilot test was completed. The shallow soils (34 to 54 feet below ground surface (bgs)) had a radius of influence of 10 feet and the deeper soils (60 to 80 ft bgs) had a radius of influence of 40 ft. Maximum vapor concentrations included: 20,070 ppmV TPHg (deep), 228 ppmV B (deep), 111 ppmV T (deep), 11.5 ppmV E (deep), 30 ppmV X (shallow), and 1,067 ppmV MTBE (shallow). Mass removal rates for TPHg were: 57.54 lb/day (shallow) and 61.32 lb/day (deep). April 2002 to September 2003 – SVE system was operated continuously using up to 12 SVE wells. Initial vapor concentrations: 5644 ppmV TPHg, 110 ppmV B, 120 ppmV T, 13.5 ppmV E, 42.8 ppmV X, and 89 ppmV MTBE. September 2003 to May 2007 – Discontinuous SVE operations were conducted including various system cycling and rebound testing events. Total number of days of SVE operation: 1017 days Total mass recovered: 14954 lb TPHg, 24 lb B, 624 lb T, 210 lb E, 1050 lb X, and 16.83 lb MTBE. Groundwater – Six groundwater (GW) monitoring wells were installed at this site. Depth to GW has ranged ~110 ft bgs to ~128 ft bgs and the flow direction has ranged from west to east, but predominantly northeast to northwest. GW impacts were detected in MW-1 during the first two sampling events at maximum concentrations of 2412 ppb TPHg, 187 ppb B, 226 ppb T, 25 ppb E, 243 ppb X, and 426 ppb MTBE. This well was sampled two additional times prior to going dry and all constituents were below the detection limits for both sampling events except 20 ppb MTBE. For seven quarters, wells MW-2 and MW-3 were ND for all constituents testing. Since October 2002, the wells have been dry and unable to be sampled. Wells MW-4, MW-5 and MW-6 were installed in October 2002 and have been sampled quarterly since this time. There have not been any detections in any of these three wells since sampling was initiated. Verification – June 2007 – Formal SVE rebound testing was conducted. The highest individual well vapor concentrations were: 175 ppmV TPHg, ND B, 8.5 ppmV T, 3.53 ppmV E, 15.3 ppmV X, and ND MTBE. Final mass removal rates for the influent vapor stream were: 5.75 lb/day TPHg, and 0 to <0.6 lb/day BTXE & MTBE. July 2007 – Four confirmation soil borings were drilled to verify subsurface conditions. Three were drilled to 80 ft bgs and one was drilled to 125 ft bgs. Impacted soils were detected between 50 and 60 ft bgs in two of the borings (CB-2 and CB-3). Maximum concentrations included: 2230 ppm TPHg (CB-2-55'), ND B, 445 ppm T (CB-2-55'), 201 ppm E (CB-2-55'), 1550 ppm X (CB-2-55'), ND MTBE. August and September 2007 - SVE operated an additional 33 days and removed 277 lbs TPHg, 6.83 lb T, 3.54 lb E, 15.69 lb X

were recovered. (No Benzene or MTBE was recovered during this time.) Subsurface Soil types: The uppermost unit from surface to 180 ft bgs is high clay content silts with lesser amounts of fine- to coarse-grained sand. This unit grades laterally and vertically into relatively clay-free sand and silty sand between 60 and 95 ft bgs. The second unit between approximately 95 and 130 ft bgs consists predominantly of sand and gravel with some fines. Other information: UST system currently installed and operating at the site. The piping and dispensers were replaced in June 2006 and the leak has been stopped. The site has been adequately characterized. Residual impacts remain at the site between 50 and 60 ft bgs in the soils south of the USTs (CB-2 and CB-3). The consultant concludes that the impacts are limited to a lens of low permeability silty clay within a larger sand unit and do not pose a threat to groundwater. No water wells, surface waters, or other sensitive receptors are likely to be impacted. RCDEH issued a letter requiring proper destruction of all existing wells and a site closure letter on 8/18/10. Documentation of well destructions to be submitted by 11/30/2010. As of 06/07/2012 - documentation for destruction of the wells has not been submitted to Riverside County Environmental Health. The County still requires the wells be abandoned properly and documentation sent to our office. All monitoring and remediation wells destroyed in Aug 2014. RCDHE issued final no further action letter December 19 2014.

September 1998 - Two 10,000 gal gasoline and one 10,000 gal diesel USTs removed. Impacted soil was detected under the USTs and piping with maximum concentrations of: 12,729 ppm TPHg, 347 ppm TPHd, 120.6 ppm Benzene, 783.422 ppm Toluene, 276 ppm Ethylbenzene, 751.99 ppm Xylenes, and 903.5 ppm MTBE.

May 2000 to October 2002 - Six soil borings were completed and three multi-completion vapor extraction/groundwater monitoring wells, three vapor extraction wells and one vapor probe were installed. Highest soil concentrations were located south of the USTs: 8400 ppm TPHg (MW-1-55 ft), 65 ppm B (VW-1-55 ft), 310 ppm T (MW-1-55 ft), 150 ppm E (VW-1-55 ft), 590 ppm X (MW-1-55 ft), 100 ppm MTBE (VW-1-40 ft).

Remediation -

October 1998 - 277.57 tons of impacted soils were excavated and removed from the site.

January 2001 - A soil vapor extraction (SVE) pilot test was completed. The shallow soils (34 to 54 feet below ground surface (bgs)) had a radius of influence of 10 feet and the deeper soils (60 to 80 ft bgs) had a radius of influence of 40 ft. Maximum vapor concentrations included: 20,070 ppmV TPHg (deep), 228 ppmV B (deep), 111 ppmV T (deep), 11.5 ppmV E (deep), 30 ppmV X (shallow), and 1,067 ppmV MTBE (shallow). Mass removal rates for TPHg were: 57.54 lb/day (shallow) and 61.32 lb/day (deep).

April 2002 to September 2003 - SVE system was operated continuously using up to 12 SVE wells. Initial vapor concentrations: 5644 ppmV TPHg, 110 ppmV B, 120 ppmV T, 13.5 ppmV E, 42.8 ppmV X, and 89 ppmV MTBE.

September 2003 to May 2007 - Discontinuous SVE operations were conducted including various system cycling and rebound testing events.

Total number of days of SVE operation: 1017 days

Total mass recovered: 14954 lb TPHg, 24 lb B, 624 lb T, 210 lb E, 1050 lb X, and 16.83 lb MTBE.

Groundwater -

Six groundwater (GW) monitoring wells were installed at this site. Depth to GW has ranged ~110 ft bgs to ~128 ft bgs and the flow direction has ranged from west to east, but predominantly northeast to northwest. GW impacts were detected in MW-1 during the first two sampling events at maximum concentrations of 2412 ppb TPHg, 187 ppb B, 226 ppb T, 25 ppb E, 243 ppb X, and 426 ppb MTBE. This well was sampled two additional times prior to going dry and all constituents were below the detection limits for both sampling events except 20 ppb MTBE. For seven quarters, wells MW-2 and MW-3 were ND for all constituents testing. Since October 2002, the wells have been dry and unable to be sampled. Wells MW-4, MW-5 and MW-6 were installed in October 2002 and have been sampled quarterly since this time. There have not been any detections in any of these three wells since sampling was initiated.

Verification -

June 2007 - Formal SVE rebound testing was conducted. The highest individual well vapor concentrations were: 175 ppmV TPHg, ND B, 8.5 ppmV T, 3.53 ppmV E, 15.3 ppmV X, and ND MTBE. Final mass removal rates for the influent vapor stream were: 5.75 lb/day TPHg, and 0 to <0.6 lb/day BTXE & MTBE.

July 2007 - Four confirmation soil borings were drilled to verify subsurface conditions. Three were drilled to 80 ft bgs and one was drilled to 125 ft bgs. Impacted soils were detected between 50 and 60 ft bgs in two of the borings (CB-2 and CB-3). Maximum concentrations included: 2230 ppm TPHg (CB-2-55'), ND B, 445 ppm T (CB-2-55'), 201 ppm E (CB-2-55'), 1550 ppm X (CB-2-55'), ND MTBE.

August and September 2007 - SVE operated an additional 33 days and removed 277 lbs TPHg, 6.83 lb T, 3.54 lb E, 15.69 lb X were recovered. (No Benzene or MTBE was recovered during this time.)

Subsurface Soil types: The uppermost unit from surface to 180 ft bgs is high clay content silts with lesser amounts of fine- to coarse-grained sand. This unit grades laterally and vertically into relatively clay-free sand and silty sand between 60 and 95 ft bgs. The second unit between approximately 95 and 130 ft bgs consists predominantly of sand and gravel with some fines.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB

Other information: UST system currently installed and operating at the site. The piping and dispensers were replaced in June 2006 and the leak has been stopped. The site has been adequately characterized. Residual impacts remain at the site between 50 and 60 ft bgs in the soils south of the USTs (CB-2 and CB-3). The consultant concludes that the impacts are limited to a lens of low permeability silty clay within a larger sand unit and do not pose a threat to groundwater. No water wells, surface waters, or other sensitive receptors are likely to be impacted.

RCDEH issued a letter requiring proper destruction of all existing wells and a site closure letter on 8/18/10. Documentation of well destructions to be submitted by 11/30/2010.

As of 06/07/2012 - documentation for destruction of the wells has not been submitted to Riverside County Environmental Health. The County still requires the wells be abandoned properly and documentation sent to our office.

All monitoring and remediation wells destroyed in Aug 2014.

RCDHE issued final no further action letter December 19 2014.

Site History:

Data prior to 2005 does not appear in GeoTracker. Consult agency files for all site data November 1999 - Three 10,000-gal gasoline USTs were removed from the site. The USTs were not replaced. Soil samples collected under the USTs and dispensers were impacted with gasoline constituents. The highest concentrations were: 1215 ppm TPHg, 3.6 ppm B, 22.6 ppm T, 35.5 ppm E, 75.9 ppm X, and 27 ppm MTBE. The site was entered into LOP. April 2002 – One soil boring was drilled to 170 ft bgs and completed as a dual-completed SVE/GW monitoring well with screen 48-73 ft bgs and 90-170 ft bgs. Groundwater (GW) was encountered at 160 ft bgs. Elevated contaminant concentrations were detected in the soil from 45 to 100 ft bgs and in the initial GW sample had contaminant detections of 1285 ppb TPHg, 10 ppb B, and 1225 ppb MTBE. January 2003 – Two additional GW monitoring wells were installed. MTBE was detected in the GW from MW-3 at a concentration of 11 ppb and MW-2 was clean. GW concentration trends in MW-1 decreased from 1225 ppb to 36 ppb (MTBE). GW flow was determined to be to the northeast. 2004 and 2005 - Two one-month (55 days total) soil vapor extraction (SVE) events were conducted July 15, 2004 to August 16, 2004 and July 27, 2005 to August 19, 2005 using VE-1 for extraction. Vapor conc. (2004-2005) TPH 2906 ppmV reduced to 314 ppmV B 3.52 ppmV reduced to ND X Increased from 14.6 ppmV to 34.3 ppmV MTBE 277 ppmV reduced to 18 ppmV Removal rates (2004-2005): TPHg 78.86 lb/day initially down to 5.03 lb/day at end of operations Removed Mass (2004-2005): TPHg 412 lbs B 0.1 lbs T 8.2 lbs E 2.2 lbs X 22 lbs MTBE 41 lbs September 2006 – Three confirmation borings were drilled to 100 ft bgs TPH 6.22 ppm (CB-1-90') BTXE ND MTBE 14.1 ppm (CB-2-70') MTBE detections in all 3 borings 8260 VOC's very low Based on the elevated soil concentrations detected at 70 ft bgs, RCDEH required additional SVE testing to further evaluate subsurface conditions and the extractable nature of the remaining contaminants. July 16, 2007 to August 30, 2007 (45 days) - SVE rebound testing was conducted using all of the wells for extraction. The proposed SVE test was extended due to elevated concentrations detected in VE-1 during the initial 72-hrs of system operation. Vapor conc. (2007) TPH 91.6 ppmV reduced to 15.3 ppmV B ND X 11.1 ppmV reduced to 1.09 ppmV MTBE 8.88 ppmV reduced to 2.81 ppmV Removal rates (2007): TPHg: 1.79 lb/day down to 0.9 lb/day Removed Mass (2007 – 45 day test): TPHg 55.5 lbs B 0 lbs T 1.1 lbs E 0.27 lbs X 6.3 lbs MTBE 4.7 lbs Cumulative Mass Removed as of 8/30/07: TPHg 467 lbs B 0.1 lbs T 9.3 lbs E 2.4 lbs X 27.4 lbs MTBE 45.7 lbs Well construction (screens): MW-1 90-170 ft bgs/ VE-1 48-73 ft bgs (same borehole) MW-2 90-170 ft bgs MW-3 90-170 ft bgs GW Monitoring – All three wells have been sampled quarterly since their construction in 2002 and 2003. TPHg and MTBE was initially detected in MW-1 at concentrations of 1285 ppb and 1225 ppb, however, concentrations decreased rapidly and have been

predominantly ND since June 2003 (two detection of MTBE 3 ppb and 8.4 ppb). GW in MW-2 and MW-3 has been ND for all constituents tested since January 2003 except for two detections (68 ppb MTBE 12/2003 MW-2 and 11 ppb MTBE Jan 2003 MW-3). Water levels have fluctuated 159 to 164 ft bgs and is currently 163 ft bgs. GW flow has been to the northeast to northwest. The consultant is requesting closure based on low vapor recovery, and conclusion that the overall effectiveness of remediation using SVE technology has been exhausted. Also, based on the results of the confirmation borings, it is estimated that the probability of leaching of the low concentrations of petroleum hydrocarbons remaining at the site is low (due to relatively deep GW conditions) and the concentrations may naturally degrade over time. Therefore, they recommend proceeding with site/case closure with no further action required. A closure document will be submitted pending WB review and requirement for no further remediation and/or monitoring. 11/19/09 Case Closed. See RCDEH file for complete site history and site data.

MW-3 90-170 ft bgs

GW Monitoring - All three wells have been sampled quarterly since their construction in 2002 and 2003. TPHg and MTBE was initially detected in MW-1 at concentrations of 1285 ppb and 1225 ppb, however, concentrations decreased rapidly and have been predominantly ND since June 2003 (two detection of MTBE 3 ppb and 8.4 ppb). GW in MW-2 and MW-3 has been ND for all constituents tested since January 2003 except for two detections (68 ppb MTBE 12/2003 MW-2 and 11 ppb MTBE Jan 2003 MW-3). Water levels have fluctuated 159 to 164 ft bgs and is currently 163 ft bgs. GW flow has been to the northeast to northwest.

The consultant is requesting closure based on low vapor recovery, and conclusion that the overall effectiveness of remediation using SVE technology has been exhausted. Also, based on the results of the confirmation borings, it is estimated that the probability of leaching of the low concentrations of petroleum hydrocarbons remaining at the site is low (due to relatively deep GW conditions) and the concentrations may naturally degrade over time. Therefore, they recommend proceeding with site/case closure with no further action required. A closure document will be submitted pending WB review and requirement for no further remediation and/or monitoring.

11/19/09 Case Closed. See RCDEH file for complete site history and site data.

Site History:						
According to the PEA, the Site consists of approximately 7.4-acre modernization area within the Jefferson Elementary School boundary. The Site was vacant, agricultural land from 1931 to prior to 1960. The northern portion of the School appears to be built by 1931 (present day administration building). The rest of the School was predominantly vacant until 1960. The School continued to expand to the west and south until 2012. The Site currently consists of fully functional elementary school campus, with classrooms buildings, administration buildings, hard court fields, and other associated

structures. The surrounding areas are generally single-family residential developments. During the PEA, the Site soil was investigated for residual lead from lead-based paint, organochlorine pesticides from agricultural use and arsenic, volatile organic compounds (VOCs) from storage shed, polychlorinated biphenyls (PCBs) from caulking material and transformer, and total petroleum hydrocarbons (TPHs) around transformer.

The PEA concludes the concentrations of arsenic, lead, OCPs, and VOCs detected in the soil samples do not appear to pose an unacceptable hazard to future students and staff and recommends no further action for the Site. Based on review of the PEA, neither a release of hazardous material nor the presence of a naturally occurring hazardous material, which would pose a threat to public health or the environment under unrestricted land use, was indicated at the Site. DTSC concurred with these conclusions and recommendations and approved the PEA for No Further Action on May 15, 2019.

Potential Contamin of Concern:

ORGANOCHLORINE PESTICIDES (8081 OCPS)
 POLYCHLORINATED BIPHENYLS (PCBS)
 TPH-MOTOR OIL
 VOLATILE ORGANICS (8260B VOCS)

ORGANOCHLORINE PESTICIDES (8081 OCPS)

SITE HISTORY:

According to the PEA, the Site consists of approximately 7.4-acre modernization area within the Jefferson Elementary School boundary. The Site was vacant, agricultural land from 1931 to prior to 1960. The northern portion of the School appears to be built by 1931 (present day administration building). The rest of the School was predominantly vacant until 1960. The School continued to expand to the west and south until 2012. The Site currently consists of fully functional elementary school campus, with classrooms buildings, administration buildings, hard court fields, and other associated structures. The surrounding areas are generally single-family residential developments. During the PEA, the Site soil was investigated for residual lead from lead-based paint, organochlorine pesticides from agricultural use and arsenic, volatile organic compounds (VOCs) from storage shed, polychlorinated biphenyls (PCBs) from caulking material and transformer, and total petroleum hydrocarbons (TPHs) around transformer.

The PEA concludes the concentrations of arsenic, lead, OCPs, and VOCs detected in the soil samples do not appear to pose an unacceptable hazard to future students and staff and recommends no further action for the Site. Based on review of the PEA, neither a release of hazardous material nor the presence of a naturally occurring hazardous material, which would pose a threat to public health or the environment under unrestricted land use, was indicated at the Site. DTSC concurred with these conclusions and recommendations and approved the PEA for No Further Action on May 15, 2019.

PERCHLORATE						
Site History:						
The Great Western Chemical site at 180 N Sherman Avenue, Corona, California 92882, was one of the company's packaging and distribution terminals. The site was situated in an industrial area of the City of Corona, County of Riverside and was surrounded by KEC Engineering in the north, Empire Building Materials, Inc., in the south, Sherman Avenue in the east and Santa Fe Rail Road in the west. Like other chemical distribution terminal sites, this site may contain trichloroethene (TCE), 1,1,1-trichloroethane (TCA), tetrachloroethylene (PCE) and other organic solvents which could have polluted the soil as well as the groundwater in the near and onsite areas. Great Western Chemical filed for Chapter 11 bankruptcy reorganization on July 3, 2001 and branch network was sold in several separate merger and acquisition (M & A) transactions to a variety of regional competitor buyers.

The site is a former Navy site for testing and targeting activities. The U.S. acquired in 1941 a total of 713.665 acres of land in fee and direct purchase for the former Corona Naval Hospital, located in the city of Norco, Riverside County, California. The site is located about 3 miles north of the City of Corona,

in Norco, Riverside County, California. The site entrance is located on Fifth Street south of Norconian Drive. The site is bounded by Fifth Street to the north, Hamner Avenue to the east, Third Street to the south, and Western Avenue to the west. Disestablishment of the hospital was declared by the Navy on 1 November 1949. The hospital was reopened on 1 June 1951 and the Navy inactivated the hospital again in September 1957. On 21 September 1959, 580 acres of the former hospital site were transferred to Bureau of Naval Weapons for use by the Naval Ordnance Laboratory. The remaining 115 acres were declared excess and recommended to GSA for disposal.) On 30 March 1962, 92.3553 acres were transferred to the State of California for use as a Narcotics Rehabilitation Center. On 15 May 1962, an additional 14.6014 acres were transferred to Corona Unified School District. On 19 May 1967 and 23 June 1972, approx. 219 acres were transferred by quitclaim deeds to Lewis Homes and Crestwood Homes Development. On 4 June 1985, 141.86 acres were transferred to Riverside Community College District. These parcels were subsequently purchased by two housing developers. The Seal Beach Naval Weapons Station currently owns 245.75 acres.

Military munitions were produced or demilitarized at this location and therefore may present an explosive hazard. Facilities known to have existed as part of Corona Annex include a missile evaluation building, fuze assembly-examination lab, fuze detonator magazine, high explosive magazine, and an explosive disposal incinerator. An identified burn pit/ordnance disposal incinerator, along with a nearby disposal area (landfill) have minor potential for remaining munitions and explosives of concern (MEC). In 1990, the Riverside Community College undertook a cleanup activity with oversight from the State Department of Health Services (now Dept. of Toxic Substances Control) and removed incinerator ash material.

LEAD

Site History:

DTSC approved a Phase I Environmental Assessment Report (Phase I) on August 14, 2020.

Based on the findings of the Phase I Environmental Assessment (Phase I) conducted for the Site, lead from lead-based paint was the only recognized environmental condition identified.

According to the Phase I, the Site is approximately 0.30 acres, located in the southwest corner within the 5.60-acre Corona Fundamental Intermediate School campus (School). The Site appears to have been developed as a part of the School since as early as 1907. The Site encompassed a portion of a School building through the 1940s, when it was redeveloped into the current general use as a sports field/courts and paved walkways. Single-family residential neighborhoods appear to the northwest, west, south, and east of the School. Commercial development with scattered residences appears to the northeast of the School.

Based on the information provided, the Phase I concluded that lead from lead-based paint was the only recognized environmental conditions and recommended a further investigation of lead and submission of a Phase I Addendum. DTSC concurred with these conclusions and recommendations and approved the Phase I.

As a result, an Addendum was submitted to present the findings of the soil investigation for lead. On November 18, 2020, DTSC approved a Phase I Addendum for the Site. . The Addendum concludes that all detected concentrations of lead were below the DTSC-Screening Level and recommends no further action at the Site.

Based on the information provided and a Site visit conducted by DTSC on November 12, 2020, neither a release of hazardous material nor the presence of a naturally occurring hazardous material, which would pose a threat to public health or the environment under unrestricted land use, was indicated at the Site. DTSC concurred with the conclusion that further environmental investigation of the Site was not required and approved the Addendum.

JACK B KELLY, INC WAS TRANSPORTING A LIQUID HYDROGEN TRAILER BELONGING TO PRAXAIR. THE TRACTOR AND TRAILER OVERTURNED ON SR-91 (WEST BOUND) IN CORONA, CALIFORNIA. THE ACCIDENT OCCURED AT APPROXIMATELY 16:35 ON 6/18/99. A RED TOYOTA CAME ACROSS THE HIGHWAY AND STARTED TO SPIN JUST AS IT GOT TO THE TRUCK AND ENDED UP FACING THE TRUCK HEAD ON. THE DRIVER TRIED TO MAKE AN EVASIVE MOVE TO THE RIGHT LANE, WHILE ALSO APPLYING THE BRAKES VERY HARD, BUT WAS STRUCK IN THE LEFT FRONT OF HIS TRACTOR. THE IMPACT RIPPED THE LEFT FRONT SPRING HANGER OFF THE FRAME, SHIFTING THE AXLE TO THE REAR OF THE TRACTOR, WHICH CAUSED THE STEERING WHEEL TO TURN SHARP TO THE LEFT. THIS CAUSED THE TRACTOR STEERING WHEEL TO SPIN IN THE DRIVER'S HANDS. AT THIS POINT THE DRIVER HAD NO CONTROL OVER THE STEERING OF THE TRACTOR, THE CAR CONTINUED TO SPIN AND THEN HIT THE FRONT DRIVER AXLE ON THE DRIVER'S SIDE. THE VEHICLES CAME TO REST ABOUT 40 FEET APART. THE DRIVER AND HIS PASSENGER IN THE TRUCK STATED THAT THE TRACTOR AND TRAILER WERE NEARLY STOPPED WHEN THE LIQUID IN THE TANK TRAILER SHIFTED CAUSING THE TRACTOR-TRAILER UNIT TO ROLLOVER ON THE PASSENGER SIDE. NO INJURIES TO THE DRIVER AND HIS PASSENGER, THE DRIVER OF THE AUTOMOBILE AND HER PASSENGER HAD MINOR INJURIES BUT DID NOT GO TO THE HOSPITAL. THERE WAS NO LOSS OR RELEASE OF PRODUCT FROM THE TRAILER. THERE WAS NO LOSS OF FLUIDS FROM THE TRACTOR (I.E. FUEL, OIL,ANTI-FREEZE).

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13 and E1527-21, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

National Priority List:

NPL

Sites on the United States Environmental Protection Agency (EPA)'s National Priorities List of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2023

National Priority List - Proposed:

PROPOSED NPL

Sites proposed by the United States Environmental Protection Agency (EPA), the state agency, or concerned citizens for addition to the National Priorities List (NPL) due to contamination by hazardous waste and identified by the EPA as a candidate for cleanup because it poses a risk to human health and/or the environment. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

Government Publication Date: May 25, 2023

Deleted NPL:

DELETED NPL

Sites deleted from the United States Environmental Protection Agency (EPA)'s National Priorities List. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. Sites are represented by boundaries where available in the EPA Superfund Site Boundaries maintained by the Shared Enterprise Geodata and Services (SEGS). Site boundaries represent the footprint of a whole site, the sum of all of the Operable Units and the current understanding of the full extent of contamination; for Federal Facility sites, the total site polygon may be the Facility boundary. Where there is no polygon boundary data available for a given site, the site is represented as a point.

SEMS List 8R Active Site Inventory:

SEMS

The U.S. Environmental Protection Agency's (EPA) Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. EPA Report on the Status of Open Dumps on Indian Lands:[IODI](#)

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

CERCLIS - No Further Remedial Action Planned:[CERCLIS NFRAP](#)

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Toxics Release Inventory (TRI) Program:

[TRIS](#)

The U.S. Environmental Protection Agency's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of toxic chemicals from U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. There are currently 770 individually listed chemicals and 33 chemical categories covered by the TRI Program. Facilities that manufacture, process or otherwise use these chemicals in amounts above established levels must submit annual reporting forms for each chemical. Note that the TRI chemical list does not include all toxic chemicals used in the U.S. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Federal Agency Locations with Known or Suspected PFAS Detections:

[PFAS FED SITES](#)

List of Federal agency locations with known or suspected detections of Per- and Polyfluoroalkyl Substances (PFAS), made available by the U.S. Environmental Protection Agency (EPA) in their PFAS Analytic Tools data. EPA outlines that these data are gathered from several federal entities, such as the Federal Superfund program, Department of Defense (DOD), National Aeronautics and Space Administration, Department of Transportation, and Department of Energy. The dates this data was extracted for the PFAS Analytic Tools range from March 2022 to April 2023. Sites on this list do not necessarily reflect the source/s of PFAS contamination and detections do not indicate level of risk or human exposure at the site. Agricultural notifications in this data are limited to DOD sites only. At this time, the EPA is aware that this list is not comprehensive of all Federal agencies.

SSEHRI PFAS Contamination Sites:

[PFAS SSEHRI](#)

This PFAS Contamination Site Tracker database is compiled by the Social Science Environmental Health Research Institute (SSEHRI) at Northeastern University. According to the SSEHRI, the database records qualitative and quantitative data from each known site of PFAS contamination, including timeline of discovery, sources, levels, health impacts, community response, and government response. The goal of this database is to compile information and support public understanding of the rapidly unfolding issue of PFAS contamination. All data presented was extracted from government websites, news articles, or publicly available documents, and this is cited in the tracker. Locations for the Known PFAS Contamination Sites are sourced from the PFAS Sites and Community Resources Map, credited to the Northeastern University's PFAS Project Lab, Silent Spring Institute, and the PFAS-REACH team. Disclaimer: The source conveys the data undergoes regular updates as new information becomes available, some sites may be missing and/or contain information that is incorrect or outdated, as well as their information represents all contamination sites SSEHRI is aware of, not all possible contamination sites. This data is not intended to be used for legal purposes. Access the following source link for the most current information: <https://pfasproject.com/pfas-sites-and-community-resources/>

National Response Center PFAS Spills:

[ERNS PFAS](#)

This Per- and Poly-Fluoroalkyl Substances (PFAS) Spills dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The National Response Center (NRC), operated by the U.S. Coast Guard, serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the "Material Involved" or "Incident Description" fields. Limitations: The data from the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Keyword searches may misidentify some incident reports that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS spills/release incidents.

PFAS NPDES Discharge Monitoring:

[PFAS NPDES](#)

This list of National Pollutant Discharge Elimination System (NPDES) permitted facilities with required monitoring for Per- and Polyfluoroalkyl (PFAS) Substances is made available via the U.S. Environmental Protection Agency (EPA)'s PFAS Analytic Tools. Any point-source wastewater discharger to waters of the United States must have a NPDES permit, which defines a set of parameters for pollutants and monitoring to ensure that the discharge does not degrade water quality or impair human health. This list includes NPDES permitted facilities associated with permits that monitor for Per- and Polyfluoroalkyl Substances (PFAS), limited to the years 2007 - present. EPA further advises the following regarding these data: currently, fewer than half of states have required PFAS monitoring for at least one of their permittees, and fewer states have established PFAS effluent limits for permittees. For states that may have required monitoring, some reporting and data transfer issues may exist on a state-by-state basis.

Encompasses Toxics Release Inventory records included in the EPA PFAS Analytic Tools. The EPA's TRI database currently tracks information on disposal or releases of 770 individually listed toxic chemicals and 33 chemical categories from thousands of U.S. facilities and details about how facilities manage those chemicals through recycling, energy recovery, and treatment.

PFAS TSCA Manufacture and Import Facilities:

[PFAS TSCA](#)

The U.S. Environmental Protection Agency (EPA) issued the Chemical Data Reporting (CDR) Rule under the Toxic Substances Control Act (TSCA) and requires chemical manufacturers and facilities that manufacture or import chemical substances to report data to EPA. This list is specific only to TSCA Manufacture and Import Facilities with reported per- and poly-fluoroalkyl (PFAS) substances. Data file is sourced from EPA's PFAS Analytic Tools TSCA dataset which includes CDR/Inventory Update Reporting data from 1998 up to 2020. Disclaimer: This data file includes production and importation data for chemicals identified in EPA's CompTox Chemicals Dashboard list of PFAS without explicit structures and list of PFAS structures in DSSTox. Note that some regulations have specific chemical structure requirements that define PFAS differently than the lists in EPA's CompTox Chemicals Dashboard. Reporting information on manufactured or imported chemical substance amounts should not be compared between facilities, as some companies claim Chemical Data Reporting Rule data fields for PFAS information as Confidential Business Information.

PFAS Waste Transfers from RCRA e-Manifest :

[PFAS E-MANIFEST](#)

This Per- and Poly-Fluoroalkyl Substances (PFAS) Waste Transfers dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. Every shipment of hazardous waste in the U.S. must be accompanied by a shipment manifest, which is a critical component of the cradle-to-grave tracking of wastes mandated by the Resource Conservation and Recovery Act (RCRA). According to the EPA, currently no Federal Waste Code exists for any PFAS compounds. To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: • PFAS • PFOA • PFOS • PERFL • AFFF • GENX • GEN-X (plus the Vermont state-specific waste codes). Limitations: Amount or concentration of PFAS being transferred cannot be determined from the manifest information. Keyword searches may misidentify some manifest records that do not contain PFAS. This dataset should also not be considered to be exhaustive of all PFAS waste transfers.

Government Publication Date: Apr 9, 2023

PFAS Industry Sectors:

[PFAS IND](#)

This Per- and Poly-Fluoroalkyl Substances (PFAS) Industry Sectors dataset is made available via the U.S. Environmental Protection Agency's (EPA) PFAS Analytic Tools. The EPA developed the dataset from various sources that show which industries may be handling PFAS including: EPA's Enforcement and Compliance History Online (ECHO) records restricted to potential PFAS-handling industry sectors; ECHO records for Fire Training Sites identified where fire-fighting foam may have been used in training exercises; and 14 CFR Part 139 Airports compiled from historic and current records from the FAA Airport Data and Information Portal. Since July 2006, all certificated Part 139 Airports are required to have fire-fighting foam onsite that meet certain military specifications, which to date have been fluorinated (Aqueous Film Forming Foam). Limitations: Inclusion in this dataset does not indicate that PFAS are being manufactured, processed, used, or released by the facility. Listed facilities potentially handle PFAS based on their industrial profile, but are unconfirmed by the EPA. Keyword searches in ECHO for Fire Training sites may misidentify some facilities and should not be considered to be an exhaustive list of fire training facilities in the U.S.

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Your answers will be incorporated into the final Phase I ESA under the section "User-supplied Information."

(1.) Environmental cleanup liens that are filed or recorded against the property (40 CFR 312.25).

Did a search of *recorded land title records* (or judicial records where appropriate, see NOTE below) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law? (NOTE - In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

Unknown

(2.) Activity and land use limitations (AULs) that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).
